"Binder" Used to Indicate Acceptance of Risk.—So that the insured may have written evidence of the acceptance of a risk, a general agent of the insurer frequently issues a statement binding the company to the acceptance of the risk and covering the property until (1) a period of 10 days from date of issue of binder has elapsed; or (2) a standard policy has been issued; or (3) noon of the second business day after written notice of cancellation is given to the assured or his agent.

COMMENCEMENT IN CASE OF RENEWAL.—In practice, the broker or agent of the insured usually notifies the insured of the date of expiration of the policy and proceeds to secure a renewal of the contract so that the new contract becomes effective on the same terms immediately upon the expiration of the original policy.

NEW CONTRACTS ISSUED ON RENEWALS SHOULD BE COMPARED.—It is advisable that new contracts issued on renewals be compared with the expired contracts to make sure that terms, description of property, voided exceptions, and special arrangements be properly recorded thereon. Care should be taken to have the necessary changes made where conditions of the insured have changed, not only in regard to amount and kind of property, but also the nature of the hazard. Neither the violations which existed during the term of the old policy, nor the privileges not recorded, but enjoyed, are transferred or considered applicable to the new policy, unless specific provision is made therefor.

TERMINATION OF THE CONTRACT.—A contract or policy may be terminated (voidance will be covered later) by any of the following: (1) expiration of the term stipulated therein, if renewal is not secured; (2) cancellation by the insured; (3) cancellation by the insurer; (4) occurrence of an event stipulated therein.

1. **Expiration of the Term of the Contract.**—It is incumbent upon the insured to secure a renewal before the expiration of the term of the policy if he desires to continue the protection. He has **no right of redress** from the company, or insurer if he or his agent fails to secure renewal in time.

2. **Cancellation by the Insured.**—The policy provides for cancellation "at any time at the request of the insured." No other obligations are imposed upon the insured.

3. **Cancellation by the Insurer.**—The policy stipulates that it can only be cancelled by the insurer by a five days' notice in writing which must either

tender or offer to tender the unearned premium. Ten day's notice is required to a mortgagee.

4. **Occurrence of an Event Stipulated Therein.**—The policy definitely stipulates that "if a building or any material part thereof falls, except as the result of a fire, all insurance by this policy shall immediately cease." It will be noted that the building or "a material part" shall fall before the insurance ceases. The insertion of "material part" has in the past compelled the companies to prove that a material part of the building had fallen. The reason for this clause is the fact that after a building has fallen, the risk in the case of the building and the hazard in the case of the contents have both changed.

INTERRUPTION OR TEMPORARY SUSPENSION.—The existence of any of the following conditions usually causes interruptions or temporary suspension of the contract.

Other Insurance.—Insurance of the same property in more than one company is usually permitted except in the case of farm property. The standard policy form lists this item as an exception, but riders are usually attached permitting it.

Increase of Hazard.—The insurer will not assume liability of a risk if the insured should increase the danger or hazard of fire by means within his control or knowledge. Unless specifically permitted the insurer will not assume liability for loss or damage under following conditions:

1. **Repairs, etc.** While mechanics are altering or repairing the described premises beyond a period of 15 days.
2. **Explosives, gas, etc.** While illuminating gas or vapor is generated on the premises, or, fire works, greek fire, phosphorus, explosives, gasoline, naptha or any other petroleum products of greater inflammability than kerosene oil are kept or used on the premises or gunpowder exceeding 25 pounds; or kerosene oil exceeding 5 barrels is kept on the premises.
3. **Factories, working hours and idleness.** In the case of a manufacturing establishment while operated in whole or in part between the hours of 10.00 P.M. and 5.00 A.M. or while it ceases to be operated beyond a period of ten days.
4. **Unoccupancy.** While the property at risk "whether intended for occupancy by owner or tenant is vacant or unoccupied beyond a period of ten days." "Vacant" as used here may be taken to designate absence of any person or thing, while "unoccupied" would indicate absence of persons.

VOIDANCE OF CONTRACT.—There are two main divisions of actions or conditions which render the policy void. These appear on the standard policy form indexed as follows: (1) fraud, misrepresentation, etc.; (2) ownership, etc.

Fraud, Misrepresentation, etc.—To quote the policy, "This entire policy shall be void if the insured has concealed or misrepresented any material fact or circumstance covering this insurance or the subject thereof; or in case of any fraud or false swearing by the insured touching any matter relating to this insurance or the subject thereof, whether before or after a loss."

Ownership, etc.—The policy stipulates that it shall be void, unless otherwise provided by agreement in writing added to it by the company, if any of the following conditions become existent or actions are taken:

1. Conditional or partial ownership.
2. Building insured not on ground owned by insured in fee simple.

3. Foreclosure or sale of property under mortgage or deed of trust.
4. Change of interest, title or possession, other than by death of insured and except change of occupants without increase of hazard.
5. Assignment of policy before loss, without consent of company to assignment.

1. Conditional or Partial Ownership.—The stipulation in the policy reads—"if the interest of the insured be other than unconditional and sole ownership" unless as stated above "otherwise provided by agreement." This condition would exist in any of the following cases:

A mortgagee who failed to protect his interest by specific arrangement.
A stockholder in a corporation who attempted to insure the property of the corporation in his own name.
A partner who insures the property of a partnership in his own name.
The owner of property purchased on the installment plan where the seller retains title until installemnts are paid.

2. Building on Ground Not Owned in Fee Simple.—Unless otherwise provided a policy is void where a building insured is built on ground which is not owned by the assured in fee simple. By fee simple is meant absolute ownership free from conditions or limitations. The reason for this provision is the possibility of a **sudden diminution of the value of the building,** which would occur if, as the result of some action relative to the ground, it becomes imperative that the building be removed.

3. Foreclosure or Sale of Property under Mortgage or Trust Deed.—Unless otherwise provided, voidance occurs "if with the knowledge of the insured, foreclosure proceedings be commenced or notice given of sale of any property insured hereunder by reason of any mortgage or trust deed." In foreclosure proceedings the moral hazard is naturally increased and when the sale of a portion of property occurs, the value of the remaining property might depreciate materially.

4. Change of Interest, Title or Possession.—The policy becomes void "if any change, other than by death of an insured, takes place in the interest, title or possession of the subject of insurance (except change of occupants without increase of hazard)." It is obvious that a contract protecting the interest of one individual, partnership, corporation, etc., must become void when said interest is transferred to another. As previously stated, insurance covers the **interest of a person in the property mentioned and not the property.** When there is a change in hazard, therefore, it is to the interest of both parties to the contract to see that their respective interests or liabilities are properly defined and/or protected.

5. Assignment of Policy before Loss.—The policy is void if an assignment is made without the consent of the insurer. It would be obviously unfair to the insurer if an assignment be made by the insured to anyone unacceptable to the insurer. Most policy forms provide endorsements, one for the assignment by the insured and the other for the consent of the insurer.

The following is a **form of assignment** of the interest of the insured:

> The interest of ..... as owner of the property covered by this Policy is hereby assigned to ..... subject to the consent of The ..... Insurance Company, New York.
>
> .....
> **(Signature of Insured)**
>
> **Dated** ..... **19**..

The following is a form of the company's consent to the assignment of the interest:

> The ..... Insurance Company, New York, hereby consents that the interest of ..... as owner of the property covered by this Policy be assigned to .....
>
> .....
> (Agent)
>
> Dated ..... 19.. .

PROOF AND SETTLEMENT OF LOSSES.—The **requirements in case of loss** stipulated in the policy are that the insured does the following:

1. Gives **immediate notice in writing** to the company.
2. Protects the property from **further damage.**
3. Separates the damaged and undamaged property.
4. Puts the property in best order possible.
5. Furnishes a **complete inventory** of destroyed, damaged and undamaged property, stating the quantity and cost of each article and the amount claimed thereon.
6. Renders to the company within 60 days after the fire (unless such time is extended by the company) a **proof of loss** signed and sworn to and stating the knowledge and belief of the insured as to the following:
   (a) The time and origin of the fire.
   (b) The interest of the insured and all others in the property.
   (c) The cash value of each item thereof and the amount of loss or damage thereto and all encumbrances thereon.
   (d) All other contracts of insurance whether valued or not covering the property.
   (e) Any change in the title, use, occupation, location, possession or exposures of said property since the issuing of the policy.
   (f) By whom and for what purpose any building described and the several parts thereof were occupied at the time of the fire.

Other provisions for submission of plans, examination of books of accounts, bills, vouchers, records, etc., are also set forth in filing proof of loss.

APPRAISAL IN CASE OF DISAGREEMENT.—"In case the insured and the company shall fail to agree as to the amount of loss or damage, each shall on the written demand of either, select a **competent and disinterested appraiser.**"

The appraisers first select a competent and disinterested **umpire;** and failing for 15 days to agree upon such umpire, then, on request of the insured or the company, such umpire is selected by a judge of a court of record in the state in which the property insured is located. The appraisers then appraise the loss and damage stating separately sound value and loss or damage to each item. Failing to agree, they submit the differences to the umpire. An award in writing so itemized, of any two filed with the company, determines the amount of sound value and loss or damage.

Each appraiser is paid by the party selecting him, and the expenses of the umpire are paid by the parties jointly.

OPTIONS OF COMPANY.—It is optional with the company to take all or any part of the articles at the agreed or appraised value, and also to repair, rebuild or replace the property lost or damaged with other of like quality within a reasonable time, on giving notice of its intention so to do within 30 days after the receipt of proper statement of loss herein required; but there can be no abandonment to the company of any property.

WHEN LOSS PAYABLE.—The amount of loss or damage for which the company may be liable is payable **60 days after proof of loss** is received by the company and ascertainment of the loss or damage is made either by agreement between the assured and the company expressed in writing or by the filing with the company of an award therein provided.

SUITS.—In order **to prevent unreasonable delay** on the part of either insured or insurer where question of the company's liability is involved, the policy provides: "No suit or action on this policy, for the recovery of any claim, shall be sustainable in any court of law or equity unless all requirements of the policy shall have been complied with nor unless commenced within twelve months next after the fire."

SUBROGATION.—In order to be able to collect all amounts possible of collection from a third party for a loss or damage for which it has settled, the company reserves the right of **requiring an assignment of rights by the insured.**

Example: Through the negligence of a third party loss or damage may have been caused to property of the insured, the insured may recover from the third party at law. It is obvious that if the insured collects from the insurance company, the company should receive the right of subrogation; in other words, it should be given the right to collect from the third party.

Another illustration is that of a mortgagee who insures his rights under a separate policy. The amount received from the insurance company would not affect his right to collect the full amount due from the mortgagor, and unless the right of subrogation is given to the insurance company, he would be able to collect twice the amount actually advanced on the mortgage.

FIRE INSURANCE FORMS AND CLAUSES.—The standard fire insurance policy is, as the name implies, standard, but as there are varying conditions and circumstances applicable to the individual risks, it is necessary to provide **means of adapting the standard forms** to such conditions or circumstances. This is accomplished by **means of riders (attachments) or endorsements.** These may be put in **two classes, forms and clauses.** Forms are usually descriptive, supplementing the standard policy. Clauses are usually added to adapt some stipulations to the use of the insured, or to modify the operation of stipulations.

Forms Used.—Forms are used for the following purposes:

Ownership. To describe ownership where conditional.
Ground ownership. To describe or give recognition to the fact that buildings insured are on leased or encumbered ground with full knowledge of the company.
Mortgage. To disclose the interest of the insured.
Change of interest. To recognize change of interest, title, or occupancy approved by the company.
Commission forms. To describe property of others for which the insured is liable.
Description of property. To describe in exact detail the nature of property insured.
Location of property. To describe location of property.
Variable locations. To describe approved locations of property being constantly shifted and constituting a "floating policy."

Clauses.—Clauses are used to modify provisions of the standard policy. To illustrate some of the **more common uses** that are made of clauses the following are listed:

Permits:

To permit the **moving** of property.

To permit extensive **repairs** or alterations.

To permit **vacancy** for a longer period than is stipulated in the policy.

To permit operating **overtime.**

To permit the **storage** of inflammable, combustible or dangerous articles.

Limitations:

To limit liability of insurer on **certain property** on account of its nature.

To stipulate **conditional** assumption of liability.

To limit damage consequent to **certain occurrences** such as loss or damage by change in temperature in cold storage warehouses.

To limit damage to electric generating machinery to outside fire; in other words, exempt the insurer from liability for damage caused by internal irregularities of **dynamos** or electrical apparatus. The electrical hazard for loss in excess of $100 to assured in electrical generating stations if fire ensues is now assumed.

To limit the **amount payable** to the ratio of coverage carried to coverage required. This clause is discussed more fully under separate paragraph.

CO-INSURANCE CLAUSE.—The co-insurance clause is intended to protect the interest of both the insured and the insurer, but in order to fully appreciate this fact, the underlying principles must be considered.

The basic principle of insurance is the most important of the principles underlying the co-insurance clause which is that insurance is in effect a distribution of the losses of one over many. This distribution is accomplished by an insurance company through its collection from each policy holder of a comparatively small sum in the form of premium. The premiums are computed on rates which, in the final analysis, are fixed so that when they are multiplied by the amount of insurance earned, they should produce from the many policy holders a fund sufficient to:

1. Pay all ordinary losses when they occur.
2. Pay the expenses of conducting the business.
3. Provide a reserve for extraordinary losses.
4. Provide a fair return to the stockholders of stock companies.

Therefore, if the policy holders fail to carry the amount of insurance required by the terms of the policies, the rate would not result in the premiums being in the aggregate sufficient to meet the losses, expenses, etc., and the company would not be in a position to meet the losses, etc., with a final result of loss to the policy holders in some form.

It would be obviously unfair for policy holders who lived up to their contracts and paid premiums on the full value of the property covered, to be put on the same footing as those who failed to carry adequate insurance; in other words, to be compelled to share the greater part of the losses of the less conscientious. It was with a view to remedying such conditions as these that the co-insurance clause was introduced.

PROVISIONS OF CO-INSURANCE CLAUSE.—The co-insurance clause provides in the abstract that where a policy holder fails to carry an amount of insurance which bears the relationship to the value of the property, which is required by the terms of the clause, he should be considered as having assumed **self-insurance** for the amount of the shortage. For example, if an owner who has property, the cash value of which is $10,000, insures it under an 80% co-insurance clause for only $5,000 he would be carrying self-insurance from the insurer's point of view of $3,000 and is a **co-insurer** to the extent of 3/8ths of

the maximum liability. If there should be a loss of $3,000, in fairness to others who carry an adequate amount, he should not be reimbursed in full for his loss, but should receive only 5/8ths of the loss. To reimburse him for the full amount of the loss would be equal to paying him $8,000 if the property were entirely destroyed while he only paid for the protection of $5,000.

The following **examples illustrate** the operation of co-insurance on the basis of 80% and 100%:

80% Co-insurance Clause

Example A

Sound value of property	$10,000	
Insurance	8,000	
Loss	$5,000	
Insurance carried $8,000 / Insurance required $8,000 = 100% of loss payable =		$5,000

Example B

Sound value of property	$10,000	
Insurance carried	6,000	
Loss	$5,000	
Insurance carried $6,000 / Insurance required $8,000 = ¾ of loss payable =		$3,750

100% Co-insurance Clause

Example A

Sound value of property	$10,000	
Insurance carried	8,000	
Loss	$5,000	
Insurance carried $ 8,000 / Insurance required $10,000 = 8/10 of loss payable =		$4,000

Example B

Sound value of property	$10,000	
Insurance carried	6,000	
Loss	$5,000	
Insurance carried $ 6,000 / Insurance required $10,000 = 6/10 of loss payable =		$3,000

DANGERS OF FAILURE TO BASE INSURANCE ON INCREASED VALUES.—During periods of rising costs considerable loss may be suffered by an insured who fails to increase his insurance to a basis equal to the **cost of replacement of the property.** While he may have met the requirements of the co-insurance clause when the insurance was placed originally, the increased values since that time would cause him to be a co-insurer to a great extent. This can be shown by the following example:

Original cost of property		$100,000
Insurance carried on a basis of 80% co-insurance		80,000
Replacement value of property today, less depreciation		200,000
Loss on property		100,000
Settlement by insurance company:		
Requirement 80% of	$200,000	
Reimbursement based on:		
Insurance carried $ 80,000 / Insurance required $160,000 = ½ of loss =		$50,000
Actual loss		$100,000
Reimbursement		50,000
Net loss to the insured, not covered by insurance		$ 50,000

The insured should always bear in mind that a loss necessitates replacement, and original cost is past history in a period of rising costs. To permit the insurance to stand as originally figured would be equivalent to selling merchandise on the basis of cost when the market for such merchandise had advanced, say, 100%.

FIRE INSURANCE RATES.—The methods employed by the various **rating bureaus** are not fully standardized, making it impracticable to go into detail on the subject of rate making. However, a high degree of co-operation exists among the various **underwriters' associations** in the work of collecting and analyzing data on the actual experience of a number of fire insurance companies over a number of years in various locations and among various classes of risks. The exchange of this information and general interchange of ideas permits of the application of the combined judgment of a number of individuals, all of which tend to make the bases of rates a fair average and therefore more reliable. The competition among the various types of fire insurance organizations, combined with the supervision exercised by the authorities of the various states, have resulted in rates, which if not as low as they might be, are generally logical and free from discrimination.

DEAN ANALYTICAL SYSTEM.—While the methods of rate construction differ in detail, the main underlying principles and in most cases the results are practically the same as those obtained by the Dean Analytical System used in about 22 states. The **objective of this system** is, first, to establish equitable **basic rates** by methodical analyses of basic factors and comparisons of actual conditions with determined standards; secondly, to provide a **flexible and logical method of constructing specific rates** based on these basic rates, reducing the possibilities of discrimination and errors of omissions to a minimum. The basic rates are established in three operations, viz.:

1. Grading of towns.
2. Grading of types of structures.
3. Establishing basic rates for each type of structure in each grade of town.

Grading of Towns.—The analytical system provides for **10 classes of towns** —from number one class, the highest, with almost ideal conditions from an insurance point of view, to class 10, towns and villages without any fire protection.

This operation of grading consists of carefully comparing with fixed standards the actual status of each town in regard to:

Water supply	Building laws
Fire department	Hazards
Fire alarm	Structural conditions
Police	

Each of the above factors is considered and a number of points credited according to the relation of the actual status to the standards. The total number of points decides the classification of each town.

Grading of Types of Structures.—Three types are used: brick, frame, and fireproof.

Establishing Basic Rates.—Basic rates are then established for **each type of structure** influenced by the number of stories for each of the ten classes of towns. The construction of rates applicable to **specific buildings** using the basic rates established, is accomplished by inspection of the individual building, adding to the basic rate charges for (1) deficiencies from the standards for structural features, (2) for class of occupancy, and (3) credits for protective equipment.

Structural Features.—Standards are fixed for the following structural features: area, wall deficiencies, floor openings, skylights, and attachments of inferior construction.

Occupancy Classification.—Every type of business is considered and graded, as far as buildings are concerned, according to the inherent hazard of the business occupying the building and the combustibility of the materials used or stored therein. In connection with **rates upon contents,** the damageability of the stock enters into the calculation. Additional charges are made for **exposure to fire** from outside sources.

Credits for Protective Equipment.—Credits are allowed in reduction of rates for various items, such as:

Automatic sprinklers	Watchman's service
Inside standpipe and hose equipment	Private fire brigade
Chemical extinguishers	Pails filled with water

REVISION FOR RATING.—Any insured may secure from the **rating board** for his district or town a **schedule** showing the construction of rate applicable to the property covered by him. He may apply directly to the rating board or he may give his broker or insurance company a letter of authority to secure the schedule. If it is found on examination of the schedule that inadequate credit has been allowed for improved conditions **a claim for revision of the rate** should be filed with the rating board. The same is true in regard to excessive charges.

Factors Influencing Reductions in Rates.—Rates of insurance may be reduced by a reduction of the fire hazard in the following ways:

Improving physical conditions in and about the property.
Introducing and maintaining protective measures.
Improving water supply.
Frequent and capable inspection.
Installing sprinkler systems.

CONCURRENCY.—On the back of the standard form of fire insurance policy there is a statement on concurrency which reads: "It is important that the written portions of all policies covering the same property read exactly alike. If they do not, they should be made uniform at once." The importance of this statement is not generally appreciated.

If policies on the same property are not concurrent, complications may arise affecting adversely the settlement of any loss. Where such policies contain co-insurance clauses, the provisions of which differ, some containing the distribution average clause and others without such clauses, there is a possibility of the insured being liable for a portion of the loss, notwithstanding his having total insurance in excess of the value of the property. Recent rulings—the "Griswold" ruling in particular—have, however, held that so long as sufficient total insurance is carried the insurer would recover his losses. In any event delays and controversy may arise.

It can be readily seen that where some policies cover property in one location specifically and others cover the same property generally (blanket policies), there would be difficulty in establishing the exact amount of insurance carried on such property in the event of a loss. Wherever policies overlap in their coverage of property, difficulty will be experienced along these lines. Policies should be so written that there can be no question as to the extent of coverage and the property covered.

VALUED POLICY.—A statute exists in some states providing that the amount of insurance covering a building, in force at the time of loss, shall be considered the value of such building regardless of its actual value. Under this statute if a building be destroyed or so far destroyed as to be considered completely so, insurance must be paid to the full amount of the policy regardless of whether such insurance is excessive or not.

SPRINKLER LEAKAGE INSURANCE.—A fire hazard is reduced through the installation of a **sprinkler system** consisting of a pressure waterflow piped over the building with heads located according to requirements. Each head is so constructed that it releases the flow of water when the temperature in its location increases above the danger point. Incidental to the installation of such a system is a liability to damage of property due to accidental opening of these heads. Loss due to this cause may be covered by sprinkler leakage insurance. A special form is usually attached to the policy or a sprinkler leakage policy may be issued as illustrated below.

The installation of a sprinkler system brings about an **appreciable reduction in the rates** of fire insurance applicable to the building as well as contents so protected. The saving in rates in most cases is sufficient to pay for the installation of the system within a period of a few years and in some cases with other improvements within 2 years, even considering interest on additional investment. The majority of mutual insurance organizations will not consider a risk which is not so protected.

Limit of Sprinkler Leakage Insurance.—The limit of sprinkler leakage insurance is governed by the **amount of fire insurance carried** and is based on a percentage of such amount, the rates being so arranged that no advantage is gained by inadequate coverage under any arrangement. For example, if the required percentage of sprinkler insurance is 25% under the co-insurance arrangement, the rate would be at a minimum point, whereas with no co-insurance clause the rate would be at a maximum. Damage caused by sprinkler leakage rarely exceeds 25% of the total value of property. Actual conditions as they affect the possibility of damage and the nature of the property should govern the extent of protection necessary.

SPRINKLER LEAKAGE POLICY—FORM B

STOCK COMPANY

No. S.L..... $.....

THE BLANK FIRE INSURANCE COMPANY OF NEW YORK

Amount $..... Rate..... Premium $.....

In Consideration of the Stipulations herein named

and of ..... Dollars Premium

does insure .....

and legal representatives, to the extent of the actual cash value (ascertained with proper deductions for depreciation) of the property at the time of loss or damage, but not exceeding the amount which it would cost to repair or replace the same with material of like kind and quality within a reasonable time after such loss or damage, without allowance for any increased cost of repair or reconstruction by reason of any ordinance or law regulating construction or repair and without compensation for loss resulting from interruption of business or manufacture, for the term of ..... from the ..... day of ..... 19.., at noon, to the .....day of ..... 19.., at noon, against all DIRECT LOSS AND DAMAGE BY "SPRINKLER LEAKAGE," except as herein provided, to an amount not exceeding .....

..... Dollars, to the following described property while located and contained as described herein, but not elsewhere, to wit:

.....

.....

This policy is made and accepted subject to the foregoing stipulations and conditions, and to the stipulations and conditions printed on the back hereof, which are hereby made a part of this policy, together with such other provisions, stipulations and conditions as may be endorsed hereon or added hereto as herein provided.

In Witness Whereof, this Company has executed and attested these presents; but this policy shall not be valid until countersigned by the duly authorized Agent of the Company at.....

Countersigned at.....

this ..... day of ..... 19.. .....Agent

Sprinkler leakage. Wherever in this policy the term "Sprinkler Leakage" occurs, it shall be held to mean leakage, discharge or precipitation of water from the "Automatic Sprinkler System," resulting in loss or damage, to property described herein, whether the "Sprinkler Leakage" originates in the portion occupied by the insured or not, including "Sprinkler Leakage" caused by freezing.

Automatic sprinkler system. Wherever in this policy the term "Automatic Sprinkler System" occurs, it shall be held to mean the automatic sprinkler heads, sprinkler pipes, valves and fittings, tanks, pumps and underground mains supplying the automatic sprinklers, within the premises described herein; but does not include non-automatic sprinkler systems, hydrants, standpipes, hose or service pipes, and/or connections thereto, nor any part of the extinguishing or service equipment other than the "Automatic Sprinkler System."

Damage to automatic sprinkler system. This Company shall not be liable for loss or damage to the "Automatic Sprinkler System," unless liability is specifically assumed hereon for a stated amount, under a separate item, mentioning no other kind of property.

Fraud, misrepresentation, etc. This entire policy shall be void if the insured has concealed or misrepresented any material fact or circumstance concerning this insurance or the subject thereof; or in case of any fraud or false swearing by the insured touching any matter relating to this insurance or the subject thereof, whether before or after a loss.

Hazards not covered. This Company shall not be liable for loss or damage caused directly or indirectly by fire, lightning, cyclone, tornado, windstorm, earthquake, explosion, including explosion and/or ruptures of steam boilers and fly-wheels, blasting, invasion, insurrection, riot, civil war or commotion, or military or usurped power, or by order of any civil authority; or by theft; or by neglect of the insured to use all reasonable means to save and preserve the property at and after a "Sprinkler Leakage."

Fall of building. If a building, or any material part thereof, fall except as the result of "Sprinkler Leakage," all insurance by this policy on such building or its contents shall immediately cease.

Added clauses. The extent of the application of insurance under this policy and of the contribution to be made by this Company in case of loss or damage, and any other agreement not inconsistent with or a waiver of any of the conditions or provisions of this policy, may be provided for by agreement in writing added hereto.

Uninsurable property. This policy shall not cover accounts, bills, currency, deeds, evidence of debt, money, notes or securities.

Excepted property. This Company shall not be liable to an amount exceeding 10% of this policy for loss or damage to manuscripts, models, mechanical drawings, lasts, dies or patterns, unless liability is specifically assumed hereon for a stated amount, under a separate item, mentioning no other kind of property.

This entire policy shall be void, unless otherwise provided by agreement in writing added hereto,

Ownership, etc. (a) if the interest of the insured be other than unconditional and sole ownership; or (b) if the subject of insurance be a building on ground not owned by the insured in fee simple; or (c) if, with the knowledge of the insured, foreclosure proceedings be commenced or notice given of sale of any property insured hereunder by reason of any

mortgage or trust deed; or (d) if any change, other than by the death of an insured, take place in the interest, title or possession of the subject of insurance (except change of occupants without increase of hazard); or (e) if this policy be assigned before a loss.

Unless otherwise provided by agreement in writing added hereto this Company shall not be liable for loss or damage,

Repairs, alterations and extensions. (a) from repairs, alterations and/or extensions to the "Automatic Sprinkler System," buildings or premises, except that ordinary minor repairs necessary to the care and maintenance of the "Automatic Sprinkler System," buildings or premises, are permitted; or

Unoccupancy. (b) while a described building is vacant or unoccupied; or

Chattel mortgage. (c) to any property insured hereunder while incumbered by a chattel mortgage, and during the time of such incumbrance, this Company shall be liable only for loss or damage to any other property insured hereunder.

Waiver. No one shall have power to waive any provision or condition of this policy except such as by the terms of this policy may be the subject of agreement added hereto, nor shall any such provision or condition be held to be waived unless such waiver shall be in writing added hereto, nor shall any provision or condition of this policy, or any forfeiture be held to be waived by any requirement, act or proceeding on the part of this Company relating to appraisal or to any examination herein provided for; nor shall any privilege or permission affecting the insurance hereunder exist or be claimed by the insured unless granted herein or by rider added hereto.

Cancellation of policy. This policy shall be cancelled at any time at the request of the insured, in which case the Company shall, upon demand and surrender of this policy, refund the excess of paid premium above the customary short rates for the expired time. This policy may be cancelled at any time by the Company by giving to the insured a five days written notice of cancellation with or without tender of the excess of paid premium above the pro rata premium for the expired time, which excess, if not tendered, shall be refunded on demand. Notice of cancellation shall state that said excess premium (if not tendered) will be refunded on demand.

Pro rata liability. This Company shall not be liable for a greater proportion of any loss or damage than the amount hereby insured shall bear to the whole insurance covering the property, whether valid or not and whether collectible or not.

Noon. The word "noon" herein means noon of standard time at the place of loss or damage.

Requirements in case of loss. The insured shall give immediate notice, in writing, to this Company, of any loss or damage, protect the property from further damage, forthwith separate the damaged and undamaged personal property, put it in the best possible order, furnish a complete inventory of the destroyed, damaged and undamaged property, stating the quantity and cost of each article and the amount claimed thereon; and, **the insured shall, within sixty days after the "sprinkler leakage," unless such time is extended in writing by this Company, render to this Company a proof of loss,** signed and sworn to by the insured, stating the knowledge and belief of the insured as to the following: the time and cause of the "Sprinkler Leakage," the interest of the insured and of all others in the property, the cash value of each item thereof and the amount of loss or damage thereto, all other contracts of insurance, whether valid or not, covering any of said property, any changes in the title, use, occupation, location or possession, of said property since the issuing of this policy, by whom and for what purpose any building herein described and the several parts thereof were occupied at the time of the "Sprinkler Leakage"; and shall furnish a copy of all the descriptions and schedules in all policies and if required, verified plans and specifications of any building, fixtures or machinery destroyed or damaged. The insured, as often as may be reasonably required, shall exhibit to any person designated by this Company all that remains of any property herein described, and submit to examinations under oath by any person named by this Company, and subscribe the same; and, as often as may be reasonably required, shall produce for examination all books of account, bills, invoices, and other vouchers, or certified copies thereof, if originals be lost, at such reasonable time and place as may be designated by this Company or its representative, and shall permit extracts and copies thereof to be made.

Appraisal. In case the insured and this Company shall fail to agree as to the amount of loss or damage, each shall, on the written demand of either, select a competent and disinterested appraiser. The appraisers shall first select a competent and disinterested

umpire; and failing for fifteen days to agree upon such umpire then, on request of the insured or this Company, such umpire shall be selected by a judge of a court of record in the state in which the property insured is located. The appraisers shall then appraise the loss and damage stating separately sound value and loss or damage to each item; and failing to agree, shall submit their differences only, to the umpire. An award in writing, so itemized, of any two when filed with this Company shall determine the amount of sound value and loss or damage. Each appraiser shall be paid by the party selecting him and the expenses of appraisal and umpire shall be paid by the parties equally.

Company's options. It shall be optional with this Company to take all, or any part, of the articles at the agreed or appraised value, and also to repair, rebuild, or replace the property lost or damaged with other of like kind and quality within a reasonable time, on giving notice of its intention so to do within thirty days after the receipt of the proof of loss herein required; but there can be no **abandonment** to this Company of any property.

When loss payable. The amount of loss or damage for which this Company may be liable shall be payable sixty days after proof of loss, as herein provided, is received by this

Permit for Assignment of Interest.

(Actual Sale and Transfer of Title.)

NOTE—*To Secure Mortgagees, if desired, the Policy should be made payable on its face to such Mortgagee, as follows: Loss, if any, payable to* JOHN DOE, *Mortgagee, as per "Collateral Security Clause."*

The interest of ..... as owner of the property covered by this Policy is hereby assigned to ..... present owner, subject to the consent of The Blank Fire Insurance Company of New York.

Dated ..... 19.. .....Assured.

The Blank Fire Insurance Company of New York hereby consents that the interest of ..... as owner of the property covered by this Policy be assigned to ..... present owner, all other terms and conditions remaining unchanged.

Dated ..... 19.. .....Agent.

Collateral Security Clause.

The Blank Fire Insurance Company of New York is hereby requested by the assured to make loss, if any, under this Policy payable to ..... of ..... Mortgagee , to the extent of ..... interest may appear, subject nevertheless to all the conditions of this Policy.

Dated ..... 19.. .....Assured.

At the request of the assured, loss, if any, under this Policy is made payable to ..... Mortgagee , as ..... interest may appear, subject nevertheless to all the conditions of this Policy.

Dated ..... 19.. .....Agent.

Removal Endorsement.

Permission is hereby granted to remove the property insured by this Policy to the

..... story ..... roof .....

building, occupied as .....

and situate .....

.....

and this Policy is hereby made to cover same property in new locality, all liability in former locality to cease from this date.

New Location shown on Map, Sheet ..... Block ..... No. .....

New Rate ..... Additional Premium, $.....

Old Rate ..... Return Premium, $.....

Dated ..... 19.. ..... Agent.

Company and ascertainment of the loss or damage is made either by agreement between the insured and this Company expressed in writing or by the filing with this Company of an award as herein provided.

Suit. No suit or action on this policy, for the recovery of any claim, shall be sustainable in any court of law or equity until after full compliance by the insured with all the foregoing requirements, nor unless commenced within twelve months next after the "Sprinkler Leakage," provided that where such limitation of time is prohibited by the laws of the State wherein this policy is issued, then and in that event no suit or action under this policy shall be sustainable unless commenced within the shortest limitation permitted under the laws of such State.

Subrogation. This Company may require from the insured an assignment of all right of recovery against any party for loss or damage to the extent that payment therefor is made by this Company.

PROFITS INSURANCE.—The protection provided for by fire insurance is against financial loss resulting from loss or damage to property by fire. The reimbursement is based on the value of the property destroyed and does not include profits which would have resulted from sale or use of such property but for the fire. Profits insurance furnishes this additional protection.

Great care is exercised by insurance organizations in the selection of risks. The **moral hazard is great** since the insured is certain of the same profits in the event of a fire as he would have realized when the merchandise had been disposed of and the proceeds of sale collected.

USE AND OCCUPANCY INSURANCE.—In the event of a fire which causes total or partial suspension of business the owner would sustain a loss of the net profits which would have resulted but for the interruption or diminution of its productivity through the fire. In addition to the loss of the net profits the business would be compelled to pay certain expenses that would continue regardless of the amount of business done. Indemnification against such losses as these is the purpose of use and occupancy insurance.

If there is a fire loss or damage which does not cause an interruption of business, there may be a loss of profits but this loss is not covered by use and occupancy insurance. Profits insurance previously described provides indemnity in such cases.

Basis of Use and Occupancy Insurance.—As stated, the indemnification of loss of net profits and fixed expenses is the purpose of use and occupancy insurance. Therefore, it is necessary to know what these losses might be in the event of a fire in order to adequately cover them. Where previous experience exists, a sound estimate can be made which must consider the trend of business. Where there was no previous experience, an **estimate** may be made **on the basis of like concerns and on the operating policies and budgets of the business.** The total of such an estimate is the basis of insurance and should be the total liability which the business should ask the insurance company to assume. Expenses necessary to reduce the loss under the policy are to be considered as being subject to indemnification.

THE LIABILITY ASSUMED BY THE INSURANCE COMPANY.—The insurance company assumes a total liability not to exceed the "actual loss sustained" which, however, cannot be in excess of the total liability agreed upon and stated in the policy. This amount divided by 300 is the **maximum per diem liability** assumed by the company unless it is agreed that where the business operates Sundays and holidays, 365 will be used. However, special clauses may be used which consider seasonal fluctuations. In such cases, the periods and the per diem liability applicable to each period are specifically listed in the policy.

In the event of a fire causing **total suspension,** the per diem liability assumed by the company or insurer is limited to the actual loss, not to exceed the per diem liability assumed by the company for each business day of such total suspension, due consideration being given to the experience before the fire and the probable experience thereafter.

During the time of **partial suspension** resulting from a fire, the company's liability is limited to that proportion of the per diem liability, which the decrease in production or business bears to the full daily production or business of all properties or plants described in the policy for a specific number of days of full operations next preceding the fire.

The following illustrates the computation of loss:

Full production, average for number of days stipulated	10,000 units
Production during partial suspension or operation....	8,000 units
Decrease in production.....	2,000 units
Company's liability, loss per day full production.....	$1,000
Loss per day collectible:	
$\frac{2,000}{10,000}$ or $1/5 \times \$1,000 = \$200$ per day	

IMPORTANCE OF ADEQUATE INSURANCE.—It must be borne in mind that the company's per diem liability is fixed, and only the proportion of this liability which the decrease in production or business bears to full production (an average of the actual full production or business) is collectible. Therefore, if the insured has failed to ask the company to assume an adequate amount of liability, he cannot expect to be reimbursed on the basis of full coverage. Using the preceding illustration, assume that the actual full production or business indicated that profits and expenses, etc., were $2,000, instead of the $1,000 which the insured covered. It is evident that the insured will only get 1/5 of $1,000, or $200 per day while his actual loss is 1/5 of $2,000, or $400 per day. It is, therefore, important that the business executive should keep his records so that he can adjust his insurance when the coverage is likely to prove inadequate.

HOW TO ASCERTAIN ADEQUATE COVERAGE.—The following is designed for use in the determination of the amount of use and occupancy insurance which should be adequate, without regard to the nature of the busi-

ness. The necessary modification can be made to adapt it to any particular business.

Estimated gross earnings for the most convenient period based on estimated production or sales, according to the nature of business, for the same period, anticipating market conditions	$.....
Less:	
Estimated cost of sales during the same period and basis as above	.....
Estimated Gross Profits	$.....
Deduct total of expenses which will and will not continue if business is suspended, taken from Col. 3, Schedule below	.....
Net profits, to be covered	$.....
Add. Total of Col. (1) Expenses which will continue	.....
Total coverage for period (if less than a year adjust to a yearly total)	$.....

To arrive at the per diem liability divide the totals by the number of business days in the period used.

Schedule of Expenses

	To Continue during Suspension (1)	Ceasing during Suspension (2)	Total (3)
Salaries and Wages:			
Executives	$.....	$.....	$.....
Superintendents	.....	.....	.....
Foremen	.....	.....	.....
Salesmen	.....	.....	.....
Employees generally	.....	.....	.....
Fixed Charges:			
Interest on mortgages (See note below in case of total destruction of property)*	.....	.....	.....
Interest on other indebtedness	.....	.....	.....
Dividends on cumulative preferred stock	.....	.....	.....
Rent or equivalent expenses	.....	.....	.....
Taxes (not including federal and state income taxes)	.....	.....	.....
Heating and lighting	.....	.....	.....
Insurance	.....	.....	.....
Telephone	.....	.....	.....
Other expenses	.....	.....	.....
Total	$.....	$.....	$.....

* Interest on mortgages which will be paid, in the event of total destruction of property, from the proceeds of fire insurance settlement, not to be included.

Separate Policies for Independent Plants or Units.—Where a business conducts several plants in different locations or units in the same location, performing distinctly different operations which may be continued independently, it is advisable to cover them under separate policies. This is particularly advisable where the real profits of the units may vary to any appreciable extent from one another; or where one or more plants are operating at a loss. It is advisable, however, to include under **one policy coverage** for all plants or units which are interdependent even to the extent of including **plants of other concerns** the product of which is essential to the continuous operation of the business.

REASONABLE TIME TO REPAIR OR REPLACE.—The policy provides that the loss liability of the company is limited to an amount of actual loss sustained for such a period as would be reasonably required to repair or replace the property destroyed or damaged.

USE AND OCCUPANCY ENDORSEMENTS.—Endorsements may be made in connection with riot and civil commotion, tornado, flood, explosion, fly wheel or boiler insurance, to cover use and occupancy indemnification.

EXPECTED CHANGES IN THE FORM OF USE AND OCCUPANCY POLICIES.—At the time of writing, July 1925, revolutionary changes are contemplated in the form of use and occupancy policies. While the form given has not been finally adopted as a standard, insurance has been written under the conditions stipulated therein by some reciprocal companies and by at least one stock company. It is expected that the form will be generally adopted substantially as it is.

The main differences from the existing form of policies are discussed below.

The proposed form **eliminates the per diem** liability. In place of this liability the proposed plan introduces a co-insurance basis which is set forth under the caption of **"Reduced Rate Contribution Clause"** in the specimen form embodied hereinafter. It is stipulated in this clause as follows:

"In consideration of the reduced rate at which this policy is written, it is expressly agreed that the Company shall be liable for no greater proportion of any loss than the amount of this policy bears to — per cent (—%) of the amount of Use and Occupancy value of the property herein described, such Use and Occupancy value being based on complete cessation of business for the period of twelve (12) months immediately following the fire."

Use and Occupancy Policy

....., INCORPORATED

As the Corporation is now or may hereafter be constituted

$..... On the Use and Occupancy of the Property described below.

The conditions of this contract are that if the buildings situate bounded by ..... Street, ... Street, and ..... Street, known as the ....., and occupied as ....., and/or machinery and/or equipment and/or stock contained therein, be destroyed or damaged by fire and/or lightning, occurring during the term of this policy so as to necessitate a total or partial suspension of business, this Company shall be liable under this Policy for the ACTUAL LOSS SUSTAINED, consisting of:

I. Net Profits on the business which is thereby prevented:
II. Such fixed charges and such expenses as would have been earned if operations had not been prevented or reduced:
III. Such expenses as are necessarily incurred for the purpose of reducing the loss under this policy:

For not exceeding such length of time as shall be required, with the exercise of due diligence and dispatch, to rebuild, repair or replace such part of said buildings and/or machinery and/or equipment and/or stock as may be destroyed or damaged (commencing with the date of the fire and not limited by the date of expiration of this policy), subject to the following conditions and limit, to-wit:

REDUCED RATE CONTRIBUTION CLAUSE

In consideration of the reduced rate at which this policy is written, it is expressly agreed that this Company shall be liable for no greater proportion of any loss than the amount of this policy bears to ninety per cent (90%) of the amount of the Use and Occupancy value of the property herein described, such Use and Occupancy value being based on complete cessation of business for the period of twelve (12) months immediately following the fire.

SPECIAL CONDITIONS

It is a condition of this insurance that:

A. Only so much of the Assured's payroll shall be covered as may be under contract or may be necessary to conserve the Assured's business organization for the purpose of prop-

erly resuming the normal business of the Assured with the same quality of service as existed immediately preceding the fire, not exceeding, however, the following percentages of payroll, to which extent the Assured hereby agrees to carry insurance in order to comply with the co-insurance clause incorporated in this policy:

1. Officers and executives, including buyers, department managers, assistant department managers, and honor roll..... 100% for full year.
2. All other payroll..... 100% for first three months.

B. In computing any loss under this policy, due consideration shall be given to the experience of the business before the fire and the probable experience thereafter.

C. The word "business" wherever used in this contract shall be construed to mean: "The carrying on of the business operations usual to the class of the Assured."

D. The Liability hereunder shall not exceed the amount of insurance by this policy, nor a greater proportion of any loss, than the insurance hereunder shall bear to all insurance, whether valid or not, and whether collectible or not, covering in any manner the loss insured against by this policy.

E. The assured shall not be entitled to compensation on account of delay which may be occasioned by any ordinance or law regulating construction or repair of buildings or by the suspension, lapse or cancellation of any license or lease.

F. As soon as practicable after any loss, the assured shall resume complete or partial operation of the property herein described and shall make use of other suitable property if obtainable, if by so doing the amount of loss hereunder will be reduced, and in the event of the assured continuing business (in whole or in part) at some other location, or using other property during the time occupied in repairing or reconstructing the property herein described, the results of the operations so conducted shall be taken into consideration in adjusting the loss under this policy.

G. Surplus machinery or duplicate parts thereof, equipment or supplies, and surplus or reserve stock, which may be owned, controlled or used by the assured shall, in the event of loss, be used in placing the property in condition of continuing or resuming business.

H. If this policy covers liability for suspension of business due to damage to or destruction of building, machinery and equipment only, this Company shall not be liable for any loss due to damage to or destruction of finished product and/or such materials as enter into and become part of the finished product.

I. If an immediate adjustment of any loss under this policy cannot be agreed upon, payments on account shall be made on the 15th of each calendar month following such loss. These monthly payments shall be as large as is compatible with the progress of the adjustment from month to month, but such monthly payments shall be made without prejudice to the final adjustment of the loss.

J. Any adjusted claim for loss under Paragraph III above, insuring expenses incurred for the reduction of any loss under this policy, shall not be included in computing the operation of the co-insurance clause herein, but such adjusted claim shall be admitted and paid provided the total insurance carried under this form shall be sufficient to cover the total adjusted loss, and provided such adjusted claim does not exceed the reduction of loss affected by such expenditure.

SPECIAL PRIVILEGES

Permission for other insurance; to use electricity, natural gas and steam for light and/or heat and/or power.

Privilege for present and other occupancies not more hazardous and to do such work and to keep and use such materials as are usual in such occupancies.

Privilege is hereby granted to have and use not exceeding one quart of gasoline, same to be kept in approved metal cans.

PERMIT FOR EXTRAORDINARY ALTERATIONS AND REPAIRS
(Sprinklered Risks)

In addition to the 15 days granted by the printed conditions of this policy, permission is hereby given for 60 days at any one time, to make alterations, additions or repairs, and

this policy (so far as it applies on buildings) shall also cover in accordance with the conditions of this policy all materials and supplies therefor, therein and adjacent, and such alterations or additions and (so far as it applies on contents) shall extend and cover in such additions.

It is understood and agreed that the terms and conditions of the "Automatic Sprinkler Clause" if attached to this policy shall remain in force and effect.

PERMIT FOR AUTOMOBILES TO ENTER PREMISES—"D"

In consideration of the compliance by the insured with the following warranties, permission is hereby given for automobiles while engaged in the transaction of livery or freight or delivery business to enter buildings described in this policy.

WARRANTIES:

1—That no claim shall be made for loss or damage to an automobile or any of its parts unless such automobile is specifically mentioned as insured under this policy.

2—That automobiles entering premises under the above permit shall remain only so long as may be necessary to load and/or unload, except that where the needs of the business occasionally require they may remain over night, a holiday, or a Sunday.

3—Unless otherwise permitted by endorsement hereon there shall be no gasoline kept on the premises, except that contained in the reservoirs of the automobiles.

4—That no gasoline reservoir of an automobile shall be opened, emptied or filled while on the above-mentioned premises, nor shall repair work be done to automobiles.

The term "gasoline" shall be held to include naphtha, benzine or any of the light products of petroleum by whatever name known.

The permission hereby granted is operative only when not in violation of any law, statute or municipal restriction.

LIGHTNING AND ELECTRICAL EXEMPTION CLAUSES

LIGHTNING CLAUSE: Except as provided in the Electrical Exemption Clause below this policy shall cover use and occupancy loss caused by lightning (meaning thereby the commonly accepted use of the term lightning and in no case to include loss or damage by cyclone, tornado or windstorm), not exceeding the sum insured, nor the interest of the insured in the property, subject to the terms and conditions of this form and the policy to which it is attached. Provided, however, if there shall be any other use and occupancy insurance on said property, this Company shall be liable only pro rata with such other insurance for any use and occupancy loss by lightning, whether such other insurance be against loss by lightning or not.

ELECTRICAL EXEMPTION CLAUSE: It is a special condition of this policy that this Company shall not be liable for any use and occupancy loss resulting from any electrical injury, disturbance or damage to dynamos, exciters, lamps, switches, motors or other electrical appliances or devices whether from artificial or natural causes, unless fire ensues, and then only for such use and occupancy loss as may be caused by such ensuing fire; this limitation to be operative notwithstanding any provision to the contrary in the lightning clause attached.

WATCHMAN AND CLOCK CLAUSE

No. 1. In consideration of a reduced rate of premium it is hereby warranted that the insured shall maintain an approved watchman's service with approved recording stations or watch clock at such times as the premises are not in actual operation.

AUTOMATIC SPRINKLER CLAUSE

This policy being written at a rate based on the protection of the premises by the Sprinkler System, it is a condition of this policy that, in so far as the Sprinkler System and the water supply therefor are under the control of the assured, due diligence shall be used by the assured to maintain them in complete working order, and that no change shall be made in the said system or in the water supply therefor without the consent of this Company in writing.

SPRINKLER SUPERVISORY CLAUSE

The Automatic Sprinkler Equipment in the within described premises, having been equipped with the Central Valve Alarm and Sprinkler Supervisory System, in full compliance with the rules and regulations of the Board of Fire Underwriters of ..... County, and a certificate issued to that effect, this policy is written at a reduced rate, in consideration of which it is warranted by the assured that due diligence shall be used in maintaining the equipment during the life of this policy.

Attached to and made a part of Policy No. .....
of the ..... Insurance Company of
.....

.....
Agents.

APPLICATION OF THE CO-INSURANCE CLAUSE.—It will be necessary under the proposed form to ascertain the use and occupancy value of the property insured. The form heretofore suggested for this purpose, as applying to the present form, may be used. This information in summary form with values inserted is shown in the following:

Net profits anticipated for 12 months after fire	$100,000
Fixed charges and expenses	100,000
	$200,000
Adequate use and occupancy coverage with a 90% co-insurance requirement	$180,000

In the event of a loss at a time when the use and occupancy value of the property covered was $200,000 (after due consideration was given to the experience of the business before the occurrence and the probable experience thereafter), and the insured was covered up to $180,000, the company could be liable only for the full amount of the actual loss sustained not to exceed $180,000.

Examples illustrating cases employing 80%, 90% and 100% Co-insurance Clauses carrying Adequate and Inadequate Coverage under Proposed Plan

	80% Co-Insurance	90% Co-Insurance	100% Co-Insurance
U. & O. Value for 12 months immediately succeeding occurrence	$200,000	$200,000	$200,000
Total liability which can be assumed by company	160,000	180,000	200,000
ADEQUATE COVERAGE			
Amount of Insurance carried	$160,000	$180,000	$200,000
PARTIAL SUSPENSION:			
Actual loss	72,000	72,000	72,000
Amount of loss collectible	72,000	72,000	72,000
Loss not reimbursed	—	—	—
TOTAL SUSPENSION EXTENDING OVER 12 MONTHS:			
Actual loss	$200,000	$200,000	$200,000
Amount of loss collectible	160,000	180,000	200,000
Amount of loss not reimbursed	$ 40,000	$ 20,000	—
INADEQUATE COVERAGE			
Amount of Insurance carried	$100,000	$100,000	$100,000
PARTIAL SUSPENSION:			
Actual loss	72,000	72,000	72,000
Amount of loss collectible	$^{10}/_{16}$ 45,000	$^{10}/_{18}$ 40,000	$^{1}/_{2}$ 36,000
Amount of loss not reimbursed	$ 27,000	$ 32,000	$ 36,000
TOTAL SUSPENSION EXTENDING OVER 12 MONTHS:			
Actual loss	$200,000	$200,000	$200,000
Amount of loss collectible	100,000	100,000	100,000
Amount of loss not reimbursed	$100,000	$100,000	$100,000

It is estimated that 90% of losses result from partial suspension.

RENT INSURANCE.—Rent insurance is designed to protect a landlord against the **loss of income from rents** which results in the event of a fire. The insured becomes entitled to the actual loss of rentals suffered through the building becoming untenantable, in whole or in part, by reason of a fire, but such loss cannot exceed the amount of insurance stated in the policy. The insured usually agrees to either carry rent insurance equal to 100 per cent of the rents or to have his indemnity reduced proportionately.

Leasehold Interests.—This coverage is also extended to leasehold interests insuring the amount of **rents accruing to the lessee** including any profit made by the lessee in subletting the premises.

Owner of Building on Leased Ground.—The owner of a building set up on leased ground may protect himself against losses of rentals by fire, through rent insurance.

LEASEHOLD INSURANCE.—This form of insurance was intended to protect a lessee against loss in the event of fire, caused by the **cancellation of an advantageous lease,** necessitating the leasing of new premises at a rental in excess of the rental paid on the cancelled lease. It is based upon the unexpired term of the lease and the value of the excess over general rentals for like property in such a location. For example, a 20-year lease is entered into on Jan. 1, 1914, for a building with 200,000 square feet of floor space at a rental of $1 per square foot per year. The same amount of space in the immediate vicinity costs $1.20 per square foot at the end of 1923. On the first day of 1925, the lease having 10 years to run, the lessee would have a leasehold insurance value of $.20 per square foot per year for ten years or as long as rental values in that location remained at the same level, which reduced to yearly value, would be $40,000 per year or a total value for the unexpired term of the lease of $400,000, this value decreasing proportionately as time elapses. At the end of 1924 the value would be $360,000—and so forth.

CONTINGENT LIABILITY INSURANCE.—A contingent liability arising from responsibility for property of others may be protected against loss or damage by fire or sprinkler leakage through contingent liability insurance. The owner of a building in some cases may be liable for loss or damage to property of tenants caused by either of these hazards. Common carriers, whose responsibility for property in the course of transportation continues until delivery is effected, are in most cases liable for loss or damage to property accepted for transportation regardless of the location of the undelivered property at the time of loss or damage.

Life Insurance

Life insurance differs from fire insurance in purpose as well as in principle of indemnity. A life insurance contract is entered into by the insured for the benefit of a third party. The loss insured is not the loss of life but the loss, by reason of death, of the insured's earnings as a source of support or income to the third party beneficiary. The amount of insurance is always basically a sum fixed in advance, which, however, may be paid in various forms.

VALUE OF LIFE INSURANCE IN BUSINESS.—Other forms of insurance such as fire, marine, burglary, etc., have become recognized business necessities, because they provide for reimbursement for losses which may occur in connection with assets. Not until recently has the business world realized that the loss of probably the most important and valuable asset in all businesses was

not insured against. The loss of the ability of important members of business organizations has forced many concerns to close their doors. In most cases the loss of tangible assets may be easily repaired, but the loss of sound business judgment, personality and ability peculiar to a particular business, while it cannot be definitely estimated beforehand, may be vital and in many cases cannot be readily replaced.

The success of many concerns is mainly **dependent upon confidence**—confidence on the part of investors, customers, employees and creditors. The death of an individual controlling a large part of the capital invested in a business, in many cases, has caused its collapse despite the existence of an organization with the necessary ability to conduct the business successfully. Confidence of creditors is shaken and they immediately start action to safeguard their interests. The employees in turn, fearing unemployment, start looking for other apparently more secure positions. Frequently the most efficient men of the organization take this step.

Even though the capital is assured to the business, the viewpoint of those appointed to control the estate of the deceased may be such as to hamper the business. Business insurance on the lives of important officials, whether important on account of their financial holdings or their ability, places in the hands of the remaining members of the organization, exactly when needed, the vitally necessary funds to counteract these detrimental effects. They will then be in a position to settle with the estate, avoiding possible unpleasant interference or, as in the case of loss of ability or judgment, offer proper inducement to replace the lost ability.

Illustration of Operation of Life Insurance in Business.—To illustrate the beneficial operation of life insurance in business, assume a partnership between A and B. A has the necessary capital and B the necessary ability successfully to conduct the business, which will be assumed to have been in successful operation. Both partners carry adequate life insurance payable to the other in the event of death. The premiums are paid from the funds of the concern. The cash or loan value of the policies increases yearly, providing an increasing financial reserve which may be available for use in times of necessity. If A dies, B will receive the insurance and have sufficient to pay A's estate one hundred cents on the dollar, creditors will be assured of the continuation of the business on an even keel, employees of their positions, customers of their deliveries and the fulfillment of contracts. If B dies, A will receive the insurance and have sufficient funds to meet losses which are bound to occur until B's ability can be replaced.

Federal Reserve banks recognizing the value of such protection have incorporated in their loan application blanks a query as to the amount of life insurance carried for the benefit of the business. **Mercantile agencies** include information of this kind in their financial reports.

VALUE OF LIFE INSURANCE AS A SOCIAL FACTOR.—The value of life insurance as a factor of social betterment cannot be overestimated. The gradually increased employment of this medium as a means of eliminating dire want by providing continuation of income or support, has resulted in higher standards of living, education and health among the many families from which the wage earner has been taken by death. As a means of cultivating thoughtfulness, unselfishness and thrift among a great many people, life insurance has been an important factor.

LIFE INSURANCE ORGANIZATIONS.—There are four main types of organizations conducting life insurance as a business, viz:

Stock companies
Mutual companies
Fraternal societies
Industrial companies

Stock Companies.—Corporations formed for the specific purpose of conducting the business of life insurance for profit are termed stock companies. The stockholders provide a sufficient **amount of capital** to get the business under way and guarantee the fulfillment of its contracts in the event of insufficient accumulation from the premiums collected. Stock companies operate either on a strictly stock plan—non-participating—or on a mixed plan—participating and non-participating.

(a) **Non-Participating Plan.**—Stock companies operating under a non-participating plan use the same fundamental basis of arriving at the premiums required, but add only a moderate loading to cover cost of running the business, to meet extraordinary losses and to provide a return on the money invested by the stockholders. **No refund of premiums** due to savings from reduced mortality or economical operation is made to the policy holders.

(b) **Mixed Plan.**—Stock companies operating under a mixed plan will issue policies on the participating as well as the non-participating basis. Policies issued on the participating basis bear a heavier load, resulting in rates which are much higher than those issued on the non-participating basis, because it is expected that **refunds will be made** to the policy holders of a part of the savings effected in such policies.

Mutual Companies.—Companies operating under a mutual plan have no stockholders and if properly conducted are managed **for the benefit of the policy holders** exclusively. Premiums are usually higher than those charged on the stock plan; but refunds are made annually after the policy is in force from 1 to 3 years, according to the operating plan. Any saving due to reduced mortality or economical operation is passed on to the policy holders reducing the ultimate cost of insurance.

Fraternal Societies.—Fraternal societies conduct insurance divisions providing insurance to their members at a low rate. Until recently no legal reserve was carried. They collected from the members a total amount equal to the current mortality costs. As the individual organization grew older so did their members, increasing the average age. The probability of death grew rapidly and many societies had to dissolve, on account of heavy mortality; others either increased their premiums or reduced the benefits. The stronger associations maintained their insurance through aid of new members, on the basis of fraternal relationship, standing by their brothers in time of financial difficulty. However, many of these societies **have adopted the legal reserve plan** on a modified basis and use mortality tables based on the combined experience of various fraternal societies. Several states have recently enacted laws which require that fraternal societies bring their reserves up to an adequate basis within a stipulated period. As there are no agents' commissions to pay and under efficient management expenses are lower than in other forms of organizations, the future possibilities of fraternal insurance are favorable.

Industrial Companies.—Industrial companies came into existence through the recognition of the great need of **insurance among the wage earners** who were unable to pay, at any one time, the premiums required by some of the other forms of organizations. They are regular organizations, conducting business on a sound basis, but under a special system adopted to the character of their service to policy holders. The name "industrial" was adopted, because it was designed for the industrial classes. Several of the large companies conduct industrial departments. Policies are usually issued for small amounts and

the premiums are collected from week to week by agents, rendering a great public service to the large number of wage earners.

WHAT LIFE INSURANCE CAN BE MADE TO DO.—Among the various uses to which life insurance may be put are the following:

1. **Personal:**
   - (a) **For thrift purposes:**
     - To accummulate funds for some specific object or purpose, with the assurance of its attainment or accomplishment, despite disability or death, such as—
       - Education of children, thereby amortizing the cost of education over a period of years.
       - Payment of a mortgage or debt at some definite date, or to guarantee payment in the event of death. To provide a retirement fund from earnings during the productive period.
   - (b) **For family protection:**
     - To provide an income for a dependent at an assured rate of interest higher than generally obtained with an equal degree of safety. The principal payable to other dependents on the demise of the first beneficiary.
     - **To provide funds:**
       - To pay accummulated bills or other debt.
       - To pay funeral expenses.
       - To pay inheritance taxes, thereby avoiding the forced sale of valuable property.
       - To continue salary of the earner in the form of an assured income.
       - To provide a business start or marriage settlement for children.
       - To assure an income in case of disability, providing thereby—
         - The continuance of the earner's salary in the event of disability through illness or accident.
         - Protection of provisions for all arrangements previously listed.
   - (c) **For charity:**
     - To perpetuate charities.
2. **Business:**
   - (a) On **lives of partners or corporate officers,** to provide funds in case of death:
     - To allay misgivings of investors and creditors.
     - To attract and secure needed ability to replace the one lost.
     - To reimburse losses during such replacement.
     - To settle with dependents of deceased partner or officer assuring them of 100 cents to the dollar by avoidance of liquidation and incidentally avoiding undesirable connection and interference with the business.
     - To replace financial support of deceased partner or officer.
   - (b) On **lives of invaluable employees** holding secret processes or possessing skill peculiar to their line, to provide reimbursement for losses which must necessarily occur after their death.
   - (c) On **employees generally:**
     - To provide incentive for co-operation and good will through continuance of salary during disability and continuance of salary to dependents for a definite period after death or a lump sum settlement.
     - To provide pensions.

(d) **On lives of debtors:**
To assure payment of indebtedness.

(e) **On lives of contracting parties:**
To assure compensation in the event of non-fulfillment of contract through death of other party.

LIFE INSURANCE RATES.—Premiums charged by the various types of organizations in this country vary, but the rates are based fundamentally on the same laws of average and mortality tables, with few exceptions, such as those used by fraternal societies, and co-operative associations. The premiums charged are made up as follows:

Natural premium: The **basic rate** used in common by all companies computed from mortality tables and brought to a level basis per annum.

Interest: Interest on premiums computed at a fixed rate compounded annually and used in reduction of the natural premium.

Loading: The estimated amount required annually to **defray expenses,** to **create a reserve** for contingencies, such as epidemics, and in the case of stock companies, a fair **return to stockholders** on their investment.

Premiums charged by **mutual companies** are always higher than those required by stock companies because they include in their loading charge a larger reserve for contingencies, such as epidemics, than do the stock companies. This is done so as not to place the burden of an epidemic or occurrence of any contingency on the policy holders entering in later years. However, **refunds** are made to the policy holders of the excess of such reserves over actual requirements, together with savings through economies and low mortality experience brought about by careful selection of risks. These refunds reduce the final cost of insurance, which cost never includes any profits or interest to stockholders on their investment, as there are no stockholders.

LEGAL RESERVE—DEFINITION.—The legal reserve in insurance is that sum of money set aside under the requirements of the laws of the states, which when increased by future interest and premiums will be **adequate to pay all the outstanding policies** of the company as they mature. The computation of this reserve naturally considers the **rate of interest** used in arriving at the premium. If the interest rate on which the premiums are based is higher, the portion set aside annually to satisfy the legal requirements will be less. This is so because the accumulation of the amount required at maturity would naturally require a smaller annual reserve if interest is computed at a higher rate of compound interest than if computed at a lower rate. Premiums on a 3½% basis should be lower than those on a 3% basis.

This being the case, policies written on a basis of a lower interest rate require the preservation of a larger legal reserve, which is regarded by the state as a trust fund and subject to its close supervision, affording additional security to the policy holders and their beneficiaries. Policy holders in a mutual company receive the benefit of the excess of interest earned over the estimated amount in the refunds made to them.

DISABILITY FEATURE.—The majority of life insurance companies, realizing the need of the insured for protection against permanent disability through illness or accident, introduced a disability feature in connection with their policies. Prior to the addition of the disability feature many policies lapsed through the inability of the insured to pay the premiums because they became disabled and consequently unproductive. Daily expenses were increased by doctor and druggist bills, savings were eaten up, and policies allowed to lapse at a time when they were most needed. Today the disability feature may

be added to the policy by payment of a comparatively small additional premium which provides, under the most generally used plan, the following:

1. Waiver of all premiums payable upon acceptance by the company of proof of total and permanent disability before age 60, and
2. Payment to the insured of a monthly disability annuity of 1% of full amount, starting on acceptance by the company of proof of such disability and continuing so long as disability lasts before maturity of the policy. Disability is considered permanent, in any event, if it continues for a period of over 90 days. Should the insured recover, premium payments are to be resumed and the policy will be continued under its original conditions.

The above payments do not affect the settlement of the policy; that is, they are not deductible.

There are several disability features varying from the above both in regard to rate of disability annuity and period of time required to establish presumably permanent disability.

DOUBLE INDEMNITY.—Within the past 10 years a double indemnity clause has been added by many life insurance companies to supplement the insurance they offer. It is now possible to secure twice the full amount of the policy for the beneficiary if the death of the insured is caused by **some outside accident.**

INSURABLE INTEREST.—As in other forms of insurance insurable interest is required. Insurable interest may arise from many causes but practically all causes are included under **three general classes:**

1. The interest of a person in his own life.
2. The interest arising from "love or affection" through blood relationship or marriage.
3. The interest arising through dependence on the life of the insured for income, pecuniary support or reimbursement.

SELECTION OF POLICIES.—There are a great many types of insurance policies designed to meet the requirements of different persons. Different kinds of policies are prepared not only with regard to financial outlay but also for different objectives and contingencies. By **expert selection or combinations of arrangements** a minimum outlay can be made to provide the most beneficial insurance protection. The differences which appear on comparison of the premiums or deposits required for the various types of policies are not indicative of lower rates or better protection except in providing a particular protection. These premiums are mathematically justified in every case, the premiums in all cases being based on cost.

It is highly important that the type of policy best suited to the circumstance and conditions affecting each individual case be selected. A careful analysis of needs and plans should always be made and a definite purpose assigned to each policy. Through lack of proper forethought, dissipation of funds, intended to provide a competency, has resulted in actual want. Not only should attention be given to the **kind of policy** but also to the **mode of settlement.** Unfair responsibility has been placed on beneficiaries through lack of proper consideration and forethought. Large sums of money have been placed unreservedly at the discretion of persons unaccustomed to financial management resulting in an average dissipation of 90% of all estates over $5,000 in the course of 5 years.

INSURANCE SERVICE.—Service rendered by the various insurance organizations is responsible for the unprecedented expansion of life insurance protection. This service extends during the life of the policy holders and can be continued through the lives of generations without any additional cost and a saving of administration expenses and taxes.

GENERAL TYPES OF POLICIES.—Various types of standard policies and arrangements are given hereinafter showing in each case some of the uses to which they are peculiarly adaptable.

1. Term Insurance.—This type of policy, having no thrift feature, is intended for protection only. It may be likened to fire insurance and is **issued for a specific term of years** not to exceed 20 years. The amount is payable only at death of the insured and ceases with that event, unless conversion privileges are taken advantage of or the policy is allowed to lapse. There are no surrender or loan values available at any time. The premiums are low. This type of policy may be used advantageously in the following cases:

To **protect a mortgage** insuring payment in the event of death.
As **collateral to guarantee payment of loans** or other indebtedness in the event of death.
To **guarantee a default payment** on the non-fulfillment of a contract through death of insured.
To provide adequate insurance for a period until circumstances permit of **conversion into some permanent form of insurance.** This usually can be done without further evidence of insurability, within a stipulated number of years.
To provide **reimbursement of expenditure** made on account of an individual for the attainment of a specific objective which would be lost in the event of his death before its attainment. In this class may be placed the working out of an idea, invention or enterprise.

In most companies when issued with the privilege of **converting** into some permanent form of insurance, it is possible to **date the new policy back** to the date of issue of the term policy, by paying the difference between the permanent-insurance and the term-insurance back premiums with interest. The rates, cash and loan values and refunds (in the case of a mutual company) being the same as those in policies issued at the time the term policy was issued.

2. Single Premium Insurance.—This arrangement is virtually a **prepayment of any form of insurance,** carrying it through to maturity. It is peculiarly adapted to wealthy individuals who wish to provide during prosperous periods protection which cannot be affected by adversity.

3. Ordinary Life.—This form of policy requires the **payment of premiums throughout the life of the assured,** unless a disability feature is incorporated, in which case premiums are waived if permanent disability from illness or accident occurs. This form is most generally used because a larger amount of insurance may be secured for the same financial outlay than any other form of permanent insurance.

4. Limited Payment.—This form of policy provides the same protection as an ordinary life policy. The premiums, however, are **limited to a certain number,** extending from 10 to 30 annual payments. This form is used to confine the payment of premiums to the productive period of life. It has a further advantage of **conversion into an endowment form** at the end of the paid-up period. This privilege is desirable in cases where the protection of dependents ceases to exist. The payment by the insured of the additional premiums would

entitle him to the face value of the policy property. In the mutual companies the insured can allow the refunds to which he is entitled during the payment period to accumulate at compound interest. At the end of this period the accumulation of refunds and interest in most cases would be approximately sufficient to pay the additional premiums necessary to secure the payment of the face amount in cash to himself.

5. **Endowment Policy.**—This is a **form of thrift** providing protection for dependents during its term and payment of the face amount to the insured or his beneficiary at maturity. It is **written for a limited term** which may be from 10 to 30 or more years. It may be used advantageously to accumulate a fund sufficient to defray the future cost of children's education, the amount necessary being guaranteed in the event of the death of the insured or at the end of the term of payments.

6. **Special Forms.**—There are several special forms of life insurance policies which may be combinations of some of the forms previously mentioned with the others or which may provide for the insuring of two or more lives jointly. This latter form of insurance is known as **joint life insurance,** and is paid at the first death.

ANNUITIES.—Annuities guarantee a definite income during the life of annuitant—the person to whom the annuity is payable. The principal classes of annuities are the following: life annuity, deferred annuity, and survivorship annuity.

A life annuity is usually paid for in advance. Annuity payments begin at the end of the first year after purchase and cease at death of the annuitant unless it is combined with a refund or cash refund plan. **The refund plan** stipulates a definite amount which must be paid out regardless of the date of annuitant's death, but must continue so long as the annuitant lives. In the event of the death of the annuitant before the stipulated amount shall have been disbursed, the annuities will be continued to the annuitant's beneficiary until totally disbursed. **The cash refund plan** is the same as the refund plan mentioned above except that the payment of the unabsorbed amount at credit of the policy is paid in a lump sum.

Deferred annuity begins at the end of a stipulated period of years or at the maturity of a life insurance contract.

The **survivorship annuity** is a form of deferred annuity, the payment of the annuity to the beneficiary being deferred until the death of the insured occurs.

Annuities may also be purchased on a due basis in which case the payments begin immediately. Arrangements may be made for payments of annuities in monthly instalments.

GROUP INSURANCE.—This form of insurance is now being extensively used by financial institutions, public utilities, hotels, department stores and a number of industries. It eliminates the necessity of contributions by the employer or other employees when death of an employee occurs. It has proved helpful in solving labor turnover problems, securing the goodwill of employees and their families, and in improving the social conditions among the families of employees.

The following plans of group insurance are among those chiefly used:

1. **A flat sum**—an equal amount of insurance to each employee.
2. **Insurance to the amount of 1 year's salary.**
3. **A service plan**—amounts of insurance based on **length of service.**

Funeral benefits may be added to the amount of insurance granted under any plan.

Illustration of service plans frequently used are given below:

Industrial Plants

$ 500	to employees	6	mos.	and	less	than	1	year	in	service
600	" "	1	year	"	"	"	2	"	"	"
700	" "	2	"	"	"	"	3	"	"	"
800	" "	3	"	"	"	"	4	"	"	"
900	" "	4	"	"	"	"	5	"	"	"
1,000	" "	5	"	"	"	"	6	"	"	"
1,100	" "	6	"	"	"	"	7	"	"	"
1,200	" "	7	"	"	"	"	8	"	"	"
1,300	" "	8	"	"	"	"	9	"	"	"
1,400	" "	9	"	"	"	"	10	"	"	"
1,500	" "	10	"	"	more					

Banks and Clerical Organizations

$1,000	to employees	6	mos.	and	less	than	1	year	in	service
1,500	" "	1	year	"	"	"	2	"	"	"
1,750	" "	2	"	"	"	"	3	"	"	"
2,000	" "	3	"	"	"	"	4	"	"	"
2,250	" "	4	"	"	"	"	5	"	"	"
2,500	" "	5	"	"	more					

Advantages of Group Insurance.—Among the advantages of group insurance may be mentioned a **lower rate** than may be obtained on an individual life, and the **inclusion of risks unacceptable to insurance companies**, which is possible only because the grouping of individuals results in an averaging of age and mortality.

Premiums may be paid entirely by the employer as an expense of the business, which is deductible under the present income tax laws, or they may be paid on the contributory plan, that is, each employee paying a portion of the premium, this portion being deducted from his earnings. In connection with group insurance it is also possible to procure disability benefits and old age pension benefits.

The **standard coverage for disability** provides weekly indemnity for temporary disability resulting from either sickness or accidental injury suffered while not engaged in the duties of regular occupation. House confinement is not required. The full indemnity is paid so long as the employee is wholly and continuously unable to perform the duties of his occupation. There is a limit to these payments, usually 26 or 52 weeks. It does not cover sickness or injuries which do not require treatment by a physician.

The rates differ according to class of occupation. No medical examination is necessary but an inspection is usually made.

LIFE INSURANCE FOR PAYMENT OF TAXES.—Insurance provides the surest means of protecting estates from forced sale of valuable property in order to pay federal and state inheritance taxes and accrued income taxes.

EXEMPTION FROM INHERITANCE TAXES.—An exemption of $40,000 in life insurance is allowed in addition to the $50,000 general exemption from federal inheritance taxes. Most states at the present time exempt from estate transfer taxes insurance payable to beneficiaries.

Marine Insurance

MARINE INSURANCE PRACTICALLY TRANSPORTATION INSURANCE—Marine insurance as conducted at the present time might more cor-

rectly be named "transportation insurance." The policies relating to merchandise as now written usually cover the goods **from shippers' warehouses to consignees' warehouses,** through all the stages of transportation until delivery is effected.

Under the ocean bill of lading the carrier assumes responsibility only for the seaworthiness of the ship both as regards its physical condition and the qualification and number of crew, but he cannot usually be held liable for damage resulting from faults or errors in navigation, or in the management of the vessel, and the ocean bill of lading contains a long list of further exceptions which leaves but few situations in which the carrier can be held liable for damage or loss.

The shipper must therefore seek protection by insurance. The ordinary insurance policy does not insure against all possible risks. The **risks covered** are: the perils of the sea, pirates, thieves, jettison, barratry and other like perils. If protection is desired against pilfering, breakage, and other like perils a **special premium** must be paid. Although there is practically no risk against which it is impossible to insure, the expense is often prohibitive.

Marine insurance provides indemnification only for **intrinsic values** unless it is possible to definitely measure, financially, other values.

UNAVOIDABLE LOSSES COVERED.—A policy of marine insurance is a **personal contract** protecting the person with a legitimate and recognized insurable interest in the object at risk against financial loss resulting from loss of or damage to the insured goods, beyond his control. Such policies did not originally protect the insured against loss from disintegration or depreciation, which was inevitable because of the nature of the goods, its packing or the voyage. Competition, however, has modified this rule. The principle usually adhered to is that marine insurance indemnifies only for losses which are the result of accident or chance.

The insurer does not usually agree to indemnify the insured against losses caused by the negligence of the carrier, whether private or common. Where such losses occur the carrier is legally responsible.

Insurance premiums as well as freight charges are usually **included in the invoices** for goods, both becoming part of the cost of the goods.

ESSENTIAL ELEMENTS OF A MARINE INSURANCE CONTRACT.—In order that a contract of marine insurance may be valid it must possess the following elements:

The legal right of both parties to enter into contracts
Good faith
Subject matter
A risk
Period or term to be covered
Insurable interest
A common understanding of object and conditions
A legal purpose
A consideration

INSURABLE INTEREST.—Insurable interest in property to be covered by marine insurance is possessed by virtue of ownership, financial and/or legal responsibility for its safety or delivery, dependence upon its preservation in good physical condition for the realization of income or profits, which would result from the consummation of transactions directly in such property or for the reimbursement of financial expenditures, or advances made specifically thereon. An owner, consignee, mortgagee, agent, or others whose interests would be directly affected by the happening of any of the perils insured against, would have such an insurable interest.

MARINE INSURANCE COMPANY.—Persons having an interest in ships, cargoes or merchandise subject to marine perils or other transportation risks

may secure the protection which they desire by dealing directly with marine insurance underwriters or by employing brokers. Marine insurance brokers must not be confused with general "insurance brokers." Unless a broker deals specifically in marine insurance and is competent in that line, it is safer for the prospective insurer to deal directly with the underwriter or insurance company. The broker acts as agent of the insured, but is compensated by the underwriter. As agent, he should conserve the interests of his principal (the insured) in any way that he may fairly do so.

QUALIFICATION OF A MARINE INSURANCE BROKER.—In no branch of insurance do the qualifications of the broker play such an important part as in marine insurance. He not only serves the insurer but is and has been the means of broadening the scope of coverage and improving the economic value of marine insurance by guarding the stability of the underwriter through not seeking a degree of coverage, which, while serving his client, would result detrimentally to the institution of marine insurance.

An efficient broker will have an intimate knowledge of the following in so far as they relate to marine insurance.

1. The law of contracts.
2. International law as affecting marine transportation.
3. The principles of insurance.
4. Modern insurance practice.
5. The various underwriters, what they will undertake and their rates.
6. Conditions of transportation facilities at all points and the most advantageous routes.
7. The necessary packing requirements.
8. The principles of loss adjustment.

MARINE INSURANCE ORGANIZATIONS.—The types of organizations underwriting marine insurance are as follows: stock companies, mutual companies, and Lloyds associations. These types of organizations have been discussed under fire insurance.

PROCEDURE.—An application for marine insurance must be made. This may be done either by the insured or his broker, on forms provided with the spaces for information covering the following:

Name of assured	Number of packages
On whose behalf insurance is desired	Amount of insurance desired
To whom possible losses are to be paid	Name of carrying vessel
Kind of goods	Points of shipment and destination
	Approximate date of sailing of vessel

The application is submitted to the underwriter, who considers the information given and either names a rate and states conditions under which he will insure the risk; or if either party desires further time to consider the rates and conditions, the application is considered as an "inquiry" or rate quotation, allowing a limited time for acceptance. If accepted and either signed or initialed by both parties, the policy is then written.

TYPES OF POLICIES.—There are various types of policies used in effecting insurance of marine and transportation risks. The principal types discussed in the following are classified according to the subject of insurance.

Vessel Policies.—Vessel policies in their various forms constitute what is known as **hull insurance.** Some of these policies are general, applying to all types of hull risks, others are specific, limiting their coverage to certain types,

such as steamers, sailing vessels with or without auxiliary power, vessels under construction or being repaired.

Cargo Policies.—Cargo policies may be divided into three main classes: (1) **Special policies** covering individual risks and certain commodities; (2) **floating policies** which are open contracts; and (3) **blanket and transit floaters.**

Freight Policies.—Freight policies **cover the freight charged** for transporting the cargo, or the cost of chartering or hiring a vessel or the value by which the merchandise is increased through addition of the cost of transportation.

Profit and Commission Policies.—Policies covering profits and commissions which are added to the values of the cargoes, the valuation of which for insurance purposes includes these additions.

Liability of Common Carriers.—The insurable interest is the liability assumed by the common carrier. A special form of policy is used for this type of insurance.

INTERPRETATION OF THE POLICY.—As the marine insurance policy reads today, it does not disclose a great difference from those issued more than 300 years ago. Its language, to the uninitiated, is odd, every word in the basic form has been given great study and judicial thought. Some of the language is obsolete and somewhat confusing to the ordinary layman. It is made up of printed, written and stamped words.

The **printed part** sets forth conditions and stipulations common to all marine policies. The **written and stamped parts** are the ones which indicate special arrangement or consideration. Where any doubt or conflict arises, the printed part usually overrules or controls the written and stamped part. The meaning of the printed part of the policy has been well established, but the other parts are subject to the degree of mutual understanding between the contracting parties and the degree of clarity in the expression of such understanding. It is, therefore, inadvisable for one not thoroughly familiar with marine insurance practice to attempt to secure what to him seems like additional protection by insisting on a special clause of his own construction. Such action may result in the invalidation of terms, printed or implied, and consequent diminution of his protection. Interpretation of technical words is **governed by usage** unless it was obviously the intention of either of the parties to overrule the common usage.

VALUED AND UNVALUED POLICIES.—A **valued policy** is one in which the insured value is stated. This value usually includes **freight and insurance charges** and an additional per cent to cover **expected profits.** An unvalued policy is one in which no stated value appears and the value must, therefore, be subsequently ascertained and proved.

WHEN MARINE INSURANCE BECOMES OPERATIVE.—In the policy will be mentioned the place or time from which protection will become effective and at what place or time protection will terminate. The contract may read "immediately following the loading on board," or "including risk of craft, raft, and/or lighter to and from vessel," or a "warehouse to warehouse" clause may be inserted by which the protection extends from the moment the goods leave the exporter's warehouse until the moment they are delivered in the warehouse of the purchaser. The insured must make certain that he is receiving the protection that he requires.

Trade customs of selling and financing are reflected in marine insurance policies. Cotton is protected by the policy from the time the cotton is ginned,

while grain sold ordinarily at the port is usually not covered until the grain is aboard the vessel.

POLICIES "TO WHOM IT MAY CONCERN."—Marine insurance policies are sometimes written "For Account of Whom it May Concern." The expression is not as broad as a literal construction would indicate. It is a technical term which **presupposes an agency,** referring only to a person or persons whom the agents had in mind when the insurance was secured. This term is intended to conceal the identity of the real party. Wishing to keep his enterprises secret, he authorizes the agent to represent him and finally adopts the interest so represented.

THE PREMIUM.—The marine insurance business is highly competitive, but differences between rates quoted by various companies are slight, if any. The amount of the premium on a particular policy is obtained by multiplying the rate which appears in the margin of the policy by the sum insured. Special risks, not covered in the standard policy require additional premium.

The basic rate in American policies is always indicated in percentages. **In English policies** 100 pounds is taken as a basis and rates will read £2 per cent, £3 per cent; or smaller rates will read so many shillings or pence per cent always meaning per hundred pound sterling in sound value.

Legally no contract exists unless not only a meeting of minds has taken place but also a consideration has changed hands, or arisen in some other way. Ordinarily the policy contains a clause declaring the consideration to be received, but many policies contain a clause indicating that the insured has bound himself to pay the premium. The latter policy has become general since it is not always practicable and often impossible to insist upon prepayment.

Rate of Premium Governed by Character of Carrier.—The rate to be paid is influenced by the character of the carrier. Well known vessels of recognized steamship lines are covered by rates governed by the current market rate. **"Outside" risks,** such as shipment by tramps and other carriers below the liner standard, are covered by rates determined in individual cases, on the basis of the type of vessel, the destination and duration of the voyage, and the character of the goods.

Rate of Premium Effected by Exceptional Circumstances.—Exceptional circumstances, such as war or revolution, will increase the rates, and they may also rise in individual instances because of the fact that insurers are usually unwilling to bear too large a share in the risk of any one vessel, and the distribution of the risk over several companies may not always be accomplished.

INSURANCE ON "UNDER" AND "ON DECK" CARGOES.—A distinction is made between "under" and "on deck" cargoes. "On deck" cargo is not covered unless specifically mentioned as being on deck, or unless such cargo is customarily stowed wholly or in part above deck.

THE LIMITING TERM OF POLICY.—There are blank spaces in the policy form providing for the geographical or time limits of the policy known as the **"termini."** The place or time of inception of risk is known as the **"terminus a quo"**; the place or time of the termination of the risk the **"terminus ad quem."** The omission of the "termini" of the insurance invalidates the policy. The "terminus a quo" must be specifically mentioned, but the "terminus ad quem" may be subject to determination, as in the case of a policy which may be terminated by either party giving notice of cancellation in writing to the other. In such a policy, however, the geographical termini are definitely stated as in a **"floating policy."**

DEVIATION.—The policy provides "that it shall and may be lawful for the said vessel, in her voyage, to proceed and sail to, touch and stay at, any ports or places, if thereunto obliged by stress of weather or other unavoidable accident, without prejudice to this insurance." If this clause were not inserted in the policy, the captain or master of the vessel, realizing that insurance would be voided if he were compelled to deviate from the course in order to avoid a peril, might delay in seeking refuge until too late. However, in each case the facts must prove the necessity for any deviation.

"LOST OR NOT LOST".—The expression "lost or not lost" appearing in a policy of marine insurance may seem contradictory to the spirit of the contract. However, the conditions under which marine insurance is written make it a necessary phrase. To illustrate, an importer of goods from a distant point has experienced considerable delay in obtaining the necessary information to effect coverage. He insures the goods in the belief that it is safe, but it might have become lost before the coverage is effected. Unless the phrase appears in the policy he will not be able to collect under the law of contracts. With the phrase included, however, he will be indemnified, provided that the goods were lost "without the knowledge of either party to the contract."

PERILS COVERED.—The perils covered are:

1. Perils of the Sea.—This does not include all perils "on the sea" but "of the sea," such as unusual action of natural forces operating in or around navigable waters; collision with other ships or objects but not those caused by negligence resulting in loss to other parties; stranding; springing a leak as a consequence of bad weather; damage by lightning; disappearance.

2. Fire Peril.—Covering the usual fire hazards.

3. Jettison.—Jettison consists of a peril on the sea, defined by Philips (Section 1278,) as "the throwing overboard of part of the cargo, or any article on board of a ship, or the cutting away of masts, spars, riggings, sails or other furniture for the purpose of lightening or relieving the ship in case of necessity or emergency.

4. Barratry.—This is wilful misconduct of the master of a ship or his crew in their characters as such, including every dishonest breach of trust which would injure the owner of ship, or cargo, committed without his consent.

5. Theft and Pilferage.—Theft is considered as robbery committed by attacking thieves. Pilferage is robbery by stealth. Petty thievery is not usually covered.

Pilferage has of recent years become a **serious cause of loss.** It is claimed that because of the practice of shippers to accept "**released**" **bills of lading,** i.e., bills of lading in which the liability of the carrier is limited or "released" from most of the liability adhering to the "**full**" **bill of lading,** the carrier has grown less careful in giving the goods the necessary protection. Insurance against pilferage has become more needed, but at the same time the insurance companies have been forced to limit their risk. The English underwriters adopted a clause in 1920 limiting their liability on account of pilferage to 75% of the value of the goods so lost, and the American companies have adopted the same ruling. The shipper must consequently do his share to prevent theft and pilferage by the adoption of pilferage-proof packing. The additional cost of this coverage will often be more than is justified by the losses arising from pilferage.

LAWLESS ACTS.—Overt acts committed by persons not connected with the venture from either personal or national motives are generally considered lawless acts.

AVERAGE CLAUSE.—The average clause was intended to relieve the underwriters of the expense and annoyance of adjusting insignificant claims. Its use results in a lower rate to the insured because the necessity of adjusting petty claims is eliminated. The average loss percentage commonly used in American policies is 5%, and in English policies 3%. However, in order to secure lower rate of insurance, a merchant may decide to assume a greater percentage of the loss, sometimes as high as 20% or 50%.

GENERAL AVERAGE LOSS.—A general average loss arises out of a reasonable and justifiable sacrifice made by the master of a ship under stress of accidental circumstances, of a portion of a ship or its cargo, in order to prevent greater damage or loss of the whole venture. It may also include the voluntary incurrence of a reasonable amount of expense for the sole purpose of protecting or preserving the common interest of all concerned in the threatened danger.

In such events all parties interested in the adventure pay a proportionate share in the loss, including the one whose interest was sacrificed to prevent the greater loss. Unless satisfactory bond is produced the goods will be held as security until payment of the assessment to be made on completion of the adjustment. Usually the insured can avoid making payments by the insurance company guaranteeing the payment of all charges to the adjusters.

PARTICULAR AVERAGE LOSSES.—A particular average loss is one suffered by a particular interest arising from accidental damage caused by the perils insured aganist. Such a loss is not usually protected unless written under special coverage such as "W. A." (with average) or A. A. R. (against all risks.) Without such special coverage it is usual that unless the damage exceeds a stated percentage (called "franchise") of the value, varying between 2 and 20% the loss must be borne wholly by the insured. If the damage exceeds the stated percentage, the loss is paid in full by the underwriters.

F. P. A. INSURANCE POLICY.—The F. P. A. policy (**free from particular average**) on the other hand does not protect against particular average. The interpretation of the F. P. A. clause is somewhat different according to the American and the English practice.

F. P. A. A. C. Insurance Policy.—The F. P. A. A. C. (**free from particular average American condition**) clause still holds the insurer responsible for particular average "caused by stranding, sinking, burning, or collision with other vessels."

F. P. A. E. C. Insurance Policy.—Under the F. P. A. E. C. (**free from particular average English condition**) clause which reads "unless the vessel or craft be stranded, burnt or in collision," the insurer is liable for partial damage when the events have occurred although the accident cannot be considered the immediate or proximate cause of the damage.

TOTAL LOSS OF A PART.—The total loss of a part of a shipment which consists of various units, is **not a particular average loss.** For example, where a shipment consists of 100 bales of cotton and one is destroyed by fire, particular average cannot be applied, because it is the loss of an integral part of the whole; but if one or more bales should be partially damaged, then particular average would become operative.

RIGHT OF ABANDONMENT AND PARTICULAR AVERAGE.—Where the particular average attains a percentage of the total value which would warrant the exercise by the assured of the right of abandonment, he may elect to do so, thereby converting a particular average into a constructive total loss. In such cases the assured must tender abandonment to the underwriter for his

acceptance. If the underwriter accepts the abandonment, he may elect to take possession of the remnants of the property and pay the insured the full insured value, but his acceptance does not compel him to accept the ownership of the property.

LOSS ADJUSTMENT.—The adjustment of marine insurance losses by the underwriter requires the most intimate knowledge of marine insurance practices and in addition a keen sense of justice, tempered by an appreciation of the ultimate effect of adjustments on marine insurance as an institution.

THE COLLECTION OF LOSSES.—Ordinarily a policy contains a clause by which it is made payable to the insured or order. In case of shipments **under letters of credit** the policy may be made **payable to the issuing bank.** The certificate issued under an open policy is made payable to a designated person or order and may be transferred by endorsement like any other negotiable instrument. The loss may be made payable in the country of the purchaser of the goods.

The underwriters usually maintain balances in the largest foreign commercial centers. The local representative of the underwriters may, after adjustment, make the proper payments, thereby making it unnecessary for the consignee to wait until the certificate or policy has been returned to the United States and funds have been forwarded.

THE "LOSS ORDER."—After adjustment has been made and the underwriter has agreed to make settlement, the holder of the certificate may issue a "loss order" whereby the underwriter is instructed to make **payment to a third person.** Where the certificate is held by a bank this procedure is often followed.

DOCUMENTS REQUIRED ON PRESENTING CLAIM FOR LOSSES.—The documents which are required when presenting claims differ in each instance, but the underwriter will usually require—the insurance policy, the bill of lading, the invoice, a statement of the market value of sound goods at destination, and adequate proof of the amount and the source of the loss. The latter will usually be prepared after a survey by an agent of the company, a Lloyds agent or some commercial body of recognized standing.

Often claims against insurance companies prove uncollectible because the insured neglected to have the damage ascertained at the proper time and by the proper persons, and because he failed to notify the insurer promptly of the loss incurred.

TOTAL LOSS.—A total loss is one in which the subject insured is destroyed, is taken out of the possession or control of the owner, or so injured as to be of insignificant or no practical value to the assured for the purposes and uses for which intended.

CONSTRUCTIVE TOTAL LOSS.—A constructive total loss is one in which the subject insured, while not becoming a total loss, has nevertheless been injured to such an extent that the remaining parts either could not be repaired at a cost less than the full value when so repaired, or if not badly damaged, is in such a position that the cost of recovery would equal or exceed its value when recovered or salvaged. It is possible by agreement or implication of law to fix a percentage of the value beyond which the loss will be considered a technical or constructive total loss. In the United States the rule has been in force which provides that in the event of a vessel being so damaged that the cost of salvage and repair will exceed 50% of the salvaged and repaired value, the assured may claim a constructive total loss.

Miscellaneous Insurance

LIABILITY AND COMPENSATION INSURANCE.—These two forms of insurance are co-related. Both provide for indemnification of losses to employers which may occur by reason of court decisions or operations of state laws for **compensation for injury or disease to employees** as a result of their occupation. Liability insurance was designed mainly for the indemnification of employers, while compensation insurance was fundamentally designed to provide support for employees. The operation of compensation insurance is generally supervised by the various states which have enacted laws with this purpose in view.

Compensation Insurance Compulsory in Some States.—In some states compensation insurance by employers is compulsory. In several states where compensation laws have been enacted the acceptance of the compensation principle by employers is voluntary, except for certain hazardous occupations where it is compulsory. However, where acceptance of the principle is voluntary, failure to accept on the part of employers usually proves detrimental to their interest. Because by their failure to accept, they elect to exchange the liability to be sued for damages specified under the compensation law for a liability to be sued for damages under the general laws.

Compensation Insurance Organizations.—There are **four general types** of organizations conducting compensation insurance, viz.: stock companies, mutual companies, reciprocals, and state funds.

Stock companies, mutual companies and reciprocals are organized and conducted on the same general principles described in connection with fire and life insurance.

State funds are mutual types of insurance created and partially financed at the start by the several states, which also manage this form of insurance. Part of the expenses are sometimes met by the states and in some states there is an immunity from taxation granted to the participants.

Wherever the state laws provide the insurers in state funds relief from all liability for payments of compensations, the employers get absolute security. There is an exception, however, in those cases where through legal technicalities the injured employees may sue employers. Liability for losses ensuing in such cases are usually neither considered nor covered by the insurance.

Self-insurance may also be carried by the employers, but this form does not properly protect the interest of employees. In the event of a catastrophe or severe losses the claims may be large enough to bring about insolvency of employers.

Compensation Insurance Premiums.—Premiums are computed **on the basis of each $100 of actual payroll,** classified according to the occupations of the various groups of employees if they do not come under a general group for the particular class of business. A specific rate for each group is stated in the policy. As the actual payroll cannot be known until the end of the policy term, an estimate is made by the insured and used in computing the initial premium to be paid. At the end of the period, the payroll is audited by the insurance company's auditor and a refund made to the insured if the premium as computed on the basis of the actual payroll is less than the initial premium, or the insured is called upon to pay an additional premium if it is more.

Injuries Covered by Compensation Laws.—The compensation laws of different states define injuries covered. Although this definition differs in the various states, the following definition is most common:

". . . disability or death resulting from an accidental personal injury sus-

tained by the employee arising out of and in the course of his employment, except when the injury is occasioned by the wilful intention of the injured employee or where the injury results solely from intoxication."

In some states accidents in the course of employment are covered, whether arising from that employment or not. In a few states industrial diseases are covered.

Elimination of Trivial Injuries.—Usually there is a provision requiring that the loss of time resulting from an injury must amount to at least 2 weeks before compensation starts. This is known as a **"waiting period."** In some states compensation dates from the day injury occurred.

ACCIDENT AND HEALTH INSURANCE.—Accident and health insurance provides for the payment of a weekly income to the insured in the event of physical incapacity caused by illness or accident, and a death benefit in case of death by accident. Compensation insurance covers accidents which occur while employees are engaged in the performance of the duties of their employment, but a great many accidents which occur cannot be so classified. Furthermore, sickness which cannot be attributed to occupational causes far exceeds the losses occasioned purely through accident.

Indemnity offered by compensation insurance is limited, and in some states no provisions are made for "occupational diseases." Sickness and accidental injury cause much suffering and poverty to persons so incapacitated and to their dependents. Accident and health insurance is a step to relieve this condition.

Recently, however, life insurance policies have added a disability clause which provides an income and a waiver of premiums in cases of permanent or presumably permanent disability without diminution of the face amount of the policy. The monthly indemnity in each case being a fixed amount per $1,000 of insurance carried. Additional disability indemnity if required can be secured through either health and accident insurance or non-cancellable income policies. Accident and health policies are written with a clause reserving for the company the **right of cancellation,** even during the policy term, which is usually one year. However, such cancellation does not prejudice any claim originating prior to the end of the policy term. The company may also refuse to renew the policy when it expires.

ACCIDENT INSURANCE.—Accident insurance provides **weekly indemnity** and death benefits only in case of accidents. The general types of policies issued are ticket, limited and unlimited policies.

Ticket Accident Policies.—These are policies which may be secured at the ticket offices of railroad stations, providing for payment of specific amounts in the event of death within specified periods of a day, week, 30 days, or 90 days. Such policies do not cover disappearances or injuries where there is no visible wound, and eliminates most of the causes of accidents most likely to occur. Features are introduced in this type of policy which provide disability income and double indemnity if death should occur on account of a specified list of accidents within a period of ninety days from time of injury.

Limited Policies.—These policies cover accident or sickness due to **specific causes** named in the contract. In some cases these policies stipulate the manner in which the accidents must happen.

Unlimited or General Policies.—As the name implies, these policies are not limited to a few causes and are more or less general. However, there is a considerable variation in the coverage offered by policies of this type. Most

of them provide for a death benefit of a specific sum, which is the basis of all other benefits payable under the policy. Some provide for doubling the benefits, others tripling and even quadrupling them if the accident occurs on a common carrier.

AUTOMOBILE INSURANCE.—A combination of **five types of insurance** is needed to provide complete protection to the owner of an automobile. These are liability, property damage, collision, fire, and theft insurance. Complete protection may be had under one policy in some states and/or under separate policies in other states.

The Liability Policy.—This type of policy provides insurance against legal liability "for damages on account of bodily injuries sustained by any person or persons other than the owner or his employees engaged in operating or caring for the automobile, as a result of the ownership, maintenance or use of the automobile covered." The policy usually promises to defend the insured in suits, pay legal costs, make investigations and settlements of claims and pay for imperative and immediate surgical relief to the injured in a total amount not to exceed the amount stipulated in the policy. Only the ordinary use of an automobile is contemplated. Therefore, the scope of the protection is limited to ordinary use, unless otherwise specifically covered.

Liability policies are issued to cover various uses, each class bearing its own specific rate. A policy covering a private passenger car does not insure the car while it is being used in carrying passengers for hire, nor while towing a trailer, or engaged in speed contests or races. The company's liability is limited to the amount stipulated in the policy. The **usual standard limits** are $5,000 for injuries to any one person in one accident and $10,000 for injuries to more than one person in one accident, subject to $5,000 per person limitation.

Property Damage Policy.—This policy provides for payment of damages resulting from **injury or destruction of the property of others** not carried in the car covered by the policy or in charge of the assured or his employees, and resulting from an accident arising out of its ownership, maintenance or use. The coverage includes the loss of use of the property damaged or destroyed. The liability of the company is limited to the amount stipulated in the policy.

Rates for Liability and Property Damages.—The rates for liability and property damage insurance depend upon the following:

1. **Territory**—Divided on the basis of degree of hazard, from the most hazardous community to the rural districts, density of population and past experience being the principal factors.
2. **Type of car**—
   (a) **Private passenger car** for personal use or business calls.
   (b) **Public automobiles**—
      Livery—hired by the day or hour.
      Other than livery—taxicabs.
   (c) **Commercial cars**—delivery cars and trucks.
   (d) **Manufacturers' and dealers' cars**—for demonstration purposes.
3. **Motive power**—
   (a) Electrically driven.
   (b) Motor driven.
4. **List price**—
   Grouped according to list price influenced by the insurer's experience with the type of car to be insured.

5. **Driver of automobile**—
   If driven only by owner, a reduction may be secured.

Collision Policy.—A collision policy provides for payment of losses sustained by collision of the automobile with a moving or stationary object. It covers **damages to the owner's car,** computed on a basis of the actual intrinsic value at the time of loss or the cost of repair or replacement.

Collision rates depend upon the following factors: type of car—same classifications as liability policy, list price, age of car, and motive power.

Fire Insurance Policy.—A fire insurance policy on automobiles provides indemnification for loss or damage to the automobile insured caused by **fire or transportation perils. Two types of policies** are issued, viz.:

1. **Valued**—The value of the automobile is agreed upon in advance
2. **Non-valued**—The value determined at time of loss.

Fire insurance rates consider construction of the car and protective devices carried. Contingencies other than fire and transportation perils may be insured against by payment of an additional premium.

Theft Insurance.—Theft insurance is usually written by an endorsement on the fire insurance policy and covers theft of owner's car. Such insurance does not cover contents of a car but is limited to the automobile and such parts as are physically attached and made part of the car.

RIOT, CIVIL COMMOTION AND EXPLOSION INSURANCE.—This form of insurance indemnifies the insured against loss caused by riot, insurrection, civil commotion (including strikes), and explosion caused by conditions foreign to the operations conducted by the insured. This class of insurance is written to cover buildings and/or contents. Use and occupancy coverage may also be obtained in connection with this type of insurance.

EARTHQUAKE INSURANCE.—This form of insurance provides indemnification of losses caused by earthquakes.

WIND STORM INSURANCE.—This class of insurance indemnifies the insured against losses caused by the elements at the time of high wind and directly by extraordinary wind conditions. It usually excludes direct damage caused by hail, lightning, flood and rain.

HAIL INSURANCE.—This provides indemnification against loss caused directly by hail, and is usually written with **a 50% co-insurance clause.**

FLOOD INSURANCE.—This indemnifies the insured against losses caused by flood, overflowing of rivers and/or tidal waves, or may be extended to include losses caused by bursting of reservoirs, dams or other artificial mediums of impounding water.

RAIN INSURANCE.—Rain insurance provides indemnification for losses caused by rain. It is used to relieve losses caused by the effect of rain on some project such as special sales, scientific observations, public contests, etc. A **specific number of time units** are usually covered, and the **measure of rainfall,** necessary to prove that damage has been suffered is definitely stated in the policy.

PLATE-GLASS INSURANCE.—This class of insurance provides indemnification against loss caused by breakage of plate-glass windows. This is mainly **a replacement insurance.** Loss is based on value of the glass at time of loss. Insurance companies usually have a supply of glass conveniently located and they consider salvage in their adjustment of loss.

REAL ESTATE TITLE INSURANCE.—Real estate title insurance provides protection against financial loss resulting from claims arising out of existent **defects in the title** to real property, which defects were undisclosed at the time protection was secured. It is a comparatively new type of insurance and has become a very important factor in financial operations relating to real property particularly in cities. Prior to its advent examination of titles was accomplished by individual lawyers who examined or had examined the records and furnished **an abstract.** In order to be complete, the examination should consist of a true history of the property from the original grant by the state to the time the abstract is made. It involves examination of records containing copies of deeds, mortgages, etc., records of wills, administration, partition, taxes, lawsuits and all kinds of incumbrances, and must consider the validity of deeds and correctness of records. At present such work is done by **title insurance corporations,** who build at an enormous cost an "abstract plant" to do title searching of the property in the district in which the corporation operates.

In view of the nature of the work undertaken and the financial responsibility and liability assumed by title insurance companies, they should be backed by adequate resources in order to fulfil their guaranties.

Types of Policies.—There are **two principal types** of policies: owner's risk policy, and mortgagee's risk policy. But several forms of contracts are entered into covering special phases.

General Provisions of Owner's Policy.—Usually the policy provides for the following:

1. **Defense of insured against suit** founded on claim of title or incumbrance existing prior to date of policy.
2. Conditions under which loss must arise, which are stipulated in the policy.
3. **Voidance** in case of misstatement or suppression of fact by the insured or his agent.
4. **Non-assignment of policy** except by special permission of the company.
5. **Reduction of premium on new policy** is assured if and when the holder of a policy, within 7 years from date of policy, shall sell or mortgage a part or all of the property and shall apply for a new policy within 30 days of such sale to be issued to the grantee or mortgagee. The former policy must be surrendered and cancelled.
6. **Adjustment of losses.** Conditions of settlement are clearly stipulated in the policy.
7. **Subrogation rights** are reserved by the company.

General Provisions of Mortgagee's Policy.—Usually the policy provides for the following:

1. **Payment of interest** on the mortgage when it becomes due.
2. **Payment of principal** of the mortgage within 12 months after it becomes due.
3. **Continuation of policy** on any extension of the mortgage with consent of the company.
4. The conduct of all actions or proceedings deemed necessary by the company or the **defense of any action** brought against the insured without any expense to the insured.

CREDIT INSURANCE.—Credit insurance is protection against excessive financial loss incident to the failure of those to whom credit is extended to meet their obligations to the insured.

Credit insurance is in effect a means of spreading the losses caused by business reverses of a few over many and furnishes a factor of stability in the credit system which system is the backbone of finance. It promotes careful selection and prudent limitation of credit risks because it requires the use of **recognized rating services and limits the amount of credit to individuals.** It furnishes a collection service for policy holders conducted for the protection of both company and policy holders. Credit insurance does not ordinarily cover **normal losses.** Its use and the creation of a proper reserve for bad and doubtful accounts based on experience should eliminate unexpected losses.

Types of Policies.—There are several types of credit insurance policies being written, but the two most generally used are the "limited" and "unlimited" types.

The "limited" policy limits the total liability of the insurer company. This type of policy usually provides for indemnification against financial loss occurring within the term of the policy and resulting from bona fide sales of merchandise shipped and delivered in the usual course of business. The provisions for an **adjustment of losses** within a specified period after the termination of the policy (or a rider can be obtained providing for interim settlements) include the following:

"From the gross loss covered and proven, shall be deducted—

(a) All discounts to which the debtor would have been entitled, had the debts been paid at the date of insolvency.

(b) All amounts collected thereon and all amounts which may have been obtained from any other source.

(c) The amount of goods returned or replevined, when such goods are in the undisputed possession of the indemnified.

(d) All amounts mutually agreed upon as thereafter obtainable.

"From the net result of the above computations shall be deducted 10 per cent as co-insurance and an agreed normal loss of the percentage stipulated to be borne by the indemnified, upon the total gross sales made during the term of the policy. The normal loss deduction shall not be less than an amount stipulated in the policy."

The "unlimited" policy differs from the "limited" policy in the following respects:

It requires that the accounts shall have been placed with the company for collection before they are more than 75 days past due under the original terms of sale, providing that no account be filed with the company after a date specified in the policy.

The 10% **co-insurance deduction** is made from the gross amount of the loss before deductions stipulated in the "limited" policy referred to above as (a), (b), (c) and (d).

The requirement for **normal loss deduction** is usually the same as that stipulated in the limited policy.

Another provision incorporated in both types of policies is that "if the indebtedness of the debtor to the indemnified at the time of insolvency is not fully covered, then the deduction shall be made pro rata, i.e., in the ratio which the amount covers bears to the whole of such indebtedness." The coverage in each individual account being based on the maximum coverage according to the rating, any excess of such maximum is not covered. However, if the amounts realized after the settlement by the company with the indemnified, exceeds the amount on which the loss was computed, the company refunds such excess to the indemnified.

Termination.—The "limited" policy provides that "if during the term of this bond, the indemnified shall become insolvent, or shall cease to continue business as heretofore carried on, or shall go into liquidation, or being a partnership shall be dissolved, then this bond shall immediately terminate and if any claim for excess loss is made, a **'Final Statement of Claim'** shall be filed by, and an adjustment shall be made with the indemnified in the same time and manner as if this bond had originally by its terms been made to expire at the date of such termination. Temporary interruption by fire or strike, or the death or withdrawal or admission of a member of a partnership composed of more than two members, shall not be considered a discontinuance or dissolution."

The "unlimited" policy makes the same provisions for termination as the "limited" policy, but in addition it provides for termination by a written notice of 10 days given by either party to the other and a proper adjustment of premium.

Special coverages of inferior ratings, interim adjustments of claims, etc., may be secured. They are usually added to the policy in the form of riders or endorsements.

REGISTERED MAIL AND EXPRESS INSURANCE.—Banks, bankers, investment companies and others who send, by registered mail or express, monies, bonds, stocks and other valuables can secure for themselves or their clients indemnification against loss from all risks except risks of war and loss by theft committed by employees of the assured or of persons to whom or by whom the property was mailed or expressed.

An open policy is generally used. The insured is supplied with notification of shipments blanks on which shipments of each day are listed at a declared value which should never be greater than 2% above the market value.

Registered Mail Insurance Rates.—Rates charged for the coverage under such policies by a prominent insurance company are as shown in the following table.

Tariff of Premiums on Each $1,000 Insured per Registered Mail between Post Offices in the States Mentioned and New York City

The rate placed opposite a state includes all post offices on a railroad, except those to which a different rate is specified and those involving carriage by stage, for which an additional charge is made, proportionate to the extra risk incurred. The minimum premium on any one risk is 1 cent.

Air Mail.—Shipments by "air mail" may be covered under this policy, the rates on such shipment being **double those for registered mail.** The principal conditions to which the coverage is subject are as follows:

1. That risks hereunder shall attach only upon notification of the amount or value mailed or expressed by or to the Assured being given to the Agents of this Company in .....; said notification to be given prior to known loss, by messenger, telegram, or mail, on the day of mailing and registration or expressing of the package insured.

2. It is warranted that the contents of each package insured under this policy shall be enclosed in a strong wrapper, envelope, or canvas sack, well secured, and in all cases sealed with wax or one or more lead seals.

3. It is warranted by the assured that on all shipments by express insured hereunder at least ten per cent. of the insured value shall be declared to the express company.

4. That the property insured under this policy shall be valued at the sum insured, provided the same does not exceed two per cent. above its market value on the day of mailing or expressing, and that in the event of loss the liability under this policy shall not be greater than market value with two per cent. added.

5. In case of loss, such loss to be paid within fifteen days after proof of loss and proof of interest; and in case of loss or misfortune, it shall be lawful and necessary to and for the assured to sue, labor and travel for, in and about the defense, safeguard and recovery of the property without prejudice to this insurance; and upon the payment of any loss under this policy, the assured, or assigns, in consideration thereof, agree to convey to the said Federal Insurance Company, the unincumbered title in the property lost as absolute owners thereof, and to take all necessary measures in behalf, and at the risk and expense of the said Federal Insurance Company, for the recovery, reissue or replacement of said property, where possible.

6. It is warranted by the assured that shipments of currency, bank or legal tender notes, shall not exceed Fifty Thousand Dollars in each registered package or package by express.

7. It is warranted by the assured that the packing and sealing of the package containing

the property insured hereunder shall be witnessed by two trusted employees, one of whom shall have charge of same until deposited and registered at the post office or until receipted for by the express company.

8. It is agreed that no suit or action against this Company, for the recovery of any claim by virtue of this policy, shall be sustained in any court of law or equity unless such suit or action shall be commenced within twelve months next after the date of mailing or expressing of the package claimed to be lost, and that the lapse of said period shall be a bar to any such suit or action, except that if such limitation of time for the institution of legal proceedings is at variance with any specific statutory provision in relation thereto in force in the State in which this policy is made, issued or delivered, such specific statutory provision shall govern and supersede any condition in this contract inconsistent therewith.

9. This policy is deemed continuous, but either party may cancel it by giving fifteen days' written notice thereof to the other, but said cancellation shall be without prejudice to any risk then pending.

BOILER INSURANCE.—Boiler insurance indemnifies the assured "for all direct or immediate loss or damage caused by the explosion, collapse or rupture of any boiler described in the schedule" embodied in the policy, as follows:

1. "For damage to the boiler or boilers and other property of the assured."
2. "For damage for which the assured may be liable, to the property of any other person or persons."
3. "Against liability imposed upon the assured by law for bodily injuries, including death at any time resulting therefrom, sustained by any person or persons not employed by the assured, but the liability of the company on account of loss of life or injury of any one person shall not exceed the sum of ..... Dollars [usually $5,000] nor exceed the amount of the policy if it be for less than five thousand dollars."

Expenses.—The company agrees to pay—

1. The expenses it incurs in defending any suit brought against the assured.
2. The interest accruing on that part of any judgment in such suit within the limits of the policy.
3. Any court costs taxed against the assured in each suit.

Liability is not assumed in the following cases: loss by fire; if safety valve of any boiler covered by the policy is set for a greater pressure than allowed by the company; or loss caused by stoppage of the plant or other indirect losses.

Use and occupancy insurance may be written in connection with boiler insurance to indemnify against loss caused by stoppage of plant.

FLY WHEEL INSURANCE.—The coverage on fly wheel insurance is the same as for boiler insurance except that the definition of explosion, bursting or breakage is as follows: "shall be understood a sudden violent and complete separation of the fly wheel into two or more parts while revolving, completely separating and dislodging any part or parts of the fly wheel or pulley."

Pulley and other rotating wheels or gears may be also covered under a fly wheel insurance policy.

ENGINE BREAKDOWN INSURANCE.—This form of insurance provides indemnification against loss caused by the breakdown of engines, such as loss or damage to the engine itself including wheels, if any, mounted thereon; the provisions for indemnification of loss or damage to property of the assured and others, as well as the liability for bodily injuries or death are the same as described in boiler insurance; the provisions for payment of expenses and interest in connection with suit and judgments on the same are similar to those in boiler insurance.

Engine Breakdown Defined.—"A sudden, substantial and accidental breaking of the engine or any part thereof, while running, which immediately prevents the continued operation of the engine and which necessitates repairs or replacement before its operation can be resumed." No liability is assumed if a breakdown is caused by running at a speed in excess of that set by the company.

SURETY BONDS.—A surety bond is a **tripartite contract** in which one party, called the **surety,** assures a second party, called the **beneficiary,** that he (the surety) will fulfill a valid obligation of a third party, called the **principal,** should the principal fail to do so.

Fidelity Bonds or Surety Bonds.—While all bonds guaranteeing the fulfillment of obligations are surety bonds, bonds which involve the **fidelity of principals** are generally known as "fidelity bonds." Many surety arrangements combine guaranty of fidelity with guaranty of contract, fulfillment or payment of certain amounts in the event of the occurrence of certain contingencies. Such bonds may be considered as special fidelity bonds.

Good Faith.—Good faith is the important element in surety contracts. **False or fraudulent statements** relieve the "surety" of obligations although such contracts may be binding on the principals. **Concealment of material facts** also relieves the "surety" of his obligations.

Application Blanks Searching.—The information called for in the application blanks for fidelity bonds is searching, the scope embracing business experience, habits, family responsibility, social ties and the moral status of the principal. The statements made therein are carefully investigated. For this reason some employers use these application forms in deciding on the selection of employees, securing and retaining extra copies for their files.

Fidelity Bonds Covering Positions.—Concerns of high standing and reputed good management can obtain bonds to cover certain positions instead of, as in the case of the ordinary fidelity bonds, particular individuals designated by name. Such bonds cover the default of any person holding a **particular position** designated by name in the contract. The number of incumbents must be listed for each position and the premium is based on the number so listed. If the employer unwittingly fails to cover the full number of incumbents of a given position and a default by one of the number occurs, the bonding company would be only obligated for a part of the amount guaranteed, proportionate to the ratio which the number of persons covered bears to the actual number.

Blanket Surety Bonds.—Blanket surety bonds are issued to bankers to cover the loss of money, securities, etc., sustained through dishonesty of their employees, theft on the part of outsiders, burglary, hold ups, etc., but such bonds do not guarantee losses through errors of judgment, such as credit losses.

Classification of Surety Bonds.—The following table from "Surety Bonds," by Edwin C. Lund, lists the important surety bonds in general use, alphabetically arranged. The abbreviations "Obl" and "Prin," appearing in parentheses mean "obligee" (beneficiary) and "principal," respectively.

Abbreviations used in the classification column indicate the division of surety to which the bonds belong. These abbreviations are as follows:

"Cus. H." for custom house
"Fid." for fidelity
"Fiduc." for fiduciary
"Int. Rev." for internal revenue
"Lic. and Per." for license and permit
"Misc. Sur." for miscellaneous surety
"Pub. Off." for public official

The number occasionally appearing in parentheses after the name of the classification identifies the government form of bond in question.

FORGERY INSURANCE.—Insurance may be obtained which provides for indemnification to individuals, mercantile concerns and banks against loss through payment or acceptance of forged or raised checks, bank drafts, bills of exchange and trade acceptances. **Four types of policies** are written: depositors' policy, commercial policy, bankers' blanket forgery, and bankers' limited policy.

The coverage provided by each type is as follows:

1. The Depositors' Policy.—Protects the assured and his bank from loss occasioned by—

Forgery of the name of the assured as maker, drawer or acceptor of a check, draft, bill of exchange or trade acceptance.

Forgery or alteration of the signature of any endorser on a check, draft, note, bill of exchange or trade acceptance, purporting to have been drawn by the assured.

Raising or alteration of a check, note, draft, bill of exchange or trade acceptance purporting to have been drawn by the assured (except those drawn in non-indelible lead pencil).

2. The Commercial Policy.—Broader than the depositors' policy. Gives the following additional protection: Against loss through acceptance for merchandise, property or services rendered of a check or draft, bearing a forged signature or endorsement raised or altered. The company's liability in such cases is limited to 75% of the amount of the check or draft and on any one such bank check or draft to 10% of the amount of the policy. Check returned marked "no account" or "insufficient funds" or drawn in lead pencil (except indelible) is not covered.

3. **The Bankers' Blanket Forgery Policy.**—Protects against loss caused by—

Forgery of a depositor's signature or that of his authorized agent as drawer, maker or acceptor on checks, drafts, notes and acceptances drawn upon or payable at the bank.

Forgery of the signature of an endorser on checks or drafts drawn upon the bank; notes or acceptances payable at the bank; certificates of deposit issued, or bank acceptances made by the bank.

Forgery of a depositor's signature as endorser of any check or draft drawn upon any bank.

Forgery of the signature of a person authorized by the bank to sign checks, drafts, certificates of deposit or to make acceptances for the bank.

Forgery of the signature of an endorser on checks, drafts, certificates of deposit or bank acceptances drawn, made or issued by the bank or purporting to have been drawn or issued.

Alteration of checks, drafts, notes, acceptances and certificates of deposit when drawn upon or made payable at the bank or when drawn or issued by the bank.

4. **The Bankers' Limited Policy.**—Protects the insured against loss caused by—

Forgery of the signature on savings account withdrawal orders when drawn or purporting to have been drawn upon the bank by a depositor and accompanied by the savings account pass book.

Forgery of the name of the drawer, maker, acceptor or endorser of a check drawn or purporting to have been drawn by a depositor and certified or purporting to have been certified by the bank, and thereafter paid through Clearing House or Exchange or deposited to the credit of a depositor.

Forgery of the signature as to the maker, drawer, acceptor or endorser of any certificate of deposit issued or purporting to have been issued by the bank.

DRUGGISTS' LIABILITY INSURANCE.—Druggists may secure indemnification against loss from claims or lawsuits against them on account of bodily injury or death of any persons or persons as a result of **a mistake made by them or their employees** in filling prescriptions, preparation of drugs or medicine, selling the same or other goods usually sold in drug stores or in delivering such drugs, medicines or other goods.

SECTION 11

TYPES OF BUSINESS ORGANIZATIONS

This section sets forth the various types of business organizations, their salient features and their relative advantages and disadvantages. The treatment of the subject is from the viewpoint of **legal organization,** and the **types of organizations discussed are:**

1. Sole proprietorships
2. Partnerships
3. Joint stock companies
4. Corporations
5. Holding companies
6. Subsidiaries
7. Massachusetts or common law trusts

Sole Proprietorships

The simplest form of business organization is the sole proprietorship, in which **one man** is the owner and manager. Most small businesses are operated in this manner. The owner may be assisted in his operations by any number of employees, whose relation to him is that of agent to principal.

ADVANTAGES.—The sole proprietorship has certain distinct advantages:

1. **Flexibility of Management.**—A sole proprietor can make immediate adjustments in his business to meet changing conditions, inaugurating new policies at will, without having to consult partners, directors or stockholders.

2. **Centralized Control.**—The administration is highly centralized, as all the powers of management are vested in an individual.

3. **Secrecy.**—Its business operations may be kept entirely secret. No documents of any kind have to be made public.

4. **Freedom from Business Taxation.**—This form of ownership, with the exception of certain kinds of brokers, is not burdened by the numerous forms of taxes that are imposed upon corporations.

DISADVANTAGES.—As a sole proprietorship business grows in size, its operations become increasingly difficult. A single owner would find it impossible to operate most of the large businesses of the present day. Many concerns which started as sole proprietorships ultimately evolve into partnerships or corporations as the business expands.

Other disadvantages are:

1. **Financial Limitations.**—The owner is limited in his means of securing outside capital.

2. **Sole Liability.**—The entire financial risk falls upon the owner. Any property which he possesses may be attached for the payment of debts contracted in the business.

3. **Lack of Continuity.**—The death of the owner terminates the proprietorship. Illness or enforced absence of the proprietor may cause disruption.

RELATIVE IMPORTANCE OF SOLE PROPRIETORSHIP.—The individually owned enterprise still remains the commonest form of business organization in the United States. However, the sole proprietorship has been steadily **decreasing in relative importance.** It has been estimated that the net income from this type of business in the United States is only about one-half of that of corporations. The value of their products is even proportionately less.

TRADE-NAMES.—When a sole proprietor operates his business under a **trade-name,** or an **assumed name,** the statutes of most states require that he shall file in the office of the clerk of the county court in which the business is conducted **a certificate** giving the name under which the business is conducted, together with his own name and address. This requirement applies likewise to partners conducting a business under an assumed name or trade-name. Failure to comply with the statutes may result in a fine or imprisonment. In some states, where owners have failed to comply with the statutes, they may not maintain an action upon their contracts.

Partnerships

DEFINITION.—"A contract of partnership is one by which two or more persons agree to carry on a business for their common benefit, each contributing property or services, and having a community of interest in the profit. It is in effect a contract of mutual agency, each partner acting as a principal in his own behalf and as agent for his copartner." (*Kerrick* v. *Hannaman,* 168 U. S. 328.)

ESSENTIALS OF PARTNERSHIPS.—

1. Capacity of Parties.—The parties must be legally competent to bind themselves by contract. Minors, insane persons or other incompetents at law cannot become partners.

2. Agreement.—There must be an agreement, either written or oral, between the partners. If formally written, it is termed "Articles of Copartnership."

3. Community of Interest.—There must be some community of interest, consisting of services, property or capital.

4. Purpose.—There must be a lawful business conducted with a view to making profit.

CLASSIFICATION OF PARTNERSHIPS.—

General Partnerships.—A general partnership is one in which the business is conducted for the joint benefit, profit and risk of all partners, each partner sharing the profits and losses regardless of the ratio of the capital contributed, but among themselves the partners may agree on unequal salaries, interest rates on capital and divisions of profits and/or losses.

Limited Partnerships.—A limited partnership consists of one or more general partners, who are liable for the debts of the firm as in a general partnership, and **special partners** whose liability is limited to the extent of their contributions. The profits are shared in accordance with the agreement of the partners. In every limited partnership there must be at least one general partner.

Single Venture Partnerships.—When a partnership is formed for a single venture, or for the transaction of a single business, it is known as a **single venture, particular partnership** or **special partnership.**

ADVANTAGES.—The advantages of partnerships are:

1. **Capital.**—The chief advantage of the partnership lies in the aggregate amount of capital which is available for the firm from the individual partners, enabling the partnership as a whole to carry on a larger volume of business than would be possible for the individual partners acting as sole proprietors of separate businesses.

2. **Increased Credit.**—The credit position of the partnership may be stronger than that of a sole proprietor on account of the **unlimited liability** of each general partner for the debts of the firm as a whole. With greater credit facilities the partnership is enabled to meet enlarged business needs.

3. **Management.**—The flexibility of management and the possibility of specialization by individual partners, in the branches of the business each is best able to serve, are greater.

4. **Combinations of Effort, Skill and Experience** of the several partners are distinct advantages in formulating and prosecuting business policies.

DISADVANTAGES.—The disadvantages of partnerships are:

1. **Unlimited Liability.**—Each general partner is fully liable for all firm obligations to the extent of his **entire personal fortune.** The partners may agree between themselves to limit the liability of one or all of the partners, but this agreement is not binding upon outsiders dealing with the firm, who may hold any general partner to satisfy the entire debts of the firm.

2. **Acts of One Bind All.**—Each partner has authority to bind the firm by contract, having full power to act as a general agent.

3. **Possibility of Friction.**—Since the act of one partner binds all, there is a possibility of friction which increases with the number of partners. To meet this situation the articles of copartnership should set forth clearly the duties of the several partners. Sometimes the authority of partners, among themselves, is made proportionate to their capital investment.

4. **Limitations of Capital.**—As in the case of the sole proprietorship, the partnership is limited in its means of raising new capital. The partners must generally choose between reinvesting earnings and taking in new partners.

5. **Slower Action.**—In changes of policy, partnerships, because of possible divergent views of the several partners, may be slower in action than a sole proprietorship.

6. **Uncertainty of Life of Business.**—The death of one of the partners terminates the partnership.

ARTICLES OF COPARTNERSHIP.—The articles of copartnership correspond to the charter, by-laws and minutes of a corporation, and should therefore be drawn up with great care. In drawing up their agreement, the partners should be certain to include the following important provisions:

1. **Nature of Business.**—The scope of the business and the relation of each partner to the business should be clearly stated; also whether a partner is permitted to engage in outside transactions and whether or not each partner is required to devote all of his time to the business.

2. **Capital.**—Specify the amount to be contributed by each partner, and how it is to be paid. If partners agree to contribute equally, the agreement should state whether cash or its equivalent is to be paid in and the penalty, if any, for the failure of one partner to contribute as much as another.

3. Changes in Capital.—If undrawn profits automatically increase and losses decrease the capital accounts of the partners, the agreement should cover the point fully, since the interests of the partners in capital and profits may not be the same.

4. Interest on Capital.—Unless provided for in the agreement, capital contributions do not bear interest. If interest is to be allowed, the rate should be fixed.

5. Withdrawals.—Since this is frequently a matter of dispute, explicit provision should be made to cover the manner and extent of withdrawals and the penalty for overdrafts.

6. Undrawn Profits.—If profits are allowed to accumulate, the agreement should state whether such amounts are to be treated as loans or additional capital. This provision is important, since the agreement may provide (see 8 below) that profits are to be apportioned on the basis of capital contributed.

7. Interest on Loans or Withdrawals.—If it is desired that interest should be allowed on loans, or charged on withdrawals, so state and specify the rate.

8. Distribution of Profits or Losses.—State the method of apportioning profits or losses and specify each partner's percentage, also any contingency which may affect the share of any one.

9. Approval of Accounts.—There should be some agreement as to the approval of the individual partners' accounts in respect to withdrawals as well as in respect to the income and capital accounts.

10. Salaries of Partners.—If any partner is to receive a stated salary, specify the amount, when it is to be credited, whether or not interest is to be allowed thereon if undrawn and whether the amount is to be charged as an expense of the business before ascertaining the profit or loss.

11. Dissolution.—State procedure if partner dies or withdraws; whether books shall be balanced at once or allowed to run on to end of month or other period; whether, in case of dissolution, partners are to share losses in same proportion as each one's capital bears to entire capital.

12. Special Causes for Dissolution.—If partnership can be dissolved for other reason than death, such as disability or intemperance, state complete details.

13. Settlement after Dissolution.—It is important not only to arrange the method of determining each partner's share upon dissolution, but it is equally important to fix the details of payment. The most equitable way is to provide for full payment within a fixed period, or to pay a certain proportion annually or semiannually. State rate of interest on balance.

14. System of Accounts.—To obviate subsequent differences of opinion as to the system of accounts, the agreement should specify that double-entry accounts be kept, that they be balanced regularly and that they be audited annually or oftener by a professional accountant. It is desirable that the method of selecting the auditor be stated.

15. Disputes about Accounts.—An arbitration clause should be inserted to the effect that if any dispute arises involving the accounts, it is to be submitted for settlement to a certified public accountant to be mutually agreed upon. Since disputes occur with respect to other matters as well as to the accounts, in such cases the reference should be made to a certified public accountant and a lawyer, with power lodged in them to select a third party in case of disagreement.

16. Firm Insurance.—If life insurance for the benefit of the firm is to be carried on the life of one or more partners, state how the premiums are to be paid, and the disposition of the proceeds if collected. Also state the disposition if the partnership is dissolved while the policy is in force.

17. Good Will.—If withdrawing partners or representatives of deceased partners are entitled to good will, based on profits or otherwise, state the method of calculation in detail. For instance, if salaries of partners are treated as business expenses in determining annual distributions, state whether or not such salaries are to be likewise treated if good will is based on "average net profits." Salaries of partners and interest on partners' capital are in reality divisions of profit—not expenses—and it requires a clear and affirmative agreement to deal with them as expenses. Where no agreement exists as to how the profits are to be divided the law gives each partner an equal share in the profits and assumes that the losses will be borne equally by each partner.

AUTHORITY OF PARTNERS AND ITS LIMITATIONS.—Each general partner is an **agent of the partnership** with full authority to transact its ordinary business, and such acts as he performs in this capacity are binding upon the other partners. There are certain acts which he is prohibited by law from doing, unless given special power so to act by the other partners. These acts are:

1. Disposing of the good will of the business.
2. Doing any act which would prevent further conduct of the business.
3. Selling at one time all the partnership property.
4. Submitting a partnership claim to arbitration.
5. Confessing a judgment.
6. Assigning any of the partnership property to a creditor or to a trustee for the benefit of creditors.

LIABILITY OF PARTNERS.—General partners are liable to the full extent of their personal fortunes for any of the firm debts. Each general partner, therefore, is a **surety for his copartners.** A partner is entitled to contributions from his copartners for their proportionate shares in the firm debts which they should have paid. A new partner coming into a firm is not liable for the debts of the old firm unless he agrees to undertake such liability or unless creditors extend time of payment or otherwise prejudice themselves at his request. A partner retiring from a firm is liable as surety for all obligations incurred up to the time of retirement. He must furthermore give **proper notice of his retirement** to the firms with whom his partnership has previously transacted business and to the public generally by newspaper publication. Otherwise he may be held liable for subsequent debts of the firm, if credit has been extended in reliance upon his credit and in ignorance of his withdrawal from the firm.

FEDERAL TAX RETURNS OF PARTNERSHIPS.—Partnerships pay no federal income taxes as entities but the **partners** are **individually taxable** on their distributive shares of profit. Nevertheless, every partnership must, under the 1924 law, file an annual return giving the data necessary for the determination of the distributive shares of profit or loss.

"Individuals carrying on business in partnership shall be liable for income tax only in their individual capacity. There shall be included in computing the net income of each partner his distributive share, whether distributed or not, of the net income of the partnership for the taxable year, or, if his net income for such taxable year is computed upon the basis of a period different from that upon the basis of which the net income of the partnership is computed, then his distributive share of the net income of the partnership for any accounting period of the partnership ending within the taxable year upon the

basis of which the partner's net income is computed." [Sec. 218 (a), Revenue Act of 1924.]

"Every partnership shall make a return for each taxable year, stating specifically the items of its gross income and the deductions allowed by this title, and shall include in the return the names and addresses of the individuals who would be entitled to share in the net income if distributed and the amount of the distributive share of each individual. The return shall be sworn to by any one of the partners." (Sec. 224, Revenue Act of 1924.)

U. S. TREASURY INTERPRETATION OF LIMITED PARTNERSHIPS.—The U. S. Treasury draws a distinction between different types of limited partnerships, regarding one type as corporations and the other type as partnerships for federal income tax purposes.

"So-called limited partnerships of the type authorized by the statutes of New York and most of the states are partnerships and not corporations within the meaning of the statute. Such limited partnerships, which cannot limit the liability of the general partners, although the special partners enjoy limited liability so long as they observe the statutory conditions, which are dissolved by the death or attempted transfer of the interest of a general partner, and which cannot take real estate or sue in the partnership name, are so like common-law partnerships as to render impracticable any differentiation in their treatment for tax purposes. Michigan and Illinois limited partnerships are partnerships. A California special partnership is a partnership." (Reg. 65, Art. 1505.)

WHEN LIMITED PARTNERSHIPS ARE CONSTRUED AS CORPORATIONS.—The regulations are frank in stating that when there is doubt it will be resolved in favor of corporate status.

"On the other hand, limited partnerships of the type of partnerships with limited liability or partnership associations authorized by the statutes of Pennsylvania and a few other states are only nominally partnerships. Such so-called limited partnerships, offering opportunity for limiting the liability of all the members, providing for the transferability of partnership shares, and capable of holding real estate and bringing suit in the common name, are more truly corporations than partnerships and must make returns of income and pay the tax as corporations. The income received by the members out of the earnings of such limited partnerships will be treated in their personal returns in the same manner as distributions on the stock of corporations. In all doubtful cases limited partnerships will be treated as corporations unless they submit satisfactory proof that they are not in effect so organized. A Michigan partnership association is a corporation." (Reg. 65, Art. 1506.)

Joint Stock Companies

DEFINITION.—A joint stock company is a **form of partnership** in which the capital contributions of the partners are represented by **transferable shares of stock.** The holders of such stock are partners and are held to the **full liability of general partners.** For this reason, the joint stock company is not a common form of organization in the United States, but in Great Britain it occupies a position equivalent to that of the corporation in America.

RIGHTS.—The statutes of most states empower a joint stock company **to hold real property in the name of its president.** They also permit the **mortgaging of such real estate.** In New York a joint stock company may sue or be sued in the name of the president or treasurer. An individual member is not liable for the debts of the company until it is shown that the claim cannot be

collected from the company. The New York courts hold (*In re Wilner's Estate*, 153 App. Div. [N. Y.] 804) that a joint stock company owes its existence to the contracts of its members and does not exist as an entity distinct from its members. It exists wherever it does business or owns property.

LIFE AND OPERATION OF A JOINT STOCK COMPANY.—The life of a joint stock company continues for the period shown in the articles of association unless previously dissolved by mutual consent, bankruptcy, dissolution by courts or the acquisition of ownership of all the shares by one member.

The management of a joint stock company is in the hands of **a board of directors** selected by all the members of the company. The relationship between the directors and the members is similar to that of the directors and stockholders of a corporation. The members of a joint stock company are not agents of the company as in the case of partners.

CHANGE FROM CORPORATION TO JOINT STOCK COMPANY.—If the joint stock company is to be substituted for the close corporation, the articles of association should be carefully prepared. They are as important to the company as the charter is to a corporation, since they regulate the duties of the officers and the duties and obligations of the members.

ADVANTAGES.—The chief advantage of the joint stock company lies in its freedom from objectionable state taxation and the publicity imposed upon corporations. It is an improvement over the ordinary partnership in that its interests are as easily transferred and divided as those of the corporation. Also, there is no interruption or reorganization necessary on the death or bankruptcy of a member.

DISADVANTAGES.—The joint stock company form is not extensively used in the United States for the following reasons:

1. Each member of the company is **individually liable** for company debts which cannot be satisfied out of company property.
2. It cannot generally hold title to real property under its collective name. Such real property must be held by some agent or officer as trustee for the company and any conveyances or incumbrances must be executed by this procedure.
3. State statutes generally provide that such companies may sue or be sued in the names of their presidents or treasurers, but the statutory regulations are not uniform, the procedure is often very technical, and the laws of each state are the only safe guide.

A joint stock company is not a legal entity in the absence of such a statutory provision. Generally, however, the **tendency of statutory regulation** has been to assimilate the provisions governing joint stock companies to those governing corporations so far as is consistent with the fundamental difference in type of the two organizations. So far as possible, joint stock companies are considered as an entity and the representative officer or officers considered as trustees for many purposes.

On the other hand, the ultimate personal liability of each shareholder is never lost sight of and, however the procedure in enforcing this liability may vary in the different states, the shareholder may be held for any deficiency in company assets in the discharge of its liabilities. In the final analysis, the shareholders are really partners, but on account of the unwieldiness of attempting to apply the procedure used with an ordinary partnership to an organization consisting of a very considerable number of individuals and subject to frequent change in membership, statutes have been enacted for the purpose of confining the pro-

cedure against or transactions with individual members to those cases where liability of the individual shareholder is directly involved.

When the company is dissolved, the shareholders may be assessed pro rata by the court to meet any deficiency in assets necessary to meet the obligations of the company.

STATUTORY REQUIREMENTS.—The New York statutes require a joint stock company doing business in that state to file with the Secretary of State and with the county clerk a **written certificate** giving its name, date of organization, number of stockholders, names and residences of its officers and its place of business. This report must be filed within 60 days after formation of the company, and a similar report must be filed each January following. Other states have similar requirements.

FEDERAL TAXES ON JOINT STOCK COMPANIES.—Partnership associations, or joint stock companies, are generally **classed for purposes of taxation with corporations.** The Federal Income Tax Law merely states that the term "corporation" shall include "associations, joint stock companies and insurance companies."

The regulations define joint stock companies and associations as follows:

"Associations and joint stock companies include associations, common law trusts, and organizations by whatever name known, which act or do business in an organized capacity, whether created under and pursuant to state laws, agreements, declarations of trust, or otherwise, the net income of which, if any, is distributed or distributable among the shareholders on the basis of the capital stock which each holds, or, where there is no capital stock on the basis of the proportionate share or capital which each has or has invested in the business or property of the organization. A corporation which has ceased to exist in contemplation of law but continues its business in corporate form is an association or corporation within the meaning of section 2, but if it continues its business in the form of a trust, it becomes subject to the provisions of section 219." (Reg. 65, Art. 1502.)

Corporations

DEFINITION.—A corporation is an artificial entity created by law for specific purposes, the limit of whose existence, powers and liberties is fixed by its charter.

A more comprehensive definition of a corporation is given by Chief Justice Marshall in the celebrated case, *Dartmouth College* v. *Woodward* (17 U. S. 518), where it is stated that: "A corporation is an artificial being, invisible, intangible, existing only in contemplation of law and possessing the qualities of immortality and individuality, by which a perpetual succession of many persons are considered as the same, and may act as an individual." Another less colorful definition is: "A corporation is a collection of natural persons, joined together by their voluntary action or by legal compulsion, by or under the authority of an act of legislature, consisting either of a special charter or of a general permissive statute, to accomplish some purpose, pecuniary, ideal, or governmental, authorized by the charter or governing statute, under a scheme of organization, and by methods thereby prescribed or permitted; with the faculty of having a continuous succession during the period prescribed by the legislature for its existence, of having a corporate name by which it may make and take contracts, and sue and be sued, and with the faculty of acting as a unit in respect of all matters within the scope of the purpose for which it is created." (10 Cyc. 143.)

DISTINCTIVE FEATURES.—The distinctive characteristics of corporations are: (1) Separate legal entity; (2) continuous existence; (3) power to take and grant property; (4) right to contract, sue and be sued in its own name; and (5) right to act as an individual within the limits stipulated in the corporation's charter.

ADVANTAGES.—The chief advantages of the corporate form of organization are as follows:

1. The liability of the stockholders is **usually limited** to a definite amount.
2. It has a **distinct legal entity** and acts as a single body for all business purposes.
3. The capital interest of the stockholders of the corporation is represented by **transferable shares.**
4. The **organization is stable and permanent,** not being affected by the death of its stockholders.
5. There are numerous ways of securing capital under the corporate form, because its many safeguards and advantages have a great appeal to investors.

Briefly, a corporation is a convenient means of associating a large number of persons in a single enterprise.

DISADVANTAGES.—Of late years the legislatures of the different states and the federal government have imposed **heavy burdens** upon corporations in the way of taxes and special reports.

TAX ON CORPORATIONS.—The taxes affecting corporations are as follows:

1. Organization taxes
2. Annual franchise taxes
3. Local property taxes
4. State income taxes
5. State inheritance taxes
6. State stock transfer taxes
7. Tax on foreign corporations
8. Federal income taxes
9. Federal capital stock taxes
10. Federal stock transfer taxes

(For detail discussion on corporation taxes see section on Federal Taxes.)

REPORTS BY CORPORATIONS.—Corporations are frequently called upon to make special reports of their activities to stockholders and often to various federal and state bodies. Annual reports must be made for federal and state taxing purposes.

RIGHTS OF STOCKHOLDERS.—The rights of stockholders may be summarized as follows:

1. To attend and vote at corporate meetings.
2. To elect directors.
3. To participate in dividends or profits.
4. To share in corporate assets on dissolution.
5. To inspect corporate books.

HOLDING COMPANIES.—A holding company is a corporation formed to control other corporations through the **ownership of voting stock.** The holding company has virtually taken the place of the trust. Some states, among which are New York, New Jersey and Delaware, have passed laws allowing corporations to purchase, hold, sell, mortgage and transfer stock and securities of other corporations and to exercise the right to vote such stock. These laws have provided a means whereby a group of corporations can be brought under one management. **Fifty-one per cent** of a corporation's outstanding stock is enough to control it, or, if the stock is scattered, 40% or even less may be sufficient, as this may prove a majority of the stock voting at a meeting, or

proxies for sufficient may always be secured to insure control of an actual majority of the total stock outstanding.

LEGALITY OF HOLDING COMPANIES.—The U. S. Supreme Court has ruled that the control of competing businesses by means of a holding company is illegal if done in a manner to violate the **Sherman Anti-Trust Law.** The use of the holding company is not illegal when the control exercised is not in restraint of trade and does not tend to lessen competition or create a monopoly. Holding companies created for purposes of economy in operations are not illegal. The **Clayton Act of 1914** forbids corporations engaged in interstate commerce from acquiring part of the stock of another corporation under certain conditions, when the effect may be to lessen competition, to restrain trade, or to create a monopoly. (See the section on Federal Regulation of Business.)

SUBSIDIARY COMPANIES.—A subsidiary company is one whose entire stock, or a controlling majority of whose stock, is owned by another company, known as the holding or **parent company.**

There are numerous reasons for the use of the subsidiary company. A common reason is that some organizations desire to do business in a number of states. By this means, capital investment and other details may be arranged to suit the requirements of any state laws. If the corporation is allowed to hold stock according to the state statutes, the corporate stockholders have the same rights as individual stockholders.

Massachusetts Trusts

DEFINITION.—A Massachusetts trust, also known as "express trust," "business trust," or "common law trust," is an arrangement by which a number of persons known as **"trustees"** hold property for the benefit of others, known as **beneficiaries.** Parties to a trust are: (1) the creators; (2) the trustees; and (3) the beneficiaries.

This type of organization originally **arose in Massachusetts** where the law (prior to 1912) prohibited the organization of corporations for the purpose of dealing in real estate. Since a corporation is deemed to have continuous succession, it was feared that a landholding corporation might increase to such a size that it would be more powerful than the state itself. Owing to this prohibition the trust principle was adopted. These organizations were found convenient and effective and not subject to the limitations and requirements imposed upon corporations. The result has been that the trust form of organization has been extended to many other lines of business.

HOW CREATED.—Such trusts are created through the drafting and execution of a written instrument called a **"deed of trust,"** which describes the business of the association and defines the rights and liabilities of the trustees and the beneficiaries. The beneficiaries' interests in the trust are represented by certificates or shares generally called **units of beneficial interest,** which are similar to certificates of stock of a corporation.

The trustees agree to carry on the business under a trade-name and to organize with a president, treasurer, secretary and other officers. They hold office for a stated period, being replaced by others elected by the beneficiaries, who cast as many votes as they have units of beneficial interest.

ESSENTIAL PROVISIONS OF A TRUST FOR BUSINESS PURPOSES.—The essential provisions of any express trust organized for business purposes are:

1. **A deed or declaration of trust,** drawn up to define the rights and powers of trustees and shareholders.
2. **Two or more trustees** who are authorized to take over and manage the capital, business, or other property supplied by the shareholders.
3. **Shareholders** who are beneficiaries and who receive transferable certificates representing their respective interests in the profits and in the property on dissolution.
4. Provisions for **division of profits, appointment of trustees** to fill vacancies, and for **dissolution** at termination of the trust.
5. Provisions that no liability is to attach to either trustees or shareholders, but only to the trust estate.

ESSENTIALS OF DEED OF TRUST.—The deed of trust should set out the following essential information:

1. The trustees and the immediate beneficiaries must be designated, and provision must be made so that others desiring to be beneficiaries can come in and assist in making up the required amount of capital.
2. If any property is to be transferred to the trustees, or if they are to purchase any particular business or property, it must be designated and described.
3. The capital, if any, that is to be raised and paid over to the trustees must be specified, and its division into shares and the value thereof must be set forth. Both preferred and common shares may be prescribed.
4. The declaration must also state that the property acquired by the trustees is held in trust, and subject to the powers, limitations, and liabilities set forth in the instrument by which the trust is created.

DETAILED PROVISIONS OF DECLARATION OF TRUST.—The declaration of trust or trust agreement must specifically prescribe and set forth the following details:

1. The duties of the trustees.
2. The powers of the trustees.
3. What consent on the part of the shareholders is required for the exercise of any special powers by the trustees.
4. Any special limitations or authorizations of the trustees.
5. The remuneration of the trustees for their services.
6. Any directions for the financial management of the trust.
7. How and under what circumstances payments of profits or of the trust funds are to be made to the holders of common and preferred shares.
8. Directions, if any, as to the sale or transfer of any of the trusteed property.
9. The continuance of the trust for such term as may be allowed by law.
10. Provisions as to registry of shareholders, the issuance of certificates, and the transfer of shares.
11. That the trustees shall have no authority to bind any shareholder by contract or to call for any assessment from them.
12. That all persons dealing with the trustees shall look only to the trust funds and not to either trustees or shareholders for payment, and that every order, contract, or obligation entered into shall stipulate that neither trustees nor shareholders are liable thereunder.
13. Provisions for annual meetings, reports and audits, and for filling vacancies among the trustees, with rules for voting.

14. How special meetings may be called and how notice of them is to be given.
15. The name of the trust and how the trustees shall be known.
16. Provisions for any other details of the trust business and organization not already prescribed.

The declaration of trust must be signed by the parties interested, and in most cases will be acknowledged before a notary or other official. Care must be taken in preparing a trust that the power of alienation is not suspended, especially if any part of the trust estate consists of real property.

ADVANTAGES OF EXPRESS TRUSTS AND CORPORATIONS.—The express trust as a form of business organization gives the following advantages which are also common to the corporate form:

1. Neither shareholders nor trustees are liable in excess of their personal interest in the trust property.
2. The shares are transferable as are corporate shares.
3. Trustees can do business and manage the trust property as directors do with the corporate business and property.
4. For all practical purposes an express trust can be made as permanent as a business corporation. In most states a trust can be created for one or more lives and 21 years more.
5. It is dissolved by agreement as readily as a corporation.
6. An express trust can sue and be sued as readily as a corporation can.
7. Shareholders have a right to accountings and to all such information as is proper.

ADVANTAGES OF THE EXPRESS TRUST OVER THE CORPORATE FORM.—In the following particulars, it is claimed that the transaction of business under an express trust has advantages over the corporate form:

1. It can do business in any part of the country as freely as an individual or a partnership. In some states, however, the members may be held as partners.
2. It is not required to make out the reports, to take out licenses, and to pay taxes to the extent that is required of a corporation.
3. Under some conditions the permanence of management secured by a continued board of trustees is better than the plan of annual elections.
4. The trustees may ask for court guidance in cases where the rights or powers of the trust are unadjudicated or not clear.

INDIVIDUAL LIABILITY UNDER TRUST ASSOCIATIONS.—Great caution should be exercised in forming a Massachusetts trust. It is important that the deed be drawn by a competent attorney, since there is danger that **a faulty deed** may cause the shareholders and trustees to be held liable as partners.

The most important question in relation to this form of business association is whether the individuals concerned, both the trustees and the beneficiaries, are likely to be held to individual liability as in the partnership. It is a general condition of the law that those who are associated in business with others are personally liable for all obligations incurred in the operations of the business.

The vital question as to the trust associations is whether business can be done by trustees under a declaration of trust with freedom from individual liability.

Under the common law a trustee was held to be a principal, not an agent, and when he contracted as trustee, he bound himself personally. He had a

right to be indemnified from the estate if he became liable without negligence on his part. If he wished to avoid all this, he could do so only by expressly stipulating that only the estate and not himself was to be bound. The Supreme Court long ago laid down the general rule that, "If a trustee wants to protect himself from liability on a contract, he must stipulate that he is not to be personally responsible, but that the other party is to look solely to the estate." In later Maryland cases the courts have explicitly stated the rule that the trustee must stipulate that he is not to be personally liable, or he will be so held. In Massachusetts it has been held that where trustees signed a note "We as trustees, but not individually, promise to pay," they were not personally liable.

As a matter of precaution, most of the well conducted trusts that are in active business are particular to have printed on all of their stationery and in particular on all bills, orders, invoices, and any other instrument that may involve or partake of a contract liability, a full **disclaimer of all individual liability.** The following disclaimer is of this nature:

"The Hampton Company is the designation of a Board of Trustees acting under a declaration of trust dated December 30, 1909, and filed with the Northampton National Bank of Northampton, Massachusetts. Any contract made or liability incurred by them binds only the trust property in their hands, and neither themselves nor the shareholders, beneficiaries of the trust, shall be held to any personal liability under or by reason thereof."

Where this has been done, neither trustees nor shareholders have been held liable for anything beyond the money already invested in the trust. It is to be remembered, however, that trustees cannot avoid personal liability for torts or negligence.

The declaration **must not prescribe any control of the trustees by the shareholders.** If the shareholders are in any way to manage the business, they will make themselves liable as partners. On this account the beneficiaries must not by means of annual elections appoint the trustees. This would be management by the beneficiaries and they would be held personally liable as in a joint stock company.

CONCERNS ORGANIZED AS EXPRESS TRUSTS.—The following list shows some of the better known concerns organized under the trust form:

The Mackay Companies (Postal Telegraph)
Great Northern Iron Ore Properties
Texas Pacific Land Trust
Amoskeag Manufacturing Co.
Ludlow Manufacturing Associates
Massachusetts Gas Companies
Chicago City and Connecting Railways Collateral Trust
Chicago Elevated Railways Collateral Trust
North American Pulp and Paper Co.
Masonic Temple Trust (Chicago)
Montgomery Ward Warehouse Associates
Pepperell Manufacturing Co.
Massachusetts Lighting Companies
New Hampshire Electric Railways

SECTION 12

CONTROLLING INVENTORY INVESTMENT

RELATION OF INVENTORIES TO FINANCIAL CONTROL.—The successful financing of a business demands close study of its **working capital requirements.** A certain amount of the company's capitalization must be invested in what is commonly termed **current assets.** The current asset requirement fluctuates with the character of the business, the general industrial and business trend, and with purchasing, production and sales conditions. Working capital which would be adequate for certain seasons of the year would be excessive in other months. If working capital is fixed for the maximum needs of a business, much of such capital will remain relatively idle and unproductive during portions of the year. Therefore, an intelligent estimate of an economical working capital is an essential duty of the financial executive.

There is **no fixed rule** for determining the amount of working capital which should be owned or the amount which should be borrowed. Obviously, the working capital should not be greater than that which can be used profitably It should be sufficient to protect the business against sudden depression and sharp price declines. It should also be enough to make an attractive financial position so as to permit borrowing when needed upon a favorable basis. Unused capital is costly and insufficient capital is dangerous.

QUICK ASSET TURNOVERS.—Any worth-while effort to establish working capital requirements involves a study of the turnovers of the quick assets and a thorough realization of the part played by the inventory and its relation to purchasing, production, sales and financial programs. The principal factors to be considered in reaching a decision regarding the proper amount of working capital are the turnovers of the receivables and inventories. The amount needed to carry customers' accounts may be approximated upon the estimated monthly sales volumes and the credit terms given, with due allowance for slow or bad accounts.

Where records are available, **the inventory turnover** may be ascertained by dividing the average inventory into the average cost of goods sold. These turnovers will differ much in various lines, but they should be somewhat similar within a trade or industry. Constructive analyses of turnovers often point the way to conserving capital and to needed improvements in purchasing, production and sales methods.

The control of the working capital position requires constant attention to these turnovers, and particularly, to the liquid condition of the investment in inventories. Careful watch must be maintained to see that unsuitable raw materials, large overruns, dead stocks, imperfect finished products, and the like, do not tie up a substantial part of the inventory investment for an indefinite time. The financial executive should insist that such items be liquidated promptly and on the best terms possible, and then take steps to correct the conditions which gave rise to such unprofitable use of the company's capital.

KEEPING RECORD OF INVENTORIES.—In most modern businesses appropriate accounts are provided to furnish the essential information regarding the inventories. The general accounts contain controls for the stocks of raw materials, goods in process and finished goods. The cost accounts supply the cost of all goods manufactured. Briefly, these accounts are charged with all materials and services which are purchased for or applied to manufacturing operations and they are credited with the costs of goods sold as ascertained by the cost accounts.

Perpetual inventories are successfully operated by many concerns, but perpetual inventories are not always practical and it is necessary at times to use **estimated inventory figures.** Whether perpetual or estimated inventory methods are followed, it is always desirable to have a **physical inventory** taken at least twice a year, and in some cases, continuously, so that any errors in the clerical work of the perpetual inventory or in the computations of estimated inventories may be disclosed and adjusted. The use of perpetual inventory records is increasing rapidly and is well worth the trouble and cost in most businesses. With well kept perpetual inventory records the value of stock on hand may be ascertained at any time. Estimated inventories are, at their best, but rough approximations and full allowance must be made for this condition in their application and use.

The importance of an exact knowledge of the amount and composition of the inventory investment cannot be exaggerated because in addition to being a vital factor in the company's working capital structure, the inventory is the basis of the determination of the results of the operations of the business. Statements of financial condition and income accounts are worth little if they are not founded upon correct inventory values. Monthly statements based on book or estimated inventories are usually viewed with a mental reservation regarding actual inventory figures and, in most cases, full confidence in financial statements of a business require that they be based on carefully prepared physical inventories.

INVENTORIES IN THE BALANCE SHEET.—Inventories of merchandise in a trading concern and of raw materials, supplies, goods in process and finished goods in a manufacturing company, are considered current assets when they are in a condition to be **convertible into cash** or its equivalent in the regular course of business and **within about one year.** It is not good accounting practice to include in current assets stocks of goods or any part of such stocks which cannot be converted into sales within one year. When the period of conversion is longer the values of such inventories should be segregated on the balance sheet. This general principle, however, is not rigidly applied to moderate stocks of replacement parts for the company's products in current use.

The annual balance sheet and income statement should be prepared at the close of the **natural business year.** If the completion of the year's activities does not come at the end of the calendar year, it is unwise, inconvenient and uneconomical to follow blindly the traditional habit of closing the accounts on December 31. The practical advantages of a fiscal period, nicely fitted to the seasons of each individual business, are obvious; yet many executives ignore such evident benefits and allow themselves to drift along with the old calendar year custom.

The natural and best time to end a fiscal year is when the **normal cycle of annual operations** has reached its most inactive position, or when periods of greatest production and shipment activities are over. At such times inventories are relatively low and many of the factory departments are closed down for necessary repairs, lay-out changes and the like. Inventories can be counted

and recorded with minimum effort and vastly reduced expense, forced shutdowns of productive departments are avoided, and the officers and employees have ample time to concentrate upon the work of the inventory and annual reports. The balance sheet at the end of a business year shows the best liquid position that it is possible to obtain under ordinary operating conditions. This element alone may determine **the attitude of a bank** regarding the extension or increase of a line of credit. In other words, the selection of a natural business year will save some money each year and may at some future time be the deciding factor in a decision of the greatest possible importance. There is no good or compelling reason for using the calendar year period when it fails to harmonize with the end of the natural business year.

GOODS ON HAND.—Inventories of the stocks on hand in manufacturing concerns should be classified primarily into:

Raw materials	Finished goods
Goods in process	Supplies

In some cases **another classification of scrap** is also desirable. Each of these main divisions should be subclassified so as to show excessive, unusable, damaged or obsolete materials, finished goods or supplies.

Raw Materials.—The raw materials consist of all materials rough, semi-finished, or finished articles which are provided as material entering into production.

Goods in Process.—The merchandise in process includes all materials delivered from store rooms to the production departments and all materials and products in the various stages of the manufacturing processes.

Finished Merchandise.—The finished goods are those upon which all manufacturing processes have been completed.

Supplies.—The supplies should consist of articles provided for consumption in the process of manufacturing, maintenance of the plant or comfort of the employees but which do not in any way enter into the product as production material. **Small tools, jigs, dies, gauges and other appliances** of the same general nature provided exclusively for the manufacturing processes are classed with supplies by some but most concerns consider such items as "special plant equipment."

OTHER INVENTORY ITEMS.—The following items should be considered as inventory and shown separately upon the balance sheet:

Merchandise pledged as collateral.
Merchandise in transit
Merchandise out on consignment.
Merchandise in foreign countries.
Advance payments on merchandise not received.
Merchandise which cannot reasonably be disposed of within a year.

Merchandise Pledged as Collateral.—Borrowing upon merchandise is a common practice with companies handling or using large quantities of commodities, such as wool, cotton, tobacco, coffee, sugar, canned goods, etc. This custom is utilized at times by industrial and commercial concerns who find difficulty in borrowing on their unsecured notes.

Usually the goods pledged as collateral on loans are **stored in warehouses** and the warehouse receipts therefor are deposited as collateral on loans. In some cases, however, loans are made on the **merchandise in the company's own store rooms.** In such cases the pledged stocks should be segregated or records

should be kept to clearly identify the pledged goods and to account for any withdrawals therefrom.

Merchandise in Transit.—The title to merchandise sold is vested usually in the purchaser upon delivery of the merchandise to a common carrier. As soon as merchandise is shipped, it becomes an accounts receivable of the seller and belongs in the inventory of the buyer. Hence, merchandise in the hands of public carriers or on receiving platforms awaiting inspection and count should be included in the inventory. It is incorrect practice to omit goods in transit from the inventory at the end of the fiscal period.

Merchandise Out on Consignment.—Statements of sales and the merchandise on hand at inventory date should be obtained from all consignees. The goods out on consignment should be priced upon the basis used for similar items in the inventory of stock on hand. If the consigned goods are in good condition and readily salable, freight, insurance and other accrued charges may be added to the basic inventory value.

If consigned merchandise is included among the assets of the consignee, a corresponding liability to the consignor must be shown. It is not customary, however, to show consigned merchandise on the balance sheet in this manner because it makes an unfavorable showing which is not justified by the facts. The goods held on consignment are not assets because they are not owned and no liability for the payment thereof exists until they are sold. The value of the goods constitutes capital which is loaned without any obligation to the consignee beyond due care.

When materials are received to be converted or fabricated for others, greater care is imposed upon the consignee but no direct liability exists which need be shown on the balance sheet.

Merchandise in Foreign Countries.—The merchandise held in foreign countries should be accounted for by the foreign branch offices in much the same manner as the goods on hand. **The domestic valuation** of such inventories should be based upon a study of exchange rates, custom duties, transportation, foreign market conditions, etc.

Advance Payments on Merchandise Not Received.—Payments on account of merchandise not received are often **charged to accounts payable.** If this custom prevails, the amounts so paid should be temporarily transferred at inventory time to an asset account so that the item may be reflected correctly in the company's financial statement. The advances are against a future liability and will be replaced ultimately by inventory, hence it is incorrect to reduce the total of the company's current liabilities to trade creditors by the amount of such pre-payments.

Merchandise Manufactured under Sales Contracts.—When articles are produced under enforceable sales contracts, the semi-finished and finished goods on hand may be included in the inventory at cost, unless it is apparent that costs are higher than the net amount realizable from the contract price.

Merchandise Held on Consignment.—Merchandise received on consignment becomes in reality a source of capital because the consignor supplies the part of the working capital of the business. The consignee does not have title to this merchandise but is responsible for its custody and it is usually necessary for him to take periodical inventories of merchandise on consignment in order to make proper accountings to the consignor.

PURCHASE COMMITMENTS.—When purchase commitments are normal and at prices which are substantially in accordance with prevailing market

quotations, the total thereof need not necessarily be shown on the financial statement. It is a good practice, however, to note the total of the purchase commitments so that the management may have this information for use in connection with its plans for future financing. During **periods of drastic price declines,** purchase commitments must be given special attention, because if they are at prices materially above current ones, they are the source of losses and real liabilities. Under such conditions all the pertinent facts regarding such commitments should be shown on the company's financial statement and **adequate reserves** should be made for the probable losses arising therefrom.

INVENTORY TURNOVER.—Turnover as applied to inventories is the completed cycle of turning capital invested in merchandise, carried for the purpose of conducting a business, into cash, negotiable paper, accounts receivable, or other valuable consideration. **Rate of turnover** is the number of times the cycle has been completed in a given period. The return on capital used increases with the rate of turnover, assuming that the margin of profits on sales is not diminished.

Profits are derived from the sales of services and/or commodities. Hence the turnovers of the inventories are most important factors in profit realizations and price fixing. Most industries have normal turnover periods and any concern in the industry that fails to effect the average turnover rate will not realize its full profit possibilities. In highly competitive lines the **narrow profit margins per unit** demand rapid turnovers in order to produce fair returns on capital invested. Those who understand the effect of frequent turnovers are often able to sell at more attractive prices than their competitors and thus secure the volume needed for economical and low cost production operations. **Selling prices** should be fixed with a careful regard for the estimated rate of turnover.

USE OF TURNOVER.—Inventory turnover should be used by the financial executives as an index to the flow of material and labor into production and its conversion through sales into cash or its equivalent. Wherever possible the turnover of the business as a whole should be supplemented by **departmental turnovers** as a means of controlling inventories and locating obstructing departmental conditions. Where several lines are carried, the turnover of the business as a whole is often deceptive, and the turnover of each product or division should be obtained.

It is seldom found that the limitation to quicker turnover has really been reached. Intensive studies of the human factor, the processes of manufacturing and sales methods, generally disclose means for improvement.

TO FIND TURNOVER.—The following is a rule for ascertaining turnover: To ascertain the turnover, take the starting inventory, add the cost of manufactured or purchased goods, and deduct the inventory at the end; divide the total by the starting inventory. The calculations are based upon a normal inventory. The result is the number of times the capital invested in stock-in-trade has been turned over during the period. In the event that the value of the inventory varies considerably throughout the year, or in case of a continuous increase or decrease in the volume of business which might have a corresponding effect on the inventories, a more accurate method of determining the turnover would be to use the average inventory instead of the starting inventory.

Most **American accountants** figure turnover on the basis of cost, i.e., they regard turnover as the number of times the normal stock-in-trade is reinvested in the goods sold. Many **British accountants,** on the other hand, say that turnover is the number of times the inventory is contained in the sales. It is

evident that when two or more businesses are compared, it is very important that the turnover be determined for all on the same basis.

Some authorities suggest **working capital as a basis for turnover.** This is the excess of current assets over current liabilities. Thus, if the excess of current assets over current liabilities is $25,000, and goods are sold during the year which cost $150,000, the working capital is turned over six times, and this may be said to represent the turnover. If a large amount of working capital is used for advertising purposes, it follows that it cannot be used to purchase goods to be sold. The same is true if a large amount is locked up in accounts receivable. The result of either of these is a lessened turnover of working capital. When the opening or normal inventory is made the basis, the turnover may remain the same although the volume of business is on the increase or decrease, because the inventory increases or decreases with the expansion and contraction of business.

Walton and Finney make the following statement regarding the use of working capital as the basis for the reckoning of turnover:

"The use of working capital as the basis of turnover is logical, first, because the capital is put in the business for the purpose of being turned over as rapidly as possible; second, because it is virtually constant; and third, because it presents all the elements concerned in the turnover, not only the stock-in-trade, but also the accounts and notes receivable, by means of which the turnover is effected. The turnover of working capital also furnishes a better criterion of the excellence of the management. If a manager uses working capital as the standard, he makes his best record by diligence in collecting outstanding accounts, and increasing the supply of cash for the development and handling of a more extensive business."

CALCULATING THE RATE OF INVENTORY TURNOVER.—The rate of turnover must be computed with due regard for the standards used in each line of business. Some use the unit of production as a basis, others use the investment in inventory. This latter basis, being applicable to most businesses, will be considered here.

1. Merchandising.—The rate of turnover of a merchandise inventory may be ascertained by either of the following methods:

Cost method. The monthly average of the cost value of the inventory carried during a period divided into the cost of sales. The average value of inventory is usually found by adding to the value of inventory at the beginning of the year, the value of the inventories at the end of each month, including the inventory at the end of the period, and dividing the total by the number of inventories.

Retail method. The monthly average of the retail value of the inventory carried during the period divided into the sales (used by some department, retail and chain stores). The retail method shows the turnovers of the stock, but it does not reflect the turnover of capital invested in inventory because both the retail values and the sales prices contain fluctuating profit factors.

Seasonal Classification by Department Stores.—When the merchandising activities are subject to seasonal and style influences, the turnovers of each department should be watched closely. The turnover calculation, however, does not disclose slow moving stocks or the percentage of sales made from the current purchases.

To control this factor, the inventories of the various departments should be classified according to seasons of purchase so that turnovers of the older season's goods may be ascertained and accelerated, by price adjustments or the like.

2. **Manufacturing.**—In manufacturing concerns it is desirable to ascertain the turnovers of the raw material, goods in process, finished merchandise and supplies. The rate of **turnover of raw materials** is determined by dividing the average of inventory into the total value of the materials used in the manufacturing processes during the period. The **turnover of the in-process stock** is obtained by dividing the average inventory of merchandise in process into the total amount credited to merchandise in process account for the period. The **turnover of the finished goods** is found by dividing the average inventory of finished merchandise into the total cost of sales. The **turnover of the supplies inventory** is shown by dividing the average inventory of supplies into the total amount of supplies used during the period.

ALLOWANCE FOR SPECIAL STOCKS.—In computing turnovers due allowance should be made for **special or abnormal purchases.** Occasionally large quantities of material are purchased to take advantage of unusually favorable conditions. Sometimes a year's supply or even more may be so acquired. If the normal purchases are confined to three months' supply, it would be misleading to include the abnormal purchase in the calculation of the turnover rate. In fact, such a transaction is either a capitalization of purchasing judgment with available funds or pure speculation, and neither of these is a true normal manufacturing or merchandising operation.

ILLUSTRATION OF ADVANTAGES OF QUICK TURNOVER.—The advantages of quick inventory turnover are illustrated in the following summary:

	A	% to Cost of Sales	B	% to Cost of Sales	C	% to Cost of Sales
Working capital	$150,000		$130,000		$150,000	
Average inventory	100,000		80,000		100,000	
Sales	$500,000		$494,800		$675,000	
Cost of sales	350,000		350,000		500,000	
Gross profits	150,000	42.86	144,800	41.37	175,000	35.00
Operating expenses	120,000	34.28	118,800	33.94	130,000	26.00
Net profits	$ 30,000	8.58	$ 26,000	7.43	$ 45,000	9.00
Rate of inventory turnover	3½ times		4⅜ times		5 times	
% Net return on working capital	20%		20%		30%	

Example A shows a condition before adopting quick turnover. Example B shows a condition after adopting quick turnover and using the turnover to reduce inventory. The gross profit is reduced 1.49%, the net profit is 1.15% less than A, but the net return on the reduced working capital is the same. Example C shows the condition with a quick turnover at lower prices, and the increased volume of sales is offset somewhat by higher operating expenses and smaller gross profits, yet the net profits are 50% greater than in either examples A or B.

GROSS PROFITS ON SALES IN RELATION TO TURNOVER.—The margin of gross profit on sales is very important. If the gross profit is insufficient to cover the business expenses, and if such expenses advance in proportion to increases in sales, an increased turnover would produce **larger losses.**

Illustrations.—Assume that the company has an invested capital of $500,000 and the following conditions:

	A	% to Cost of Sales	B	% to Cost of Sales	C	% to Cost of Sales
Average inventory value...	$200,000		$200,000		$200,000	
Sales.....	$720,000		$960,000		$960,000	
Cost of sales.....	600,000		800,000		800,000	
Gross profits.....	120,000	20.00	160,000	20.00	160,000	20.00
Expenses.....	150,000	25.00	200,000	25.00	160,000	20.00
Net loss.....	$ 30,000	5.00	$ 40,000	5.00	No loss	
Rate of turnover.....	3		4		4	
Loss on investment.....	6%		8%		None	

Example A shows an inadequate percentage of gross profit before increasing turnover rate. Example B shows an increase in turnover with the same percentage of gross profits maintained and expenses increased in proportion to sales. Example C shows the same gross profit and sales but expenses did not advance in proportion to sales.

INVENTORY CONTROL.—The control of inventories is an **essential part of the control of finances.** The co-ordination of the various functions necessary to keep the inventory investment as low and as active as practicable is an important factor in securing a satisfactory return on the invested capital. The control of the investment in inventories requires good organization and suitable records. The **underlying principles** of control are the **same for all businesses,** but their application must be fitted to the particular nature and size of each concern.

OPERATIONS AFFECTING INVENTORY CONTROL.—The control of the inventory involves a coordination of the purchasing, production, sales and stock-keeping activities. Purchasing includes ordering, contracting and receiving; producing includes the fabrication of material or development of resources; selling includes ordering out and shipping; and stock keeping includes the receipt and recording of all purchased and finished goods. The sales are the controlling factor and purchasing and production should be planned and timed to meet the expected volume of sales.

BASIC INFORMATION NECESSARY FOR INVENTORY CONTROL.—The basic facts required for inventory control are:

1. The actual sales or consumption.
2. The expected or estimated consumption of each class or kind of merchandise in a given time based upon unfilled orders and sales forecasts.
3. An accurate and available record of the quantities of each kind or class of merchandise on hand.
4. The actual receipts of merchandise.
5. The quantities on order.

BASES AND POLICIES AFFECTING INVENTORY CONTROL.—Definite bases and flexible policies are necessary as guides for control. The most important of these are:

1. Minimum inventory investment for effective operation of the business.
2. The minimum quantity of the inventory at which replenishment is necessary.
3. The quantity necessary for sales in the usual course of trade.
4. The policy in regard to size of purchase units.

5. The policy in regard to disposal of slow moving items.
6. The policy in regard to extraordinary increases and decreases in stock.

MINIMUM INVESTMENT NECESSARY FOR EFFECTIVE OPERATION.—In establishing the minimum necessary investment all factors relating to the business should be considered. The result should be a practical basis sufficiently flexible to meet the varying business conditions. The stock should be sufficient for production needs and to meet normal demands of customers. It should also allow a fair margin of safety for delays, strikes, breakdowns and the like.

The establishment of a minimum inventory investment involves the consideration of the following:

The completeness of assortment, parts, sizes or kinds (the "balanced" inventory).
The time which ordinarily elapses between ordering and receipt of merchandise.
The types of merchandise used, that is, staples, specialties, novelties or seasonal goods.
Obsolete and slow moving merchandise.
Excessive or disproportionate quantities.
The storage and stock space available.
Over-production or scarcity at sources of supply.
Rising or falling market due to general business conditions and the economic trend.
The production period or the time required in each process of manufacture. The limiting factor of manufacturing is usually found in some one process.
Time required to ship merchandise from stock.
Material necessary to produce single unit.
Quantities of merchandise usually sold in a given time.
Quantities scheduled to be sold through special effort or sales campaign.
Market conditions in regard to demand and competition.
Margin of safety.

USE OF RECORDS AND RATIOS.—Previous records and inventory statistics in themselves are of minor significance, because they may reflect abnormal or subnormal conditions. But when such data are used with good judgment and due consideration of all factors affecting them, they serve as a good working basis for establishing minimum requirements. The following is an illustration of how inventory statistics may be used and of the necessity for considering all pertinent factors:

	Average Inventory	Sales	Ratio of Inventory to Sales
1921.....	$10,000	$30,000	1 to 3
1922.....	15,000	50,000	1 to 3.33
1923.....	30,000	60,000	1 to 2
Present inventory.....	$30,000		

The above figures indicate that during the year 1921 the average inventory was equal to 4 months' sales and that in 1923 the inventory was sufficient to take care of customers' requirements for 6 months. Such an increase in inventories should cause investigation on the part of the financial management. The increase may be due to the accumulation of slow moving or obsolete

merchandise or to inflated inventory values. On the other hand, the increase may have arisen from an accumulation of supplies and merchandise at favorable prices, or from large purchases of goods of which a future shortage is expected.

CLOSE CO-OPERATION HIGHLY DESIRABLE.—Close co-operation between the purchasing and the sales and operating departments is necessary to secure the advantages of intelligent and economical purchasing. The index of trade tendencies is of vital significance to the purchasing department.

STOCK-KEEPING AND RECORDING IMPORTANT.—Properly kept stock records are needed to show the changes in the structure of the inventory, and to disclose unbalanced stocks, obstructing dangerous accumulations and actual shortages.

THE POINT AT WHICH REPLENISHMENT IS NECESSARY.—Under normal conditions the replenishment point is reached when the quantity on hand is equal to or slightly more than the quantity which will be consumed or sold during the period required to order and actually receive a new supply.

THE POINTS AT WHICH SALES ARE EXPECTED.—In **manufacturing** staple merchandise sales may be expected when the merchandise is finished and ready for shipment. In **seasonal goods production,** the sales periods are not reached until the opening of the buying season. In such cases merchandise must be accumulated in order to supply the markets, preserve the organization of the factory and make the fullest use of the buildings, machinery and equipment. In **mining or other development of natural resources,** the point at which sales may be expected is usually dependent upon market conditions and financial strength of the concern.

THE POLICY IN REGARD TO SIZE OF PURCHASE LOTS.—In the normal operation of a business purchases are made in quantities which have become recognized as regular but under abnormal conditions the application of sound judgment usually regulates the size. The availability of the merchandise and the variance in costs of large and small lots are important factors in the establishment of the standard quantities to be purchased. Ordinarily it is a good business practice to **standardize purchase lots.**

CONTROL IN MANUFACTURE OF SPECIAL MERCHANDISE AND CHANGES IN DESIGN.—Where special merchandise is produced, **analyses of the orders** are important to determine the frequency of repetitions of the same items and the economical run of parts common to several items.

Before changes in design are made effective the inventory of the stock to be superseded should receive careful study. In this connection the following conditions should be weighed.

Relation of unfilled and anticipated orders to stock of finished merchandise on hand.

The storage space required for merchandise accumulated during an extended period of distribution and the loss incidental to immediate disposal of such merchandise which is finished.

Quantity and balance of stock on hand, on order and in process.

Possible use of special stock in the contemplated changed design.

Possible use in some other article.

Quantities required to carry on manufacture to the point at which the change will be effective.

Other factors which influence decisions to change designs not coming directly under inventories as defined in this section, but which cannot be dissociated with the financial control are:

Utilization and adequacy of the present machinery and equipment.
Necessity of changes.
Excessive machinery facilities, etc.

DISPOSAL OF SLOW MOVING GOODS.—The establishment of a **definite policy** for the disposal of dormant stock due to lack of demand or because of unfavorable prices, obsolete types, styles or sizes, is very desirable. Drifting is costly. The sale of such goods at a sacrifice of a part or all of the profits thereon, in order to free capital and space for more active employment has been found a sound profitable procedure. No business can afford to lock up capital in "souvenirs."

VALUE OF BUDGET SYSTEM IN INVENTORY CONTROL.—General budgetary control, as explained in the Budget Section, provides definite objectives for sales, receipts, expenditures and profits. With definite monthly sales quotas, the **timing of the purchasing and production** may be fixed with fair precision. Standard inventory quantities, and estimated shipments are compared frequently with actual inventories and shipments, and significant changes are disclosed promptly.

CLASSIFICATION AND SYMBOLIZATION.—Classification and its expression by means of symbols is an important feature of inventory control. It should be reduced to a unified system. This necessitates a careful grouping of all activities. The accounting records usually give an insight into the fundamental activities; therefore, fundamentally the system of classification should follow the order of accounts shown in the general ledger. All items being grouped under their proper classification, each item should receive a distinctive symbol and description, and each should have a distinctive place in its own group. Within groups the plan of classification must be determined upon a logical basis.

A **symbol** is a concise form of accurate description of a given object, and usually consists of letters, or numbers, or both. Symbolization consists in the permanent identification of the elements in the final classification. It is an important step in standardization of materials.

Symbol systems may be based on letters or on numbers. Those based on numbers are similar to the **Dewey decimal system.** It is preferable, for inventory classification, to use a combination of the two. The **numerical system** permits of the 10 basic classifications. The **alphabetical system** permits use of 23 letters, I, O, and Q not being used because they resemble numerals. Each item must be represented by but one symbol, and each symbol must represent but one item. If possible, symbols should possess suggestiveness, as, S for supplies, etc.

Standardization of stock or stores must precede their symbolization.

The establishment of **control accounts** must be based upon a logical classification of **stores ledgers.** A possible division of the stores ledger would be: general stores, component part stores, finished product stores, and by-product stores; but specific conditions must govern. Corresponding **controlling accounts** should be set up in the general ledger. Charges to this general ledger control account are made at the end of each accounting period, postings being from the purchases journal or voucher register, whereas entries in the subordinate ledger may be posted from vendors' invoices.

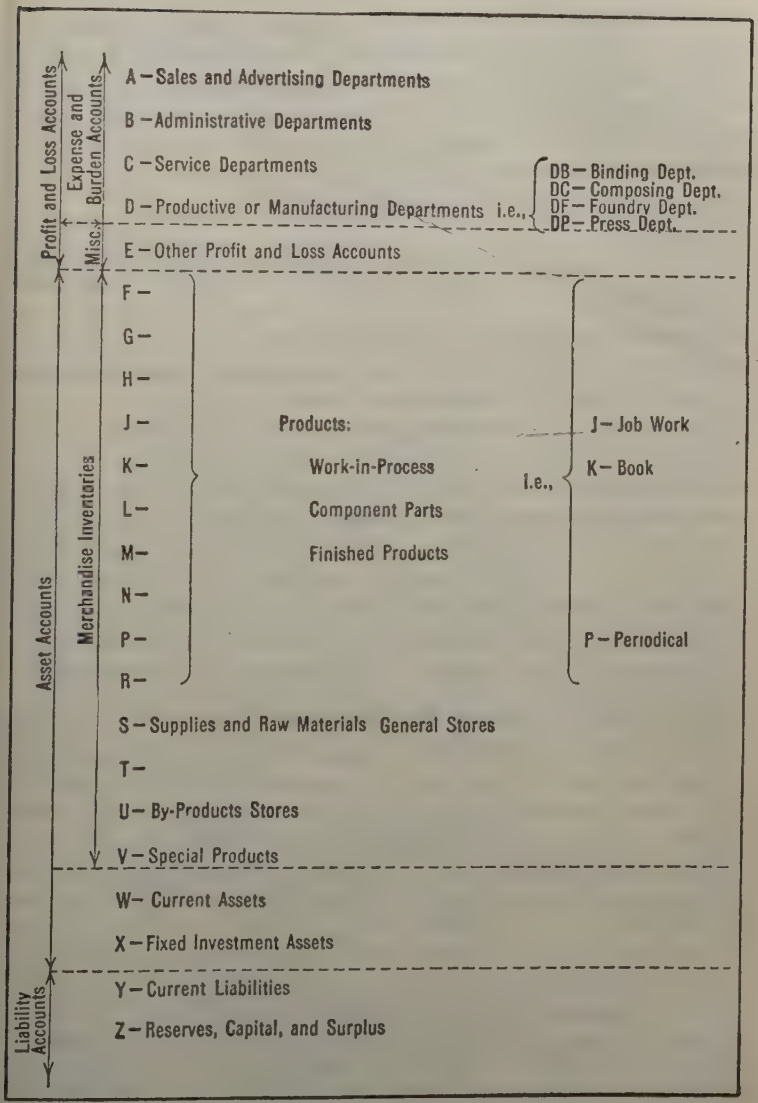

Chart showing Classification and Symbolization of Main Accounts
(From Madison Cartmell's "Stores and Materials Control")

PROCEDURE FOR SYMBOLIZATION.—The accompanying chart shows the basic classification of main asset and liability accounts. Letters of the alphabet symbolize the main classification. Numerals should be used to denote subclassifications or such as cannot be effectively represented by means of combinations of letters. Note that S symbolizes the general asset account, Supplies and Raw Materials, and D represents productive departments. Therefore, SD symbolizes supplies for a productive department. Similarly other combinations may be used, as:

SA – Supplies for sales and advertising department.
SJ – Raw material for job work only.
ST – Tools.

Each of these general classes permits of further subclassification. Thus if SC represents service department supplies, then within this departmental classification:

SCJ – Supplies used by janitor's department.
SCS – Supplies used by shipping department.

The shipping department uses binding materials, as, string, cord, rope, and gummed paper tape. These may be symbolized:

SCS1B – String used by shipping department to bind packages.
2B – Cord used by the shipping department to bind packages.
3B – Rope used by the shipping department to bind packages.
4B – Gummed paper tape used by shipping department to bind packages.

PERPETUAL OR BOOK INVENTORIES.—Perpetual inventory and stock records are kept for the purpose of showing continuously or at the end of short intervals the quantity and value of the inventory on hand. The **inventory items** may be classified according to departments, kinds of merchandise or locations. As such records are the result of recording receipts and withdrawals, their accuracy depends upon the correctness of the entries which are made. Generally such inventories do not reflect the physical condition of the merchandise. In some cases the stock records are kept in quantities only, but the better practice is to keep the record in both quantities and values.

ADVANTAGES OF STOCK RECORDS.—Stock record sheets sometimes provide for maximum and minimum limits to prevent tying up of too much capital in stock. Not only must quantities of materials be sufficient, but deliveries must also be kept ahead of requirements in factory or salesroom. Stock records facilitate checking of receipts of stock against purchase orders or special contracts. Sometimes materials are contracted for long before delivery. In such cases it is especially important that the contracts be checked against the stock records to prevent malpractice in pricing of goods purchased. A good stock record system aids in elimination of wastes which occur when no systematic method of recording stock transactions is in effect. It facilitates bidding on contracts because immediate reference can be made to past costs. It aids in the settlement of fire loss insurance. Although book inventories carried at cost prices may not represent market prices at time of fire, they give invaluable evidence of quantity and value of losses. They aid in reduction of obsolete stock because they show date of receipt of stock and thus permit determination of age of different classes of stock. Financial statements can be prepared monthly and on a more scientific basis when book inventories are employed than when dependence is placed upon physical inventories or upon estimates.

PERPETUAL INVENTORY RECORD.—The form of the perpetual inventory record must be designed to suit the particular needs of the business. A form which has been found quite satisfactory is described below.

Amounts received are brought into the Amount Received column and carried over and added to the previous balance in the Amount on Hand column. The price per unit of the amount received is entered in the Price per Unit column. Entries for succeeding receipts of material are similarly entered. When material is issued on requisition, the amount is entered in the Amount Issued column, and deducted in the Amount on Hand column. The price of valuing the material issued is taken from the Price per Unit column of the first line not checked in the second "Ck." column. This process is continued until the first amount is exhausted, after which the price is taken from second unchecked line in the Price per Unit column, and so on. Sometimes the requisition will exhaust one amount in the Amount on Hand column and require the taking of a part of the next. In this case the two prices may not be the same. The quantity requisitioned must in this case be split into as many parts as there are different prices and be priced accordingly. By this method calculations are simplified, and the total amount on hand is always shown. Any unused balance of a quantity received may be shown in pencil to simplify its use in connection with the quantities which follow. Materials should be issued on requisition at the same price at which they are charged when received. This price may be secured from the invoice or from the duplicate of the purchase order, providing it shows the correct price.

Points to be noted in connection with this stock record sheet are:

1. Running totals
2. Requirements and ordered
3. Appropriated
4. Received
5. Issued

The **merchandise stock book** is another form of stock record. On the debit side of this book are shown quantities purchased, cost per unit, and value in money. On the credit side are shown quantities sold, cost per unit, and amount of sales expressed in dollars and cents. A third or balance column is provided in which are shown quantities remaining, cost per unit, and money value. If prices are subject to fluctuations provision should be made for showing average cost.

The following is an outline of the data which it is desirable to have shown on the stock ledger or book:

1. Description of material.
2. Factory requirements for each kind of material.
3. Quantity on hand, or order, and allotted to production.
4. Quantity to be ordered when time comes to procure a new supply, by production or purchase.
5. Unit price at which the particular item of store is to be priced on requisitions.
6. Quantity consumed during given periods.
7. Value of stock on hand.

This information serves the following purposes:

1. Scientific planning of purchasing and production.
2. Enables factory manager to meet requirements of sales department.
3. Eliminates errors in ordering.
4. Reduces dead stock to a minimum.
5. Avoids excessive inventories.
6. Aids purchasing, by means of statistics of requirements.
7. Aids financial control, by affording a running inventory.

PHYSICAL INVENTORY.—All business concerns find it desirable to take physical inventories periodically. Perpetual inventories do **not eliminate the need of physical inventories,** because it is practically impossible to avoid errors and omissions in such records, and physical inventories are needed to correct and adjust such errors. Moreover, perpetual inventories do not disclose the exact condition of the stocks, and a physical inspection and count is needed to check the quantities which should be on hand and to determine the deteriorated or damaged stocks. Physical inventories should be taken as often as useful and practicable. They may be taken **periodically or continuously.**

Physical inventories are the actual count and determination of the value of the merchandise owned. Inventory time should be **the "clean up" time of business.** Every effort should be made to locate all unusable or unsalable stocks. Inventories taken in a casual and haphazard manner, and priced in a hit or miss way are of but little value for any purpose.

The taking of a physical inventory should be carefully planned. The chances for serious errors and omissions in the physical counts and valuations are so great that modern management finds it necessary to give very close attention to the arrangements for the taking of inventory.

Under the continuous method a separate organization is held responsible for a constant count, inspection and report upon designated parts of the stock. In large businesses the taking of the periodical inventory is worked out so as to reduce the task and to proceed in an orderly and logical way.

INVENTORY ORGANIZATION.—A special organization and a well considered plan should be formed for the taking of the **periodical physical inventories.** The financial head should be responsible for the plan and its execution, and for the selection of a capable employee to take general charge of the work. Assistants to direct and supervise the actual count and recording in the various departments or divisions should be chosen carefully, and proper preparation should be made in all departments affected by the inventory taking. Written instructions should be issued to all division heads.

The **written instructions** should cover the time at which the inventory is to be taken, the close-down period, the physical preparation of plant and stock rooms, the method to be used in taking the inventory, the persons in charge of the various divisions, the general classes of articles to be taken, and the like. The instructions should also include the procedure to be followed in the final compilation of the inventory and the accounting and cost departments' routine in connection therewith.

PREPARATION FOR INVENTORY TAKING.—The proper preparation of the various departments for inventory taking is most essential. The financial executive should see that each department is fully informed regarding the scope and character of the work it needs to do in this connection.

Purchasing Department.—The purchasing department should be instructed to verify and pass on to the accounting department all **invoices** covering material received up to the inventory date, and to submit **lists of all items in transit** and of all **materials received** for which invoices were lacking at inventory date. All invoices in dispute should be promptly adjusted and passed to the accounting department.

The purchasing department should be held responsible for **a record of all materials, patterns, tools, etc., in the possession of outside fabricators,** and be required to obtain statements from the vendors regarding such items on hand at their plants. They should also obtain a list of materials received and shipped

by outside vendors and fabricated by them during the months preceding the inventory taking.

Accounting Department.—The general accounting department should be instructed to **reconcile all statements of accounts** received from the vendors with the books and to adjust any differences that exist between the vendors accounts and the company's records. **Lists of all goods billed prior to inventory date** which are still awaiting shipment and of all goods out on consignment should be prepared. The department should see that all **material transactions** are properly recorded against the respective accounts and that the **labor distributions** are balanced with the payrolls and charged to the proper production orders. All **price records** should be brought up to date and all expense standing orders should be closed.

Production Department.—Prior to closing the plant for inventory, the production department heads should see that all **manufacturing orders** are balanced with material so that there will be no orders in the shop not covered by material and no materials in shop not covered by orders.

No **delivery or receipts of materials** from shop should be permitted while the inventory is being taken. **Shipments of goods** should not be permitted while the plant is closed down for inventory.

The plant should be swept clean and particular attention should be given to corners and spaces underneath benches and machines. All loose material should be pulled into aisles to be inventoried. The **salvage department** should dispose of all goods possible and have the scrap material in shape for inventory. All **goods or production orders in process and in a semi-finished state** should be listed accurately and so as to show the last operation completed thereon. All **tools, gauges, etc.,** should be placed in properly indentified cribs, and all outstanding tools should be called in. All work in process in the tool manufacturing department should be tagged with its order number and description. Decisions should be obtained from the inspection department of all defective or doubtful parts and all parts considered defective should be delivered to the salvage department.

Store Rooms.—The store rooms should have all materials in their possession properly stored and labeled for easy identification and count.

TAG METHOD OF TAKING INVENTORY.—In the larger companies the tag method of inventory taking is now **in general use.** A form of tag made with a light paper first sheet and a tough paper or manila duplicate, with a perforated stub, numbered consecutively, is generally used. The tags are made with spaces for all necessary information, such as the name, the location, the condition, kind, size and quantity of the goods, and the shop numbers of orders in process. All tags should be under the control of a designated person, and a careful record should be kept of the tags delivered to departmental inventory supervisors.

The tags should be prepared and attached to the stock by a section of the inventory organization commonly classed as **"tag writers" or "counters."** After a sufficient number of cards have been so prepared, they should be checked by another group known as **"checkers."** When all stock in a department has been counted and checked, and the **departmental inventory supervisor** has satisfied himself that everything has been properly tagged, the condition should be reported to the general inventory supervisor. No tags should be pulled until instructions are received from the general inventory supervisor.

When the word or signal is given for the pulling of the tags, they should be detached and delivered to the floor supervisor. The stub of the manila copy

should be allowed to remain upon the stock for subsequent identification, if necessary, until the entire inventory is completed.

The departmental supervisor should have the original and duplicate of every tag charged to him. No tags should be destroyed or loaned. Unused or spoiled tags must be delivered together with the good tags. The first copy of the tag should be detached at the time the tag is written, and held by the departmental supervisor as a guide to the location of any tags which may be missing at the time the manila tags are pulled. After the tags are detached, they should be delivered by the departmental supervisor to the general supervisor, or the person he designates for this purpose. The tags should then be checked to ascertain that all are accounted for, after which they should be sorted by part number or commodity, and summarized upon inventory sheets. All good tags should be entered on inventory sheets under proper classification. The inventory sheets should be numbered consecutively, totalled separately, and summarized according to desired classifications.

The tags, or duplicate inventory sheets, should be turned over to the cost department for valuation, and for checking quantities against perpetual inventory records and records of manufacturing orders. In extending the valuations of large inventories, comptometers or other computing machines can be used advantageously, and all the calculations, however made, should be checked by a different group of clerks.

INVENTORY VALUATION.—In determining the values of inventories the application of sound judgment and experience plays a most important part. The mechanics of inventory taking can be arranged to determine correctly the quantities and conditions of the stocks, but the valuation of these constitutes the main purpose of an inventory. The pricing of the inventory is **not a purely routine matter,** because there are several conditions affecting values which must be weighed and reflected in the inventory prices. The standard adopted for valuation must be flexible enough to cover the true situation.

The value of anything depends upon relevant conditions existing at the time of valuation. Valuations are usually influenced by several factors, among which are the following:

Market value—which is the index of supply and demand, actual and potential.

Actual costs—purchase price and transportation expense paid for materials and the actual material, labor and overhead costs of in-process and finished products.

Purpose of valuation—whether for liquidation, for selling or buying in the course of trade, for measuring compensation, for taxation, etc.

Physical condition—in regard to both depreciation and obsolescence.

Mental attitude—of business men in regard to general conditions.

From a financial point of view a profit cannot be realized until a sale is made. Therefore, the stock on hand should be valued **at cost, or market price if lower than cost, or even at a price lower than either** if general economic conditions point to probable rapid deflation of high costs and high market values. Some successful business executives adopt a low base price for inventory valuations, and others establish substantial **reserves against inventory shrinkages.** Even though the trend of the market definitely indicates that the merchandise may be sold at an abnormally large profit, a true financial position can be reflected only by pricing inventories at cost. If priced at market,

when market is greater than cost, the mark-up on inventories should be segregated as **"Unrealized Gross Profits."**

The market price should be the realizable value in the current active market. It should represent the cost of replacing in a free market the particular quantity and kind of goods on hand. Small or broken lots should be priced at the purchase price for small lots and not at carload lot prices. When current market quotations are not available because of temporary or seasonal inactive conditions, recent purchases or sales in fair volume may be used. When market quotations are merely nominal because of general trade conditions, an effort must be made to ascertain or anticipate the realizable market values for the quantities on hand.

COST BASIS OF VALUATION.—The term **cost** means the actual factory cost of production and the actual cost of material and supplies at their respective locations. The cost of production is made up of the actual cost of materials, supplies, labor and the proportion of overhead expense applicable to the product. **Overhead costs** should not include interest on investment, selling expenses, taxes or general administration expenses. **Transportation charges** may be included in costs but **storage charges** should not be added unless storage is a process which adds to the value of the merchandise. **Duty, freight, insurance** and similar charges on imported merchandise should be included in costs.

Under normal conditions, when the actual cost of the raw materials can be kept, little or no difficulty is experienced in their valuations. When various lots of similar goods cannot be identified, their **average cost** may be used. Where there is considerable variation in costs and sizes of the various lots purchased, it is important that an average cost and not an average price should be used. When actual costs rise sharply during the period immediately preceding inventory date, the average cost over a longer period should be used.

Another method is that of using the **latest invoice price** for as much of the total quantity appearing on the inventory as equals the quantity on the invoice, and the remainder, if any, is priced at the cost of the merchandise purchased next previously.

RULES FOR INVENTORY VALUATION.—Value, not cost, is the **inventory criterion.** It is not always possible to secure trustworthy market quotations for important parts of the inventory. The question of actual value includes much more than inquiry into market unit prices, and complete dependence should not be placed on market quotations for apparently the same goods or materials as those in the inventory. Unit cost figures and unit market prices are only a few of the factors that must be considered in arriving at inventory valuations.

The term "market basis" applied to inventory means the **cost of replacement or current purchase prices** prevailing at the time of the inventory for merchandise in the volume which is ordinarily purchased.

Inventories should be valued at cost or market prices when there have been no substantial fluctuations in selling prices or costs during the preceding fiscal period and in so far as the results fairly reflect conservative values for balance sheet purposes. In normal times cost and market prices are practically the same; the term "market" is synonymous with replacement cost; therefore, when there have been no radical fluctuations in values or methods, original cost and replacement cost are the same, or so nearly the same that the rule of **"cost or market, whichever is lower,"** is a satisfactory one and does not deceive those who use balance sheets. When some other method is required

to produce fair values for balance sheet purposes, good practice sanctions the substitution of one of the following methods:

1. It is proper to value inventories, or portions thereof, **at more than cost** and in some relation to net sales prices, when:

(a) Costs are **difficult to determine** due to inherent difficulties, such as occur when several commodities are produced from one process, or due to accounting difficulties which occur when raw materials are bought at widely fluctuating prices, etc.

(b) Costs are **substantially below replacement** costs.

(c) **Firm sales have been made** and cancellations are definitely deemed to be improbable, whether or not market prices are advancing.

In (a), (b) and (c) the unrealized profits and the asset accounts arising therefrom must be separately stated in the income account and in the balance sheet.

2. It is proper to value inventories, or portions thereof, **at less than cost or market,** when there is what is believed to be **inflation of current or replacement costs.** The balance sheet must show the basis of valuation, which presumably will be an estimated past or future replaceable value as distinguished from temporary costs.

3. It is proper to value inventories at cost, even though cost is higher than market, when:

(a) Basic commodities or staple goods are temporarily **quoted at less than the fair costs of production.** This exception must be strictly construed. There must be an honest belief that the decline below cost of production is only temporary. Even then it is easy to make mistakes. It is permissible to assure that basic materials never remain below cost of production for any extended period of time: but costs of production also decrease. The latter facts must not be ignored.

(b) Raw materials or other goods have been **purchased at higher prices than those existing** at the date of closing, and such purchases are allocated to contracts or notes which are not subject to cancellation, the contract on sales prices of which are based upon the high cost of such raw materials. It must be borne in mind that such temporary decline may develop into a permanent market decline, and wherever the above basis is used for inventory valuations, it should be clearly so stated in the balance sheet.

In both of cases 3 (a) and (b) the balance sheet must show the basis used. Apparent market prices are ignored in both instances, but there must be some relation to actual values, or else the method is not justified. If what is believed to be a temporary decline merges into a permanent decline, the basis of valuation will prove to be erroneous. Therefore, the method is somewhat dangerous and may be used only when it is boldly shown on the balance sheet so that no one is deceived. If the valuation is justified as of the time it was made, no blame attaches to those who fixed the values. If there was not sufficient justification for the valuation, those who used bad judgment must assume the responsibility. The usual reason given for not reducing inventories of basic materials to apparent lower market prices, is that large quantities cannot be purchased at less than cost of production. The reason fails if it is probable that large quantities can be purchased at the lower prices. When apparent market prices are not considered to be representative, the basis suggested in effect substitutes real market prices which are assumed to be reproduction or replacement costs.

SELLING PRICE BASIS.—Some conservatively managed and successful gold, silver, copper, lead mining companies, packing companies, crude and

refined oil producing companies, and sugar companies value the inventories upon the basis of **selling price less selling and delivery expenses and charges.** In many of these businesses the inventories are covered by **firm sales contracts.**

Good accounting practice permits inventories represented by firm orders from solvent and honorable payers, verified by actual experience (at least in the past) after the date of the balance sheet, to be priced at net sales prices when no one is deceived and when good business judgment sanctions the practice as exhibiting the true results of operations for a specified period, always assuming that the accounts are so stated that the exact facts are clear to all who use the balance sheets; that the practice is optional and that it is designed only to reflect "true financial conditions." When all of these conditions are observed the rule "cost or market, whichever is lower" has no relevancy.

The foregoing rule, however, is effective only when all parts of inventories not valued at sales prices are ruthlessly reduced to actual market prices if not worth cost, and when "market" is construed to mean the prices at which one would willingly buy equal quantities of exactly similar goods.

SELLING PRICE LESS MARK-UP BASIS.—It is a common practice in department stores and similar lines of trade to take inventories at the selling prices marked thereon and then reduce the value of the stock to its approximate cost by the deduction of the **average mark-up percentage.** In mercantile stores selling prices are based on actual cost plus a definite percentage of mark-up. This method is illustrated as follows:

Sales	$292,000
Closing inventory (selling valuation)	50,000
	$342,000
Less: Opening inventory (selling valuation)	37,000
Selling valuation of purchases	$305,000
Less: Purchases at cost	227,469
Mark-up (25.42% of $305,000)	$ 77,531
Closing inventory (selling valuation)	$ 50,000
Less: Mark-up (25.42% of $50,000)	12,710
Closing inventory (balance sheet value)	$ 37,290

The process may also be expressed in the form of a proportion, as follows:

305,000 Selling valuation of purchases	:	227,469 Purchases at cost	::	50,000 Closing inventory at selling valuation.	:	X Closing inventory at cost valuation.

$$X = \$37,290$$

The following description of the "gross profit test" appeared in the *Journal of Accountancy*, Mar. 1921.

"Stock on hand may be estimated at dates between the taking of physical inventories by applying the gross profit method. The rate of gross profit on sales since the last inventory may be estimated on the basis of the rate of gross profit earned on sales in prior periods. Any changes during the period in the cost or selling price of merchandise would have to be taken into consideration in estimating any probable variation between the rate earned in prior periods and the rate earned in the current period. The sales since the date of the last inventory would be multiplied by this estimated rate of gross profit to determine the estimated gross profit on the goods sold. Then the sales minus this estimated gross profit would be the estimated cost of goods sold since the last inventory.

The opening inventory plus the purchases, freight, and other additions to the cost of goods, minus the estimated cost of goods sold, would give the estimated inventory."

The **retail inventory system** is described as follows by T. L. Blanke, Director of the Bureau of Accounting and Control of the National Retail Dry Goods Association:

"The system enables the merchant to know what his stock of goods on hand is at the close of each day, week, month or year, or any other period, for each department in the store, and he thereby is able to control his investment. An efficient control of the stock not only saves money on the money invested, but, what is of much greater financial importance, helps in the avoidance of depreciation of goods on hand and in maintaining up-to-date merchandise.

"Under this system of inventory accounting, the merchandise is charged to the various departments on the books of account at the retail or selling price and also at cost. These cost and retail values are accumulated for the year by periods and the percentage of mark-up is arrived at by deducting the total cost from the total retail values and dividing the result by the accumulated retail figures. The retail value of the inventory at the close of any period is arrived at by deducting the sales and mark-downs taken on the original selling price from the accumulated retail values. The cost value of the goods on hand is then computed by subtracting from 100%, the percentage of purchase mark-up, the remainder being the percentage of cost. Multiplying the retail value of goods on hand by this latter percentage gives the value of the inventory at cost. **Physical inventories** are taken at the close of the year at the retail values and the book figures are adjusted to them.

"The **percentage of mark-up** on merchandise must be sufficient to cover the cost of salaries and other operating and administrative expenses, receiving and delivery costs, mark-downs, inventory losses of all kinds and a net profit for the business. That a net profit is not always realized is shown by the fact that the average net profit for all stores reporting in 1921 was less than one cent for each dollar's worth of sales.

"The system is very easily installed and operated, and it has been found entirely practical for the small as well as the large stores. It has been approved by the Treasury Department, through the Bureau of Internal Revenue, and is being installed by all the leading public accountants of the country. There is no question that the system actually saves the retailer many thousands of dollars annually. The president of one of the largest metropolitan stores recently said that it would increase his operating expenses fully $600,000 a year to go back to the 'cost' system of taking inventory, while a somewhat smaller merchant stated that the use of the 'cost' system would increase his expenses more than $200,000. It is therefore as important to the consumer that the retailer should be efficient in his accounting methods as it is to the retailer himself.

"What are the **advantages** of this system that enable the merchant to make this saving? In the first place, it furnishes a definite and reliable basis for the taking and valuing of stock for financial statement purposes. This is of vital importance to the banker and broker when passing upon the financial statement of a client. It is, therefore, of direct benefit to the retailer himself in that it establishes greater confidence in his financial ability, making borrowing easier and on more liberal terms.

"The inventory system is accurate in the results that it shows. The Internal Revenue Bureau has accepted it because of the fact that the book figures are accurate and easily verified. The complete records of every step from the

purchase of items to their final disposition by sale are readily checked. It is almost impossible to do this under the cost system. The natural result is that those who use the retail inventory method have substantiating evidence of their actions, while those without it may be subject to some adjustments by tax officials, which may be felt to be unjust, but, from lack of evidence, they will probably suffer.

"Furthermore, the fact that accurate inventory values are available at all times makes the system particularly valuable from an **insurance standpoint.** The records will show at any time just what the amount of stock is in each department, so that a store can carry sufficient insurance, but will not carry excess amounts, thus incurring unnecessary expense.

"In addition, this method provides **an efficient check** in dollars and cents as between book and physical inventories at retail, **without the use of percentages.** If large differences are found to exist between the two, the work can be rechecked and errors corrected. It will disclose inventory padding on the part of those handling the stock. If a buyer should report an inventory at retail higher than the book inventory, it would be sufficient grounds for believing that he was attempting to increase profits by inflating the stock. This is especially true where the buyer is receiving a bonus based upon earnings.

"Through its use **merchandise stocks may be controlled.** Unless the merchandise manager knows at least once a week the amount of stock in each department, the size of the inventory or the stock turnover cannot be controlled. Time is saved at the close of the fiscal period or at any time when the physical inventory is taken. With this system in operation, it is necessary to take the inventory at retail only, thus eliminating the chances of errors through the copying and decoding of cost marks. . . . Not the least of its advantages is that it provides for a complete monthly operating statement, making it possible to issue an accurate profit and loss statement for the business as a whole, as well as for each individual department. The figures affecting the gross profit being available at all times, unnecessary waste can be prevented through the elimination of losses that would not otherwise be discovered until the close of the year."

BASE STOCK BASIS.—Some manufacturers carry basic raw materials through the accounts at **fixed and perhaps arbitrary prices.** This plan has simplicity in its favor, but it is subject to criticism for the reason that balance sheets based on such valuations are misleading. Some concerns which adopted the plan at the beginning of the World War have concluded that their procedure was justified by the results. The Treasury Department refused to sanction the practice insofar as the computation of taxes was concerned.

INTERDEPARTMENTAL OR INTERCOMPANY PROFITS IN INVENTORIES.—These represent unrealized profit and **should be eliminated.** If transfer is made below cost, an interdepartmental loss occurs, but these arise only when departments are run on a commercial basis, the transfer being at market price. The loss is then taken care of automatically. For interdepartmental profits a reserve should be set up at inventory dates. If, in case of manufacturing concerns, it is not possible to identify products as they pass through the various processes, the profit must be estimated on basis of average margin of profit realized.

INVENTORIES OF RETURNABLE CONTAINERS.—Illustrations are cement sacks, barrels, cable reels, acid carboys, gasoline drums, cracker tins, petroleum drums, tierces, etc. Sometimes these are charged to customers in the invoice and a refund made when returned. Sometimes a separate invoice

is sent for them, credit being allowed upon their return. Sometimes merely a memorandum invoice is made out. Oil drums, cable reels, gasoline drums, and floating cooperage should be regarded as fixed assets, and an asset record kept therefor. Charge these at cost and write off depreciation in the usual way. If these are actually charged to customers, credit a reserve which will take care of refunds when they are returned. Periodical examination and adjustment of the account should be made.

Smaller items should be carried in container accounts. If a definite charge therefor is made against the customer, do not include the item in sales but credit the container account and charge this account when such retainers are returned.

PRICING OF INVENTORIES.—After the basis of the inventory valuation has been decided upon, the actual pricing of the inventory items should be done by the cost and general accounting departments. The pricing of an inventory of a manufacturing company has a few complications, particularly in connection with the exact prices to be used for work in process and finished stock. The principal problem involved here concerns the amount of overhead to be included in manufacturing costs.

OVERHEAD AND COSTS.—As stated previously, the portion of overhead expense which is applicable to the manufacturing of a product may be included in the costs used as a basis for inventory valuations. This general principle, however, requires some modification in cases where the actual overhead expenses are excessive, because of idle or part time conditions in some or all of the production departments. If costs include the actual burden rates, it must be ascertained that they represent fairly the **normal operating conditions.** In many industries normal operations are about 80% of the plant capacity. If **standard burden rates** are used, they should be scrutinized for the purpose of determining that they fairly reflect the normal or standard overhead expense during the period in which the products were produced and that they are not appreciably in excess of the overhead expense actually incurred. Where **departmental burden rates** are used, less difficulty is experienced in properly distributing the overhead charges. **General plant overhead rates** often distort valuations and costs when the stock included in the inventory is not evenly distributed throughout the productive departments.

SECTION 13

SECURITY MARKETS

INVESTMENT MARKET DEFINED.—The investment market, from the standpoint of issuing companies, may be any place where their securities may be sold. Such places are generally found in the financial centers. The organized **stock exchanges** and **investment bankers** are in part instrumental in providing for issuing companies a market for their securities and where speculators and investors may buy and sell them.

The securities sold in the investment market consist of the **stocks, bonds,** and short-term notes of private corporations of all kinds, such as railroads, public utilities, industrial and commercial corporations, as well as obligations of nations, states, cities and other governmental bodies.

SALE OF SECURITY ISSUES TO INVESTMENT BANKERS.—When a corporation is in need of funds for a new plant or for equipment, or for other purposes, it may raise money by floating stocks, bonds or short-term notes. These securities may, under certain conditions, be sold directly to the public by the issuing company. If the issue is large, or if conditions are unfavorable, it might be some time before the needed funds could be raised in this manner. To overcome this situation and to assure a corporation of the immediate availability of funds for which it is floating the security issue, the custom of selling such issues to **investment bankers** has arisen. An **underwriter** is one who underwrites the sale of the issue; that is, one who guarantees the sale of the issue, generally to the stockholders, within a certain time, agreeing to take over any unsold portion at a certain specified price, and thus assuring the corporation of funds for immediate use. Frequently the investment banker buys the entire issue, and disposes of it to investors through his own sales organization. In other cases, the banking house will form a **syndicate** to underwrite and dispose of the securities.

There are investment banking houses in all cities of considerable size throughout the country. However, the **largest and most important** ones are located in New York, in or near the financial district.

The banking house **assumes all the risk and trouble** of selling the issue to investors or speculators. Its purpose is not to invest its funds in the securities of the corporation, but to distribute them at a profit to others.

PUBLIC OFFERING OF SECURITIES.—When a syndicate [1] has been formed and its **selling campaign** is ready, advertisements of the new issue are published in news and financial papers throughout the selling territory. At the same time the different members of the syndicate send out circulars to prospective customers, giving all the essentials of the issue, and the sale is begun. Prior to the date of the public sale the bankers make every effort to

[1] Particulars as to formation and operation of syndicates are included in the section on Capital Structure and Policies.

prepare their sales forces to dispose of the issue as quickly as possible, since by the nature of their business they must make a quick turnover on their capital.

The issue is sold at a **price** which may vary from 3 to 12% above that paid to the issuing corporation, in order to give the bankers a margin of profit. For example, the price paid to the corporation by the syndicate might be 90% of the principal amount of the issue, while it might be sold by the syndicate to the public at 95% of the principal amount. There is no set percentage of profit which the banker may take. It depends largely upon the rate of interest, the nature of the issue, the credit of the issuing company, and the condition of the investment market at the time.

TYPE OF BUYERS OF SECURITIES SOLD BY INVESTMENT BANKERS.—The type of buyers of securities offered by investment bankers is governed by the nature of the securities and the conditions of the investment market. In general, the purchasers of the offering are from the following classes:

1. **Investors,** who subscribe for the securities in order to hold them for the income they yield.
2. **Speculative investors,** who believe the principal and income are safe, but are primarily actuated by the hope of selling the securities later at an increased price.
3. **Speculators,** who plan to sell them at a profit as quickly as possible.

RISK TAKEN BY BANKERS IN HANDLING SECURITIES OF A PROMOTION.—The securities of a newly formed corporation are always of a speculative nature, no matter how good the prospects of the concern may appear. Hence an undertaking to dispose of a **promotional issue** involves generally a considerable risk. It means handling stocks or bonds whose value is doubtful and which it may not be able at the time to recommend unreservedly. Because of this increased risk and the necessity of building up the credit of the new corporation, bankers handling an issue of this type may often be required to carry it for a long period, in which case they may demand not only that the financial affairs of the new business be placed absolutely under their control, but also that their compensation must be in direct proportion to the risk they have assumed.

DISTRIBUTION THROUGH INVESTMENT HOUSES.—The large investment banking houses maintain offices in most of the important financial centers of this country and Europe, including New York, Chicago, Pittsburgh, Philadelphia, Boston, London and Paris. By means of these **branches** and through their other contacts they are in close communication with other bankers and dealers, who assist them in disposing of the security issues they have purchased.

Many of the large investment bankers handle all phases of financing of corporate security issues, from the preliminary investigation of the business to the distribution of the securities to the investors. To accomplish this they have a complete organization to exercise the functions of **investigation, analysis, purchasing and distribution.**

INVESTMENT BANKERS AS FINANCIAL ADVISERS TO CORPORATIONS.—Investment bankers make every effort to assist the corporation whose securities they are selling. They will advise as to what are the **best types of securities** to be issued for the particular requirements of the business, besides giving information concerning current conditions to be met with in the money market.

The advisory functions of investment bankers usually extend through the period the security issue they have distributed is outstanding. They generally serve the companies continuously in all financial operations pertaining to their capital issues. When additional securities must be issued for expansion or refunding operations, the bankers are in a position to recommend the type of security to be issued and the favorable period in which to bring it out.

SPECIALIZED INVESTMENT BANKERS.—In former days bond houses confined themselves largely to government, municipal and railroad issues, but with the development of large-scale corporate industry, the field of the investment bankers has been extended to include industrial and public utility securities. This evolution also developed specialized investment bankers. Some devote themselves almost exclusively to marketing municipal securities, others are concerned only with the financing of steam railroads, still others specialize in public utility issues or in industrial securities.

FUNCTION OF INVESTMENT BANKERS.—The **primary function** of investment bankers is to bring together the demand and supply of capital. Corporations in need of capital are put in touch with investors seeking investment. To consummate this purpose investment bankers perform **5 sub-functions** which are: (1) selective; (2) educative; (3) advisory; (4) protective; and (5) distributive.

Selective Function.—Of the many industrial corporations which desire to sell securities through investment bankers the latter will make their selection of the issues they will sponsor. In this they are guided by the soundness of the companies, character of the issue and their adaptability to the market, or the requirements of their clientele.

Educative.—The investment banker, by reason of his position as a middleman, is in a position to bring to the attention of the investing public the desirability of certain forms of investment in certain types of industry. On the other hand, he is in a position to encourage or discourage certain methods of financing of industrial corporations and instruct them in what is considered good business practice.

Advisory.—Investment bankers are in a position to advise investors in making purchases of securities to fit their needs or wishes. At the same time the investment banker often serves in an advisory capacity in financial matters of the company whose securities he is handling.

Protective.—Because they are usually very jealous of their reputation, investment bankers do not undertake to handle the securities of an industrial company until they have made a careful investigation of the merits of the issue.

Distributive.—The most important function from the standpoint of the banker himself is the distribution of the securities. To do this he must bring the securities to the attention of the investing public, advertise judiciously, make a market and sell the securities at a price he considers fair and at which they will be taken.

INVESTMENT BANKERS ASSOCIATION OF AMERICA.—Most investment bankers of any consequence are members of the "Investment Bankers Association of America." The requirements for membership are that a banking house must have a paid in capital of at least $50,000 and must be engaged in buying investment securities, either stocks or bonds, and offering them for sale as dealers to the public.

The members are grouped into **three classes** as follows:

1. **Wholesalers** who obtain the original issues and sell them to other investment dealers. They may or may not have their own retail facilities.
2. **Participating houses** which usually participate in syndicates formed by the wholesalers and usually do an extensive retail business. Participating houses occasionally bring out small issues on their own account.
3. **Retailers** who specialize in retailing in their own local market.

SALE OF SECURITIES THROUGH STOCK EXCHANGE.—Corporations having large issues of securities frequently make **application to have** them **listed** on the New York Stock Exchange, in order to secure for them the widest possible market. Before a stock or bond issue can be listed, however, a formal application must be made by the corporation, since the New York Stock Exchange never solicits new listings. Applications are referred to the **Committee on Stock List,** which is composed of 5 members of the Exchange. They consider such applications and make recommendations to the governing committee as to whether or not the securities should be listed.[2]

After securities have been listed on the Exchange, it may become necessary to arouse public interest in them. This may be done by bringing about a large number of transactions in the security. At the same time wide publicity is given to the affairs of the corporation. Not every new security which is listed on the Stock Exchange and immediately becomes active is in process of flotation through Stock Exchange manipulation. Often it is listed simply as an incident to its flotation, and is allowed practically to take its own course except for receiving some support from time to time in case its price tends to sag below the direct "over-the-counter" price.

The flotation of new securities through Stock Exchange operations has certain limitations which cannot be overlooked. In general, it may be said that new securities cannot be distributed to the public through the New York Stock Exchange, as one of its requirements for listing is that the security have already a reasonably wide distribution. Listing on the New York Stock Exchange is rarely feasible for the great mass of comparatively small corporations. Where the capitalization is under, say $1,000,000, it is likely to be difficult to have the stock listed on the New York Stock Exchange.

DISTRIBUTION OF SECURITIES IN FOREIGN COUNTRIES.—Sometimes it is planned to float a part of some of the larger security issues in a foreign country. This is more commonly the case with a **large bond issue of a railroad** than in other forms of securities. To make them more attractive to the foreign customer, they may be made payable as to principal and interest in the currency of the country where they are sold. The Pennsylvania Railroad Co., the New York Central and Hudson River Railroad Co., and others have issues that are payable in francs and sterling as well as in dollars.

Where bonds are payable in more than one country, the **rate of exchange** is usually **fixed** for the purpose of determining the exact amount the corporation will be obliged to pay. Where the bondholders will present their claims for interest or for principal at maturity will depend on the **fixed rate of exchange** stipulated in the bond and the position of the **current market rate of exchange.**

Dollar Loans.—A foreign loan which is made in the United States and is payable in U. S. gold coin, is designated as a **"dollar loan."** In such a case the American lender is not concerned with foreign exchange operations in connection with the payments of interest and principal.

[2] See Requirements for Listing Securities, p. 778.

Sterling Loans.—A foreign loan made in London, which is payable in the British monetary unit, is known as a "sterling loan." In such a loan the British lender is not concerned with foreign exchange.

The American lender or borrower on a "sterling loan" or the British lender or borrower on a "dollar loan," must, however, take into consideration the foreign exchange operations connected with the payment of the interest and the principal at maturity.

Making a Market for New Securities

SPECULATIVE INTEREST IN NEW SECURITIES.—In order that the banking house or syndicate managing the flotation of a new security issue may dispose of its securities, the public interest must be aroused. To create this interest **judicious publicity** is resorted to, including the distribution of circulars and letters to bring the new issues to the attention of the public. In addition to this direct advertising every effort is made to obtain favorable comments in the financial pages of newspapers.

The listing of securities on the Stock Exchange is sometimes a part of the flotation procedure. As **speculative buying** must be relied on in some cases to take the unsold portion of the new issues off the hands of the syndicate underwriting the flotation, the volume of transactions may be increased to bring the issue to the attention of the speculative public.

FLOATING SUPPLY IN THE MARKET.—From the time a syndicate offers an issue of securities until they are all finally taken out of the market for permanent investment, there is what is called the "floating supply" of the securities held by speculators. These speculators may include the **floor traders, specialists,** and **odd-lot dealers** of the stock exchange, and the **speculative customers of commission houses.**

There is almost always a greater or less floating supply of any large listed security in the hands of speculators, or investors who are anxious to buy or sell. When economic conditions are favorable and a given company is successful, the quotations for its securities rise and the tendency is for investors to buy them from speculative holders. The cumulative effect of purchases by investors is to decrease the floating supply in the market. On the other hand, if economic conditions are bad and the company encounters difficulties, the quotations fall and many investors sell out because they are unable or unwilling to take the risk of holding the securities. In this way the floating supply increases.

The **economic function** performed by speculators is to carry this floating supply of securities. The speculators assume the greatest risk and investors are enabled to find a market at all times for their securities. Carrying out this function involves risk for which speculators sometimes obtain large profits.

MAINTENANCE OF MARKET.—An important problem of the syndicate or the issuing house is to make a market for the new securities and maintain it until they have the entire issue disposed of. This is always an uncertain period. The bankers are under the necessity of stimulating activity in the new issue and maintaining the price at approximately the same level as at the date of issue. This they do by putting orders in the market to buy the new security **"on a scale down,"** or sell it **"on a scale up."** A given syndicate manager, for example, might give orders to buy 1,000 shares of a given newly listed stock at 99, 1,000 shares at 98, at 97, and 96 respectively; together with orders to sell 1,000 shares at 101, 1,000 at 102, at 103, and 104 respectively.

By such operations any investor who wishes either to buy or sell the new security can be certain of being able to do so. In due course orders away from the market are sent in by investors and speculators, just as in the case of long-listed securities, and accumulate in the dealers' and specialists' books. Gradually, but as rapidly as they can, the syndicate members reduce the amounts of their "scale orders" until at length, the dangerous initial stage having been passed, the new security is left to follow its own devices. This effort of the syndicate to provide an active market is not undertaken for the purpose of speculative profit; it tries to avoid heavy losses, but usually incurs small ones by the operation.

NEW ISSUES LEFT IN HANDS OF BANKERS.—Should the new issue of securities remain unsold at the expiration of the syndicate agreement, it becomes necessary for the syndicate members to carry them in proportion to their liability as set forth in the syndicate agreement. The length of time the securities must be carried depends upon the condition of the investment market, the terms upon which the securities were offered for sale, and their relative attractiveness.

Bankers do not carry securities indefinitely. If a favorable market for them does not develop within a reasonable time, they sell them at a convenient opportunity and take their loss.

"Churning" of Speculative Supply of Stocks.—The securities carried by speculators, which are a part of the floating supply, are seldom carried for long periods by the same speculators. There is **continuous buying and selling** from one speculator to another. In this "churning" a fairly active speculative stock may be held in turn by thousands of different speculators over a period of a number of years before the security is sufficiently seasoned to become attractive to investors, who may gradually take the greater part of the floating supply out of the market.

Investors and Speculators

Corporate securities are sold to investors and speculators. Although distinct types of securities appeal to each class there is no sharp line of demarcation between the different types.

INVESTORS.—In general, investors may be said to be those who are more concerned with assured **steady income** and **safety of principal** than with possible large returns at some risk of principal.

SPECULATORS.—Speculators consist of those who look for large returns and are willing to risk their principal to secure them. Speculators may be roughly divided into **three classes** as follows:

1. Purchasers of securities which afford **comparative safety of principal** but yield a larger return than can be obtained from strictly investment securities. This class of speculators purchase preferred stock, junior bonds, etc.
2. Those who purchase securities with a view to an **increase in principal** as well as a larger income return. They buy the common stocks of established companies which are not as yet seasoned investment securities.
3. Those who purchase securities, generally common stocks, with the sole expectation of securing an **increment of principal.** This class includes most of the so-called **margin traders** who buy and sell stocks on borrowed capital.

INCREASE IN NUMBER OF INVESTORS.—The number of investors in corporate securities is growing from year to year and at the same time the number of shares held per person is decreasing. This indicates that the general public is taking a greater interest in the ownership of capital stock issues of corporations.

A typical example may be cited by considering the ownership of the capital stock of the American Telephone & Telegraph Co. In 1912 the company had a little over 50,000 stockholders, with an average of 66 shares to each shareholder. In 1925 the company had about 345,000 stockholders, with an average holding of 26.19 shares.

The following statistical tables show the constantly widening public distribution of the common stock of three large American corporations—a public utility, an industrial, and a railroad—as of the earliest period in the years indicated:

Year	American Telephone & Telegraph Co.		U. S. Steel		Pennsylvania Railroad	
	No. of Shareholders	Aver. No. of Shares Held	No. of Shareholders	Aver. No. of Shares Held	No. of Shareholders	Aver. No. of Shares Held
1910..	35,823	72	22,033	230.70	65,283	126.41
1914..	55,983	62	47,221	107.64	91,571	109.04
1917..	70,555	56	42,564	119.42	100,138	99.82
1920..	120,460	37	104,376	48.69	133,068	75.04
1925..	345,466	26	174,831	43.96	146,400	68.19

TYPES OF SPECULATIVE TRADERS.—The four types of **speculative traders** who deal in securities on the Stock Exchange are:

1. Floor traders or scalpers.
2. Brokers and others in close touch with the market.
3. Persons dealing on basis of intrinsic knowledge of particular securities.
4. The general public, or the "lambs."

"Floor Traders" or "Scalpers."—Traders on the floor of the Stock Exchange who buy or sell for a profit of ⅛% to ¼% or more on a **quick turnover** are generally known as **"scalpers."** Many of these traders close out their transactions before the close of business each day. Their basis of operation is an intuitive feeling of the probable trend from the nature of trading on the exchange. Their action is largely governed by the nature of the operations of other brokers. When there is a large demand for a certain stock on the floor and the trend is upward, they help along the movement by making a purchase and in turn stabilize the price by selling at a slightly higher price. Scalpers are often in and out of stocks several times a day.

Brokers and Others in Close Touch with the Market.—Another class of speculators are brokers and others who are in close touch with the market and who carry on their buying or selling campaigns for the short swings of the stock market. In this group are found the **professional speculators** who sometimes operate on a large scale and form **"pools"** for the purpose of operating in a particular security. These "pools" work on the theory that sooner or later the general public will be attracted to the movement of the particular stock in which the pools are interested and will buy the stock. Generally, the public

buys the stock after it has had a considerable advance. By gradually selling out their securities, buying in when necessary to maintain the market, they may be able to clear a large profit for themselves.

Persons Dealing on Basis of Intrinsic Values.—Another class of speculators are those who buy or sell securities on the basis of their real or fancied knowledge of the intrinsic value of the securities. When the market price of a particular stock is a considerable distance away from what they consider the normal price, they buy or sell with the expectation that the normal price will be reached at a later date and they will be able to realize a profit.

General Public or the "Lambs."—The general public in stock market speculation, often designated as "lambs," make the sorriest spectacle of all speculators. This group of speculators are poorly equipped by training and experience to undertake stock market speculations. They do not possess dependable knowledge of market conditions, familiarity with the details of intrinsic as well as market values of securities, and have as a rule but limited financial resources. Their operations are generally little more than a gamble.

INSTITUTIONAL INVESTORS.—

Savings Banks.—Savings banks purchase large amounts of bonds. The laws of most of the states carefully restrict savings banks to the purchase of certain types of high-grade bonds. In Wall Street these are known as **savings bank bonds.** The New York law regarding savings banks has been copied by several other states. In some states, mainly in the South and West, there is no legislation at all governing the type of securities savings banks may invest in.

Commercial Banks.—The investments of commercial banks in stocks of industrial and commercial corporations are negligible as it is considered bad banking practice to own shares of such companies for investment purposes. The permanent investments of commercial banks are largely confined to high-grade bonds. National banks are ordinarily not permitted to hold stocks unless obtained on defaulted loans, in which case they must be disposed of at the earliest opportunity.

The following table from the Report of the Comptroller of the Currency shows the amount and character of bonds and stock investments of national banks as of June 30, 1923, and June 30, 1924:

(In thousands of dollars)

	June 30, 1923	June 30, 1924
Domestic securities:		
State, county, or other municipal bonds	$ 401,816	$ 505,528
Railroad bonds	503,348	573,571
Other public-service corporation bonds	337,293	397,560
All other bonds	521,200	575,743
Claims, warrants, judgments, etc.	90,252	90,594
Collateral trust and other corporation notes	135,235	105,933
Foreign government bonds	153,723	179,470
Other foreign bonds and securities	91,236	85,055
Stock, Federal reserve banks	71,862	72,318
Stocks, all other	69,892	74,778
Total	$2,375,857	$2,660,550
United States Government securities	2,693,846	2,481,778
Total securities of all classes	$5,069,703	$5,142,328

Insurance Companies.—Insurance companies make **large purchases of high-grade bonds.** In this way insurance companies play an important part in providing funds for the productive needs of a community.

Investment Associations.—Investment associations **or trusts** are popular in Great Britain, France and Holland, where they buy large quantities of stocks and bonds. They sell their own bonds and shares and invest the proceeds in securities of corporations. The purpose is to substitute, for the uninformed judgment of the individual with a small amount to invest, the judgment of men experienced in investments, with larger funds in the aggregate, and to secure a wider distribution of the risk. The American investment public is beginning to take an interest in investment trusts. The indications are that their use will extend in the next few years.

Miscellaneous Institutions.—Such institutions as universities, philanthropic and eleemosynary institutions, must confine themselves to strictly investment securities. The same is true of estates which are administered in trust, unless the creators of the trusts expressly relieve the trustees of responsibility and direct them to purchase or hold non-legal securities.

Stock Exchanges

DEFINITION.—Stock exchanges, in a broad sense, are meeting places for buyers and sellers of securities. In a more restricted and accurate sense, stock exchanges are **unincorporated membership associations,** the members of which trade in securities for themselves and for others.

GROWTH OF THE STOCK EXCHANGE.—Fundamentally, a stock exchange is like any other market, and the operations that are carried on are mainly the basic operations of buying and selling securities. Exchanges like the New York Stock Exchange, however, are so thoroughly organized and perfected that they are able to handle a very large turnover of sales. By means of a very elaborate system of telegraph and telephone communication, as well as numerous other mechanical devices and systems, the business of the Exchange is made world-wide in its scope. American investors can, at any time, purchase the better known securities or turn securities which they own into cash almost immediately through the medium of the Stock Exchange. This is due not alone to the efficiency of the New York Stock Exchange as a unit but to the widespread organization of brokerage houses, which are in constant communication with members of the Exchange by telephone and telegraph.

PRINCIPAL STOCK EXCHANGES OF THE WORLD.—The principal stock exchanges of the world are:

The London Stock Exchange is an international market of enormous scope. A great number of foreign securities are listed on this exchange.

The Paris Bourse is the leading exchange of France. This exchange deals mainly in French securities, although a large number of foreign issues are also traded in.

Other international exchanges are located at Amsterdam, Berlin, Vienna, Rome, Madrid and Tokio.

The New York Stock Exchange is the largest exchange in the United States. Although American securities are mainly traded in on this exchange, the list of foreign securities is growing rapidly. A rather detailed description of this exchange is given on pages 762 to 780.

The Consolidated Stock Exchange of New York is often referred to as the **"Little Board,"** to differentiate it from the New York Stock Exchange which is

generally referred to as "The Exchange" or the **"Big Board."** The securities listed on the Consolidated Stock Exchange are mostly those listed on the New York Stock Exchange. The only practical difference between the two exchanges is in size, volume of trading, and units of trading. On the "Little Board" stocks are ordinarily bought and sold in 10-share lots or multiples of 10, whereas on the "Big Board" most of the dealings are in 100-share lots or multiples of 100.

THE NEW YORK CURB MARKET.—The New York Curb Market was formerly an unorganized and unhoused market for the purchase and sale of securities not otherwise dealt in. All transactions were of an informal nature and no official record was kept of them. In 1911 the New York Curb Market Association was formed, the first step toward organizing the Curb Market. In 1921 a building was opened for use of the New York Curb Market Association, which is now an organized market, patterned, in general, after the New York Stock Exchange.

Type of Securities Traded In.—Securities of companies which are unable or unwilling to meet the listing requirements of the New York Stock Exchange are frequently traded in on the Curb Market. The Curb Market is a popular market for new issues.

The securities traded in on the Curb Market are not, however, all of a speculative nature nor are they all unseasoned. Many issues are traded which are of a very high order, for instance, certain of the Standard Oil securities, as well as securities including both stocks and bonds of numerous substantial corporations, many of which could be listed at any time, upon proper application, on the New York Stock Exchange.

Units of Trade.—Transactions on the Curb Market may be in **odd lots,** that is, units of less than 100 shares.

OTHER AMERICAN STOCK EXCHANGES.—Besides the leading exchanges in New York, there are other exchanges in the principal cities of the United States. The tendency is to establish a stock exchange wherever investors and corporate enterprises exist. The small exchanges generally confine their operations to **local securities.** There are stock exchanges in Philadelphia, Baltimore, Pittsburgh, Cleveland, Cincinnati, Chicago, St. Louis, San Francisco, New Orleans, Denver, Boston, and other cities. These exchanges are comparatively small and confine their operations largely to securities in local companies.

JURISDICTION, CONTROL AND OPERATION.—Courts take judicial notice of stock exchanges. It has been judicially declared that:

"The stock exchange is so much a part of the financial method of our time that we take judicial notice of its general nature. We know that in a particular sense it is an association of stock brokers and stock dealers contributing to a general fund on account of their membership, and having the exclusive right to buy and sell on the floor of their exchange. They give aid to their patrons by the closest scrutiny of securities presented to be listed by them for sale. The information so obtained is always available, and prices are fixed by their transactions. It is evident from the nature of the case that these stock exchanges are the best and most favorable agencies for the sale of their listed securities, and that the calling of the list, with all that it implies, suggests the fullest information available. While the exchanges have what is sometimes called the unlisted department, and permit the sale of securities which do not meet the requirements of the stock list, even these are supervised by their com-

mittees, so that the greatest measure of security consistent with the freedom of legitimate trade attends their operations."[3]

New York Stock Exchange

IMPORTANCE AND OBJECT.—The most important American stock exchange is the New York Stock Exchange, located at Broad and Wall Streets, New York City. It far overshadows in importance all other exchanges in the United States. The **objects** of the New York Stock Exchange, as stated in its constitution, are "to furnish exchange rooms and other facilities for the convenient transaction of their business by its members, as brokers; to maintain high standards of commercial honor and integrity among its members; and to promote and inculcate just and equitable principles of trade and business."

ORGANIZATION AND MEMBERSHIP.—The New York Stock Exchange is an unincorporated membership association. The total membership is limited to 1,100 and a full membership is maintained. A membership is generally termed a **"seat"** on the New York Stock Exchange. A seat is obtained either by purchase from a deceased or retiring member, or by bidding high enough to induce some member to sell. The price of a seat varies with the demand. In July of 1925 a seat was sold for $122,000.

An **applicant** for membership in the Exchange must be 21 years of age, a citizen of the United States and acceptable as to character to the membership committee.

The **initiation fee** is $4,000, payable on the day of the applicant's election. The Exchange is supported by **dues,** not to exceed $1,000 a year, payable quarterly.

CONTROL AND OPERATION OF THE EXCHANGE.—The Exchange is governed by a **Constitution and Rules** corresponding to by-laws. According to the constitution, the legislative and judicial powers of the Exchange are placed, without qualification, in the hands of the **Governing Committee,** composed of the president and the treasurer of the Exchange and 40 members.

The **officers of the Exchange** are the members of the Governing Committee, the secretary, the first assistant secretary and the accountant. The president, treasurer and 10 members of the Governing Committee are elected annually by the members of the Exchange. Any member in good standing is entitled to vote.

The **real powers** of the New York Stock Exchange are vested with the Governing Committee. Its power over individual members is absolute, as conferred upon it by the provisions of the constitution. It has the power to suspend or expel any member for violations of the constitution, or for unjust or inequitable conduct in connection with trading, or for other acts which may be detrimental to the interests of the Exchange. A **high standard of conduct** is enforced and members may be disciplined for offenses which violate the rules of the Exchange but are not violations of any state or federal law, and would not on that account be cause for action in a law court.

The jurisdiction of the Governing Committee does not extend beyond those affairs of the members which pertain to trading on the Exchange. It is limited to matters arising between the members of the Exchange in the course of their business with each other as brokers, and with the public as buyers or sellers of securities.

---

[3] *Dibert* v. *D'Arcy,* 248 Mo. 644.

IMPORTANT COMMITTEES.—The more important of the committees of the New York Stock Exchange, in addition to the Governing Committee, are the following:

Conference Committee, which consists of the president, vice-president, treasurer and the chairmen of several other committees, and whose duties are to hear reports from the various committees and others, advise with them and make recommendations to the governing committee.

Committee on admissions, which considers applications for membership in the Exchange.

Committee on business conduct, which considers matters concerned with the business relations of the members and customers. It keeps in touch with the prevailing prices of securities as listed on the Exchange in order to guard against any improper transactions resorted to by members.

Committee on stock list, which considers applications for the listing of securities upon the Exchange This committee reports to the governing committee, giving statements with full details of the organization, capitalization, resources, indebtedness, and other information required of the applying corporation, and making recommendations as to whether or not the stock should be listed on the Exchange. The committee may remove from the list any security when the amount of stock outstanding becomes so small as to make free and open trading in it impossible or inadvisable.

RULES OF THE STOCK EXCHANGE.—All transactions entered into by members with one another and with customers are governed by **well defined rules.** The constitution and rules of the New York Stock Exchange are strictly enforced to safeguard the interest of the public in dealings with the members of the Exchange, and to regulate the conduct of its members and hold them to the highest standards of fair dealing and honesty.

Contracts made on the floor of the Exchange are inviolate and must stand unless both parties agree to alter their terms. All serious disputes are brought to the attention of the arbitration committee which passes on the merits of the controversy. However, in the case of **corners** the Governing Committee may postpone the time of deliveries on contracts, and in case the parties to any contract in a cornered stock fail to agree on "a fair settlement price," such price may be fixed by the committee, after a hearing before it or a special committee appointed for that purpose.

BROKERS AND TRADERS.—The members of the New York Stock Exchange may be classified in general as brokers and traders, although many members may act in both capacities.

Brokers execute orders of their customers to buy or sell securities on the floor of the Exchange. Their compensation is the commission they may charge for their service, and is regulated by the Stock Exchange.

Traders, usually referred to as "floor traders," buy and sell securities on the floor of the Stock Exchange for their own account and attempt to make a profit thereby.

The broker acts as **agent** for someone else in buying or selling securities, working on a **fixed commission.** The dealer or trader, however, works entirely for himself and not as agent for any customer. He buys and sells stock entirely on his own account and his profit is made, not out of commissions, but out of sales of securities at prices higher than those which he pays. When a broker executes an order for another member, he does so for a smaller commission than the fixed commission for executing orders for a non-member.

The operations of a stock broker are usually broader in scope than those of

brokers in other lines of business. This is especially true in the case of **margin business.** In such cases the broker buys and sells the stock in his own name. He retains possession of the margined stock and the name of the customer or principal does not generally appear in the transaction.

THE "TWO-DOLLAR" BROKERS.—The "two-dollar" broker is a broker whose customers are other brokers. His chief work is to assist commission houses and other brokers in executing their orders in heavy markets, when the work is too great for the regular commission broker to handle it all on the floor. The name—"two-dollar" broker—arises from the fact that his fee for purchasing or selling 100 shares of stock was formerly $2.

The commission now charged by "two-dollar" brokers for every 100 shares bought or sold for other brokers is as follows:

$1.25 where the price of stock is below $10 a share.
$2.50 where the price of stock is $10 a share or above but under $125 a share.
$3.00 where the price of stock is over $125 a share.

SPECIALISTS.—The specialist is a broker who specializes **as a dealer** in a particular security or securities, which are located at a single post on the floor of the Stock Exchange. Commission brokers often give over their orders to some specialist to execute on the same basis as their dealings with the "two-dollar" broker.

ODD-LOT DEALERS.—Trading on the New York Stock Exchange is done in units of 100 shares. In order to accommodate persons desiring to trade in less than 100 shares, the system of **trading in odd-lots** has grown up. Odd-lot dealers will purchase from 1 to 99 shares of stock and later sell them on the Exchange in 100 share lots, or they will purchase 100 share lots on the floor of the Exchange and split them up to accommodate customers who wish to buy from 1 to 99 shares.

OPENING A BROKERAGE ACCOUNT.—Under the rules of the Stock Exchange no employee of a bank, stock exchange house, trust or insurance company is permitted to open a speculative account unless the written consent of the employer is obtained. Aside from these reservations, the Exchange is open to all persons on equal footing for trading. Opening an account with a brokerage firm is much like opening a bank account. The prospective customer is required to fill out a certain form giving his name, address and occupation, as a matter of record and identification. Some brokerage houses require prospective customers to sign an agreement that they will maintain with the broker sufficient margin on their accounts and that in the event of their failure to advance additional margin upon request, the broker is authorized to sell the security.

DUTIES OF THE BROKER.—Generally the relationship between the broker and his customer is that of agent and principal. The broker must, therefore, exercise reasonable skill, diligence and good faith in carrying out the customer's orders. In the case of purchases on margin, the relationship between customer and broker is that of pledgor and pledgee. In these transactions, the broker undertakes:

1. To advance the purchase money required in excess of the margin.
2. To obtain the stock promptly as ordered.
3. To hold such stock as the property of the customer and at the customer's risk, ready for delivery upon his order.
4. To deliver stock to the customer on payment of the balance due on his account. This balance will include not only the balance of the pur-

chase price but also commissions, interest, bank exchange and any other expenses incident to the handling of the account. Any dividends paid on the stock are credited to the customer when paid by the company whose stock he holds.

5. To notify the customer of his intention to close the latter's account, unless the margin is increased when necessary.
6. To sell the shares upon order of the customer and to remit to him the proceeds thereof. A broker may not make secret profits for himself out of transactions for the customer, and must notify his customer of all the transactions made for him.
7. To render an accounting whenever a statement is demanded. Monthly statements of accounts are usual.

DUTIES OF THE CUSTOMER.—The customer has certain obligations which he must carry out, as follows:

1. He must keep his accounts **amply** margined.
2. He must repay the broker for all outlays and losses incurred for his account.
3. He must pay the usual commission to the broker as soon as his order is filled.

DURATION OF RELATION OF BROKER AND CUSTOMER.—The **legal relation** of broker and customer is one of **agency,** the broker being the agent and the customer the principal. The agency relationship continues until the purposes of the relationship have been completed. It is terminated in one of the following ways:

1. Sale of securities held for benefit of the customer.
2. Purchase of securities when the purchase is made against a previous "short" sale.
3. Transfer of the account and securities held for the customer or for his benefit by a third party upon payment of the balance due.
4. In margin transactions the agency relationship is coupled with an interest, and is irrevocable until the full indebtedness on the account is paid.

KINDS OF ORDERS.—The following are different kinds of orders which may be presented by a customer to his broker for execution on the New York Stock Exchange:

At the Market.—On an order for the purchase or sale of securities to be executed at the market, the broker buys or sells the customer's stock immediately, regardless of the price he is compelled to pay or accept. The broker, in the interests of his customer, must carry out the order at the **best possible bid or offer** on the market.

At a Definite Price.—When an order is entered at a **specified or limited price,** and the transaction is a sale, the customer sets a definite price, below which the broker may not sell the securities. He must sell either at the specified price or a higher one. If the transaction is the purchase of stock, the customer sets a certain price which he is willing to pay. The broker is empowered to buy either at this price or at a cheaper price. The customer may set a **time limit** within which the broker may execute the order, or he may make it good until cancelled, commonly referred to as a **"G.T.C." order.**

Unless otherwise specifically stated, all orders, except stop-loss orders, are good only upon the day for which they are entered. At the close of business on that date they automatically expire.

Stop-Loss Order.—This form of order is used when the customer desires to limit the amount of his possible losses. If after the purchase of stock on margin the tendency of the market is downward, the customer may enter with his broker a stop-loss order. This order names a certain price below the current market price at which the broker is to sell when the market reaches that price. If a customer is **selling short** (see page 774) he may also limit his losses by a stop-loss order. Such an order names a price above the current market price. If the security rises to that figure, the broker buys. For instance, if the customer has sold short 100 shares of U. S. Steel at 115 and desires to limit his losses in the event of a rising market, he enters an order with his broker to buy at 120. As soon as the security sells at 120, the broker must buy the shares as promptly as possible.

Under the rules of the New York Stock Exchange, a **stop-loss order to buy** becomes a market order when the stock sells at or above the stop price. **A stop-loss order to sell** becomes a market order when the stock sells at or below the stop-price.

KINDS OF PRICES.—The prices quoted for securities may vary considerably according to the nature of the transaction and some of the surrounding circumstances. Some of the different bases on which prices are quoted in stock exchange transactions are briefly described:

Bid price is the price a would-be purchaser offers for a security.

Asked price is the price asked for a security by a seller in transactions leading up to a sale.

Actual price in a transaction is the price at which a transaction actually takes place.

Market price is the price at which a security is selling at a given time in its usual market place, and if there are no transactions at the moment, it is generally given by stating the bid and asked prices.

Nominal price is an approximation of the probable value of certain securities, quoted as a basis for negotiation where actual transactions or firm bids and offerings are lacking.

Spot price is the price quoted on securities or commodities for immediate delivery. The term is generally found in quotations in the commodity markets and is unusual in stock market transactions.

Firm price is a price quoted and adhered to for a definite period. This method of price quoting is frequently used between brokers in dealing in inactive stocks. A broker, having a prospective order to buy a given stock "if the price is right," makes inquiries of other brokers, and if he can, gets them to quote a "firm price" on the security. The first broker then reports the "firm price" to his customer and if the price is satisfactory the order for its purchase is given.

Exhaust price is an expression sometimes used in margin transactions and means the price level at which the holder's margin will be exhausted. For instance, if a man buys U. S. Steel Common at say 100 on a 20 point margin, the exhaust price would be 80. As a matter of fact stock bought on margin will seldom be held by a broker until the "exhaust" price is reached. A practice which is considered better and is gaining in usage is that the margin be "kept good," that is, for every point of margin "consumed" by a decline in the market value of the stock, an equivalent amount of additional margin must be deposited.

KINDS OF DELIVERY.—Orders may also be classified according to the type of delivery, which may be one of the following:

For Cash.—When the sale is for cash the stock must be delivered by the seller) the buyer upon the same day the sale is made.

Regular Way.—Delivery of stock is made upon the business day following he day of the contract. Saturday is not considered a delivery day. This is he usual method of trading.

At Three Days.—Delivery of stock is on the third day following the day of ontract.

Buyer's or Seller's Option.—Such an option is for not less than 4 days or more han 60 days from the day of contract.

MARGIN TRADING.—**"Buying on margin"** is the phrase used in buying tocks or bonds, which to a large extent corresponds in other commercial trans-ctions to **purchasing on credit.** In buying on margin the purchaser advances nly a percentage, or margin, of the total amount of money required. Most of he necessary funds for the transaction are supplied by the broker, either out f his capital or by borrowing, generally of banks.

In the ordinary purchase and sale of stock on margin the customer is required o deposit with his broker at least a certain **minimum margin** which depends on he market character of the stock and the price. If the market price declines fter the purchase, the customer may be called upon for additional margin in rder to comply with the margin requirements of the broker. If the customer ells short and the price of his stock advances, he may also be called upon for dditional margin. In either case, if additional margin is not furnished and he customer's equity decreases to the point where the broker is in danger of uffering a loss, the account may be closed out by purchase or sale as the case nay be.

MARGIN PURCHASE ILLUSTRATED.—The procedure in buying on mar-in is as follows:

The speculator desires to buy 100 shares of a stock which is selling at $100. 'he margin required will depend on the stock and the brokers, and may ap-roximate $10 a share. The speculator, therefore, gives his broker $1,000 and n order to buy 100 shares. The broker, or his representative on the Stock Exchange, buys the 100 shares on the floor. The broker must pay for these hares at the end of the next day if the transaction is executed in the "regular ay"; that is, he must be prepared to pay the price of $100 per share, or 10,000. In order to raise this money, he borrows from a bank, depositing he shares of stock as collateral for the loan. On high-grade stock the bank ill loan him up to about 80% of the market value, or about $8,000. The emaining $1,000 necessary must be supplied by the broker out of his own funds. the market for the stock should later advance, say, 10 points, the customer ay give an order to sell. The stock will then bring $11,000. Out of this mount the broker returns the $8,000 to the bank and $1,000 to himself, and hen deducts from the balance his brokerage charges, interest on the $9,000 e advanced the client, and other incidentals, if any. The remainder is turned ver to the customer. If the stock should go down 4 or 5 points, the broker ill call upon the customer for additional margin, that is, to advance more oney. If the customer fails to do so, the broker will sell the stock at the arket price, repay the bank and himself, deduct his brokerage charge and terest, and then return to the customer what is left of the original $1,000 eposit.

A trustee, in the absence of express authority, is not permitted to trade on argin with trust funds. The direction of a trust "to invest" does not include

trading on margin. A broker knowingly receiving trust funds for margin transactions, is accountable to the beneficiary for those funds.

GENERAL MARGIN REQUIREMENTS.—The marginal requirements of stock brokers vary, but, in general, stock brokerage concerns having membership on the New York Stock Exchange carry securities listed on that exchange in lots of 10 to 100 shares and upwards when conservatively margined. The amount required is sometimes set as follows:

Shares selling under			$ 10	must be paid in full.						
"	"	from	10 to $ 20	....	50%					
"	"	"	20 "	60	10	points	(dollars	per	share)	
"	"	"	60 "	90	15	"	"	"	"	
"	"	"	90 "	110	20	"	"	"	"	
"	"	"	110 "	150	25	"	"	"	"	

In other cases the broker may set a fixed percentage, say 20%, of the purchase price.

Much depends on the character of the stock, but in each case the amount of margin required is for the protection of the broker as well as the customer. In buying on margin a purchaser should not assume liabilities which he could not pay in full in case of necessity.

COMMISSIONS.—Brokers operating on exchanges charge standard commissions for buying and selling. On the **New York Stock Exchange** the charges on stock transactions are as follows:

							Per 100 Shares
Stocks selling below			$ 10	.....			$ 7.50
"	"	at	10 and under	$ 25	.....		12.50
"	"	"	25 "	"	50	.....	15.00
"	"	"	50 "	"	75	.....	17.50
"	"	"	75 "	"	100	.....	20.00
"	"	"	100 "	"	200	.....	25.00

On stocks selling at $200 per share and over, 25 cents per share for the first $200 in price and 5 cents per share additional for each $50 increase in price, or fraction thereof. The minimum commission on an individual transaction in stock is not less than $1.

New York Curb Market commissions for stocks are as follows:

							Per 100 Shares
Stocks selling under $			.50, 2% of amount involved				
"	"	at	.50 and under	$ 1	.....		$ 2.00
"	"	"	1.00 "	"	3	.....	4.00
"	"	"	3.00 "	"	5	.....	5.50
"	"	"	5.00 "	"	10	.....	7.50
"	"	"	10.00 "	"	125	.....	15.00
"	"	"	125.00 "	over	.....		20.00
Minimum commission on individual trades					.....		1.00

TRANSFER TAXES.—

Federal Tax.—The federal law imposes a stamp tax of 5 cents on the original issue of each **$100 of par value,** or fraction thereof, of stock, and 2 cents on each transfer thereafter. **Stock without par value** is taxed at 5 cents a share on original issue and 2 cents a share on transfers. This transfer tax must be reckoned with by a customer as one of the fees which are paid for him by the broker.

State Tax.—In Massachusetts, New York, and Pennsylvania, a state stamp tax is also imposed upon the sale, agreements to sell, memoranda of sale, or transfer of all stock. The amount of this tax is 2 cents for each $100 of face

value, or fraction thereof. Stock without par value is taxed at 2 cents on each share.

The tax is payable whether the transfer of stock is made on the books of the company, by assignment in blank, or by delivery, or by any paper transferring the beneficial or legal title or merely the possession of the stock or certificate. Agreements evidencing the deposit of securities as collateral for loans are exempt. Mere loans of stock are not taxable.

The transferor or seller must affix and cancel the required stamps and pay the tax.

ORDERS EXECUTED MUST BE CONFIRMED.—The laws of New York state and the rules of the New York Stock Exchange require all brokers to

BROWN & CO.
400 WALL ST.

New York, October 5 19

Mr Blank

We have this day **BOUGHT** for your account and risk, in accordance with the rules of the New York Stock Exchange.

NO. SHARES	DESCRIPTION	PRICE	TIME	FIRM NAME
200	Southern Pacific	90	1.03	Jacobson & Co.

It is agreed between broker and customer:
1. That all transactions are subject to the rules and customs of the New York Stock Exchange and its Clearing House.
2. That all securities carried from time to time in the customer's marginal account, or deposited to protect the same, may be loaned by the broker, or may be pledged by him, either separately or together with other securities, either for the sum due thereon or for a greater sum, all without further notice to the customer.

Respectfully yours,
BROWN & CO.
By William Jones

FIG. 1. Broker's Confirmation

Showing purchase for the account of Mr. Blank by Brown & Co. of 200 Southern Pacific at 90 from Jacobson & Co. at 1:03 P. M.

render customers a confirmation of every order executed for them. The **confirmation** (Fig. 1) sets forth the name of the broker, the name of the customer, the name and number of shares bought or sold, the price, date, and time of transaction, and the name of the firm from whom they were bought or to whom they were sold. This memorandum is sent out on the day the transaction is consummated, and enables a customer to verify the transaction.

MONTHLY STATEMENTS OF CUSTOMERS' ACCOUNTS.—Stock brokers render statements to their customers of their accounts, usually each month. A **typical customer's statement** (Fig. 2) with explanations is taken from "The Work of the Stock Exchange," by J. Edward Meeker, economist of the New York Stock Exchange. It is rendered to Mr. Blank by his brokers, Jenkins & Co. It contains columns for the dates of the customer's various transactions and for the amounts of the securities bought or sold. Other columns contain a description of the item, the price at which it was bought or sold, the debit or credit thus incurred by the customer, and his debit or credit balance. At the extreme right of the statement the interest items are calculated upon a detachable slip in the manner shortly to be described. Such statements are made out with two carbon copies, and the originals usually record credit cash items in red. The original is kept as an office record, while one of the duplicates goes to the customer and the other is available for transmission to the branch office or correspondent in case the customer's order came in to the commission house from either of these sources. The statement is **expressed in terms of cash** rather than securities. The customer is credited with long stocks and with the cash extension of stock sold, and debited with short stocks and the cash extension of stocks purchased.

SUMMARY OF TRANSACTIONS.—In the typical account of Mr. Blank under consideration, the customer in the beginning deposited as **margin** a $1,000 Baltimore and Ohio Railroad 6% bond, 10 shares of U. S. Steel preferred, and his check for $2,000. He then bought 200 Southern Pacific at 90 and one day later sold it at 92. He next proceeded to sell 100 Reading short at 75, but some time afterwards covered the sale of 75½—an unprofitable transaction. He also purchased 100 Columbia Gas and Electric at 60, 100 Chesapeake and Ohio at 40, and 100 Mexican Petroleum at 150, and **sold short** 100 U. S. Steel common at 88½, and 100 Crucible at 110. The latter short sale he later covered at 100.

At the outset Blank's securities deposited as margin are entered as "Received," and he is credited with his check for $2,000. His first transaction was his purchase of 200 Southern Pacific at 90, which occurred on August 4. The date of this item on the statement, however, is August 5, for items are dated, not according to the dates when contracts for the purchase and sale of securities were made on the floor of the Exchange but when such contracts were settled by delivering the securities. If Blank's order was executed on a Monday, the contract would ordinarily be settled Tuesday, etc., according to the daily settlement system employed on the Stock Exchange. So it is, too, with all the other purchases and sales entered on the statement—they are posted on the day when the contract is settled.

HOW THE BROKERAGE COMMISSION IS ENTERED.—For this purchase of 200 Southern Pacific at 90, Blank is debited for $18,030. The extra $30 represents the commission charged by Jenkins & Co. for making the purchase for him, and is added into the extension instead of being posted as a separate item. Since the customer's purchase of stock creates a debit cash extension, commissions are in this way added to it. On the other hand, since

FIG. 2. A Form of Customer's Statement Used by Many Stock Exchange Houses

the customer's sale of stock creates a credit cash item, the commissions on sales are subtracted from the cash extension. Thus, when Blank sells his 200 Southern Pacific at 92, he is credited with $18,400 less commissions of $30 and taxes of $8, or with $18,362. The commission computations here are based on rates obtaining prior to November, 1924.

TAXES ON SALES.—The taxing of sales of securities also affects the customer's statement. On the sales of stock of no par value or of $100 par, there is a federal and a state tax of $2 each per 100 shares, or $4 for both. When Blank sold his 200 Southern Pacific, taxes amounting to $8 were therefore deducted from his credit extension, along with commissions. Since this tax applies only to the sale and not to the purchase of stocks, he was not taxed when he bought the stock. Southern Pacific stock has a par value of $100, while Reading has a $50 par. Accordingly, when Blank on August 9 sold 100 Reading his tax amounted to $2 instead of the $4 he had to pay for selling 100 U. S. Steel (another $100 stock) on August 20.

DIVIDENDS AND PREMIUMS.—The statement in Fig. 2 gives illustrations of the payment of dividends to the customer on his long stock, and of the payment of dividends by him on his short stock. When the dividend on Reading is paid, Blank is already short 100 shares of this stock, and accordingly he is debited $100 for the quarterly $1 per share. But when the $1.50 per share quarterly dividend on Columbia Gas and Electric is declared, Blank is long of 100 shares, and consequently he is credited with $150.

Blank is charged for a premium for three days of ¼ on the 100 shares of Crucible Steel of which he is short. As the **floating supply** of the stock was scanty and it was difficult to borrow it, Blank had to pay a premium to get the desired stock. On August 25 he sold 100 shares short at 110 and did not cover the sale until the 28th, when he purchased the same number of shares. In the interim, Jenkins & Co. had to borrow the 100 Crucible for him and, owing to its temporary scarcity, had to pay a daily premium of ¼%, or $25, for it, for three days. Accordingly, Blank is debited for $75.

COMPUTATION OF INTEREST.—The interest charges are calculated upon the detachable slip on the right of the statement. The column headed "Interest Adjustment" contains the cash amounts upon which the customer is due to receive or pay interest. To save time, all interest charges or credits are first calculated at 6%, and the total credits and debits are then adjusted to the correct and actual rate, which may be either more or less than the flat 6% rate first employed.

Blank's account has a **credit balance** of $2,000 (the amount of his check) for one day. Accordingly, he is credited with 33 cents interest upon it. By his purchase of 200 Southern Pacific at a total cost of $18,030, he creates a **debit balance** of $16,030 which remains one day until he sells this stock. He is therefore charged interest upon $16,030 for the one day, and thus receives a debit of $2.67. This interest charge serves to repay his brokers the interest and commissions they may have had to pay on their loans.

At the end of the month a total debit and credit interest item is obtained. As shown in the statement, Blank is debited with $37.61 and credited with $1.89. These figures, as has been stated, were arrived at on the basis of a 6% rate. But the brokerage house will rarely if ever pay as much as that on customers' temporary credit balances. In this case Jenkins & Co. pay 3%, and, comparatively speaking, this rate is high. If the customer's credit interest item at 6% was $1.89, at this actual 3% rate it would amount to 95 cents. Accordingly, Blank is credited with this sum at the bottom of his credit column.

THE RATE OF INTEREST CHARGED.—The exact rate of interest at which Blank is charged is derived by averaging the rate paid by the house on all of its various loans during that month. If this average rate of interest amounts to 7%, the firm adds, say, ½, to compensate it for its trouble, expense, and risk in making these loans for its customers and accordingly charges the latter 7½%. This means that in addition to the 6%, a **carrying charge** of 1½% must be made. Therefore, the $37.61 (or interest at 6%) is increased by 25%, giving $47.01 as the interest at 7½%. This sum is then entered as a debit on the customer's statement. A special rule in the constitution of the Exchange forbids its member firms from competing unfairly with each other for business by charging "special and unusual rates of interest." Such a practice is looked upon by the Exchange as tantamount to a breach of its commission law.

After these interest items are figured in, Blank is shown to have a total debit balance at the end of the month of $13,074.06. In addition, his account shows that he is long of the securities which he originally left with Jenkins & Co. as margin—namely, his $1,000 Baltimore and Ohio 6% bond and his 10 shares of U. S. Steel preferred, as well as the 100 Columbia Gas and Electric, the 100 Chesapeake and Ohio, and the 100 Mexican Petroleum which he bought on margin during the month. At the same time he is still short of 100 U. S. Steel common.

DETERMINING THE CUSTOMER'S MARGIN.—What Blank is principally interested in is what his **equity in the account,** or the sum of money belonging to him in it, amounts to. This can be determined only by first imagining that his account has been completely closed—that is, that all his long stocks have been sold and all his short stocks bought in. Suppose this is done on August 31, when Baltimore and Ohio 6's are selling at 91, U. S. Steel preferred at 107, Columbia Gas and Electric at 62, Chesapeake and Ohio at 44, Mexican Petroleum at 148, and U. S. Steel common at 85. At these prices Blank's 320 shares of long stock possess a market value of $27,380, and his 100 shares of short stock a market value of $8,500. In addition, we learn from his statement that his debit balance owed to his broker amounts to $13,074.06.

Had Blank's account contained only long stock, his equity in it could be determined simply by subtracting his debit balance (which he owes his broker) from the total market value of his long stock (which is credited to the customer). On the other hand, had the account consisted entirely of short stock, Blank's equity would be determined by subtracting from his credit balance (in such a case he would necessarily have a credit rather than a debit balance), the total market value of his short stock.

In the somewhat more complicated instance above cited the customer's account contains both long and short stock. The simplest way to reckon the customer's equity in such an account is to consider the account long or short according to the preponderance of its commitments, and figure in the lesser of the two afterwards. In this case Blank is long 320 shares and short 100 shares. His account is thus mainly a long account. In reckoning Blank's equity, therefore, his debit balance of $13,074.06 would be subtracted from the total market value of his long stocks, or $27,380, which would give us $14,305.94 But there is another subtraction still to be made—namely, the $8,500 which he must pay to cover his short stock at its market price. When this is subtracted, Blank's true equity of $5,805.94 is obtained.

This figure represents the value of his Baltimore and Ohio 6% bond ($910) and his 10 shares of U. S. Steel preferred ($1,070), or $1,980 altogether, which

he originally put up as margin. It also contains the $2,000 originally deposited with the broker for the same purpose. When these two items are subtracted from Blank's total equity in the account, his profit from his transactions is found to amount to $1,825.94.

SHORT SELLING.—"Short sale" is the term used in stock exchange transactions to designate a sale of securities which are not possessed or owned by the seller. In a short sale the **seller borrows the security** to effect delivery. He will return the stock when he **has covered,** that is, bought it in. His motive in selling short is to make a profit from a decline in the price of the stock during the interval between his short sale and his covering operation.

A short seller is in virtually the same position as the farmer who sells his crop before it is planted or harvested, or publishers of newspapers or magazines who accept subscriptions for the future daily, weekly, or monthly delivery of their periodicals. In such cases, the sellers sell what they do not possess but which they feel confident they can obtain and deliver when the delivery dates arrive.

OPERATION OF A TYPICAL SHORT SALE ON MARGIN.—A person wishing to sell a stock short deposits, say, $1,000 with his broker and instructs him to sell 100 shares of that stock. The broker sells the securities on the floor of the Exchange. Under the rules of the Exchange delivery must be made the next day, but as neither the broker nor the speculator owns the stock sold, it is necessary to borrow the stock in order to make delivery. This is usually done through the **"loan crowd."** Stocks are loaned on payment of the market price which is to be returned with the agreed interest, if any, on the return of the securities. This borrowed stock is used by the broker to make the delivery on his sale.

ECONOMIC EFFECT OF SHORT SALES.—The general economic effect of short sales is that they act as **stabilizers of security prices.** Undue inflation of prices is just as detrimental as undue depression. Short selling acts as a check on the upward rise of prices of securities; and when prices of stocks fall, the purchase of securities previously sold tends to support a declining market. Short selling has thus a tendency to prevent extremes of fluctuations in security prices.

If the market declines and the seller orders his broker to buy in the stock at a lower price, the broker makes the purchase and uses the stock he obtains to return the loan with which the original delivery was made. The difference between the price at which the stock was sold and the purchase price less the brokerage charges and taxes, represents the profit to the seller on the operation.

In a short sale, the seller does not usually have interest charges accruing against him, because the broker, when he borrows the stock, advances the market price; instead, he may actually receive interest on the money advanced, though it is customary for brokers not to credit customers with such interest.

If the market rises to a point where the amount of margin on deposit makes it hazardous for the broker to carry the account, he calls on the customer for more margin. Failing to get a response, he will buy in the stock, return the stock borrowed, and charge the customer with the brokerage. The difference between the selling price and purchase price plus commissions and taxes represents the seller's loss.

A speculator who buys stock with the expectation that it will rise and enable him to sell at a profit, is a **"bull."** A speculator who sells short, expecting that the price will fall so that he can cover his sales at a lower price than that at which he has sold, is a **"bear."**

PRIVILEGES IN STOCKS.—Privileges in stocks are known as **"puts," "calls"** and **"spreads."** Trading in privileges is European in origin and subsequently was adopted by brokers and traders in the United States. Members of the New York Stock Exchange are forbidden to trade in privileges on the floor of the Exchange.

A **"put"** is a privilege issued for an agreed consideration whereby the holder may deliver a given number of shares of a given stock to the maker, at a certain price within a certain time. If the privilege is not exercised before its expiration date, it becomes valueless.

All dividends go with the stock. In case the stock covered by the privilege should sell **"ex-dividend"** the amount of the dividend would be deducted from the original price on the privilege and that would then be the price at which the privilege would become operative.

A "put" in effect is similar to a short sale of stock within the time limit specified in the privilege. It is sometimes bought where the purchaser is long of the stock and wishes to limit his possible loss to the price stated in the "put."

A **"call"** is a privilege whereby the buyer for an agreed price receives the right to demand the delivery of a certain number of shares of a given stock from the maker, within the prescribed time limit at the price stated in the privilege. It is sometimes bought where the purchaser is short of the stock and wishes to limit his possible loss to the price stated in the "call."

A profit in a "put" accrues only when the price of the stock falls below the "putting" price. Likewise a profit in a "call" accrues only when the market price exceeds the "call" price. Privileges must be exercised before their expiration to be of value. They automatically cease when the time limit expires.

ADVANTAGES OF TRADING IN PUTS AND CALLS.—There are certain decided advantages in trading in puts and calls:

1. **Limitation of Loss.**—The purchase of a "put" or "call" limits the possibility of loss to the amount paid for the privilege.

2. **Possibility of Gain.**—There are only two limitations to the possibilities of gain. These are (a) the limit of time in the privilege and (b) the market price of the security after the purchase of the privilege. Where the market price of the stock justifies the sale of a stock against a "call," or the purchase of a stock against a "put," a person may sometimes obtain a large profit without running the risk attending margin transactions.

THE BOND MARKET.—There is a special bond market on the New York Stock Exchange. The **unit of trading** in bonds is $1,000. Two $500 bonds is considered a good delivery for $1,000, but a delivery of $1,000 in bonds in smaller denominations than $500 is not a good delivery. Sales of bonds of smaller denominations than $500 are readily made on the Exchange, but the dealer demands a slight **premium** in buying or selling them. In the case of Liberty bonds which may be readily exchanged at federal reserve banks for bonds of $1,000 denomination, the premium demanded is very slight, amounting to only about 1/10%, or less. However, with bonds which dealers may find difficult to change to larger denominations, the premium charge, either in buying or selling, is considerably larger than this.

HOW BONDS ARE QUOTED.—Bond prices are **quoted in percentages** of their face value. Thus a $1,000 bond, quoted at 97½, would sell at $975; a $100 bond quoted at 103 would sell at $103.

Except in the case of bonds in default, and income and adjustment bonds, where uncertainty in the matter of interest prevails, **interest accrued** up to the day of delivery is added to the selling price of the bonds. Interest is cal-

culated, not to the day on which the sale is made, but to the day upon which the seller delivers the bonds to the buyer. Calculation is made from the date of the last interest payment.

To take a **concrete example**—a $1,000 5% bond, purchased at 99 on April 10, its semi-annual interest payment dates being January 1 and July 1, would cost the purchaser $990 in principal and $13.75 accrued interest (3 months and 9 days interest, the interval between January 1 and April 10—the day of delivery being excluded), a total of $1,003.75. On July 1 the holder would collect the semi-annual interest coupon for $25, this representing the $13.75 which he advanced at the time of purchase, and the $11.25 interest accruing since that time.

When the buyer purchases a bond in default, or an income or an adjustment bond, it may be sold to him **"flat,"** which means without any interest added to the market price. A $1,000 bond in this case sold at, say, 80 will bring $800.

In figuring bond yields, in addition to the coupon rate of the bond (5%, 6%, or whatever it may be), there must be taken into consideration the difference between the price paid for the bond and the figure which it will be worth at maturity (ordinarily 100). A bond selling at a discount (less than 100) would, of course, return the investor a higher yield than its coupon rate and one selling at a premium (above 100), less than its coupon rate.

The foregoing may be made clearer by a specific example. Take a 5% bond, maturing in 5 years and bought at 95. The investor pays for his bond $950 and accrued interest. He receives, however, 5% interest on the face value of the bond ($1,000) or $50 interest—in other words, whereas he has actually invested only $950, he receives interest on $1,000. Dividing the annual return, $50, by the original investment, $950, we arrive at approximately a 5.25% yield.

Five years hence, however, this bond will be worth $1,000, or $50 more than the investor paid for it. Dividing this amount by the 5 years that the bond has to run, it means that each year the bond increases $10 in value, or 1% of its face value, which, added to the 5.25% yield, above figured, results in an annual return of about 6.25%.

If, in the above case, the investor had paid a premium for his bond instead of purchasing it at a discount, it would be necessary for him to regard a portion of his income as the return of part of his principal and thus amortize, as it is called, between the time of purchase and the maturity of the bond, the premium paid.

These methods of figuring are not exact, the slight inaccuracies being accounted for by the fact that no consideration has been given to interest on interest, but they will suffice to show the principles involved in arriving at bond yields.

SALE OF COUPON OR REGISTERED BONDS.—Unless otherwise expressly stipulated, at the time of the sale, brokers and dealers always presume that the dealing is in coupon bonds, not registered bonds. If an investor wishes to buy or sell a registered bond, it must be so stated at the time of transaction, otherwise the transaction would be presumed to be in coupon bonds.

ALL ORDERS FOR BONDS AUTOMATICALLY CANCELLED ONCE A MONTH.—According to the custom of bond brokers all bids and offers on bonds are automatically cancelled on the last Saturday of each month. This

means that all orders, including "G. T.C." orders, must be renewed by the customer if he wishes them to remain in force for another month.

THE STOCK AND BOND TICKER.—All transactions in stocks on the New York Stock Exchange are given full and immediate publicity by means of the stock ticker, while bond transactions are recorded on the bond ticker. As soon as a sale has been made on the floor of the Stock Exchange, information is telegraphed to the New York Quotation Co. which has ticker machines installed throughout the lower part of Manhattan Island. The Western Union Telegraph Co. immediately copies the quotation from these tickers and transmits it on its own tickers which are located all over the United States.

FIG. 4. Specimen Sections of Bond Ticker Tape

Specimen sections of bond ticker tape recording sales on paper tape $\frac{5}{8}$ in. wide, are shown in Fig. 4. Abbreviations represent sales as follows:

Top row: $5,000 of Chicago, Milwaukee & St. Paul Ry. 1925 4's at 72$\frac{5}{8}$; $20,000 of Skelly Oil 6$\frac{1}{2}$'s at 115$\frac{1}{4}$; $1,000 of Sinclair Con. Oil 6's at 115$\frac{1}{4}$; $1,000 of Morris & Co. 4$\frac{1}{2}$'s at 80$\frac{3}{4}$; $2,000 of Sinclair Pipe Line 5's at 84$\frac{1}{4}$.

Middle row: $1,000 of Sinclair Con. Oil 7's at 94$\frac{7}{8}$; $1,000 of Steel & Tube Co.'s 7's at 107; $1,000 of Wheeling & Lake Erie Ry. at 100$\frac{3}{4}$; $1,000 of Toledo & Ohio Central Ry. 5's at 98$\frac{1}{2}$.

Bottom row: $1,000 of United Fuel Gas Co. 6's at 99$\frac{3}{4}$; $2,000 of Reading Co. 4$\frac{1}{2}$'s at 93; $5,000 of Chicago, Milwaukee & St. Paul Ry. 1925 4's at 72$\frac{3}{4}$; $1,000 of Chicago, Milwaukee & St. Paul Ry. 1932 4$\frac{1}{2}$'s at 56$\frac{1}{4}$; $9,000 at 56.

Complete lists of the abbreviations in use are published from time to time by the New York Stock Exchange.

CORNERS.—A stock is said to be **"cornered"** when most of the floating or purchasable stock of the company falls into the hands of a single individual or group of individuals, who may then advance the price at will. In such situation, all those who are short of the stock, that is, those who have made contracts to sell, and are, therefore, under the necessity of purchasing it, are at the mercy of those who have cornered the stock and must cover their sales at whatever price is demanded.

When a stock is partially cornered, the price rises and the premium on borrowed stock increases. This combination has a tendency to prevent an excessive short interest. Where, however, these economic factors do not accomplish their purpose and a corner develops, there is no longer a free and open market for trade. As this situation is detrimental to the interest of the Stock Exchange, trading may be suspended as a protection to the brokers and the public.

LISTING SECURITIES.—A **"listed security"** is one which has been admitted to the right of being traded in on the Stock Exchange. Before a stock or a bond can be listed, certain requirements of the Stock Exchange must be complied with.

The **advantages** to be gained by listing securities on the Stock Exchange are:

1. **Wide Market.**—Listing securities gives them a wide market whereby an issue can be distributed to a large number of stockholders, and provides better marketability.

2. **Bona Fide Issues.**—The securities listed on the Stock Exchange are bona fide issues of existing companies. The investigation made by the Stock Exchange covers a wide range as to the financial and operating condition, legality of the issue, and other matters connected with the company, which assures the public that the securities listed are at least bona fide. Further than this the Stock Exchange cannot go. The subsequent value of the securities is determined by financial and business conditions over which the Stock Exchange has no control.

3. **Publicity.**—The listing requirement that stockholders must receive an annual financial and operating report from the company gives the stockholders of such companies the means of keeping informed as to the condition of the concern.

REQUIREMENTS FOR LISTING.—A corporation which desires to have its securities listed must make formal application to the New York Stock Exchange. The committee on stock list passes on all applications. The **list-**

ing fee is $100 for each $1,000,000 or part thereof of each class of securities to be listed. For stock having no par value, $100 for each 10,000 shares must be paid.

A great deal of information is required of the corporation by the stock list committee. The corporation is given three sets of documents which must be filled out: A list of requirements which must be met; a questionnaire; and a distribution statement. Some of the more important requirements are as follows:

1. **Complete information** of the general nature of the corporation as set forth in the corporation charter.
2. The **latest available balance sheet and profit and loss statement** together with a complete financial history of the corporation.
3. A **statement of the purpose** of the issue to be listed.
4. Copies of the **corporation charter** and by-laws, and certain legal papers certifying to the legality of the issue to be listed.

The New York Stock Exchange is constantly revising its listing requirements and will supply upon application up-to-date instructions for the information of corporations contemplating the listing of securities.

ACTION ON APPLICATION FOR LISTING.—When the necessary information and documents are received by the secretary of the Stock Exchange, they are carefully examined and then turned over to the committee on stock list and a date set for a hearing. The application is also posted on the floor of the Exchange for the information of the members, who may acquaint the committee with any information they may have concerning the corporation. If the committee on stock list finds that the application is satisfactory, they will recommend to the governing committee that the application be granted. The final authority for placing the security on the list rests with the governing committee which generally, but not always, accepts the recommendation of the committee on stock list. After the governing committee grants authority for the listing of a new security, notice of such action is sent through the tickers, and trading may begin in the security the next morning on the floor of the Exchange.

All information which is received by the committee on stock list concerning the financial condition or organization of a corporation is always available to the public. The committee reserves the right to give full publicity to all such information, not only for the benefit of the members of the Exchange but as a protection for the public in general.

RIGHT TO REMOVE STOCK FROM THE LIST.—The governing committee reserves the right to **suspend dealings** in the securities of any corporation or to remove such securities from the list, whether because the outstanding amount has become so small as to make inadvisable or impossible further dealings therein, or for other reasons held by the committee to be sufficient cause of removal.

H. K. Pomroy, ex-president of the Stock Exchange, has stated the conditions which may necessitate the removing of stock from the list in his testimony in the "Money Trust Investigation," Volume I, page 49, as follows:

"Our experience of many years as governors of the Exchange, and the experience of previous governing committees, is that a small amount of stock in the list leads to a condition that is dangerous to ourselves and to our customers, the public; and therefore, in order to obviate the danger, when in our opinion that condition has been reached, we remove the stock from the list or suspend it from dealings. . . . The danger may arise from two causes. A

small quantity of stock is more easily subject to manipulation than a large quantity, and by means of manipulation people may be induced to buy stock at very much greater prices than it is worth. The other danger, which of course is the greatest one we fear, is the subject of a corner in the stock, which not only hurts the broker and his customer, but demoralizes the whole country, the Northern Pacific corner being a case in point."

Stock Market Loans

TIME LOANS.—When a broker gets actual possession of the securities, he may deposit them with a bank as collateral for one of two kinds of loans, **time loans** or **call loans.** The time loan is made for a definite period of time, such as 60 days, 3, 6 or 9 months, or a year. The rate of interest is fixed when the loan is made and does not vary during the life of the loan. Banks will generally lend amounts up to about **80% of the market value of the collateral,** the exact amount varying with the type of the security and the conditions of the money and security market. If the value of the collateral declines, the broker must supply additional collateral to the bank up to the agreed amount of the margin.

CALL LOANS.—A call loan is one having no specified time to run. Either the broker or the bank may terminate it at any time. Call loans are **renewed each day.** The rates of interest may vary from day to day, depending upon fluctuations in the money market.

There is a special **money desk** on the floor of the Stock Exchange at which call loans may be negotiated. Such loans may also be negotiated through **money brokers** or through direct negotiations between borrowers and lenders. When negotiated on the Stock Exchange the different money lenders announce the amounts of money which they have to lend, and the rates. The borrowing brokers file the amounts of loans which they expect to negotiate. In this way the supply and demand for call loans is easily ascertained.

From the factors mentioned in the last paragraph the money rates for call loans may be estimated. This estimated rate is known as the **renewal rate** and is established by the Exchange, merely as an expression of opinion and is not binding in any way upon borrowers and lenders. This renewal rate, however, is generally a very accurate estimate of the rates that should result from the prevailing supply and demand, and is generally adopted by borrowers and lenders in making new loans or in renewing old ones.

RENEWAL OF CALL LOANS.—Call loans are made for one day only and they must be renewed each day by borrowers if they wish them to continue. Renewals are made each morning between 10 A. M. and 12:15 P. M. The borrower does not send a formal notice of renewal of his loan if he wishes it to continue at the same rate of interest. However, if he believes the rate to be high, or if the exchange renewal rate has been changed from the previous day's rate, he will notify the lender either of his desire to pay off his loan or to continue it at the new rate that he is willing to pay. The lender in the same way may notify the borrower either to pay off his loan at once or to continue it at a new rate of interest satisfactory to the lender.

In a communication to the U. S. Senate, dated March 27, 1920, from the governor of the Federal Reserve Board, it was stated:

"The operation of the law of supply and demand is equally effective in determining the rate for commercial loans and all other borrowings. In fact, rates for commercial loans and rates for collateral call loans have a common

root in the law of supply and demand, and the conditions which affect one in the main affect the other, although not in like degree, as is demonstrated by the far wider fluctuation of call rates and the higher points to which they go. The rates of call money do not determine and have not exerted an important influence on the rates for commercial borrowings."

It often happens that an upward or downward movement of all money rates will first be seen in the call money rate. This is natural, for the fact that call money represents excess or surplus funds only, makes the call loan market the most sensitive to the fundamental factors of supply and demand underlying all money markets. In reality, therefore, the call loan rate often serves as a barometer for other money rates, but it does not cause later disturbances in these markets by its own fluctuations. In the long run all money rates tend to move in unison, and like water to seek their own level. When there is a general shortage of money, all money rates are high. When there is a plethora of funds, all money rates are low.

SURPLUS FUNDS OF INTERIOR BANKS LOANED IN THE STOCK MARKET.—Loans made on securities other than U. S. government bonds cannot, like commercial loans, be rediscounted by member banks at the federal reserve banks. For this and other reasons, the average banker in the regular course of his business prefers to make commercial loans rather than either time or call loans based upon security collateral. The result of this is that only the **excess funds of bankers,** accumulated for special purposes, or the reserves of non-members of the Federal Reserve System, which cannot be safely and profitably placed in commercial loans or other investments, are available for call loans.[4]

Such excess funds of banks all over the nation, and even beyond our borders, are collected in New York to loan in the stock market. The larger banks in such local financial centers as Chicago, Philadelphia, Boston, Cleveland, Detroit, St. Louis, Richmond, Baltimore, San Francisco, or Montreal carry accounts of the smaller banks of the immediate vicinity and constantly absorb their surplus funds at a low rate of interest. But these larger banks in turn carry accounts with the still larger banking institutions in New York, to which they transmit the surplus funds they have gathered in their immediate vicinity to be employed in stock market loans and other investments. The result is that a large part of the excess funds of the nation's banks, instead of being allowed to remain idle, is mobilized in New York banks and profitably placed in loans on security collateral. The advantage of this system to the country banker is that a market is provided for him in which he can invest funds at any time and to any extent he wishes, and from which he can withdraw his funds with equal speed.

DIVERSIFICATION OF LOANS.—In order to diversify the risk of loans, banks prefer to loan their funds to several different brokerage firms rather than all to one firm. On the other hand, brokers prefer to borrow from several different banks in order to diversify the risk of having all their loans called at the same time.

Bankers in making loans have a preference for **"mixed" collateral securities.** Such collateral generally consists of railroad and industrial securities in about equal proportions. Loans on railroad securities alone have become rare, but loans on all industrial securities have become quite common. Sometimes such collateral is more desirable than mixed collateral.

[4] The Work of the Stock Exchange, J. Edward Meeker, pp. 177, 178.

OTHER FACTORS IN COLLATERAL LOANS.—Money lenders have a number of requirements regarding the nature of collateral acceptable for loaning purposes which are generally understood and complied with by borrowers.

High Priced Stock.—Bankers prefer collateral with a ready market and which does not fluctuate violently. Extremely high-priced stocks with wide fluctuations are not considered the most desirable collateral for loaning purposes.

Odd Lots.—Bankers dislike to have in their loan envelopes odd lots of securities, that is, from 1 to 99 shares of any stock, because they are more difficult to keep track of, and involve a more complicated method of marketing, if this should be necessary.

Unlisted Stock.—Generally, unlisted securities are not acceptable for loans. When they are accepted, a wider margin is required and often a higher rate of interest is demanded than with listed stock.

Relation of Stock Market to Various Interests

RELATION TO CONSUMERS.—Consumers are benefited indirectly by organized stock exchanges in that the latter are partly instrumental in reducing the cost of living. This is done by making possible quantity production and distribution by large industrial, transportation and trading corporations, which can be created only by large accumulations of capital. Such accumulation of capital could hardly be possible were it not for the machinery provided by the exchanges, which provide a means by which the savings of the population can be united.

RELATION TO PRODUCERS.—The creation and operation of large industries necessitates stock corporations with thousands of stockholders. The progress and growth of industries depend upon distribution of their stocks and bonds, first to speculators and then to investors.

The stock exchanges provide the facilities for selling the securities of large corporations to speculators and investors. In addition to enabling the companies to obtain capital for business uses, stock exchanges provide the means of distributing the risks of industry. Without such distribution many of the larger concerns could not be established.

RELATION TO INVESTORS.—To the **large investors** the stock exchanges constitute a part of the daily machinery of business life. They enable them to distribute their investments in any manner they may wish and shift their investments at any time to suit their needs, or to sell them in case of necessity.

The small investors can obtain the same service as large investors. For a small and fixed rate of commission they can buy or sell securities in an open market at prices which are publicly reported all over the country on the ticker and in the newspapers. The small investors can suit their needs from a great variety of stocks and bonds, ranging from the old and well seasoned investment securities to the newer flotations of a more speculative character.

Another advantage the small investors have is that they can obtain financial information concerning the companies whose securities they are thinking of purchasing. Such information is not always available in the case of unlisted securities.

The number of small investors is rapidly increasing and, in the aggregate, amounts to a considerable factor in financing corporate enterprises.

RELATION TO CORPORATIONS.—The stock exchanges provide the machinery by which the savings of individual speculators and investors all over

the country may flow into productive industry. Although this flow of money may not pass directly from the investor to the corporation, this result is eventually accomplished through the various stages the securities take from the time they are issued by the corporation to the time they are absorbed by investors.

RELATION TO BANKERS.—Almost all bankers are directly or indirectly investors or dealers in securities, and consequently in a measure depend on the operations of the stock exchanges. The nature of their particular type of banking determines their relation to these institutions. The savings banker is interested in securities as an investor; the commercial banker is chiefly interested in securities because they constitute collateral for loans; the investment banker is chiefly interested as a dealer and distributor of securities.

The large banks and trust companies in the financial centers come in direct contact with stock brokers through the large loans they make on securities dealt in on the stock exchanges.

RELATION TO FOREIGN TRANSACTIONS.—Securities listed on the stock exchanges of two nations, particularly international securities, afford an acceptable substitute for gold as a medium of foreign exchange transactions. The instant marketability of such securities makes them almost as acceptable as gold as a medium of exchange.

RELATION TO GOVERNMENTS.—Practically every great stock exchange of the world assists its government in maintaining its credit and the negotiability of its debt by providing a market place for its securities. In addition to listings of government securities of the United States, many foreign government securities are traded in on the New York Stock Exchange.

SECTION 14

"BLUE SKY" LAWS

NECESSITY OF COMPLIANCE WITH LAWS.—Any person, before selling or offering for sale securities in any state, should be carefully advised as to whether there is in that state a **Securities Act,** generally known as a **"Blue Sky" Law,** containing requirements which must first be met or which regulate the sale of securities. Most of the states in this country have now passed blue sky laws of some description.

These state laws differ in the various states. An offering may be legal for sale in one state and not in another. There are **widely different systems of qualifying** under these laws. Certain ones prescribe explicitly and in detail exact procedures to be taken before any offering or sale may be made. For example, some require the licensing of the party offering the securities and his agents, and furthermore, require a permit for the sale of the securities. These licenses and permits are issued by the **state securities commission** or other administering body after various papers and showings for that purpose have been filed with it. All of these papers and showings must be filed before the securities are offered for sale. Other states place no burden at all on business and simply give the Attorney General broader powers to act in case of fraud.

Any person offering securities in disregard of these laws may incur severe penalties. The sales he sought to make may become void or voidable, and he may have to return to the purchasers the money he originally received. The safest procedure for one not thoroughly familiar with these laws is to secure the advice of an attorney familiar with their requirements before offering securities for sale. Banks and the larger bond houses that retail securities will usually direct any inquiries to a specialist on this somewhat intricate phase of modern statutory law.

PURPOSE OF BLUE SKY LAWS.—The old-fashioned fraud statutes of this country left a place in the commercial life for the application of the common law principle of caveat emptor, and in no part did it come to be applied with less satisfactory results than in the sale of worthless securities. England and other European countries had already realized the need of their people for protection, and had passed statutes against the sale of worthless and fraudulent securities. In 1911 need for somewhat similar enactments was felt in this country. In that year Kansas passed its **first blue sky law** to protect its citizens from the worthless securities and get-rich-quick schemes which unscrupulous promoters were selling and promoting throughout the state. They would locate in another state, organize a corporation with an enormous amount of issued capital stock, but with little or no assets of value, enter Kansas, sell their worthless stuff, and then depart. There was then no restriction in the corporation law of the state sufficiently effective to cope with the situation. The first Kansas law was crude and was soon upset by the Supreme Court, but was

later replaced by another better law drawn in the light of experience. Other states soon followed until the present blue sky legislation became general.

Fraudulent promoters were called "fly-by-nighters" as they flew in obscurity from the state as quickly as they had entered, escaping as it were, in the dark, from the victims they had fleeced. They were said to capitalize their corporations out of the blue sky and were therefore called "blue sky merchants," and the laws against them "blue sky laws."

NEED OF BLUE SKY LAWS.—The Congressional Committee on Interstate and Foreign Commerce, which made a very exhaustive investigation of all phases of "blue sky" matters at the time the **Federal Blue Sky Law** was introduced in Congress, stated in its report to Congress under date of March 2, 1922:

"It has been officially estimated that the people of this country have lost as much as $500,000,000 annually through the sale of fraudulent and worthless securities. The Treasury Department estimated that $400,000,000 worth of Liberty bonds were taken from purchasers in some of the States in the Middle West in a few months in exchange for worthless or doubtful securities that promised larger returns.

"A prominent Oklahoma newspaper made an investigation of the stock-selling oil companies in Oklahoma in 1917. It found that the stock promoting companies produced less than two one-thousandths of 1 per cent of all the oil produced there in that year. For every $555 of capitalization only $1 worth of oil was produced."

The integrity of securities can be assured by making certain of the probity of the dealers in them, also by examination of the securities by competent state authorities. This was clearly stated by the Supreme Court in *Hall* v. *Geiger-Jones*, 242 U. S. 539, as follows:

"The integrity of the securities can only be assured by the probity of the dealers in them and the information which may be given of them. This assurance the state has deemed necessary for its welfare to require; and the requirement is not unreasonable or inappropriate. It extends to the general market something of the safeguards that are given to trading upon the exchanges and stock boards of the country—safeguards that experience has adopted as advantageous. Inconvenience may be caused and supervision and surveillance, but this must yield to the public welfare; and against counsel's alarm of consequences, we set the judgment of the state."

VARIOUS TYPES OF STATE BLUE SKY LAWS.—Among the various blue sky laws now in existence in this country some are hardly more than **fraud statutes** which give the Attorney General the right to restrain the offering of an issue which to him may seem likely to cause an irrevocable public injury. Any party aggrieved by an order of the Attorney General restraining the offering of an issue in this way has the right of a hearing, generally before a state court designated in the Act. Maryland has a law of this character. On the other hand, laws of certain states require dealers, agents and the issue to be qualified before the issue can be offered in that state. A thorough examination is made of each. The Michigan law is of this character. Illinois, on the other hand, requires simply the qualification of the securities and not the licensing of dealers and agents. Different classes of laws with various modifications have, up to this time, been passed in all the states, except Colorado and Nevada.

PRELIMINARY APPROVAL.—Where a short space of time is permitted in which to do the qualifying work, a preliminary approval of the offering should be requested in those states which make a practice of granting it. The following states in one form or another formally grant a preliminary approval:

Massachusetts	Wisconsin
Rhode Island	Georgia
Michigan	Missouri
Illinois	

On an offering of securities in Massachusetts or Rhode Island it is sufficient for the dealer licensed in those states to mail a **"notice of intention,"** as it is called, to the state authorities, which notice advises them of the offering of the securities in those states. In Michigan the granting of preliminary approval is not obtained automatically by filing a notice, as in Massachusetts and Rhode Island. On forwarding certain preliminary papers and paying the fee, the Michigan Securities Commission may or may not grant such preliminary approval. The Illinois Law provides for granting preliminary approval of Class C securities in a somewhat similar manner to the Michigan law, except that it requires with the preliminary papers a "consent to service" executed by the party requesting the same, or by the issuing company. It is discretionary with the Secretary of State of Illinois to grant it. Wisconsin requires simply a notification that the offering is to be qualified as a Class A offering. The licensed dealer in Wisconsin may offer Class A securities on giving the commission notice which automatically constitutes a preliminary permit. Georgia requires a notice of intention quite similar to the Massachusetts notice and with the same effect. Michigan, Illinois and Wisconsin require the filing of a bond to assure the filing of final papers for qualification of the issue. In Indiana, under its recent act, a bond may be given and certain specified classes of securities registered by notification.

WHEN APPLICATION FOR PRELIMINARY APPROVAL SHOULD BE MADE.—Where dealers underwrite or purchase large offerings running into many millions and offer them to the public, it is imperative that they apply promptly for preliminary approval in the states where it is required. It is not possible in most cases to obtain the signature of the issuing company to the "blue sky" papers prior to the closing of the deal by the signing of the purchase or underwriting contract. Dealers carrying large commitments of this character on their books are obliged to offer them within 2 or 3 days after their purchase, because in offering them, they are subject to market conditions which are constantly varying. Often high-grade securities are sold by dealers the same day that they are offered to the public, that is, such securities are off the books of the dealers within 2 or 3 days after the date of signing the underwriting agreements.

Preliminary papers may often be made up by the dealer with the information which he has with respect to the issue, prior to the signing of the purchase contract. The final papers, however, cannot be so executed, but as soon as the deal is closed they should be placed in the hands of the company for execution and returned to the dealer for filing. In large offerings it is extremely important, if possible, that the issue be brought within the scope of **the exemptions** which are found in most of the statutes, for if the issue comes within such exemptions all, or a large part of the "blue sky" work, is unnecessary. Unfortunately, this burden on legitimate business falls much harder on the high-grade underwriter who is offering securities continually, than upon the fraudulent fly-by-nighter type of salesmen, who makes his fraudulent transactions in one of two states and then leaves it. Furthermore, the high-class underwriters generally operate on a narrow profit of approximately 5 points, and rarely over 10, so that their operations have got to be put through quickly on the market for which they bargain.

FINAL QUALIFICATION PAPERS.—These should be sent by the party offering the securities to the company issuing them as soon as possible, with instructions to that company to fill them in completely, and return them for filing with the state commission. If the company issuing the securities is itself applying for qualification of its own issue, it should complete the papers and forward them to the commission. Any failure to fill these papers out and furnish all the information that the commission requests is likely to be followed by the return of the papers with a request on the part of the commission to furnish everything that has been omitted. The application will be hastened by forwarding to the commission with the completed papers a **certified audit of the company** and any documents tending to enhance the strength of the securities for which application for qualification is made.

TESTS APPLIED BY STATE COMMISSIONS.—The state commissions apply their own tests to determine whether the issue is worthy of a permit, and in those states which do not issue permits, whether they are worthy of sale in those states. These tests differ but in a general way may be summarized as:

1. Character test
2. Asset or property test
3. Earning test
4. Speculative and non-speculative issue test
5. No apparent or particular test

Character Test.—In **Massachusetts** the test may be described as a character test. The Department of Public Utilities of Massachusetts does not require extensive data so long as the application indicates that the principals are above reproach, and that the offering is high-grade.

Asset or Property Test.—**Michigan** looks particularly at the fixed assets, requiring an appraisal of the real property, and usually a segregation in the appraisal of the land, buildings, and equipment. A corporation which can show a large real estate item on its balance sheet and a substantial item of buildings and equipment, offers a good issue to present to the Michigan Commission, particularly if an independent and true valuation of the properties revealing that the securities to be offered are not over 60% of such valuation can be forwarded with the application.

Earning Test.—**Illinois and Wisconsin,** however, look principally at the potential strength of the issuing company, rather than at its present asset position. The test is upon the **earning power** of the company over a period of two years stated separately, or over an average period of years. A company, therefore, which has a very high income has a particularly good issue to qualify in either of these states. The state authorities in each are keen in **analysing income accounts and surplus accounts** over the period for which the income is given. There are times when an issue will qualify in certain states and not in others, because the test in the various states is not a uniform one.

Speculative and Non-Speculative Issue Test.—The states of Illinois and Wisconsin distinguish between securities which have an established income and those which have not, and which are termed **speculative securities.** In Illinois the non-speculative issues are the Class C securities, while this class in Wisconsin is the Class A. The recent Indiana Law has some suggestion of each of the Illinois and Wisconsin Laws. The West Virginia Law and a few other laws of the southern states distinguish between non-speculative and speculative issues.

No Apparent or Particular Test.—Some states have no very apparent test by which they determine the fitness of an issue. In those states where a qualification is required the following features should be shown, if possible:

High character
Substantial earnings
Substantial fixed assets, such as land and buildings

Anyone offering securities in several states should understand fully the requirements he has to meet. He should also be careful not to offer or sell any securities until the proper approval has been received.

In furnishing papers to the commissions it is quite likely that they will take an independent position and call for still further papers. In that case it is not wise to argue and antagonize the commission but to furnish what they require as quickly as possible.

EXEMPTIONS OF SECURITIES FROM BLUE SKY LAWS.—There is in many of these acts a section which enumerates certain securities, the inherent qualities of which assure their sale and disposition without the perpetration of fraud, and which are, therefore, **exempt from the necessity of qualifying.** It is exceedingly advantageous to bring the issue which is being offered for sale within a class of securities exempted thereby avoiding the burden of qualifying such issues. Very little "blue sky" work then need be done, inasmuch as the series of states in which that class of securities is exempt is instantly eliminated.

Securities which are usually exempted from the operation of the various state security laws are:

1. Governmental issues
2. Security issues listed on stock exchanges
3. Public utility issues

Any party involved in qualifying securites under the various blue sky laws will find it a simple matter to dispose of an issue if it falls in any one of these three classes, for each of these classes of exemptions is found as hereafter shown running through many laws. If one, therefore, takes from the laws the paragraphs mentioned and classifies them with the headings, (1) governmental exemptions, (2) stock exchange exemptions and (3) public utility exemptions, he will have a method of disposing instantly of a large number of issues throughout a large part of the United States.

Many of the law sections containing the exemptions provide that the securities exempted therein are exempt from the entire act. It is not necessary under such provisions to have the dealer or agents, or the securities themselves, licensed in those states which otherwise require such licensing. If the sections provide that the securities enumerated therein are exempt, except as hereinafter provided, or from another section in the act, it is then necessary to comply with the other provisions of the act from which the securities are not specifically exempted.

Governmental Issues.—Government issues constitute a class that is **generally found exempted.** Suppose, for example, that a bond house is selling United States bonds, Liberty bonds or others. The first paragraph of Section 4 of the Illinois Securities Act includes among those securities which are not subject to the provisions of the Act, those "issued or guaranteed by a government or governmental agency or by any body having power of taxation or assessment."

Under this provision securities issued by a government are exempt. This provision would exempt securities issued by any government. The added provision "guaranteed by a government" would exempt a Japanese Industrial

ssue guaranteed by the Japanese government, or any issue guaranteed by any o'ernment. The next phrase reads, "or governmental agency." This would, or example, exempt securities of a railroad owned by a government. The ext provision in this short paragraph, "or by any body having power of tax- tion or assessment," would exempt state bonds, municipal bonds, county onds, not only of this country but of any other country.

Security Issues Listed on Stock Exchanges.—The second class of securities hich are generally exempt is composed of those which have been listed and ealt in on stock exchanges enumerated within the said exemption section. or example, the following provision taken from the Wisconsin Act, Section 91 (d), exempts: "Securities listed upon the New York, Boston or Chicago tock exchange pursuant to official authorization by such exchange and securities enior to any securities so listed."

Securities listed on these foremost exchanges are exempt because these issues nd the companies issuing them are very thoroughly examined before the ssues are permitted to be listed. Therefore, if the exchange has already made n examination of the issue, there is no reason for the commission to do so. relies on the exchange. The phrase in the paragraph above quoted reading and securities senior to any securities so listed" **opens this exemption wider.** uch securities might be bonds of a corporation whose common stock was listed n one of these exchanges. The foundation for this added provision is that if he common stock of the company is exempt, a bond of the company, which is enior to the stock, should also be exempt. The preferred stock of a company senior to the common stock and would be exempt if the common stock were sted. Likewise, if the preferred stock was listed, any and all mortgage bonds f such a company would be senior, and so exempt, and if the junior bonds ere listed, the senior bonds would be exempt. For the purpose of financing y security issues it is a **distinct advantage** for a corporation **to have its junior ssues listed on one of the recognized exchanges.**

Public Utility Issues.—There is a third class of securities generally exempted hich is as important as the first two just mentioned, that is, public utility sues. For example, Section 2, paragraph C, of the Minnesota Law exempts: Securities of public or quasi-public corporations the issue of which securities regulated by a public service commission of this state or any state or territory f the United States or securities senior thereto."

Public utility corporations are quasi-public corporations and usually have een free from fraud. There is a further protection for this class if the issue is egulated by a public service commission, a separate body passing upon the sue, or in some way regulating the issuing company. The general provision, hich is found in the exemption section of many laws, varies somewhat from hat above stated. Some exempt securities of a public utility where the company regulated; others, however, exempt the securities of companies whose rates re regulated. Securities senior to these specifically exempted are usually cluded in this class. This class also opens up a large body of securities.

LEGAL PROVISIONS EXEMPTING GOVERNMENTAL SECURITIES.—he laws of the following states contain the provisions shown below exempting overnmental issues either from the provisions of the entire act or from that ction of the act requiring the qualification of securities.

Alabama

9879. Exempted securities and sales. Except as hereinafter provided, the provisions this article shall not apply to any security which at the time of the sale thereof is within y of the following classes of securities.

(a) Any security issued or guaranteed by the United States or by any territory or insular possession thereof, or by the District of Columbia, or by any state or political, public taxing subdivision, or agency thereof.

(b) Any security issued or guaranteed by any foreign government with which the United States is then maintaining diplomatic relations, or by any state, province, or political subdivision thereof having the power of taxation or assessment.

Arizona

The following bonds are exempt under Paragraph 2259, the law of Arizona.

Bonds of the United States, the State of Arizona, or bonds of some county, city, town or school district.

Arkansas

Section 3. The provisions of this act shall not apply to:

(a) Securities of the United States or any foreign government, or any state or territory thereof, or of any county, city, township, district or other public sub-taxing division of any state or territory of the United States or any foreign government.

Colorado

Section 14. The provisions of this Act shall not apply to any of the following classes of securities:

(a) Any security issued or guaranteed by the United States, or any territory or insular possession thereof, or by the District of Columbia, or by any state or political subdivision or agency thereof, or by any domestic corporation not for profit.

(b) Any security issued or guaranteed by any Foreign Government with which the United States is maintaining diplomatic relations at the time of sale or offer for sale of such security, or by any state, province or political subdivision thereof, having the power of taxation or assessment.

Georgia

Section 8. Securities in Class "A" shall comprise:

(1) Those issued or guaranteed by the United States or any territory or insular possession thereof or by the District of Columbia, or by any state or political subdivision or agency thereof.

(2) Those issued or guaranteed by any foreign government with which the United States is at the time of the sale or offer of sale thereof maintaining diplomatic relations, or by any state, province or political subdivision thereof having the power of taxation or assessment.

Securities in Class "A" and the sale thereof shall not be subject to the provisions of this Act.

Illinois

Section 4. Securities in Class "A" shall comprise securities:

(1) Issued or guaranteed by a government or governmental agency, or by any body having power of taxation or assessment.

Securities in Class "A" and the sale thereof shall not be subject to the provisions of this Act.

Indiana

Section 4. Except as hereinafter otherwise expressly provided, the provisions of this act shall not apply to the following classes of securities.

(a) Any security issued or guaranteed by the United States or any territory or insular possession thereof, or by the District of Columbia or by any state or political subdivision or agency thereof having the power of taxation or assessment.

(b) Any security issued or guaranteed by any foreign government with which the United States is at the time of the sale or offer for sale thereof, maintaining diplomatic relations, or by any state, province or political subdivision thereof having the power of taxation or assessment.

Iowa

Section 1920-ul. The provisions of this act shall not apply to:

(a) Securities of this state, or of the United States or of any state or territory thereof, or of any foreign government or of any district, county, township, city, town or other

public taxing subdivision of any state or territory of the United States, including all drainage, county, school or other municipal bonds of this state.

Kansas

Section 9465. The provisions of this act shall not apply to:

(a) Securities of the United States; or any foreign government; or of any state or territory; or of any county, city, township, district or other public taxing subdivision of any state or territory of the United States or any foreign government.

Kentucky

Section 3. The provisions of this Act shall not apply to:

(a) Securities of the United States; or any foreign government; or any state or territory thereof, or of any county, city, township, district or other public taxing subdivision of any state or territory of the United States, or any foreign government.

Louisiana

Section 8. Be it further enacted, etc., That when the Commissioner has issued a license to a dealer or investment house, he may, without further special authority from the Commission, deal in any of the following classes of securities:

(a) Securities of the United States; or any foreign government; or of any State or Territory; or of any parish, county, city, township, district or other public taxing subdivision of any state or territory of the United States or any foreign government.

Massachusetts

Section 3. Except as hereinafter provided, provisions of this chapter shall not apply to:

(c) Any security issued or guaranteed as to principal or interest by a government or governmental agency, or by any public body having power of taxation or assessment.

Michigan

Section 4. Except as hereinafter provided the provisions of this act shall not apply to any security which at the time of the sale thereof is within any of the following classes of securities:

(a) Any security issued or guaranteed by the United States or any territory or insular possession thereof, or by the District of Columbia, or by any state or political subdivision or agency thereof.

(b) Any security issued or guaranteed by any foreign government with which the United States is maintaining diplomatic relations, or political subdivision thereof having the power of taxation or assessment.

Minnesota

Section 2. The provisions of this act, except Section 10 thereof, shall not apply to:

(a) Securities of the United States or any foreign government; or of any state or territory thereof; or of any county, city, township, district or other public taxing subdivision of any state or territory of the United States or any foreign government.

Mississippi

Section 14. The terms of this act shall not apply to:

(a) Securities of this state, or of the United States, or of any state or territory thereof, or any foreign government or of any district, county, township, city, town or other public taxing subdivision of any state or territory of the United States, including all drainage, county, school or other municipal bonds of this state.

Missouri

Section 4. Except as hereinafter provided, the provisions of this act shall not apply to any security which is within any of the following classes of securities:

(a) Any security issued or guaranteed by the United States or any territory or insular possession thereof, or by the District of Columbia, or by any state or political subdivision or agency thereof.

(b) Any security issued or guaranteed by any foreign government with which the United

States is at the time of the sale thereof, maintaining diplomatic relations, or by any state, province, or political subdivision thereof having the power of taxation or assessment.

Montana

Section 1. The following securities are excepted from the provisions of the Act.

Bonds of the United States, State, County, or Municipal bonds or warrants, stock of State or National Banks located in the State of Montana.

Nebraska

Section 2. The provisions of this article shall not apply to:

(a) Securities of domestic or foreign countries, municipalities, governments or governmental agencies.

New Mexico

Section 8. The provisions of this act shall not apply to:

(a) Securities of the United States; or any foreign government or of any state or territory, or of any county, city, township, district or other public taxing subdivision of any state or territory of the United States or any foreign government.

New York

359-f. The provisions of subdivision two of section three hundred and fifty-nine shall not apply to any transactions relating to the sale or offering for sale of any of the following described securities by a dealer therein.

(a) Any security issued, or guaranteed by the United States or any territory or insular possession thereof, or by the District of Columbia or by any state or political subdivision or agency thereof.

(b) Any security issued or guaranteed by any foreign government with which the United States is at the time of the sale or offer for sale thereof maintaining diplomatic relations, or by the Dominion of Canada or by any province or political subdivision thereof.

North Dakota

Section 9. The provisions of this act shall not apply to:

(a) Securities of the United States; or any foreign government or of any state or territory; or of any county, city, township, district or other public taxing subdivision of any state or territory of the United States or any foreign government.

Oklahoma

Section 10. The provisions of this Act shall not apply to:

(a) Securities of the United States, or any foreign government; or of any state or territory; or of any county, city, township, school district or other public taxing subdivision of any state or territory of the United States or any foreign government.

Oregon

Section 6839. The provisions of this section shall not apply to:

(e) To bonds or other evidences of indebtedness of the United States of America, or of any foreign government, or political subdivision thereof, or of any state or territory of the United States of America or of any municipal or public corporation of such government, state or territory. (As amended by Chap. 189, Laws of 1923.)

Pennsylvania

Section 2. None of the following transactions shall constitute the person or company engaging therein a "dealer" within the meaning of this act; that is to say, a sale, offer for sale, solicitation, subscription, invitation, dealing in, or delivery:

(1) Of a security issued or guaranteed by any of the following: the United States of America, or a state, territory, insular possession, political subdivision, or agency thereof, the District of Columbia, a national bank corporation created or acting as an instrumentality of the Government of the United States pursuant to the authority of Congress.

Rhode Island

Section 3. The provisions of this act shall not apply to:

(c) Any security issued or guaranteed as to principal or interest by a government or governmental agency, or by any public body having power of taxation or assessment, excepting currency issued by such government.

South Carolina

Section 4230. The provisions of this article shall not apply to:

(a) Securities of the United States, or any foreign government; or of any state or territory thereof, or of any county, city, township, district or other public taxing subdivision of any State or Territory of the United States, or any foreign government.

South Dakota

Section 10129. The provisions of this chapter shall not apply to:

(1) Securities of the United States, or of any foreign government, of any State or Territory of the United States, or of any County, City, Township, District or other public taxing subdivision of any State or Territory of the United States, or of any foreign country.

Tennessee

Section 1. The following bonds are exempt from the Act.

Bonds of the United States, the State of Tennessee, or of some municipality of the State of Tennessee.

Utah

Section 2. The provisions of this Act shall not apply to:

(a) Securities of the United States, or any foreign government or any state or territory thereof, or of any county, city, township, district or other public taxing subdivision of any state or territory of the United States or foreign government.

Vermont

Section 5451. The following bonds are exempt from the Act.

Bonds of the United States, the State of Vermont, Municipalities of the State.

Virginia

Section 9. The provisions of this act shall not apply to:

(a) Securities of the United States; or any foreign country; or of any state or territory; or of any county, city, township, district or other taxing subdivision of any state or territory of the United States or any foreign government.

Wisconsin

Section 1753-49. Except as hereinafter provided the provisions of sections 1753-48 to 1753-68 inclusive, shall not apply to:

(a) Securities issued by or the principal and interest of which are guaranteed by the United States or any foreign government, or by any state or territory thereof or by any county, city, township, village, district, or other political or taxing subdivision or any state or territory of the United States or any foreign government.

Wyoming

Section 5111. The provisions of this act shall not apply to:

(a) Securities of the United States, or any foreign government, or of any state or territory, or any county, city, township, district or other public taxing subdivision of any state or territory of the United States or any foreign government.

LEGAL PROVISIONS EXEMPTING LISTED SECURITIES.—The laws of following states contain the provisions shown below exempting stock exchange issues either from the provisions of the entire act or from that section of the act requiring the qualification of securities.

Alabama

9879. Except as hereinafter provided, the provisions of this article shall not apply to any security which at the time of the sale thereof is within any of the following classes of securities:

(f) Securities issued, outstanding, distributed, and fully listed upon any organized stock exchange having an established meeting place in a city of over five hundred thousand population according to the last preceding United States census and providing facilities for the use of its members in the purchase and sale of securities listed by such exchange, and securities senior thereto and evidences of indebtedness guaranteed by companies, the common capital stock of which is so listed; and upon such other stock exchanges as the commission may from time to time by written order designate. If actual transactions on such organized exchange have occurred during each of the preceding twenty years in the purchase and sale of United States bonds or other bonds of any of the classes exempted herein from the provisions of this article, and if such stock exchanges require financial statements to be submitted at the time of such listing and annually thereafter.

Colorado

Section 14. The provisions of this Act shall not apply to any of the following classes of securities:

(f) Any security of any concern having outstanding securities regularly listed on the New York Stock Exchange or Chicago Stock Exchange or Boston Stock Exchange or New York Curb Association.

Georgia

Section 8. Securities in class "A" shall comprise:

(7) Those appearing in any list of securities dealt in on the New York, Chicago or Philadelphia Stock exchange or other stock exchanges of like standing to be selected by the Securities Commission, pursuant to official authorization by such exchanges, and securities senior to any securities so appearing whereof the current prices shall have been quoted from time to time for not less than one year next preceding the offering for sale thereof in tabulated market reports published as news and not as advertisements in a daily newspaper of general circulation in this state.

Note: The Commission has added the Boston Stock Exchange to those named above.

Securities in class A and the sale thereof shall not be subject to the provisions of this Act.

Illinois

Section 4. Securities in Class "A" shall comprise:

(d) Listed and dealt in on the New York, Boston or Chicago Stock Exchange, respectively, pursuant to official authorization by such exchanges, respectively, and securities senior to any securities so listed and dealt in, or guaranteed by any corporation the common capital stock of which is so listed and dealt in.

Securities in Class A and the sale thereof shall not be subject to the provisions of this Act.

Indiana

Section 4. Except as hereinafter otherwise expressly provided, the provisions of this Act shall not apply to any of the following classes of securities:

(f) Securities appearing in any list of securities dealt in on the New York stock exchange or on any other recognized and responsible stock exchange which has been previously investigated and approved by the commission and which securities have been so listed pursuant to official authorization by such exchange and also all securities senior to any securities so listed, or evidences of indebtedness guaranteed by companies any stock of which is so listed, such securities to be exempt only so long as such listing shall remain in effect: Provided, however, That the commission may at any time withdraw its approval of any such stock exchange; and Provided, further, That the commission may at any time for cause withdraw its approval of any security so listed on the New York stock exchange or any other approved stock exchange, and thereafter such security shall not be entitled to the benefit of this exemption, except upon further order of the commission.

Kentucky

Section 3. The provisions of this Act shall not apply to:

(j) Securities listed on any stock exchange recognized by the Banking Commissioner of securities senior thereto; Provided, however, that the Banking Commissioner shall have the power to suspend temporarily or permanently the sale of such securities by any person, firm or corporation when in the opinion of the Banking Commissioner the sale of such security or securities would work a fraud upon the purchasers thereof.

Louisiana

Section 8. Be it further enacted. That when the Commissioner has issued a license to a dealer or investment house, he may without further special authority from the Commission, deal in any of the following classes of securities:

(g) Securities which are listed on stock exchanges in cities of 100,000 and over, the status of which exchanges is attested to by the majority of clearing house boards in the community in which such exchanges are located.

Massachusetts

Section 3. Except as hereinafter provided the provisions of this chapter shall not apply to:

(e) Securities listed upon any stock exchange in Massachusetts which has been doing business continuously for the last ten years prior to the effective date of this chapter and all securities senior thereto, for six months from the effective date of this chapter; and thereafter provided that there has first been submitted to the commission a form of application and set of rules adopted by such exchange for the listing of securities which is acceptable to the commission, as indicating in substance that the requirements of such exchange are adequate to guard against fraud, and provided further that any subsequent change in the rules of such exchange shall not affect the exemption of securities listed before said change was adopted.

The commission may add to this exemption sales or securities listed upon any other organized stock exchange.

Missouri

Section 4. Except as hereinafter provided the provisions of this Act shall not apply to any security which is within any of the following classes of securities:

(f) Securities which at the time of the sale thereof are issued, outstanding, distributed, and fully listed upon duly organized stock exchanges to be approved by the commissioner, and securities senior to any security so listed upon any of such exchanges, and evidences of indebtedness guaranteed by any company the common capital stock of which is so listed upon any of such exchanges.

New York

The provisions of subdivision two of section three hundred and fifty-nine shall not apply to any transactions relating to the sale or offering for sale of any of the following described securities by a dealer therein:

(k) Securities which on January first, nineteen hundred and twenty-five, have been fully listed upon any exchange, located in the state of New York, which on said date was organized and in operation, and so long thereafter as the same shall remain so listed and any securities senior thereto. Securities which shall become fully listed upon any such exchange subsequent to said January first, nineteen hundred and twenty-five, shall not be exempted as herein provided unless and until such exchange shall cause to be duly published pursuant hereto in the state paper as defined herein, under the caption or head described in section three hundred and fifty-nine of this chapter, a notice which shall contain the name of the corporation, association, common law trust or similar organization issuing the security or securities so listed, the business or post office address thereof, the state or county where incorporated or organized, the date of such listing and a brief description and the amount of the security so listed. After such publication of said notice as aforesaid, securities so listed subsequent to January first, nineteen hundred and twenty-five, and any securities senior thereto, shall thereupon be exempted hereunder so long as the same shall remain so listed.

Oregon

Section 6839. The provisions of this Section shall not apply to:
(a) Securities listed on the New York or Chicago stock exchanges, or securities of companies not objected to by the corporation commissioner and listed in any standard manual or supplements thereto and securities of subsidiary companies and successors of such listed companies as are not objected to by the corporation commissioner.

Rhode Island

Section 3. The provisions of this Act shall not apply to:
(e) Securities listed upon such regularly organized stock exchange as the commission may from time to time specify.

Wisconsin

Section 1753-49. Except as hereinafter provided, the provisions of Sections 1753-48 to 1753-68 inclusive, shall not apply to:
(d) Securities listed upon the New York, Boston or Chicago stock exchange pursuant to official authorization by such exchange, and securities senior to any securities so listed.

LEGAL PROVISIONS EXEMPTING PUBLIC UTILITY SECURITIES.—The laws of the following states contain provisions shown below exempting issues of public utilities, either from the provisions of the entire act or from the provisions of the section requiring qualification.

Alabama

9899. Except as hereinafter provided, the provisions of this article shall not apply to any security which at the time of the sale thereof is within any of the following classes of securities:
(d) Any security issued or guaranteed either as to principal, interest, or dividend, by a corporation owning or operating a railroad or any other public utility; provided, that such corporation is subject to regulation or supervision either as to its rates and charges or as to the issue of its own securities by a public commission, board, or officer of the government of the United States, or of any state, territory, or insular possession thereof, or of the District of Columbia, or of the Dominion of Canada or any province thereof.

Arkansas

Section 3. The provisions of this Act shall not apply to:
(c) Securities of public or quasi-public corporations, the issue of which securities is regulated by the Arkansas Railroad Commission or by any public service commission or board of equal authority of any State or Territory of the United States or securities senior thereto.

Colorado

Section 14. The provisions of this Act shall not apply to:
(n) Securities of Public Utilities Corporations heretofore and hereafter issued of such corporations as are subject to regulation or supervision as to the issue of any of their securities by the Interstate Commerce Commission or by a public service Commission or other similar regulative body of any state or territory of the United States.

Georgia

Section 8. Securities in Class "A" shall comprise:
(5) Those issued or guaranteed as to principal, interest or dividend by a corporation owning or operating a railroad or any other public service utility; Provided that such corporation is subject to regulation or supervision either as to its rates and charges or as to the issue of its securities by a public Commission, board or officer of the Government of the United States, or of any state, territory or insular possession thereof, or of the District of Columbia, or by the Dominion of Canada or any Province thereof.
Securities in Class "A" and the sale thereof shall not be subject to the provisions of this Act.

Illinois

Section 4. Securities in Class "A" shall comprise securities:

(3) Issued or guaranteed by any corporation operating any public utility in the United States or any state thereof or in the Dominion of Canada or any province thereof wherein there is or was at the time of issuance thereof in effect any law regulating such utilities and the issue of securities by such corporation, and evidences of indebtedness secured by collateral consisting of any securities herein above in this paragraph three (3) described, provided that such collateral securities equal in par value 125% of the par value of the evidences of indebtedness so secured.

Securities in Class "A" and the sale thereof shall not be subject to the provisions of this Act.

Indiana

Section 4. Except as hereinafter otherwise expressly provided, the provisions of this act shall not apply to any of the following classes of securities:

(d) Any security issued or guaranteed either as to principal, interest or dividend by a corporation owning or operating a railroad or any other public service utility: Provided, That such corporation is subject to regulation or supervision as to the issue of its own securities by a public commission, board or officer of the government of the United States, or of any state, territory or insular possession thereof, or of any municipality located therein, or of the District of Columbia or of the Dominion of Canada or any province thereof.

Iowa

Section 1920-ul. The provision of this act shall not apply to:

(j) Securities of corporations operating railroads, public or quasi-public utilities, the issue of whose securities, is regulated by the interstate commerce commission or by a railroad or public service commission, board or similar body of any state or territory of the United States or of any province of the Dominion of Canada, and securities of all other corporations operating public utilities in this state.

Kansas

Section 9465. The provisions of this act shall not apply to:

(b) Securities of public or quasi-public corporations, the issues of which are regulated by the Public Utilities Commission of the state of Kansas, or by the public service commission or board of similar authority of any state or territory of the United States; or securities senior thereto.

Kentucky

Section 3. The provisions of this act shall not apply to:

(c) Securities of public or quasi-public corporations, the issue of which securities is regulated by any public service commission or board of equal authority of any state or territory of the United States or securities senior thereto.

Louisiana

Section 8. That when the Commission has issued a license to a dealer or investment house, he may, without further special authority from the Commission, deal in any of the following classes of securities.

(b) Securities of public or quasi-public Corporations, the issues of which are regulated by the Louisiana Railroad Commission or by the Public Service Commission or Board of similar authority of any State or Territory of the United States; or securities senior thereto or securities of any association or corporation whose business is regulated and supervized under Associations authorized to do business in this State.

Massachusetts

Section 3. Except as hereinafter provided, the provisions of this chapter shall not apply to:

(d) Securities of, or guaranteed either as to principal, interest or dividend by, a corporation owning or operating a railroad, or any other public service utility, the issue or guarantee of such securities being regulated or controlled or requiring approval by, public officials of

this or of any other state or of the United States empowered to regulate and control or supervise public service utilities and the issue of securities thereby; and all securities senior thereto. Securities issued by a holding corporation holding or owning solely securities within the provisions of subdivision (c) of this section and the above sentence of this subdivision (d) and issuing its own securities against such securities, not exceeding in par value the par value of such securities owned or held by it, shall be deemed to be within the provisions of this subdivision (d).

Michigan

Section 4. Except as hereinafter provided, the provisions of this act shall not apply to any security which at the time of this sale thereof is within any of the following classes of securities:

(d) Any security issued or guaranteed either as to principal, interest or dividend, by a corporation owning or operating a railroad or any other public service utility; Provided, Such securities have been affirmatively passed upon by the Michigan Public Utilities Commission, or by a public commission, board or officer, with authority equal to that of the Michigan Public Utilities Commission, of the government of the United States, or by any state, territory, or insular possession thereof, or of the District of Columbia, or of the Dominion of Canada, or any province thereof, and who by law are charged with the supervision of such securities;

Minnesota

Section 2. The provisions of this act except section 10 thereof, shall not apply to:

(c) Securities of public or quasi-public corporations, the issue of which securities is regulated by a public service commission of this state or of any state or territory of the United State, or securities senior thereto.

Mississippi

Section 14. The terms of this act shall not apply to:

(c) Securities of public or quasi-public corporations, the issue of which securities is regulated by any public board or commission now or hereafter created by the laws of this state.

Missouri

Section 4. Except as hereinafter provided, the provisions of this act shall not apply to any security which is within any of the following classes of securities:

(d) Any securities issued or guaranteed either as to principal, interest, or dividend by a corporation owning or operating a railroad or any other public service utility; Provided, that such corporation is subject to regulation or supervision either as to its rates and charges or as to the issue of its own securities by a public service commission, board or officer of the government of the United States, or of any state, territory, to insular possession thereof, or of the District of Columbia or of the Dominion of Canada or any province thereof.

Nebraska

Section 2. The provisions of this article shall not apply to:

(d) Securities of public utility corporations or common carriers, whether domestic or foreign in origin.

New York

Section 359-f. The provisions of the act shall not apply to:

(d) Any security issued or guaranteed by a public service or utility corporation including a railroad corporation, provided such corporation is subject to regulation or supervision either as to its rates and charges or as to the issue of its own securities by a public commission, board or officer of the Government of the United States, or of any territory, or insular possession thereof, or of any state or municipality or other political subdivision thereof, or of the Dominion of Canada, or any Province thereof; also equipment and trust certificates or equipment notes or bonds based on chattel mortgages, leases, or agreements for conditional sale of cars, motive power, or other rolling stock mortgaged, leased or sold to or furnished for the use of or upon such a railroad or other public service utitity corporation, or equipment trust certificates, or equipment notes or bonds where the ownership or title of such equipment is pledged or retained in accordance with the provisions of the laws of the

United States, or of any State, territory or insular possession thereof, or of the District of Columbia, or of the Dominion of Canada, or of any Province thereof, to secure the payment of such equipment trust certificates, bonds, or notes.

North Dakota

Section 9. The provisions of this Act shall not apply to:
(b) Securities of public or quasi-public corporations, the issues of which are regulated by a state officer of the state of North Dakota, or by a state officer or board of similar authority of any state or territory of the United States; or securities senior thereto.

Ohio

Section 6373-2. The term "securities" as used in this Act, shall not be deemed to include,
(2) Securities of quasi-public corporations, the issuance of which has been authorized by the public service commission of this state.

Oklahoma

Section 10. The provisions of this act shall not apply to:
(b) Securities of public or quasi-public corporations, the issues of which are now regulated by the public service commission or board of similar authority of any state or territory of the United States, or securities senior thereto.

Rhode Island

Section 3. The provisions of this act shall not apply to:
(d) Securities of a corporation owning or operating a railroad or any other public service utility, which may be issued by or guaranteed either as to principal, interest or dividend by such corporation; Provided, that the securities of such corporations are regulated, controlled, or their issue approved by a public officer or officers of the government of the United States, or of any state, territory, district or insular possession thereof, or by any officer or officers of the Dominion of Canada or its provinces thereof, and all securities senior thereto.

South Carolina

Section 4230. The provisions of this article shall not apply to:
(c) Securities of public or quasi-public corporations, the issue of which securities are regulated by a public service commission or board of equal authority of the United States or of any State or Territory of the United States or securities senior thereto

South Dakota

Section 10129. The provisions of this chapter shall not apply to:
(3) Securities of public or quasi-public corporations, the issue of which securities is regulated by the Board of Railroad Commissioners of this State, or by a pubilc service commission or board of equal authority of any State or Territory of the United States or securities senior thereto.

Utah

Section 2. The provisions of this act shall not apply to:
(c) Securities of public corporations, the issuance of which is regulated by public service commissions or boards of supervision, in this state or any other state or territory of the United States.

Vermont

Section 5451. The provisions of this section shall not apply to:
Bonds, stocks, or notes of corporations which have been approved by the public service commission, or other governmental authority, of any state or of the United States.

Virginia

Section 9. The provisions of this act shall not apply to:
(b) Securities of public service or utilities corporations after organization, which are regulated by the commission or by the public service commission or board of similar authority of any state or territory of the United States; or securities senior thereto.

Wisconsin

Section 1753-49. Except as hereinafter provided the provisions of sections 1753-48 to 1753-68 inclusive, shall not apply to:
(c) Securities of corporations operating railroads or public utilities, the issue of whose securities is regulated by the commission, or by a railroad or public service commission board or similar body of the United States or of the Dominion of Canada or of any state or territory of the United States or of the Dominion of Canada and securities senior thereto; and equipment securities evidencing rights to receive partial payments agreed to be made under any contract of leasing or conditional sale of rolling stock for use of companies operating steam railroads.

Wyoming

Section 5111. The provisions of this act shall not apply to:
Securities of public or quasi-public corporations, the issue of which are regulated by the public utilities commission or board of similar authority of any state or territory of the United States.

SELLING SECURITIES TO EXEMPT PURCHASERS.—In those states where for any reason it is not practical or possible for dealers, brokers or others to qualify an issue, and the state laws provide that sales of securities to certain purchasers are exempt, a practice has sprung up of restricting the offering when made to such exempt purchasers. Pennsylvania, for example, requires that for a **dealer** to sell in that state he must be **licensed therein.** A dealer not holding such a license may, however, sell to the purchasers who are exempted from the act. Such a dealer may then place the following restrictive provision below his advertisement of the issue in the Pennsylvania papers: "The above offering is confined to banks, savings institutions and trust companies created under the laws of Pennsylvania and to persons and companies registered under 'The Securities Act' approved June 14, 1923."

Such wording restricts the offering to that particular class made exempt under The Securities Act, Section 2, Sub-section C-5, which provides that sales made in Pennsylvania shall not constitute a dealer engaging therein as a dealer and require licensing under the act when made—"to any bank, savings institution, or trust company created under the laws of this Commonwealth, or to any person or company registered under the provisions of this act."

In offering in this way to persons and institutions exempted as purchasers in certain of the State acts, the party so offering must make sure that the exemption is from the entire act and not simply from that provision in the act which requires the qualifying of the securities, unless the selling dealer and his agents making the offering are not required to be licensed. If, however, the selling dealer and his agents are licensed under an act, he may offer securities exempted from any of the provisions of that act, and is properly qualified to sell to exempt purchasers as well as those requiring qualification.

SALE OF SECURITIES AS INTERSTATE COMMERCE.—The question frequently comes up whether the sale of securities conducted along the lines of interstate commerce is subject to the provisions of these laws. The **itinerant salesman** for example, who travels through a state selling securities therein and who refers for acceptance and delivery the orders he receives back to his home or other office outside of such state is **engaging in interstate commerce.** Under

the state license tax laws such business has been held to be free from their application. Interstate commerce, even though such may originate and terminate in any state, cannot thus be taxed by the local states.

Brennen v. *Titusville*, 153 U. S. 289.
International Textbook Co. v. *Pigg*, 217 U. S. 91.
Hovey v. *De Long Hook & Eye Co.*, 211 N. Y. 420.
Caldwell v. *North Carolina*, 187 U. S. 622.
Crutcher v. *Kentucky*, 141 U. S. 47.
Stockyard v. *Morgan*, 185 U. S. 27.

Securities are articles of interstate commerce within the commerce clause of the Constitution:

Alabama, etc. Transportation Co. v. *Doyle*, 210 Fed. R. 173.
Campton Co. v. *Allen*, 216 Fed. R. 537.
Brasey v. *Darst*, 218 Fed. R. 482.
Geiger-Jones v. *Turner*, 230 Fed. R. 233.

BLUE SKY LAWS WITHIN THE POLICE POWERS OF STATES.—The blue sky laws do not arise under the taxing power of the state, but under the police power of the state to protect the welfare of its own citizens. The laws do not and cannot prevent the transportation of securities within their borders, and do not further attempt to regulate or interfere with them after they get there. States recognize that they have no right to interfere with their coming within their borders, and no right to interfere with them after they get there. However, the states may require that he who disposes of them in the state shall be licensed and do whatever the law prescribes, even though such securities are a part of interstate commerce. This is probably the extent to which states may by law interfere with the sale of these securities that form a part of an interstate selling of them. This is the limit of State authority as drawn in the case of *Hall* v. *Geiger-Jones Co.*, 242 U. S. 539, page 558, by the Supreme Court when in construing the Ohio law it stated:

"This certainly is only an indirect burden upon them as objects of interstate commerce, if they may be regarded as such. It is a police regulation strictly, not affecting them until there is an attempt to make disposition of them within the State. To give them more immunity than this is to give them more immunity than more tangible articles are given, they having no exemption from regulations the purpose of which is to prevent fraud or deception. Such regulations affect interstate commerce in them only incidentally. *Hatch* v. *Reardon*, 204 U. S. 152; *Ware & Leland* v. *Mobile County*, 209 U. S. 405; *Engel* v. *O'Malley*, 219 U. S. 128; *Brodnax* v. *Missouri*, 219 U. S. 285; *Banker Brothers Co.* v. *Pennsylvania*, 222 U. S. 210; *Savage* v. *Jones*, 225 U. S. 501; *Standard Stock Food Co.* v. *Wright*, 225 U. S. 540; *Trading Stamp Cases, supra.* With these cases *International Textbook Co.* v. *Pigg*, 217 U. S. 91; *Buck Stove & Range Co.* v. *Vickers*, 226 U. S. 205, and the *Lottery Case*, 188 U. S. 321, are not in discordance."

To prevent the mailing of fraudulent securities into the state, against which the states have thus been powerless, the Dennison Bill was introduced in Congress in 1922 but failed to pass Congress and become a law.

NOT APPLYING TO ISOLATED TRANSACTIONS.—It is not the purpose of these laws to prevent a bona fide owner of any securities from disposing of them for his own account if it was not in the course of repeated and successive transactions of a like character and provided that he is **not a dealer or underwriter** of such securities. These private transactions never were intended to

be regulated or interfered with by these blue sky laws. Many of the statutes contain **specific provisions** to that effect. Thus the **Michigan law** provides that it shall not apply to any security coming within the following class: "In an isolated transaction in which any security is sold, offered for sale, or delivery, by the owner thereof, or by his representative for the owner's account, such sale or offer for sale or delivery not being made in the course of repeated and successive transactions of a like character by such owner, or on his account by such representative, and such owner or representative not being the underwriter of such security."

Similarly the **Illinois statute** provides that the following class of sales shall not be subject to the provisions of the Illinois Act: "(1) An isolated sale of any security by a bona fide owner thereof or his representative, for the owner's account, such sale not being made in the course of repeated and successive transactions of a like character, and such owner not being a broker or dealer in securities or an underwriter of such securities."

Somewhat similar provisions may be found in certain of the other states.

UNDERWRITING AGREEMENTS AND REQUISITES OF BLUE SKY LAWS.—Where the dealer or broker buys or underwrites an issue for the purpose of selling same throughout the United States, or in various states thereof, such dealer or broker should insert a **provision in the underwriting agreement** that the issuing company will furnish all necessary papers, showings, documents, make all reports and do all necessary things to qualify its issue in the various states that the dealer or broker desires to sell the same, and will pay all necessary license fees in connection therewith. The state authorities in their blanks frequently insert the statement that the underwriting agreement is an exhibit and must be forwarded with the blanks. This has proved however, a somewhat obnoxious requirement, for the underwriters jealously guard the confidential and private purchase agreement from the eyes and ears of competitors.

PENAL PROVISIONS OF BLUE SKY LAWS.—Throughout these laws there are penal provisions imposing generally **fines and prison terms** on parties selling securities contrary to their provisions. Some of the laws contain provisions that sales made in violation of the law are either **void or voidable at the option of the purchaser** of the securities. In a number of the states it is provided that sales made in violation of the law are "unlawful" and such a sale has been held to be *malum prohibitum* and void, although not expressly declared to be so by the statute. (*Edward* v. *Idor*, 205 Mich. 617, 625; *Vercillini* v. *U. S. I. Realty Co.*, Minn. 196 N. W. 672.) A company violating these laws may also have its **license suspended or cancelled** by the securities commission administering the law. An agent violating the law may have his license suspended or cancelled and proceedings brought against him to enforce the penal provisions.

NEW YORK BLUE SKY LAWS.—The New York blue sky laws effective May 31, 1925, require that persons or corporations selling securities to the public **proclaim themselves as dealers** by publishing a notice in an official state paper and to give certain data on all securities offered for sale. The notice dealers must publish in the "State Paper" must set forth the following information:

1. Name(s) of dealer(s).
2. Business address(es) or post office address(es) (state which).
3. If a corporation, the State or Country in which incorporated.
4. If a partnership, the names of the partners.

Notice at Time of Offering Securities

A dealer offering a security for sale to the public which does not come within the exempt class as enumerated in Section 359-f of the Law, must before or at the time of such offering, cause to be published in the "State Paper" a further notice containing the information, other than the names of partners, required to be published in the notice mentioned above, and, in addition thereto, the following:

Name of security.
Name of the issuer. Post office address of issuer and the state or country in which organized.

This additional information must be furnished in the following form:

Name(s) of security or securities.
Name of issuer of securities.
Post office address of issuer of securities.
The state or country in which organized.

Provision is made in the Act for a single publication of the second notice in case of group or syndicate offerings; also for inclusion, in the same notice, of descriptions of two or more securities.

The Albany *Times-Union* has been designated as the "State Paper" for the year 1925. The dealer causing any notice to be published under the provisions of this Act is required to pay the publisher of said "State Paper" in advance for the publication thereof at the rate of thirteen cents per line.

Section 359-e of this Law **defines a dealer** for the purposes of this Act to include "every person, partnership, corporation, company, trust, or association except a domestic municipal corporation, who engages directly or through an agent in the business of trading in securities in such manner that as part of such business any of such securities are sold or offered for sale to the public in this State; or who deals in futures or market quotations of prices or values of any securities or accepts margins on prices or values of said securities. The business of trading in securities within the meaning of this section shall not include an isolated transaction in which a specific security is sold or offered for sale, by the owner thereof, or by his representative, for the owner's account, such sale or offer of sale not being made in the course of repeated and successive transactions of like character by such owner, or for his account by such representative, and such owner or representative not being the issuer or underwriter of such security. A sale or offer of sale to the public shall not include an isolated transaction of the nature above mentioned; any sale or offer of sale to any person engaged in the business of acquiring securities for the purpose of resale to the public; any sale or offer of sale to a banker, to a dealer or to a corporation or to any syndicate or group formed for the specific purpose of acquiring such securities for resale to the public directly or through other syndicates or groups, or any sale or offer of sale upon the floor of any exchange to a broker in securities."

Brokers who act solely as buying and selling agents for customers are not concerned directly with the publication of security lists. The law exempts **securities listed on any exchange** of the state prior to January 1, 1925. The exchanges, however, must furnish for publication the desired information on any issues listed after January 1, 1925. **Dealers in unlisted security issues** should seek competent legal advice. To the extent that they act only as brokers they are not required to publish even the preliminary notice under the law. As a large part of the unlisted security dealings are not strictly brokerage transactions, particularly where dealers buy stocks for their own account and sell them to customers, such dealers are required to publish a list of those issues sold to the public.

Certain securities are exempt from the provisions of the blue sky laws and are set forth in Section 359-f of the act as follows:

(a) and (b) [See under Legal Provisions Exempting Governmental Securities.]

(c) Any security issued by a national bank or by any federal land bank or joint-stock land bank or national farm loan association under the provisions of the Federal Farm Loan Act of July seventeenth, nineteen hundred and sixteen, or by any corporation created or

acting as an instrumentality of the Government of the United States pursuant to authority granted by the Congress of the United States.

(d) [See under Legal Provisions Exempting Public Utility Securities.]

(e) Any security issued by a corporation organized exclusively for educational, benevolent, fraternal, or reformatory purposes, and not for pecuniary profit.

(f) Any capital stock issued by a State bank, trust company or savings institution incorporated under the laws of and subject to the examination, supervision and control of any State or of the United States or of any insular possession thereof.

(g) Any security which under the laws of this State is a legal investment for savings banks or trust funds, and any securities which are underwritten or sold by any corporation under the supervision of the Superintendent of Banks of the State of New York.

(h) Any security, other than common stock, outstanding for a period of not less than five years, upon which no default exists in the payment of principal or interest and upon which no such default has occurred for a continuous immediately preceding period of five years, or in the case of preferred stock upon which dividends specified in the certificates of such stock have been paid for a continuous immediately preceding period of five years.

(i) Negotiable promissory notes, drafts, and commercial paper, provided that such issue of notes, drafts and commercial paper mature in not more than twelve months from date of issue and shall be issued within three months after the date of sale.

(j) Any bond and mortgage sold or offered for sale in an undivided whole.

(k) [See under Legal Provisions Exempting Listed Securities.]

(l) Securities sold or offered for sale at any judicial, executor's, administrator's, guardian's, or conservator's sale, or any sale by a receiver or trustee in insolvency or bankruptcy, or at a public sale by auction held at an advertised time and place.

(m) Sales by or for the account of a pledgee or mortgagee selling or offering for sale or delivery, in the ordinary course of business, to liquidate a bona fide debt, a security pledged in good faith as security for such debt.

SECTION 15

EXPORT AND IMPORT PROCEDURE

Foreign Credit Information

EFFECT OF DISTANCE ON CREDIT.—The foreign credit problem is essentially not different from the domestic credit problem. But the fact that buyer and seller are separated by a **greater distance** than in domestic transactions, and, are separated by **barriers of language,** trade customs and laws, makes it necessary to use greater care in the granting of credit in foreign trade, while at the same time the obtaining of credit information is more difficult.

Distance affects credit in many ways. The distance often **increases the length of the credit** period. If 3 months' credit from the date of arrival of the goods has become the accepted terms of sale in a certain market and product, the seller finances the transaction during those 3 months and during twice the length of the journey from his city to that of the buyer. The goods must travel to the buyer and the money or draft must make the journey back. The distance, therefore, influences the credit period, within certain limits.

The seller will also find it **more difficult to keep himself informed of the changes in the general credit situation** in the foreign market and especially to watch the individual credit risks.

CREDIT RISK AFFECTED BY RISK OF REJECTION AND TRADE CUSTOM.—The credit risk is still further increased by the difficulty and expense involved in disposing of goods refused by the buyer. It may be necessary to have them returned at great expense and with considerable delay; or it may prove better to sell the goods for what they will bring in the foreign market, as they may have been specially made up for foreign consumption and may not be salable at home.

Trade custom will often prescribe credit terms which differ greatly from those commonly granted in the domestic field, but competition compels the seller to conform to custom. The local law will determine the legality of contracts, and the method, as well as the likelihood of making collection in case of refusal of goods or insolvency of the buyer.

CREDIT INFORMATION REQUIRED.—The credit man will need to ask:

1. What is the nationality of the buyer?
2. How long has he been in business?
3. Does he exercise good merchandising judgment and does he buy conservatively?
4. Is he reliable?

Although it would be a great mistake to generalize about the honesty and **business habits of different nationalities,** the fact remains that some nationalities have an enviable reputation for fair dealing, while others are regarded

as unfavorable credit risks. There is some reason for this difference in reputation.

It is important to know how long the firm has been established. **Experience** comes only with time and the longer the business career, the more significant is the information concerning the standards of business conduct. In the single proprietorship it is also of value to know approximately the age of the proprietor and what is likely to be the fate of the business in the case of his death.

The **judgment of the customer** as a merchant may often be an open book to the visiting salesman. Antiquated stocks, ill-balanced stocks, the presence of goods which appeal to an entirely different buying public from those for which the bulk of the goods is intended are all signs which call for a more careful investigation of the risk.

The **capital of the firm** and the rate of turnover determine how much the firm should purchase, while the probable number of sources of supply indicates how much it is safe for the firm to buy from any one of them. No hard and fast rules can be laid down but it is well for the credit man to bear these factors in mind in determining the credit limit of the firm.

Is he reliable? This can usually be tested most effectively by an investigation of his **paying habits.** Punctual payment at maturity indicates a prime credit risk while irregularity in paying and a reputation of being involved in many disputes and arbitration cases are indications of doubtful credit risks.

Sources of Foreign Credit Information

CUSTOMERS' OWN BANK REFERENCES.—The first step is to collect reliable and up to date credit information. This the seller may obtain from various sources. Frequently the letter head of the customer shows one or more banks who are willing to give information about the customer. The local bank may have a great deal of information but it must always be remembered that in many countries abroad the bank does not play as important a rôle in the average business concern as it does in the United States. The bank, moreover, may know his domestic business relations and methods but may be wholly ignorant of the experience foreign firms have had with the importer.

A bank will always be careful in answering credit inquiries; on the one hand, a bank **cannot afford to give unfavorable information about its customers,** and on the other hand, a bank does not consider it good policy to give too detailed a report of good risks. Consequently, the information is often inadequate and noncommittal.

AMERICAN CONCERNS AS REFERENCES OF BUYERS.—The importer may refer to American business concerns. The danger of such references lies in the fact that an importer may deliberately build up a good reputation with a few outstanding firms and be far from honorable in his dealings with others. The references who will give excellent credit reports may be entirely unaware of the dealings of the importer with other firms. It would greatly contribute to the elimination of much of the foreign credit risk if exporters should make it a habit, upon completion of the transaction, to report back to the references their experience with the importer. In principle the business reference is of little value in itself because a creditor, asked for information about a firm which owes him a substantial sum, will not readily spread unfavorable reports about his customer even when his experience has not been entirely pleasant, since it would merely lessen his chances of collecting his own bills.

MERCANTILE AGENCIES.—The two well-known American credit agencies, **Dun's and Bradstreet's,** maintain foreign offices in the more important com-

mercial centers and have co-operative agreements with foreign credit agencies which enable them to obtain information about firms in almost any part of the civilized world.

A rate book such as is used in domestic credit does not exist for foreign business concerns. It is necessary to obtain **individual reports.** The charges for these reports vary with the work and expense involved in obtaining the required information. Usually the cost of each report is not more than $5, but it may amount to as much as $10. By subscribing to a large number of reports at one time the cost per report is greatly reduced.

The reports prepared by the credit agencies often represent the result of accumulated information gathered during many years. Both agencies have in their foreign department in New York City detailed reports covering hundreds of thousands of concerns in every quarter of the world and may often give an immediate answer to inquiries. On the other hand, the exporter need not be surprised if the credit agency cannot supply him immediately with the latest information concerning a foreign importer for it is obviously impossible to keep the information constantly up to date and to include all foreign firms which may at some time consider purchasing in the United States.

FOREIGN MERCANTILE AGENCIES.—The mercantile agency idea originated in England and was introduced on the continent before finding its way to the United States. Excellent agencies are found in most of the European countries. **Stubbs, Ltd.,** in London, **W. Schimmelpfeng,** in Germany, **La Société du Commerce,** in France and **Van der Graaf & Co.,** in Holland, are but a few of the long list of agencies all performing substantially the same functions as our American agencies.

The home office of the export firm will not find it practicable to employ the services of a foreign mercantile agency on account of the loss of time involved. But the salesmen or other foreign representatives of the exporter may obtain reports of the local agencies and attach them for the other information which they send in regarding new customers. Such reports are comparatively inexpensive and are quite as reliable as those gathered through the American agencies.

Most of the credit information available through these foreign agencies must be obtained by means of individual reports. Rating books are published in isolated instances and are inadequate and hardly ever up to date.

AMERICAN BANKS.—Many American banks maintain foreign departments. One of the most valuable assets of a commercial bank engaged in foreign trade is its credit file. This credit file the bank may have accumulated through information collected by its own branches abroad or through correspondent banks. The bank's own experience with these risks will also be a part of the credit file.

The exporter will consequently be able to obtain without delay credit information about many foreign buyers from his own bank. If the bank cannot answer the inquiry from its own file it will secure the required information from its foreign branch or from a correspondent in a foreign country.

The foreign bank will be much more willing to give information to another bank, where goodwill can always be translated into dollars, than to answer inquiries of unknown foreign business houses. This makes it wiser to apply to one's own bank for information.

CHAMBERS OF COMMERCE, AT HOME AND ABROAD.—Information concerning foreign buyers may also be obtained from many of the American chambers of commerce in foreign countries and from some of the foreign

chambers of commerce established in the United States. The credit information obtained from these sources is useful to check up information received through other channels.

As an example of the services maintained by American chambers of commerce abroad, may be quoted those of the Sao Paulo Chamber of Commerce:

"Comprehensive studies of the conditions in any particular trade including customs informations, $100.

The arranging for representatives in Brazil of United States firms, $10 to $50.

Credit reports taken from five responsible sources, $1, mailing lists, 10 cents per name, minimum $5.

Display of samples, 50 cents per square foot, minimum $10.

Catalogues. The keeping in a properly indexed file of trade catalogues for the free use of any local applicant, $10 per year."

FOREIGN TRADE ASSOCIATIONS IN THE UNITED STATES.—Even more valuable is the credit information that may be obtained through some of the foreign trade associations found in this country. Many national organizations exist, some of them limited to a narrowly restricted group of producers, and others of a more general scope, which are building more and more efficient credit report systems. The **National Association of Manufacturers** and the **American Manufacturers Export Association** may be mentioned among many. Such organizations may depend largely upon information gathered through foreign agents, upon the exchange of credit experience between their numbers, or they may combine these two sources of information.

THE NATIONAL ASSOCIATION OF CREDIT MEN.—This association established in 1919 a **Foreign Credit Interchange Bureau,** which acts as a clearing house for the interchange of ledger experience between its members. The bureau is financed by the fees of its members and is conducted as a non-profit making undertaking.

Each member sends to the bureau a list of the firms with whom he has done or is doing business. For each foreign customer a card is prepared, on which, by means of numbers, are indicated the exporters who have sold him goods in the past. When a request for information comes from a member concerning a foreign firm of whom a record is found in the file, the various exporters are circularized to obtain their latest experience with the credit risk. The replies are combined in a report sent to the inquirer and to the exporters who furnished the information, thereby enabling the latter to revise their own credit records. The information collected about a buyer from the various members covers the following points: how long sold, terms of sale, highest recent amount, date of last dealings, amount now owing, amount past due, number of days past due, manner of payment, rating, credit limit (if any), credit declined (with reason).

The bureau also publishes a bulletin which keeps the subscribers informed of general credit conditions throughout the world.

This organization makes special investigations and combines the result of this information with the ledger experience of many manufacturers. The clients are informed of any change in the financial standing of the customer. Bulletins are issued at stated intervals giving general economic and credit information about foreign countries and information is available concerning shipping, foreign tariffs, commercial laws and other matters of interest to exporters.

OTHER SOURCES OF CREDIT INFORMATION.—The **Philadelphia Commercial Museum,** the various export journals and many of the **American chambers of commerce abroad** and **foreign chambers of commerce in the**

United States are in a position to give credit information. Some of these channels of information may prove especially valuable since they may give access to data not available elsewhere. This is particularly true of organizations like the American Chamber of Commerce in Sao Paulo and the American Chamber of Commerce in Berlin which are making a special effort to gather reliable and up to date credit information.

These services are not, as a rule, gratuitous. The charges are, however, very small and represent only approximately actual cost. The mercantile agencies and the chambers of commerce may also aid the American exporter in finding reliable agents in the making of collections, and in supplying information concerning customs regulations and tariffs.

It is often necessary to gather credit information with the least possible delay and in such cases a knowledge of more than one source of information is especially desirable.

American consuls abroad, the commercial attaches or any other government representatives or government bureaus are not permitted to distribute credit information. It is equally useless to address foreign consuls for information about their home firms.

TRAVELING SALESMEN.—Traveling salesmen or local agents are not trained as credit men and it is often claimed that it is inadvisable to require them to gather credit information about their customers. But the personal contact which the export firm has with its customers through its salesmen and agents is too valuable an opportunity to gather credit facts to allow it to pass without being used.

The salesman who is called upon to give such facts when sending in his initial order and is required to report his observations concerning old customers, is forced to think of the credit aspect of his sales. He will in time become a keen observer of surface indications and will, moreover, be less likely to waste his efforts upon the securing of orders which his firm will subsequently refuse to fill.

The credit man in the home office must still obtain his information from other sources but the salesman's report may throw a new light upon the reports thus received and may aid the credit man in arriving at his final conclusion.

It is good policy for the credit man to see to it that the salesman is in possession of credit information concerning old and new customers and is informed of all cases where his judgment may have proven to be wrong either through the reports received from other sources or through the sad experience of dishonored drafts. The credit man may in this way train the direct representatives which the firm has in the foreign market to become more than mere order takers and may prevent annoyances and legal entanglements resulting from the refusal of the home office to execute orders sent in by the salesmen.

Foreign Credit Insurance

THE MORAL RISK.—Familiarity with domestic credit insurance will enable one to understand readily the difficulties connected with the insuring of foreign risks. The domestic insurance scheme was based upon the published ratings in rating books like Dun's. No such rating books exist for foreign credits and the limiting of insurance to selected risks becomes a difficult matter. In the absence of an external check the moral risk becomes extremely great for the temptation will be powerful for exporters to endeavor to insure only the bad risks and to incur no unnecessary expenses with the good risks. No in-

surance undertaking can be successfully carried on unless this moral risk is in some way limited. Two methods may be used to diminish the moral risk. The first is to build up a body of credit data comparable to the credit ratings of domestic firms and accept for insurance only the known risks with good credit history; while the second is to insure only a part of the amount involved in each transaction, thereby making it worth while for the exporter to exercise due care.

DEL CREDERE BANKING HOUSES.—Some of the German banks, known as del credere houses prior to the war, made it a practice to buy without recourse bills drawn by approved dealers upon known customers abroad. They also insured for a premium, a portion of the risk in other approved bills and "accepted invoices." The latter were invoices accepted as correct by the buyer.

GOVERNMENT CREDIT INSURANCE.—In Great Britain and some of the countries of the European continent, notably Holland, the governments have established credit insurance offices which will share foreign credit risks on approved transactions.

FOREIGN AND DOMESTIC CREDIT INSURANCE COMPANIES.—This fractional insurance has also been adopted by the Trade Indemnity Co., Ltd., recently organized in England. In the United States several ways of insuring foreign credits are open to the exporter. In the case of **staples** as high as 75% of the risk may be insured by a certificate, "For account of London Underwriters." The insurer is only liable in case of insolvency and will only accept risks on acceptable bills. The use is, therefore, quite restricted. Many of the regular insurance brokers are now in a position to write this insurance. Of more general application and more satisfactory as to coverage is the insurance contract which may be obtained through the **American Manufacturers Foreign Credit Insurance Exchange.** Without giving unqualified approval of the operation of this exchange a description is here given merely as another example of an attempt to provide the protection sought for.

THE AMERICAN MANUFACTURERS FOREIGN CREDIT INSURANCE EXCHANGE.—This exchange is a mutual company. The exporter in applying states his name, address, business, average yearly export sales, the usual terms of foreign sales and the annual basis on which he desires membership. He desires to seek protection against losses due to the insolvency of foreign customers and appoints the exchange attorney-in-fact as his agent to secure this protection.

Master Policy of the Credit Insurance Exchange.—He then receives a "master policy," which acknowledges him as a member of the exchange and entitled to obtain protection for each separate and approved risk on the conditions laid down by the exchange. The master policy also contains a statement to the effect that the other members agree to insure the new member in proportion to their participation and that a reciprocal obligation rests upon the new member.

Basis for Premiums.—The estimated sales form the basis for determining the **deposit premium** to be paid in addition to the premium charged on each specific risk. In return for these premiums the association gives 100% protection on each accepted risk.

Factors Determining Acceptance of Risks.—The factors which play a part in determining whether and to what amount the specific risks will be acceptable are:

1. The single account limit. The exchange has information concerning the various buyers and for each a **credit limit** has been set. This limit is arrived at after a study of the financial responsibility of the buyer, the type of merchandise, the normal turnover, the number of probable sources of supply and the number of known sources.

2. The insured must notify the exchange when payment has been made. He is encouraged to do so by the fact that premiums are charged monthly and cease only upon **notification of payment.** In this manner the exchange is informed of the extent of the credit granted by the known sources.

3. In each individual case the member will inquire for the **rate.** Upon approval of the risk the rate is quoted and the exporter must immediately send a "nomination of shipment" or run the risk of finding the rate changed later or of finding the credit line exhausted. The exchange then issues a certificate of insurance.

Factors Determining Rates of Premiums.—In determining the premium three factors are taken into consideration: the credit rating of the buyer, the terms of the sale, and the length of the credit.

The basic rates for "high," "good" and "fair" credit ratings are 1%, 1⅛%, and 1¼%, respectively. These are increased by ⅛ of 1% for each additional month when the credit period exceeds two months.

The rates apply to sight or time drafts of not more than 6 months.

The exchange has also published **two credit guides,** one for Latin America, the other for the Orient and Australia. They are kept up to date by supplementary sheets issued from time to time.

OBJECTIONS TO CREDIT INSURANCE ON FOREIGN ACCOUNTS.—Although protection may thus be obtained on most foreign risks the present methods of credit insurance are often open to the following objections:

The most **serious causes for credit losses,** such as rejection of goods, are not covered and actual insolvency against which the insurance protects is a comparatively rare occurrence.

While making sales it is impossible to know whether and at what rate insurance may be obtained.

The most successful underwriters have thus far been mutuals and to participate in them exposes the exporter to **assessments** and other expensive surprises in the future, and makes it of the utmost importance for him to become informed of the administrative details of the mutual. One point of importance to watch is how much of the premiums paid in is actually used to create an insurance reserve fund or to secure reinsurance and how much is absorbed in the administrative expenses and the salaries of the mutual.

DEL CREDERE AGENTS AS A PROTECTION OF CREDIT RISK.—The exporter may find another way to protect himself against the credit risk. Many agents in foreign markets are what are called **"del credere" agents.** This means that the agent guarantees to his principal that drafts drawn on his customers will be duly honored. Obviously such a guarantee means little unless the agent's financial capacity is sufficient to meet the contingent obligations which he thus assumes. The principal objection to this method is the expense, for the "del credere" agent will demand a fairly large del credere commission for this service.

Foreign Credit Policy

FACTORS IN DETERMINING CREDIT POLICY.—The exporter will find that it is much more difficult to live up to inflexible rules in foreign trade

than in domestic trade. This is especially true of the terms of credit. He will do best to adopt **a definite credit policy** always with the understanding that more favorable terms may be made upon satisfactory evidence that the importer is entitled to such special treatment. This places the burden of proof upon the buyer. A definite policy has the additional advantage of concentrating the sales activities on buyers willing to meet these terms. There will then be less friction between the credit man and the sales force.

Nature of Trade.—In general it must be remembered that the retailers abroad depend much more upon their own capital and upon trade credit than do the retailers in the United States to whom the commercial banks readily extend credit facilities.

The importing house abroad is under the necessity of carrying his retailers. In turn he, therefore, depends upon the credit obtained from the exporters of other countries to carry him. The importer will be forced to carry relatively large stocks of the goods which he undertakes to distribute, for any replenishing of stock may be subject to delays of manufacturing and of transportation.

These are only some of the factors which will often cause the salesman to urge his firm to grant liberal credits. He will find his selling greatly influenced by the credit terms granted by other foreign firms, who may know the market better because of their longer experience and who are for that reason able to extend rather liberal terms.

Character of Goods and Economic Development.—The next considerations in determining the credit policy in any one market are the character of the goods and the economic development of the market. Generally speaking, **fluctuating staple commodities** should not be sold to new customers except on cash/document port of exportation. Goods subject to a **slow turnover** will usually demand a longer credit period. If the goods are **seasonal,** this fact must be borne in mind, for in no case should the credit extend beyond the end of the selling season, since such an extension would not increase the ability of the customer to liquidate his goods and is, therefore, dangerous.

Character of the Country.—Similarly it is necessary to take into consideration the character of the country. Buyers in an **agricultural country** may usually be granted longer credit terms than those in a highly industrial country. The reason for this is obvious, for the amount of capital available is usually smaller and the moving of the goods is to a large degree tied up with the movement of the crops.

Credit Period Governed by Period of Turnover.—The one principle which should always be foremost in the credit man's mind is that the only sound credit is a credit which allows the customer the time to turn his goods into cash with which to pay his bill. A longer period of credit is dangerous because the funds may have been reinvested by the time that the due date arrives, but a much shorter period may under certain circumstances be equally dangerous, since the due date may find the customer unable to meet his obligations.

Credit Terms in Relation to Margin of Profit.—The margin of profit which the dealer may be expected to make on the goods is another important consideration. The larger this margin the less of the goods he needs to sell to earn enough to pay the draft when due. The **"mark-up,"** from the point of view of the credit man, is as important as the rapidity of turnover.

Credit Terms in Relation to Capital Strength and Turnover.—Easy credit is always an invitation to over-buying. The extent of the credit in each individual case should bear a relation to the capital strength of the buyer to

the rate of turnover of the goods in his establishment, and to his reputation as a credit risk.

RISK OF LONG CREDIT TERMS IN FOREIGN TRADE.—A non-competitive product will allow the exporter to make his own terms, but few products are of that type. On the other hand, long credits granted without careful analysis of all the factors involved will prove more disastrous than they would in domestic trade because of the difficulty of making proper adjustments at a long distance.

LIBERAL CREDIT TERMS OF EUROPEAN CONCERNS.—The rather liberal credit terms which European houses are reported to have been in the habit of granting in South America and other foreign markets were usually granted, not by the manufacturers, but by **commission houses and export houses,** who, because of their local representation, were in a position to know their risks. Much of the credit granting by German houses prior to the war was unwise and the mistake is not likely to be repeated in the future.

CREDIT TERMS "CASH NEW YORK."—Terms, "Cash New York," will naturally not be an aid to selling a highly competitive article in a highly competitive market but will not by any means strike the foreign buyer always as unfair or unreasonable. Through the **letter of credit** he will be able to secure the aid of his bank in meeting these terms and no particular hardship is put upon him. If his credit is not good enough with his own bank to secure its co-operation then he surely cannot expect a foreign exporter as a matter of course to grant him a liberal credit.

On the other hand, cases will often arise when a firm little known to the exporter but of long standing in its own locality, will greatly resent such cash terms. The firm may regard it as a reflection on its reputation and may resent an American firm taking an uncompromising attitude when European firms have always been willing to grant long credit without question.

CREDIT MAN'S DUTIES AND FUNCTIONS IN FOREIGN CREDITS.—The credit man should study his markets and the customs prevailing, as well as the general economic and credit conditions in the country where the customer resides, and should decide each individual case upon its own merit. A credit department may be merely a brake upon business, a restraining hand upon the enthusiastic sales representatives abroad, but the success of the concern in foreign markets will be greater if the credit department will bend its efforts to training the sales force in credit judgment and in selling only where sales will be most profitable.

DANGER SIGNALS IN FOREIGN CREDITS.—The credit man must constantly be on the lookout for danger signals. **Crop failures** may change the credit conditions in a given country over night, a disaster like the Japanese earthquake will call for careful action and may make it necessary to hold up the shipments already made until more information can be obtained; a bank failure or the possibility of bankruptcy of a large commercial concern may deeply affect the financial ability of a customer. Other factors that need to be watched are **changes in the tariff** or **changes in the exchange rates.** The importer pays the import duty, and the exchange rates affect him directly when the draft is drawn in dollars, so that his willingness to live up to his contract may be greatly affected by such events.

PROTECTION AGAINST NON-ACCEPTANCE OF GOODS.—It is not difficult to find excuses and plausible reasons for non-acceptance of goods.

Some exporters demand that the buyer, when placing his order on the basis of a dollar quotation, submit a statement from his bank to show that he has covered himself by a **future purchase of exchange** against the exchange fluctuation risk. This is a sound credit policy, but even so, it does not protect against disastrous price competition when a sudden drop in the dollar exchange enables the importer's competitors to buy more cheaply in which case the exporter will still face the risk of refused goods.

CO-OPERATION OF CREDIT AND SALES DEPARTMENTS.—The credit man must, therefore, do more than merely pass on credits. He must secure the co-operation of the sales department to eliminate waste effort in the sales force through selling to undesirable risks, and he must watch for danger signals so that action may be taken when needed to protect the interests of the firm.

Collecting Past-Due Foreign Accounts

It is not possible to state in detail what action a firm should take in every case when a draft is not honored when due. The action which the firm should take depends not only upon the laws and customs of the foreign country but also upon the individual relations existing between buyer and seller.

PROTESTING DRAFTS.—Many exporters make it a rule not to protest a draft unless new evidence has been received at the office indicating a decided change in the credit and moral standing of the buyer. To **protest a bill for non-acceptance** is usually unwise for it does little good and makes enemies.

In the case of **non-payment** the matter is somewhat different. Not to protest for non-payment may mean that the drawer sacrifices an important advantage for in most countries the holder of such a protested draft has little trouble in proving his claim while a non-protested draft has practically no standing in the courts.

In case the buyer becomes insolvent and goes into bankruptcy the rights of a holder of a protested draft are fully protected and he is placed in a preferred position. There must, therefore, be good cause for instructing the collecting bank not to protest upon non-payment. A valid excuse for non-protest would be because some circumstance has arisen which makes it unwise on the part of the exporter to press his claim. On the other hand, it may be said that no honorable firm would allow a draft to be presented knowing that payment will not be made, without making some effort to come to an agreement with the drawer prior to maturity. Where the exporter is duly informed and the reasons are good and sufficient he will do well to waive protest and to grant the needed extension.

Where no attempt has been made to come to an agreement protest may be the best thing especially in the case of accepted drafts. After all, to protest a draft means merely to obtain legally accepted evidence of non-payment and in no way puts the exporter under obligations to press his claims further. But the exporter must remember that his customer may resent having the draft protested, may have a good reason for refusal and that the costs of protest are sometimes considerable.

A good practice to follow is to protest only in those countries where valuable rights would be sacrificed by non-protest, and to protest in other countries only after the bank has notified the exporter of the circumstances and conditions. As a rule **legal action** should be avoided. It is difficult and expensive in the United States, and becomes even more so when the customer is located at a great distance and is subject to different laws from those of the United States.

The expense is increased by the requirement found in many countries that the creditor deposit a sum sufficient to cover all necessary costs before the court will take any action in the matter.

COMMERCIAL ARBITRATION.—In recent years much progress has been made in commercial arbitration. Many American chambers of commerce abroad and foreign chambers of commerce in the United States have established **arbitration committees or courts.** The most significant step in this direction was taken by the **International Chamber of Commerce.** This international body, created in 1920, with headquarters in Paris is represented in the United States by the Chamber of Commerce of the United States which is a member of the International Chamber.

When a question is submitted to arbitration little time is consumed in arriving at a conclusion, legal hair splitting is avoided, and the issues involved are approached by the business men who act as arbitrators in a friendly conciliatory spirit. But arbitration can only be used when both parties are willing to submit to it. When the debtor refuses to submit the only recourse is in the courts. It does not usually pay to press small claims unless the exporter has a resident agent in which case the matter may be referred to him giving him full power to act.

FOREIGN COLLECTING ATTORNEYS AND AGENCIES.—Large claims on debtors in places where the exporters do not have personal representation may be collected through foreign attorneys or collecting agencies or they may be placed in the hands of American attorneys or agencies who have correspondents abroad. Many foreign credit information agencies undertake the collecting of overdue accounts. In every case it is well to have a clear understanding as to the charges, both in case of success and failure.

If the matter is placed in the hands of an agency or attorney it will be necessary to provide them with a **proof of claim** and it will usually expedite matters if the claim is assigned to them. All documents referring to the transaction, letters, catalogues, cables, and the debtor's order and proof of shipment must all be provided and attested by affidavits which will make them acceptable as proof in the foreign court. The creditor's statements must usually be under oath before a notary public and it may be necessary to have the notary's signature verified by the foreign consul or by the county clerk or secretary of state of which the creditor is a resident.

As a rule the **charges of foreign lawyers** are not as high as those of American lawyers, at least if they are properly approached. There is a decided tendency among foreign lawyers to charge much more liberally when dealing with American firms than when called upon to represent firms of other nationalities.

LEGAL ACTION SHOULD BE AVOIDED IN SOUTH AMERICA.—In South American countries litigation is especially to be avoided for delays and costs are particularly large and since in many South American countries protest may be made as late as 5 years after the due date of the draft it is better to try every possible means of friendly settlement before resorting to legal action. Legal action should always be the last thing and should never be taken until the exporter has decided that he never cares to sell again to the customer involved.

Ocean Freight Rates

HOW QUOTED.—There is **little uniformity** in the method of quoting freight rates by ocean carriers. Many lines are still quoting in terms of the

cargo ton (2,240 lb.,) metric ton (2,204.62 lb.) or measured ton (40 cu. ft.) There are many lines now quoting special commodity rates based upon 100 lb. or cubic feet, cubic meters, M. feet and other weight or quantity units. Some lines publish "rate cards" or "tariffs" after the fashion of the railroads but this is the exception. Rates change in ready response to shipping conditions and different steamship lines will quote different rates.

"Ship's option" in the quotation refers to the privilege reserved by the carriers to calculate the freight per 2,240 lb. or per ton of 40 cu. ft. Goods weighing more than 56 lb. to the cubic foot are charged on the basis of the weight ton, all other freight, and that is the majority of the ocean freight, pays on the basis of the measurement ton.

PACKAGE NOT TO EXCEED 2 TONS IN WEIGHT.—It is always understood that the rates quoted apply to packages not exceeding **2 tons in weight.** Packages of greater weight need **special hoisting equipment** to be placed on board and the shipper must either make arrangement with a hoisting company to place the goods on board or pay the extra charges of the steamship company.

MINIMUM CHARGES.—Ocean bills of lading usually contain a clause that the shipper must agree to pay at least a minimum charge. This is called **"minimum bill of lading."** The shipment of small packages for that reason becomes expensive under a regular bill of lading.

PARCEL RECEIPTS.—Many steamship companies now issue **parcel receipts** for parcels of small size and weight for which only a small charge is made. Another method of avoiding excessive freight charges on account of the minimum bill of lading is to combine several parcels into one shipment. The shipment may then be broken up by the shipper's representative abroad. The freight forwarder performs this service among others to be discussed later.

BERTH CARGO RATES.—The rates charged on commodities like coal, grain or case oil shipped in large quantities are subject to severe competition of the tramp steamers placed "on berth" by ship brokers and are, therefore, in closer agreement with the open freight market than the general cargo rates above mentioned. Such bulk goods are often carried as paying ballast at very low rates by regular line steamers.

CHARTERS.—Where goods are shipped in sufficiently large quantity to warrant engaging an entire vessel, a vessel is chartered through a ship broker. The contract between ship owners and shipper is called **"charter party."**

Two types of charter parties exist: the trip and the time charter. Under the **trip charter** the owner operates the vessel and the shipper pays a given sum per ton cargo, per bushel or per hundred pounds. This charter specifies the ports of departure and of destination with a certain latitude as for example "North Atlantic range," meaning all ports in the North Atlantic, and contains a demurrage clause stating the penalty to be paid by the shipper for undue delay in loading or receiving the freight.

The **time charter** usually transfers the operating expense to the shipper, though operation of the vessel is left under control of the owner. In this case the shipper usually pays an agreed rate per dead weight ton or per net registered ton.

The **charter rates** are a matter of open market bargaining and are published in the shipping and financial journals.

INQUIRY MUST BE DEFINITE.—In requesting information regarding freight rates it is necessary to be definite. The inquiry must state: kind of goods, value, number of packages, weights and measurements of each, and date of shipment. Once the quotation has been received it should be acted upon immediately and the necessary freight space reserved.

Shipping Procedure

SHIPPING PERMIT AND DOCK RECEIPT.—A "shipping permit" is delivered by the carrier. Without it the clerk at the dock will not receive the goods for shipment. The goods are sent to the dock at the time indicated in the permit and the shipping permit is exchanged for a dock receipt in which the company acknowledges receipt of the goods.

DOCK RECEIPT EXCHANGED FOR BILL OF LADING.—The dock receipt must be exchanged for a signed bill of lading. The carrier will usually demand **prepayment of freight charges.** It is possible to arrange for payment at delivery but this is not normal. Foreign buyers should be informed that in all cases where the quoted price does not include freight charges, the buyer must be prepared to pay freight in the United States unless he can make other arrangements with the carrier.

EXPORT DECLARATION.—The exporter must also produce an "export declaration" which is required by the United States customs. The steamship company must not issue bills of lading until a properly certified export declaration is presented.

PACKING IN RELATION TO FREIGHT RATES.—Export packing must answer different requirements from packing for domestic transportation. **Climatic changes and methods of handling freight** differ in various parts of the world. Shipping by steamer, especially where transshipment takes place puts usually a greater demand upon the strength of the packing. An ocean trip exposes the goods to dampness which may make it necessary to protect metal parts more carefully than when shipped inland. Ocean freight is more exposed to pilfering and to breakage than is domestic freight.

Packing may be efficient and yet not excessively heavy; it may be heavy and yet not strong. Scientifically constructed boxes and containers can now be procured as a result of the valuable experience gathered during the War. Organizations like the **American Freight Container Bureau** are prepared to give information to shippers as to the best way of packing their goods.

Certain fundamentals are to be kept in mind. Very large and very heavy cases may mean extra expense in loading and unloading, may mean greater risk of damage, since large and heavy cases cannot always be handled carefully.

Since space is paid for, it is economical to pack as much into that space as is possible. **Protection against pilfering** not only prevents stealing but may lead to better insurance and freight rates. Poor packing will result in dissatisfied customers and in expenses on account of claims. It is usually good business to obtain and follow instructions concerning packing from the purchasers.

MARKING OF CASES FOR SHIPMENT.—Each container should bear, if possible, on all sides the marks by which it may be identified. These marks should **correspond accurately** with those appearing upon the commercial and consular invoices, the bill of lading, and the other documents relating to the shipment. Loss in time and money will result from discrepancies.

The markings should be put on **with stencils** so that all marks will be identical and if more than one box makes up the shipment they should bear serial

numbers for quick identification. This will make it easier to trace boxes in case of delay or loss. When consecutive shipments are made to the same firm, it is well to use consecutive numbering from one shipment to the next. It will then be possible to identify the cases of each shipment after they have been placed in warehouse.

The customs regulations in many countries make the use of stencils obligatory, and require that the **gross and net weights** appear on the outside and also the name of the consignee and the port of destination.

PACKING LIST.—Another method of protection against loss is to include in each box a packing list with markings. This slip would make identification possible even after outside markings are destroyed.

MARINE INSURANCE—RISKS TO BE COVERED.—Under the ocean bill of lading the **carrier assumes responsibility only for the seaworthiness of the ship,** both as regards its physical condition and the qualification and number of crew, but he cannot usually be held liable for damage resulting from faults or errors in navigation, or in the management of the vessel, and the ocean bill of lading contains a long list of further exceptions which leaves but few situations in which the carrier can be held liable for damage or loss.

The shipper must therefore seek protection by insurance. The ordinary insurance policy does not insure against all possible risks. The **risks covered** are: the perils of the sea, pirates, thieves, jettison, barratry and other like perils. If protection is desired against pilfering, breakage, and other like perils a special premium must be paid. Although there is practically no risk against which it is impossible to insure, the expense is often prohibitive.

The subject of marine insurance is comprehensively covered in the Section on Insurance Protection.

The Bill of Lading in Foreign Trade[1]

NATURE OF DOCUMENT.—The ocean bill of lading is a receipt and a contract. It is a **receipt** for the goods delivered by the shipper to the carrier and a **contract** by which the carrier is bound to carry the goods from one port to another and to make delivery at the port of destination to the person legally entitled to the goods. The B/L therefore is also a certificate of ownership and as such is negotiable if drawn to the shipper's order or to a named consignee.

The form of bill of lading differs in the various countries and frequently each trade has its own form. The **legal responsibilities** of the carrier are determined by the clauses of the bill of lading and by the commercial codes or special laws dealing with the bill of lading found in most countries today. The multiplicity of forms and of laws under which these forms are to be interpreted do not contribute to make the position and the rights of the shipper clear and certain.

A number of attempts have been made of recent years to bring order out of the chaos. The meeting in The Hague in 1921 of the International Law Association brought out a recommendation under the name, Hague Rules 1921. These rules have been adopted by a large number of carriers and form the basis for the contractual relation between shipper and carrier in an increasing number of cases. The Bill of Lading convention of Brussels in 1922 was another step in the direction of greater uniformity.

TYPES OF BILLS OF LADING.—The bill of lading prepared to be used as collateral for a loan with a bank is made out to the order of the shipper and

[1] For bill of lading in domestic trade, see Section 20 on Traffic Management.

endorsed by him to the bank or in blank. This is called an **"order bill of lading."** A bill of lading made out to the consignee is called a **"straight bill of lading."** If the name of the importer is mentioned as the consignee no one but he or his order can obtain possession of the goods. Such bills of lading do not make acceptable collateral with the banks.

Some countries, notably in South America, do not permit the use of order bills of lading. In other countries the importer may obtain possession of the goods even without presenting a B/L if he can prove that he is the consignee. In such cases the exporter can protect himself only by demanding payment prior to shipment or by consigning the goods to a bank with instructions to turn the goods over to the purchaser only upon payment of the draft.

THE "NOTIFY CLAUSE" IN BILLS OF LADING.—The "notify clause" often appears in the margin of order bills of lading. The shipper thereby does not in any way relinquish his rights with respect to the goods but merely requests the steamship company to inform the purchaser of the arrival of the vessel. In some countries the "notify clause" must appear on all B/L drawn to order.

"FOUL" AND "CLEAN" BILLS OF LADING.—The carrier is responsible for damage to the goods other than that stated in the conditions of the bill of lading. If any packages are delivered to the carrier in damaged condition or insufficiently packed for the ocean voyage, the carrier to protect himself will make a notation in the margin of the B/L. This "foul" bill will **not make good collateral** with the banks. They demand "clean" bills, for claims are almost certain to result from a shipment made under a "foul" bill.

LETTER OF INDEMNITY.—The shipper may not always be aware of defects until after the goods are in the hands of the carrier. He may nevertheless be able to secure a clean bill of lading by preparing a "letter of indemnity" in which the shipper undertakes to hold the carrier free from claims on account of or resulting from the damage ascertained at the time of shipping. A better method is to instruct the receiving clerk of the carrier not to accept the goods if he is not prepared to issue a clean bill of lading against them.

NUMBER OF COPIES OF BILLS OF LADING.—The bill of lading is usually prepared by the shipper on forms obtained from the carrier. **Usually three copies** are signed by the carrier. These constitute the **"negotiable copies."** The number of negotiable bills issued is stated in each negotiable copy. The banker will insist upon a **"full set"** being delivered to him for any one negotiable copy is sufficient to obtain possession of the goods.

Additional "non-negotiable" bills of lading may be issued. These may be required for various purposes. One copy may be sent to the purchaser to notify him that shipment has actually taken place, another may be kept by the shipper for his file, while another copy may be required by the foreign consul for his record.

TERMS "ON BOARD" AND "FOR SHIPMENT"—DISTINGUISHED.—In some countries, notably on the European continent, the ordinary bill of lading stating that goods have been received for shipment, is not accepted for negotiation in the absence of special instruction. In this country much controversy and little agreement exists among banks, merchants, carriers and even among the courts with respect to the value of the **"received for shipment" bill.** The steamship lines belonging to the Transatlantic Freight Conference have agreed to stamp a dated endorsement on the bills of lading indicating that the goods have not only been received for shipment but have been actually placed on board a given vessel. With this **"placed on board" or "shipped" clause the bill of lading** undoubtedly gains in value as collateral for the actual

fate of the goods is not left in doubt and the approximate date of arrival may be computed. There is, however, no agreement on this point, and in normal times when freight space is readily available, there is not much difference between the two kinds of bills of lading.

The seller may prefer the "received for shipment" bill for this is issued without delay upon receipt of the goods by the carrier and may be presented at once to the negotiating bank. The buyers, on the other hand, often insist on some unmistakable proof that the goods are actually placed on board and are on their way before allowing their bank to make any payments. They are supported in this by some laws and by not a few decisions in the American and English courts.

THE THROUGH BILL OF LADING.—When shipped from interior points the goods may be consigned to a representative in the port of exportation. The ocean bill of lading secured by him is then placed in the hands of the negotiating bank. The railroads issue "through bills of lading" from interior points to foreign ports.

Difficulties have sometimes arisen from the use of through bills of lading because of the uncertainty which necessarily adheres to this method with respect to the particular steamship by which the goods will be dispatched. Banks on the eastern seaboard generally refuse to accept them in the absence of special instructions, but through bills of lading are quite generally used for shipment to the orient.

The **freight forwarder,** if he is entrusted with a shipment from an interior point, also issues a bill of lading or way bill. This document does not enjoy favor with the banks and is not usually accepted as collateral.

TRANSSHIPMENT BILLS OF LADING.—It may often be unavoidable and sometimes desirable to send goods not by direct but by indirect route necessitating transfer to another vessel at some intermediate point. Often quicker and more frequent service is available by indirect than by direct route. Although an element of uncertainty is thereby introduced on account of possible delay and damage in transshipment, the transshipment bill of lading is usually acceptable to the bank unless the purchaser has insisted upon a direct route.

CERTIFICATION OF BILLS OF LADING.—Many countries require that negotiable copies of the ocean bill of lading be certified by a consular officer of the country. The following is a list of these countries: Argentina, Bolivia, Chile, Cuba, Guatemala, Haiti, Panama, Paraguay, Salvador and Uruguay. The charge for this service varies from 75 cents in the case of Chile to $3 in the case of Panama. It is important to secure this certification for without it no delivery will be made by the carrier.

Price Quotations

DOMESTIC AND FOREIGN PRICES.—The exporter selling in foreign markets may follow a different price policy abroad from that which has been established in the domestic market without affecting the domestic sales. A nationally advertised consumers' **article sold at a standard price** in the United States will usually be sold abroad at the same price. A lower price abroad might reflect on the home market. When competition is extremely keen abroad the standard price may have to be abandoned, but in this case it is desirable to make some slight yet noticeable change in the composition or make-up of the article so that domestic users may at once recognize it when traveling abroad as an article prepared especially for the foreign market and

that any attempt at reimportation of the cheaper article for sale in the United States may easily be detected.

In **selling abroad at a lower price** than in the domestic market some difficulty may be encountered with foreign tariff regulations especially in those countries where anti-dumping certificates are required.

HOW QUOTED.—In quoting prices the seller may quote the price at the factory or he may quote a price at which he is willing to carry the goods to any given point on the route between his warehouses and those of the foreign purchaser. In each of these various quotations the following factors must be mutually understood:

1. **What the exporter undertakes to pay** and what charges must be met by the importer.
2. **Where delivery takes place,** or in other words where the responsibility lies with respect to loss or damage for the exporter; for the place of delivery is the place of inspection. Acceptance, however, does not bar action for damages.

In the section on Purchase and Sales Terms is set forth the meaning together with the obligation of the buyers and sellers under the various trade laws used in foreign and domestic business.

In Europe **"free go down"** or **"free delivered"** (named interior point) is often found. This is not commonly used in the United States. Any payment of duties and other charges is covered specifically in this country, by clauses in the contract of sale. In making quotations it is well to state the exact meaning of the quotation or to make mention of the fact that the American foreign trade definitions are taken as a standard.

F. O. B. Quotation.—The simplest quotation for the exporter is f. o. b. quotation. As far as his prices are concerned he has not introduced any new element and the transaction is little different from a domestic transaction. This quotation throws the calculation of **freight and insurance charges on the buyer.** Purchasers may not be sufficiently familiar with foreign trade practice to enable them to obtain the needed information readily, nor will they always be willing to undertake the burden of attending to all the formalities incident to shipping and insuring the goods. Therefore, the quotation while simple enough usually is not good practice.

C. I. F. Quotation.—The c. i. f. quotation which gives the purchaser a price for which the goods are laid down in the port of destination will be more acceptable not only because the exporter thereby undertakes to act as the buyer's agent in arranging for the freight and insurance but also because all fluctuations in the freight and insurance rates are shouldered by the seller. From the point of view of the seller the c. i. f. quotation is not so desirable because cost of insurance and freight may change suddenly and unless prices are revised frequently the prices may cease to be competitive.

The price must be determined not only upon the basis of cost and competition but with due regard to the channels of distribution which will be used. If the introductory sales are made to retailers the price must be set sufficiently high so that later sales to jobbers and wholesalers may be made with a sufficiently attractive margin. The most satisfactory method is usually to establish a list price and to notify the agents or salesmen periodically of the proper discount to be allowed to adjust prices to changes in the market.

Where c. i. f. prices are quoted, a complication arises for three elements of cost must be taken into account, **cost of goods, insurance** and **freight.** Cost of goods is the same for all markets but the other items differ with the distance

and with the seasons. One discount will therefore not fit all markets. Each market, each port in fact, must be given its own rate in order to translate list price into actual sales price. It may prove better to leave it to the local representatives to add insurance and freight but they are not in a position to know accurately what these charges would be and must be kept informed by the home office if miscalculations are to be avoided.

QUOTATIONS TO FOREIGN REPRESENTATIVES.—Some firms quote a price to their representatives abroad and allow them to sell at any price they can get. The agent may then be paid the whole of the difference or a part of the difference plus a commission. This price policy is only suited to highly competitive articles and especially to those which are not trade-marked and nationally advertised. For all other articles the resulting **lack of uniformity in prices** is certain to cause trouble. A dealer who discovers that a competitor or a merchant in another country or city is selling the goods at a price which would mean a loss to him grows suspicious of the firm from whom he has purchased the goods.

QUOTATIONS ON LONG-TERM CREDIT ACCOUNTS.—Where credit is granted, the prices must be increased to compensate for interest loss and credit risk. In quoting prices it will usually prove best to quote the long-term price as the basis and to allow reductions if payment is made within that period. It is easier and will create less friction to reduce a price once announced than to increase a price when it is discovered that long credit is required. Frequent fluctuations in price must be avoided for the same reason and it will prove good policy once the season's buying has started, to guarantee that prices will be maintained throughout the season.

QUOTATIONS IN DOLLARS OR IN FOREIGN CURRENCY.—By quoting in dollars the exporter escapes the risk of losing on account of **fluctuation of foreign exchange rates.** He knows what the transaction will yield him whether the terms read cash against documents New York or whether payment is made in a foreign country against a draft "payable in legal currency at the bank's drawing rate on the day of payment for sight drafts on New York."

The fact that under such a quotation the purchaser faces the foreign exchange risk has its disadvantages. It makes it more difficult for the buyer to calculate prices and the credit risk is greatly increased. Every unfavorable change in the rate of exchange presents a temptation to squirm out of the contract. It is often possible to throw the foreign currency risk upon the bank by a purchase or a sale of future foreign exchange but the exporter is usually in a better position to make such arrangements than the importer.

The exporter will find that quotations in foreign currencies will increase his sales, will allow greater choice of methods of payment, will improve his credit risk, and may be made practically free from risk of exchange.

The Sales Contract

CARE IN DRAWING CONTRACT.—After the quality and make-up of the goods and the credit and price policies to be followed have been established the merchant may solicit orders. In soliciting and accepting orders it is extremely important that no loop hole be left for misunderstanding and consequent disputes. In domestic trade the customs prevailing in a given trade are known or may be supposed to be known. In foreign markets different customs prevail and in perfect good faith a contract may be entered into by buyer and seller which afterwards proves to have been based upon different interpretations of

terms. Such possibilities may be guarded against by adopting a very detailed and comprehensive printed form for the submitting of special and general quotations.

ITEMS TO BE STATED ON SALES OR QUOTATION FORM.—The items which should be stated clearly in such form would naturally differ somewhat for each line of goods but will usually need to include the following:

1. **A description of the goods.** A reference to a published catalogue with indications of numbers, or a reference to samples submitted, or both, may take the place of a long detailed description but cannot usually make definite specifications unnecessary.

2. **The method of packing.** A detailed description of the method followed, the size of the cases and their weight and dimensions when ready for export.

3. **Who is to pay for the packing.** If any part of the packing must be paid for by the buyer the cost in actual figures or in percentages of the total invoice should be stated. If several optional methods of packing exist care should be exercised to indicate which method is recommended for the particular country or customer.

4. **The approximate time** required to fill orders of different sizes after receipt of the order.

5. **The price at which the goods will be sold, and the basis for this quotation;** whether f. o. b. steamship, c. i. f., f. a. s., c. i. f. i. & c., or some other quotation.

6. **What liability** with respect to quality, damage or breakage is assumed by the seller.

7. **What obligations** rest upon the buyer with respect to inspection of goods, making claims for shortage or defects, etc.

8. **Exemption of the manufacturer from liability** for delivery in case of strikes, or other causes beyond his control.

9. **What route** of shipping will be followed, and if possible what steamship company will carry the goods.

10. **What form of marine insurance** will be used unless otherwise instructed by the buyer.

11. **The terms of payment** that will be allowed should be explained definitely and if options exist these should also be clearly stated as separate and distinct possibilities.

12. **What will constitute acceptance of the offer,** and whether after acceptance either buyer or seller may modify the agreement as to quality or quantity or time of delivery. If so, then the last date after which no changes may be made must be stated.

13. If **sales samples** are usually supplied the conditions under which samples will be sent must be clearly stated.

14. The same holds true with respect to advertising matter and other dealers' aid devices. There should not be left any doubt regarding the question as to **who is to pay for** the shipping and for the import duties and other incidental charges on such **advertising matter.**

15. Special mention should be made of the **payment of consular fees** and other expenses.

16. The manufacturer should state definitely **until what future date the quotation will hold,** making due allowance for the time required to place a reply in his hands.

17. If the manufacturer can guarantee that for a certain time in the future he **can maintain the prices quoted** this will encourage foreign merchants to place their orders.

18. The prospective buyer must be informed that the seller is prepared to

execute to the letter any **special instructions** regarding packing, steamship routes, and the preparation of consular invoices and that the seller can only be held responsible for the faithful following of these instructions and not for damage, delay or fines resulting from them.

19. It should be stated that no contract exists until orders based upon this offer have been formally accepted by the seller.

ACCEPTING THE ORDER.—On the basis of the offer the order will be placed. In foreign countries it is customary to **sign and return a copy** of the order. Signed by both parties it thus becomes a contract the conditions of which will be determined by the formal offer to which reference is made in the contract.

The order should be carefully examined and any doubtful points should be cleared up before it is accepted. Once it is accepted, the seller is bound by a contract and exact compliance with every, even the minutest, detail in the order becomes a part of the manufacturer's obligation.

If **any modification** seems advisable to the manufacturer, on account of changes in style or quality, no substitution should be made until first the buyer has been consulted and has given his consent. In acknowledging and accepting the order every detail of the order should be repeated.

DELAYED SHIPMENT.—If any delay has occurred in shipping, it is safer to communicate with the buyer and to secure his consent to a delayed shipment than to assume that he will accept the goods upon arrival. By assuming nothing and by making certain at every stage of the contractual relation the possibility of cancellation and refusal of goods will be much lessened.

GUARANTIES ON SPECIAL ORDERS.—In cases where the goods must be specially manufactured for the foreign buyer and require a considerable outlay some time in advance of shipment, the manufacturer may insist upon special guarantees. It may be that he will demand that an **irrevocable credit** be established before he will begin to manufacture or he may follow the custom often found in European countries of demanding a bank guarantee that the order will not be cancelled and that the buyer will live up to his part of the contract.

Foreign Tariffs

CUSTOMS DUTIES INCLUDED IN QUOTATIONS.—It is not customary among American exporters to quote prices "franco domicile," "free go down," or "free warehouse." Such quotations include all charges including customs duties, until the goods are placed in the purchaser's warehouses, European houses sometimes make such quotations in dealing with Indian or Oriental purchasers and frequently sell under those conditions on the continent of Europe. Where such quotations are made a thorough knowledge of the foreign tariff is required.

But even in those cases where foreign duties are not included in the quotation a knowledge of foreign tariffs and custom procedure is desirable. Unimportant changes in the makeup of the goods or in their packing may influence greatly the duties to be paid by the foreign customer.

AD-VALOREM AND SPECIFIC DUTIES.—Two kinds of duties are found; those based upon the value of the goods—**ad-valorem duties;** and those based upon the quantity of the goods—**specific duties.** In the latter case the basis may be gross weight or net weight. The net weight may be actual or real net weight, or may be arrived at by deducting a given percentage—the legal tare

from the gross weight. When gross weight or legal net weight are used, a packing box, heavier than necessary, may increase the amount of the duty.

CLASSIFICATION OF GOODS.—Not infrequently the classification of goods under a tariff is influenced not only by the character of the goods but by the way in which they are finished. A slight change in the general appearance may often result in a more favorable classification. Care should also be used in naming and describing the goods. Pumps classified as agricultural machinery may be subject to a lower rate than the same goods classified as building or mining equipment.

PACKING AND MARKING REQUIREMENTS.—Customs regulations may require a certain method of packing or may demand that the marking be done by stencil. It may be that the name or initials of the consignee and the net and gross weight must be indicated in the system of weights and measures of the country of importation.

For this reason it is always desirable to obtain detailed instructions from the importer regarding such requirements in order that the goods may receive the most favorable treatment and that delay and penalties may be avoided. Whenever the exporter receives instructions regarding packing, marking or other technical details he should follow them to the letter no matter how trivial the requirements may appear to him. A failure to follow instructions gives the buyer a welcome excuse to refuse the goods and may result in unexpected outlays for the exporter.

SIMPLIFICATION OF CUSTOMS FORMALITIES.—No uniformity exists with respect to customs requirements in the various countries. The most recent attempt to bring about greater uniformity was **The International Convention Relating to the Simplification of Customs Formalities** signed in Geneva, November 3, 1923, by representatives of 21 countries.

Consular and Other Government Services

FUNCTIONS OF CONSULS.—Consuls are agents appointed by one nation to reside in the territory of other nations and charged with the protecting of the interests of their countrymen and with the promoting of commercial intercourse between that country and the country to which they are assigned.

The functions of consuls are varied. The **American consuls** serve practically every department of the government. Their **principal functions** which directly affect the foreign trade merchant are: documentation of merchandise, issuing of landing certificates, bills of health, disinfection of hides, rags, etc., administration of plant quarantine, the visé of passports, maintaining of consular courts in extra-territorial countries and the gathering of trade information.

The American business man can obtain information concerning foreign markets direct from American consuls abroad but he will usually be able to obtain this information through other government channels. The Department of Commerce through the Bureau of Foreign and Domestic Commerce maintains an information service for American business men which ranks high among similar services in foreign countries. Through the commercial attaches, the trade commissioners, and a large number of other investigators a **wealth of material** is gathered and placed at the disposal of the business world.

COMMERCE REPORTS.—The Commerce Reports which appear weekly and may be obtained for **$4 per year**, contain the carefully edited reports sent in by representatives of the Department of Commerce and also reports received from the consuls abroad by the Department of State.

TRADE INFORMATION BULLETINS.—Besides the Commerce Reports, the Bureau of Foreign and Domestic Commerce issues trade information bulletins dealing with conditions in various markets of the world and with technical problems confronting the foreign trader. Since 1921 the Bureau is definitely organized on the basis of commodity groups and geographical divisions corresponding to the industrial grouping of the country's productive activities and to the market interests of the export and import firms of the country.

SERVICE OF BUREAU OF FOREIGN AND DOMESTIC COMMERCE.—The merchant may secure the **aid of the experts of the government free of charge** by correspondence or by personal visits to the office in Washington, the district branch offices in New York, Boston, Chicago, New Orleans, St. Louis, San Francisco, Seattle and Manila or to the co-operating offices established in connection with many of the chambers of commerce.

EXPORTERS' INDEX.—The Exporters' Index prepared by the Bureau consists of American firms who have made application to be placed on the list. They receive information concerning inquiries by firms abroad wishing to purchase American products and concerning the plans and specifications of government projects in which American bids will be considered.

The Cable Service

CABLE ADDRESS.—The **cost of cable messages** is high because of the high rate per word and of the fact that every word in the address and in the signature is counted and paid for. The cable address **reduces the cost** of cables by substituting one word for the address. It is used by all who receive and send cable messages habitually. It is customary to print the address in the heading of letters and bills so that the correspondent may be familiar with it. The American cable companies register cable addresses for $2.50 per year, through a registry office maintained jointly by the various companies.

CABLE CODE.—A cable code is made up of artificial words each one of which represents a phrase. The **tremendous saving** resulting from their use has made them indispensable. A code word must be composed of syllables capable of pronunciation according to the common usage of all of the following languages: German, French, Dutch, Italian, English, Spanish, Portuguese or Latin. The words must not be longer than ten letters. The combinations ae, aa, ao, oe, ue and ch are counted as two letters. Combinations of bona fide words are not permitted; the words must be actual code words.

The usefulness of a code depends upon the following factors: the saving which it will show; the time involved in coding and decoding messages; the liability to mutilation of the words in transmission; the possibility of discovering mutilation and correcting it; the degree of adaptation to the particular business and the cost of the code.

The **standard commercial codes** will fit ordinary business transactions. In order to make the code fit the peculiar needs of any particular business, it will often be necessary to add other words and phrases and to devise new code words for them. It is dangerous to undertake the building of such code words. It is better to refer such problems to a code company so that the code words may not cause confusion in the future.

A private code may be constructed by purchasing from a code company a list of code words and to attach meanings to fit the firm's requirements or the whole problem may be put into the hands of a code company for solution. A

private code cannot be constructed with too much care. The phrases should be clear, logical, and should closely fit requirements and the code words should not interfere with words found in the standard commercial codes so that the private code may be used in conjunction with the standard codes. It is always better to invest some money in a good code than to run the risk of costly mistakes.

MOST RAPID CABLE SERVICE.—The full rate, plain language or code message receives the best service. Frequently it is not necessary to use a straight message. In that case a cheaper rate message may be used.

DEFERRED MESSAGES.—Deferred messages are delayed no more than 24 hours and for that reason may often be used when a delay of one day will not be of great consequence. They must be written in plain language but a cable address may be used. They may be sent only from the cable offices of New York City, Staten Island, Yonkers, Jersey City, Brooklyn, Long Island City, Astoria, Port of New York, Hoboken and the New England states. The charge for these messages is one-half that of the straight messages.

The **cable letter and the week end letter** are other types of cable messages receiving less rapid service than straight messages, but because of the great saving often are excellently suited to weekly communication between the export office and the agents and salesmen in foreign markets.

CODE WORDS FOR ARTICLES LISTED IN CATALOGUE.—In preparing catalogues for foreign markets it is customary to attach to each article listed a code word to be used in cable orders.

Foreign Mail

FOREIGN POSTAL SERVICE.—The international postal service is regulated by the Universal Postal Convention.

CLASSIFICATION OF FOREIGN MAIL.—The classification of foreign mail differs from that of the domestic. In place of the well known four classes, there are: (1) letters, (2) post cards, (3) printed matter, (4) commercial paper, (5) samples of merchandise, and (6) parcel post.

RATES ON FOREIGN MAIL.—The following rates are at present in force for mail from the United States:

Letters—first ounce or less	5 cents
Each additional ounce or fraction	3 cents
Postal cards	2 cents
With additional paid reply	4 cents
Printed matter per 2 ounces (Limit in weight 4 pounds, 6 ounces)	1 cent
Commercial papers—first 10 ounces or less	5 cents
Each additional 2 ounces or fraction (Limit of weight 4 pounds, 6 ounces)	1 cent
Samples of merchandise—first 4 ounces or less	2 cents
Each additional 2 ounces or fraction (Limit of weight 12 ounces)	1 cent

On the basis of special agreements the domestic rate on letters applies to:

Argentina	Bolivia	Colombia
Bahamas	Brazil	Costa Rica
Bermuda	Canada	Cuba

Dominican Republic	Mexico	Peru
Ecuador	New Zealand	Salvador
England	Nicaragua	Scotland
Honduras	Panama	Spain
Ireland		

And some other less important countries.

The domestic rate on postal cards applies to:

Argentina	Cuba	Nicaragua
Bolivia	Dominican Republic	Paraguay
Canada	Ecuador	Peru
Colombia	Honduras	Salvador
Costa Rica	Mexico	Spain

PREPAID POSTAGE.—Postage can be prepaid only by means of postage stamps of the country in which the articles are mailed. When it is desired to "enclose stamps for reply" the sending of local postage stamps from one country to another is therefore useless. **The international reply coupon** has been created for this purpose. These coupons are issued in denominations of 11 cents each and are exchangeable in practically all countries for stamps representing postage on a single-rate letter originating in the foreign country.

On all mail not fully prepaid the postal service collects twice the amount of the deficiency upon delivery. This **"penalty postage"** is a source of unnecessary annoyance. An export firm should exercise great care in affixing sufficient postage to all its outgoing mail, for the impression is often created abroad that failure to do so is only an indication of the carelessness with which all matters are handled by the offending firm.

INFORMATION REGARDING FOREIGN CUSTOMS.—In sending articles of merchandise through the mail the post office cannot give information regarding customs regulations in foreign countries and has no power to question the action taken with respect to dutiable merchandise in other countries.

Foreign Parcel Post

FOREIGN PARCEL POST PROCEDURE.—In sending parcel post packages abroad the following procedure must be followed: The parcel should bear the name and address of the addressee and the words "Parcel Post" on the left-hand corner of the address. A **customs declaration** must be filled out (form 2966) stating contents and value. The blanks may be obtained from any post office.

Customs duties cannot be prepaid but will be collected from the addressees. Parcels cannot be insured but can usually be registered and a return receipt may be obtained without special charge. Parcels cannot be sent C. O. D. In addition to the regular postage a **"transit charge"**—and in a few instances a **"delivery charge"**—may be charged for certain countries. Upon request the post office will issue free of charge a certificate of mailing for each parcel. Duplicates may be obtained for 1 cent each. These certificates may prove useful for purposes of record and to be sent to the addressee as a notice that the parcel was mailed on a certain date.

ADVANTAGES AND DISADVANTAGES OF FOREIGN PARCEL POST.—The international parcel post may be used for the sending of orders of small bulk. Usually the customs formalities in clearing parcel post packages are simple and the services of a customs broker, in other cases almost indispensable,

are almost never required. The objection that parcels cannot be insured by the post office may be overcome by taking out insurance with a private company. The fact that the parcel post reaches almost every nook and corner of the world makes this method of shipping efficient. The principal disadvantages are the limitations upon the weight and size of the package and the relatively high cost of shipping.

CONSIGNEES' MAIL.—It is a common custom for shippers or banks to forward the documents relating to a shipment by the steamship which carries the goods. In this way the documents are certain to arrive at the same time as the goods. Such "consignees' mail" or mail relating to the cargo may be sent by the carrying vessel without postage stamps affixed.

The Freight Forwarder

FUNCTIONS.—The selection of shipping routes, the preparing of shipping documents and other technical details related to the handling of ocean freight may be placed in the hands of specialists. The freight forwarder is such a specialist. He maintains offices in the interior and at the seaboard and has his own representatives or correspondents in many foreign ports. He is in constant touch with railroad and steamship services and can give information regarding routes and rates and can select the best available service. After he receives the necessary information from the shipper, the technical details of preparing documents to satisfy the consular and steamship company's requirements may be left to him.

The seaboard office may often save the shipper trouble and expense by **reconditioning the goods** before delivery to the steamship company, so that a clean bill of lading may be issued, or in breaking up shipments at the port of entry so that the separate packages may be remarked and reshipped.

By **combining small shipments** of various shippers the forwarder is often able to quote better rates and give better service than the shippers could obtain for themselves. In such combination shipments the forwarder takes out the ordinary bill of lading covering the entire shipment and issues his own bills of lading for the various parts of the shipment. Such freight **forwarder's bills of lading** are usually not accepted as collateral by the banks. In case of large shipments the forwarder takes out individual steamship bills of lading.

Although interior shippers will make more general use of freight forwarders than merchants at the seaboard, the special facilities and services which the forwarders have developed appeal to seaboard shippers as well. Shipments **"freight collect"** or **"cash plus charges"** may be made through these agents. Some forwarders perform banking functions. They discount drafts drawn upon the consignees, although most of these are immediately rediscounted with the banks.

PROCEDURE IN MAKING SHIPMENTS THROUGH FREIGHT FORWARDERS.—A shipper from an interior point may send his goods to a forwarding agent at the seaboard and forward by mail the railroad bill of lading and an "advice of shipment" or "shipping instructions" prepared on blanks supplied by the forwarder, or he may consign them to the forwarding department of the steamship company. Most steamship companies now maintain such a department. The facilities offered by these departments are practically the same as those of the regular forwarding agents. In making use of the **steamship company's forwarding department** the shipper is assured the best possible

service the company can render, but he sacrifices the advantage of a choice between carriers which the independent forwarder can exercise.

CHARGES OF FREIGHT FORWARDERS.—The charges of a freight forwarder will consist of a **variety of small fees.** Some of these charges may seem out of proportion to the services rendered. Usually no fault is found with the charge for the cartage or insurance, but the charge for the preparing of the bill of lading is one of those which are sometimes questioned. The amount of work involved in handling the various documents of an ordinary shipment and the certainty that all the documents have been prepared in conformity with all requirements amply justify the usual fee.

The freight forwarder finds his principal source of revenue in the difference between the freight charges paid by the shipper and those paid to the carrier. But even here the shipper is usually the gainer, for, especially on small shipments, he could not have secured any more favorable rates and might have been obliged to pay more.

Where the freight forwarder is instructed to **collect his charges from the importer,** it is good policy for the exporter to request his customer to send him a report of the charges made. There is no other way in which the exporter can know with certainty what the importer has been obliged to pay. Although the importer may undertake to pay the charges it is part of the exporter's function to see to it that these charges remain within the limits of reason and fairness.

Foreign Trade Agents

THE EXPORT COMMISSION HOUSE.—The export commission house is principally the **purchasing agent of the foreign importer.** These purchases may be made according to detailed instructions indicating the sources of supply, or a commission house may be left free to exercise its judgment.

The manufacturer who sells to an export commission firm usually receives **cash upon delivery** of the goods into the hands of the commission house, or extends **the usual domestic terms.** The export commission house attends to all the details of shipping and insurance and passes these charges on to its principals. The house receives a commission which varies with the size of the order, being small for a large order but as high as 5% or more on small orders. The reason for this sliding scale is that there is almost as much work connected with a small order as with a large order and if the same commission were charged the returns on small orders would be insufficient.

Some commission houses also buy on their own account and sell abroad through their own branch houses. Strictly speaking when so doing they act as export merchants or shipping merchants.

As far as the manufacturer is concerned dealing with export commission houses and export merchants does not differ materially from dealing with other domestic firms.

THE MANUFACTURERS' EXPORT AGENT.—The export agent undertakes to sell in foreign markets the goods, usually produced by several manufacturers. The agent in this way takes the place of the export department or export manager. He is paid on a commission basis by the manufacturers who employ him. The advantages are found mainly in the saving resulting from the fact that where there are no sales there are no expenses. The disadvantage lies in the lack of personal interest of the agent in the manufacturing concerns. Sales are his sole object. He must make his returns quickly for he never knows

when the manufacturers may decide to dispense with him and begin to handle exports direct.

THE FOREIGN AGENT.—Although the **selecting of a foreign agent** properly belongs in the sales department, the conditions of the agency contract determine the financial relations between the agent and the exporter and should claim the attention of the financial manager. The same institutions which furnish credit reports may be called upon to suggest reliable firms as representatives in the foreign field. Moreover, the Bureau of Foreign and Domestic Commerce and the United States consuls abroad may give aid. Although not allowed to give credit information they are permitted to aid exporters in obtaining adequate representation. After investigation of the credit standing, and above all of the ability and general reputation for business judgment in the community in which he resides, the agent is appointed and the agency contract is drawn up.

CONTRACT WITH FOREIGN AGENT.—The items which will usually be included in the contract are as follows:

1. **Whether the agent is to be an exclusive agent** or whether other agents may be appointed. It is obvious that only a man of the highest integrity should receive an exclusive agency, for the exporter's success or failure in the market in question is wholly linked to the individual in such contracts. It is also necessary to state clearly what products the agent is to sell so that if at any time in the future the line of the manufacturer is expanded he may be free to decide whether to place the new products in the hands of the agent or to appoint a new agent for them.

2. **The territory is sharply defined.** The territory should not be larger than the agent can successfully develop with the funds at his command.

3. **The duration of the contract.** Ordinarily this should not exceed, say, 5 years.

4. **How the contract is to be renewed.** Renewal will usually take place automatically unless notice is served by either party at an agreed period in advance.

5. **How the contract is terminated.** (a) **By notice.** 6 months' notice before the expiration of the five year period may be required. (b) **By default.** The failure of the agent to sell an agreed quantity of goods will usually give the exporter the right to terminate the contract if he so desires.

6. **How the commission is to be calculated and paid.** (a) The **most logical basis** is the f.o.b. price or cost price at the factory. C.i.f. prices do not form a good basis because they contain items of cost from which the seller does not derive a profit and can therefore not logically pay a commission to others.

(b) The commission will **usually be calculated in percentages.** In highly competitive lines an agreement is sometimes made by which the agent receives a commission over a minimum price and a share in the over price which he is able to obtain.

(c) The **commission should not be considered earned until the goods have been accepted and paid for.** Payment may be made to the agent before that time but in that case the commission will be considered only in the nature of an advance to be repaid or charged against future commissions in case the purchaser fails to honor the draft.

(d) It may be agreed that the earned commission will be paid by bankers draft or that the agent may draw upon the exporter. **Settlement** may take place monthly or quarterly, depending upon the rate of turnover, the cost of selling, and the time required for filling orders.

(e) In the case of an exclusive agent it is customary to pay a commission

on all orders received from his territory whether they have passed through his office or not. In the latter case, the commission is often smaller than on orders received through the agent.

7. **How the price is to be quoted** and whether subject to change with or without notice.

8. **The terms of sale.**

9. Whether the agent is permitted to sell outside his own territory.

10. Whether **the agent may sell other and competing products.** This will depend upon the products and upon the market. The sales possibilities must justify the agent's undivided attention if he is to exclude all other products. Although the handling of competing products may often interfere with the best sales effort, goods which differ sufficiently to open up the possibility of customers' preferences or which in a way supplement each other so as to form a more complete line in price or quality may frequently be successfully handled side by side. The foreign buyers often prefer to deal with the agent who handles the largest line.

11. **In how far the exporter will assist the agent in selling expenses. Advertising expenses are frequently shared.** The contract may call for a definite annual expenditure in which exporter and agent share in a given proportion. The amount to be spent in advertising may be an agreed percentage of the total sales. It is a good policy not to allow the agent any advertising allowance unless the copy is submitted to the home office for approval.

12. **The exporter retains the right to pass upon the credit standing** of the purchasers unless the agent guarantees the credits.

13. **The contract cannot be assigned** to another without the consent of the exporter.

14. **The contract should include a statement indicating the law under which the contract is to be interpreted.**

Although an export firm may have a standard form of agency contract it will usually be necessary to exercise judgment in adapting the contract to a specific market and to the individual agent.

Traveling Salesmen Abroad

EXPENSES OF MANUFACTURER'S SALESMEN ABROAD.—The expenses of the foreign salesman will include besides the customary railroad and steamer fares and hotel bills much larger items for tips than would be allowed in the United States. At least 10% must be added to the hotel bill for tips to the headwaiter who usually presents the bills. In some countries this 10% is added to the bill by the hotel clerk. But in addition it is necessary to tip the head porter, the chambermaids, the elevator boys and pages. There usually is no escape from these extra expenses.

Another appreciable item of expense is the fee for a visé upon the passport demanded by most of the countries of Europe at the present time. To this must be added a possible fee for a license permitting the salesman to sell his goods and make contracts and also import duties on samples and advertising matter.

FUNDS FOR DAILY EXPENSE.—There are several ways in which the commercial traveler may be provided with funds for his daily expenses.

Cash.—The salesman may be given a definite sum of money to carry with him. This is both risky and wasteful. It is always an invitation to robbers to carry large sums of money, and the money carried by the traveler is not earning

any interest. The amount of ready cash should be cut down to the lowest sum practicable.

Drafts.—Safety may be obtained by purchasing drafts upon foreign financial concerns. These may be of different kinds. **An ordinary draft** of moderate size may be carried to be cashed when needed. The advantage is found in safety. The banks abroad will pay only upon a satisfactory identification. The disadvantages are that the money is tied up for a long unproductive period; that it is necessary to determine rather accurately beforehand the amount of money needed in any one town or country, for the drafts can be cashed only at the bank upon which they are drawn. Identification is not always easy and often almost impossible. Though it is possible to send drafts to the salesman when and as needed, this may leave him waiting for the arrival of the draft and it will still be difficult to obtain identification.

American Express checks or American Bankers Association checks may be bought before departure. These are drafts of small denominations drawn upon the European offices of the issuing institutions. The fact that these checks are payable at a large number of institutions in any country of the world, that they are accepted by banks, hotels and restaurants in payment of bills, and that identification is easily accomplished by placing a signature upon the instrument to correspond with the signature placed on the check at the time of purchase, makes this method of carrying funds very convenient. But only pocket money should be carried in this way, to be relied upon in an emergency. This method is too expensive for larger sums. It requires a tying up of funds and the checks are not always acceptable to merchants. Large sums should not be carried this way.

Travelers' or Circular Letters of Credit.—A travelers' or circular letter of credit is the most ideal way of carrying large sums. This letter of credit is no more than a draft drawn by the issuing bank upon all its correspondents abroad. Identification is usually accomplished by means of an **"identification booklet"** in which the signature of the rightful holder and the number of the letter of credit are recorded, and sometimes a photograph, and in which is also given a complete list of correspondent banks. The paying banks make such payments within the total limit of the letter of credit as the holder demands and endorse the amounts thus paid upon the back of the letter.

Besides safety and ease of identification the circular letter of credit offers the possibility of avoiding the tying up of a large sum of money for a long period. The importer's bank will sell a letter of credit outright for a definite sum or will issue such a letter of credit outright for a definite sum or will issue such a letter of credit with the understanding that the exporter's account will be charged with the sums taken up by the salesman as the return drafts of the paying banks arrive at the issuing bank.

THE FOREIGN EXCHANGE RISK.—It is impossible to avoid wholly the risk of foreign exchange fluctuations in the financing of salesmen by the means of the circular letter of credit. The letter of credit may read in dollars or in foreign currencies but in either case the risk is present. When purchasing a letter of credit from the bank the exporter must decide in what currency the letter will be made out. In case he expects the value of foreign currency to decline he will do well to have the letter made out in dollars. He will reap the full benefit of any increase in the value of the dollar. On the other hand should conditions indicate a probable increase in the value of the foreign currency then it is to his advantage to have the credit established in the foreign currency

while it is yet cheap. This choice exists only where the letter of credit is paid for before departure.

OTHER EQUIPMENT OF THE SALESMAN.—Besides the passport and the letter of credit the salesman should be provided with a document which will enable him to prove that he is actually representing the firm and preferably also with a letter of the exporter's bank or of the local chamber of commerce testifying to the reliability of his firm. The exporter should never forget that however well known his firm's name may be in the United States the foreign merchants are very likely not aware of its existence and may sometimes hold back because they know nothing of the firm nor of the salesman soliciting their orders.

The salesman who carries valuable samples should also be provided with **certificates of origin** so that he may obtain the most favorable treatment for his samples from the foreign custom officials. Most countries allow samples to enter free or allow a refund of duties paid upon re-exportation. The difficulties and delays of obtaining the refund will often make it advisable to make no attempt to obtain it.

Customs Requirements

DOCUMENTS REQUIRED.—The foreign office of the American importer or the foreign exporter must prepare the following documents.

Export Declaration.—This is a permit, license or certificate to satisfy the customs authorities of the foreign country.

Consular Invoices.—These are to satisfy the American customs requirements. Every shipment valued in excess of $100 must be accompanied by a consular invoice. These are prepared in triplicate and must contain a correct and detailed statement of the merchandise and of its value in the currency paid. The shipping charges, bounties, or drawbacks are to be separately listed. The invoices must be presented to a consul and sworn to in his presence.

There are different kinds of consular invoices; for goods purchased by the importer; goods not purchased by the importer, and returned American goods. It is important that the invoice should list the articles contained in each container under the number of the package and show the proper identification marks on the invoice.

The **value of the goods** is given in the currency of the country where they were purchased. This value is translated into dollars by the customs officers in the port of importation. They use as their basis for translating the values published by the Secretary of the Treasury on the first day of January, April, July and October, and also the value appearing on the "certificate of the value of currency" which the exporter may have obtained from the United States consul when the goods were shipped and which is attached as a rider to the invoice. By the value of the goods is understood the price of the goods when offered for sale in the usual wholesale quantities packed ready to ship on the date of the consular invoice.

The **three copies of the invoice** are marked "original," "duplicate," and "triplicate." The original is retained by the consul, the duplicate is given to the shipper, the triplicate is forwarded to the collector of customs in the port of destination. The duplicate is then sent by the shipper to the importer.

Special Documents.—Special documents must be prepared for **shipments of food and drug products.** The "declaration of shipper of food and drug

products" is intended to secure the statement from the shipper that the products conform to the health and pure food laws of the country. In shipping hides, hair, seeds, plants, and other animal and vegetable products it is necessary to obtain other documents which state that the goods in question are free from disease or have been disinfected under supervision of the consul.

INSTRUCTIONS TO SHIPPERS.—The importer should give the shipper the necessary instructions so that these documents may be prepared correctly and may not give cause for difficulties and fines. An invoice can show only one destination, but goods originating in different consular districts may be assembled under one invoice. As many goods as go by one steamer should preferably be listed on one invoice. The less documents there are the less danger of their becoming lost, the smaller the consular fees ($2.50 is charged per invoice) and the smaller the fees to be paid in the port of entry.

All Items of Expense Must be Separately Listed.—All items of expense must be separately listed, for ocean freight, insurance, cartage, inland freight, commissions, and brokerage are "non-dutiable" charges.

Description of Goods.—In describing the goods the terms should be as clear as possible and preferably both American and foreign terms should be used.

Goods on Consignment.—Goods sent on consignment cannot be listed on the same invoice with goods purchased by the importer.

Packing Goods.—The shipper should also be instructed how to pack the goods if the goods are to be shipped inland or to be broken up into different lots.

Customs Procedure

NOTICE OF ARRIVAL.—When the goods arrive in the United States the importer or his agent at the seaboard receives notice of the arrival from the steamship office. In order to avoid delays on valuable and rush shipments the shipper may cable advice of shipment giving the name of the vessel. The importer may then ascertain from the steamship company or from the newspapers when the vessel is due to arrive.

CUSTOMS ENTRY.—Every shipment whether dutiable or not must be "entered." This is accomplished by the preparation of a customs entry upon forms provided by the customs service. There are more than twenty different entries. The importer must decide what he will do with the goods and select the proper form of entry. The most commonly used entries are:

Preliminary Entry (P. E.).—This is used for perishable goods and other articles. This special permit allows for inspection and release as soon as discharged but formal entry must be made later.

Appraisement and Informal Entry (A. & I. E.).—This is used for shipments under $100 the exact value of which is unknown because no invoice was produced. The value as arrived at by the appraisal is made the basis for the formal entry.

Informal Entry (I. E.).—For all the goods free of duty; where the duty amounts to less than $100 and for returned American goods.

Consumption Entry (C. E.).—This is the most generally used entry. It is used for goods which the importer wishes to have released immediately upon payment of duty.

Warehouse Entry (Wh. E.).—This is an entry for dutiable goods to be placed in a bonded warehouse, payment of duty being postponed.

There are many variations of this type of entry: **warehouse and transportation entry (Wh. & T.)**; **immediate transportation entry (I. T.)** for the shipment of goods in bonds from the port of entry to another customs district in the United States; **transportation and exportation entry (T. & E.)** for goods to be re-exported after transportation in bond to another port; **exportation entry (Ex.)** for goods to be immediately re-exported; **bonded manufacturing warehouse entry (B. M. Wh.)** for goods to be used in the manufacturing in bond of goods intended for export.

Once an entry is filed changes cannot usually be made. The entry may be made in the owner's name or in the name of the customs broker employed by him. Before the entry is made out the figures appearing in the consular invoice must be checked up. If the importer knows that the invoice values do not correspond to the foreign market values he must be certain to enter the foreign market values in the entry. Any misstatement, intentional or otherwise, will cause the importer trouble and will result in a fine.

IMPORT TARIFF.—The importer must determine under what **classification** in the tariff the goods are located and must calculate the duty. The entry contains the number of the consular invoice, lists **dutiable and non-dutiable values,** the latter surrounded by a circle to prevent them from being included in the total, and shows the net amount on which the duty is to be calculated. The importer also prepares a **"summary of entered value, examination and appraisement,"** which is pasted to the face of the consular invoice. Five copies of the entry are filled out.

BOND FOR MISSING DOCUMENTS.—In case no consular invoice is available the application blank printed on the back of the consumption entry is filled out and a bond must be produced known as a **"bond for missing documents."**

CERTIFICATE OF BILL OF LADING.—A "certificate of bill of lading" must be procured for the original copy which must be filed with the United States customs house and the importer must secure the release of the goods from the carrier by the certificate which states that the original is in the customs house file.

BOND WHEN ORIGINAL BILL OF LADING IS NOT PRODUCED.—A separate bond for double the value of the goods must be produced if the original bill of lading is not available, for the customs service regards this document as evidence of the right of the owner to clear the goods.

BOND FOR PAYMENT OF DUTIES.—Before presenting the entry to the customs officials the importer must procure a bond to protect the government against non-payment of duties due on final liquidation. The "consumption entry bond" covers all these requirements with the exception of the bill of lading bond.

ADVANTAGES OF TERM BOND.—When the importer has a "term bond," his entries may be charged against the term bond. The term bond covers all importations entered within a period of one year.

DOCUMENTS NOTARIZED.—It is now necessary to have the various documents notarized. Importers make such frequent use of a notary that many of them have one of their employees authorized to act as a notary.

PROPER ARRANGEMENT OF DOCUMENTS.—The documents are now arranged in proper order and a certified check for the duty is attached to them. All together in proper order the following documents are sent to the customs house:

1. Certified check
2. Copy of entry and declarations
3. Bonds
4. Certificate for bill of lading
5. Consumption entry permit
6. Consular invoice
7. Bill of lading
8. Consumption entry (four copies)

THE CUSTOMS APPRAISAL.—The goods are taken from the dock to the appraiser's warehouse when the examination cannot take place on the dock. The appraisers are provided by the customs entry division with the copy of the consular invoice and entry. The examiners determine the value and classification and send this information to the customs liquidation department. Here the duties are calculated, the importer is notified of the release of the goods from store. He pays the additional duties, if any, or receives a refund, if any, and orders his goods removed from the appraiser's storehouse.

In case tariff rate, classification, or amount of duties seem incorrect to the importer he may file a protest with the collector of customs. The protests are reviewed by the Board of General Appraisers. Appeal from their decision may be made to the U. S. Court of Customs Appeals and another appeal may be filed with the U. S. Supreme Court in all cases involving a constitutional interpretation.

Penalties are incurred when the appraiser finds the value of the goods understated, and if the value as set by the appraiser is 100% more than the value as declared by the importer, the entry is considered fraudulent and the goods are seized and criminal prosecution may result.

THE IMPORTATIONS IN BOND.—Duties paid on goods unsold represent an appreciable investment and interest loss. It may for this reason prove at times more economical to postpone payment of the duties until the goods have been sold or until the opportunity to sell them seems to have arrived. Many goods, especially holiday goods, are more readily sold if delivery can be guaranteed within a few days. Such goods may be imported in bond. It may also be that it may prove better to re-export the goods. When such goods are in the country in bond re-exportation does not involve any special problem or expense.

BONDED WAREHOUSES.—The United States customs regulations provide for the establishing of bonded warehouses.

Entry to Bonded Warehouses.—The importer after filling out the proper warehouse entry must produce a warehouse bond, for double the amount of the estimated duties. This bond guarantees to the government payment of duties and the performance on the part of the importer of all necessary acts.

The customs inspectors determine the duty before the goods are permitted to be placed in the warehouse. The importer now files three copies of the **"warehouse permit,"** and after receiving one copy properly signed, he can have the goods removed from the custody of the customs service and transported by "bonded truck" to the indicated warehouse. Here the goods may remain for no more than three years.

Withdrawal from Bonded Warehouse for Entry.—When the importer decides to withdraw the goods for sale in the United States the duty must be paid and he would proceed as follows:

He prepares five copies of the "withdrawal for consumption entry" and files these with the customs house together with the permit for warehouse and a certified check for the amount of the duty. The goods are then allowed to be removed from the warehouse and the warehouse bond is released.

Withdrawal from Bonded Warehouse for Re-export.—Should the importer decide to re-export the goods he then files a "warehouse withdrawal for ex-

portation entry" and he must then produce a bond for double the amount of the duty which bond is released only after the shipper has produced a properly filled in Landing Certificate which proves to the customs officials that the goods were actually landed on a foreign shore.

THE DRAWBACK.—When goods upon which import duties have been paid are again exported a **refund of 99%** of the duties paid may be obtained under certain conditions. A "drawback entry" must be filed and the usual export declaration.

THE CUSTOMS BROKERS.—The great complexity of the customs formalities and the risks involved in making even small and unintentional misstatements make the clearing of goods through the American customs the work of a specialist. Few importers can afford to train a man for this service, and most of them depend for their customs work entirely upon the customs broker.

The out of town importer is under no great handicap in not maintaining a seaboard office, for the customs broker when fully instructed by him can attend to all technical matters. The charges of these brokers are small. Entries are charged for at a flat rate of $5 and the cost of bonds is usually 50 cents per $1,000 with a minimum charge of $1.50 or $2. Special charges are made for the collecting of claims, usually on a percentage basis.

Most freight forwarders combine a customs brokerage business with their forwarding work.

SECTION 16

FOREIGN EXCHANGE AND FINANCING

Preliminary Considerations

DEFINITION.—Foreign exchange has been defined as an international means of payment; it is a system whereby **money is exchanged between countries** in payment of obligations. An adequate understanding of foreign exchange operations presupposes a knowledge of the theory of money and of monetary standards. A brief survey of this field is therefore appropriate as an introduction to the more detailed considerations of actual operations in foreign exchange.

MONEY AND THE GOLD STANDARD.—Money is merely a **medium of exchange and a standard** by which the value of commodities is measured. Therefore, money itself is a commodity. During the early stages of economic development various commodities in their turn served as a means of exchange. But in the course of time gold and silver have come to supplant all other commodities in this respect and are today the general standards of values. With the exception of China and Persia, practically all the nations of the world are now on the gold basis, at least in theory. Under a complete gold standard exchanges are always effected in gold, directly or indirectly. But this does not mean that gold itself actually changes hands in all such transactions. In fact, very little gold circulates. Based upon confidence and convenience there has grown up a custom of exchanging, instead of gold, demand obligations redeemable in gold, issued as a general rule by governments or banks. Demand obligations of various sorts form the principal circulating medium under modern monetary standards.

Money may, therefore, be divided into **two general classes:**

1. Standard money (gold, under the gold standard).
2. Representative or fiduciary money, redeemable in standard money at a fixed rate represented by its face value.

Between countries on the same basis, the standard money of either, according to its weight and fineness, will ultimately discharge an obligation in the other. This is true because standard money may be melted down and recoined; and because, under normal conditions, its bullion value remains substantially equal to its mint price. On the other hand, fiduciary money is not finally exportable. It may be temporarily exported but it must ultimately return to the country of its origin in order to realize full face value. Excepting some silver coins, fiduciary money generally possesses a face value that is out of all proportion to its commodity value; the commodity value of paper money is practically nil.

The following table relates to the standard money of several prominent countries:

Country	Monetary Unit	Fine Gold Content in Grams	* Par of Exchange with United States
United States	Dollar	1.50463	.....
Great Britain	Pound	7.3223	$4.8665
France	Franc	.29032	.1930
Belgium	"	.29032	.1930
Switzerland	"	.29032	.1930
Italy	Lira	.29032	.1930
Germany	Mark	.35842	.2382
Holland	Florin	.60479	.4020

* Par of exchange between any two of the above mentioned countries may readily be ascertained by making a comparison of the fine gold content of their respective monetary units.

Table giving values of foreign coins in United States currency is given in Section 2, Mathematics of Finance.

Foreign Exchange in Theory

PAYMENTS MADE BY TRANSFERS OF BANK DEPOSITS.—As already noted, the **principal circulating medium** in a gold standard country is representative money, that is, claims upon gold rather than gold itself. This is true also in the field of foreign exchange. Money payment in foreign exchange means deliveries of gold at a given time and place. However, comparatively little actual gold is transferred and this only under certain conditions which will be discussed later under "Specie Points and Shipments." Exchanges are usually effected in **claims upon gold** at such times and places as will satisfy the obligations to be discharged.

For example, an American importer buys from a British exporter merchandise valued at £1000. The obligation of the American importer is to pay to the British exporter, presumably in London, £1000 in gold. The importer can discharge his obligation by shipping actual gold. But such a procedure would be most unusual. As in domestic payments, the common practice is to make the payment with a claim upon gold. The importer will accordingly exchange a claim on New York gold (a check, generally, drawn upon his New York bank) for a claim upon London gold; perhaps a banker's sight draft drawn against the latter's London bank balance, a cable transfer or a time draft, depending upon the nature of the debt. We may say, therefore, that payments in foreign exchange are generally made by **transfers of bank balances** in different countries.

SOURCES OF SUPPLY AND DEMAND.—The principal sources of exchange supply and demand may be classified in general under the following headings:

1. Commercial transactions (including hereunder trade, traffic and travel).
2. Banking transactions.
3. Extraordinary governmental transactions. (This type is very rare.)

The classification which follows is based upon data appearing in Whitaker's "Foreign Exchange."

Nature of Transaction	Supply of Exchange	Demand for Exchange
Commercial Transactions, including Trade, Traffic and Travel		
Commerce in Merchandising.	Drafts against exports drawn upon (consignee, or bank, under letter of credit).	Drafts to pay for imports, remitted to shipper or applied against indebtedness under letter of credit.
Commerce in Securities, Government or Private.	Drafts against sales of securities abroad. Interest and dividend drafts received by domestic holders of foreign securities.	Drafts to pay for securities bought abroad. Drafts to pay interest and dividends to foreign holders of domestic securities.
Investments Other than Purchase of Securities.	Drafts remitted by foreigners, proceeds to be invested here. Drafts against profits on our foreign investments.	Drafts to cover our investments abroad. Drafts to send abroad profits on foreigners' investments here.
The Carrying Trade.	Drafts to recover charges owed our ships by foreigners. Drafts sold to cover expenses of foreign ships in our ports.	Drafts to pay freight obligations to foreign ships. Drafts to pay expenses of our ships abroad.
Miscellaneous Brokers' and Agents' Services.	Drafts to recover brokerage, commission and insurance charges due to us.	Drafts to pay brokerage commission and insurance charges which we owe.
Foreign Travel and Emigration.	Drafts on their home funds by foreigners here.	Drafts to cover expenses of our travelers abroad. Remittances to native land by immigrants.
Banking Transactions		
Banking Transactions governed primarily by relative rates of discount—as borrowing and lending.	Drafts sold to secure funds borrowed abroad. Drafts sold to reduce balances abroad or to transfer funds repaid on account of previous loans made abroad by us.	Drafts bought to repay funds borrowed abroad by us. Drafts bought to increase our foreign balance.
Arbitrage Transactions.	Exchange offered for sale as part of an arbitrage transaction.	Exchange bought as part of an arbitrage transaction.
Gold Shipments.	Exchange for sale against gold export.	Exchange bought to cover gold import.
Speculation.	Offerings due to speculation.	Speculation demand.
Extraordinary Governmental Transactions		
War Indemnities, Purchase of Territory, etc. (as Philippine indemnity, purchase of Panama Canal, etc.).	Exchange offered against governmental credits abroad.	Demand for exchange to meet governmental debts abroad.

TYPES OF EXCHANGE.—The types of exchange may be classified as to the element of (1) **security** or (2) **time.** Classified as to security the following types appear:

1. Bankers' drafts drawn on bankers (including cable transfers).
2. Merchants' drafts on bankers.
3. Merchants' drafts on merchants.

The first two types mentioned offer greater security and are more common than the third type.

APPLICATION FOR CABLE OR MAIL TRANSFER

Guaranty Trust Company of New York

FIG. 1. Order for Cable Transfer

Exchange as to time may be classified as follows:

1. Spot cable transfers.
2. Spot demand or sight exchange.
3. Spot time or long exchange.

Each of these three types may be made the subject of future contracts.

SPOT CABLE TRANSFERS.—A cable transfer results from a cable message between banks located in different countries whereby one bank, at the request of the other, pays a certain specified sum to a designated payee. The obvious advantage of the cable transfer is its speed. It is used in cases of emergency or upon short notice. Cable transfers are sold at the **cable rates of exchange** plus the charge for sending the message. Banks have their own code for such transfers together with a series of test words so that the paying bank can confirm the source of the cablegram.

Spot cables on London sold in New York from day to day mean that dollars will be paid in New York the day following the purchase for sterling to be paid in London upon arrival of the cable. Due to the difference in time, payment will probably be made in London the following day. In case of delayed payment in London due to cable difficulties, the buyer of the cable transfer is usually **allowed interest** at the London deposit rate. However, in making a contract to transfer funds by cable the bank usually insists on inserting a **disclaimer clause** under which it is protected from delays beyond its control and under which exchange rates are based for future adjustment. (Fig. 1.)

SPOT DEMAND EXCHANGE.—This type of exchange is usually a **draft payable on demand,** drawn by a bank in the United States on its branch or correspondent in a foreign country. An importer of goods may send such a check to a foreign exporter who is named in the check as payee. The payee cashes the check at his bank as he would an ordinary check.

A buyer of a sight draft on London, if his credit standing is satisfactory, usually receives the draft on the day before the sailing of the first mail steamer for England. He pays for the draft on the day following unless it be Sunday or a holiday, in which case the buyer pays on the day when the draft is delivered to him. Sterling will be paid in London upon arrival and presentation of the draft. Interest is charged by the London drawee against the account of the New York drawer from date of receipt of the advice covering the draft, whether the draft has been presented or not. As a precaution against loss in transmittal, drafts are customarily **forwarded in duplicate** by different steamers, the first to arrive being presented for payment.

FOREIGN CHECKS.—Banker's draft drawn in sterling is illustrated in Fig. 2.

BANK DRAFTS IN DOLLARS.—Since the close of the World War exchange on various foreign countries has fluctuated violently at times. Many concerns having financial transactions with such countries, particularly those with depreciated currencies, have desired to retain the value of their remittances in dollars until a favorable opportunity was presented to convert their dollar drafts into the currency of those countries. Bankers have accordingly made arrangements to draw such drafts in dollars on banks in practically all European countries and to some extent in Asia and South America.

Although dollar drafts are expressed in dollars, **payment is not necessarily made in dollars,** but may be made in the currency of the foreign country, at the current rate of exchange for buying drafts on New York on the day the draft is presented for payment.

SPOT LONG OR TIME EXCHANGE.—A purchaser of a **sight time bill** on London (one maturing a specified number of days after sight) will exchange dollars in New York upon the same basis as in sight exchange. Sterling will be paid in London upon maturity of the bill. But if the exchange be a **date bill** (maturing a specified number of days after date) the purchaser will exchange dollars against delivery of the exchange. Sterling will be paid in London at the bill's maturity.

FUTURE CONTRACTS.—As stated by the Guaranty Trust Company of New York, experience has demonstrated that when the American importer buys merchandise abroad in terms of any foreign currency, it is generally advisable for him to enter into a future contract with a bank to purchase the amount of foreign exchange involved, whether the shipment is to be prompt or is not to be made for some weeks or months to come. In this way, the cost price of the merchandise can be immediately ascertained and the importer is protected against a possible rise in the exchange which, if left uncovered,

FIG. 3b. Used in Connection with a Future Purchase of Exchange

might wipe out all of his anticipated profit on the transaction. It is equally true that if the exchange in question were left open and a fall occurred, the importer might stand to make additional profit.

Similarly, the American exporter who sells goods abroad in terms of foreign money should protect the transaction by a future contract with a bank. In negotiating with a foreign buyer he must necessarily ascertain the rate of exchange **in order to fix a profitable selling price** and when the sale is concluded and the exchange covered as of that day, he is assured of being able to take his profit at the time of shipment.

Future contracts can be fixed for delivery at any time during a given month at buyer's or seller's option respectively, but a closer rate can generally be quoted when delivery during the first or the second half of a particular month is specified. In the case of imports the importer has to approximate not only the arrival of the merchandise but the additional time it will take him to sell and deliver it and to receive payment.

It should be pointed out that future exchange is often at a premium over spot exchange, the premium becoming larger in direct proportion to the length of time involved. This premium, accordingly, must be allowed for in quoting a price for goods to be exported, or in bidding for goods to be imported.

The future contract is a definite agreement between the buyer or seller of exchange and the bank, and both parties have to live up to it. The contract conveys no option privilege except that it may be extended or shortened by mutual agreement. The bank takes no speculative position in entering into such contracts as it undertakes only those which can be immediately covered by an offsetting sale or purchase. The rates for forward exchange vary according to supply and demand as in the case of spot exchange. That there is a regular market for forward exchange is clearly demonstrated in the foregoing paragraphs. The operations of the importer seeking to protect himself by a forward purchase, and of the exporter seeking to protect himself by a forward sale, are concluded through the banks, which thus act as a clearing house for these operations.

Forms used in contracts of future sales of exchange are shown in Figs. 3a and b.

When such contracts are entered into between responsible parties for the purchase or sale of exchange for future delivery, no funds are transferred until the delivery date contemplated in the contract. Upon maturity of the contracts the purchase or sale becomes a spot transaction at rates previously agreed upon; both local and foreign deliveries are made according to the particular type of exchange involved.

QUOTATIONS AND SPREADS.—In a market free from abnormal influences the rates for the various types of exchange tend to **rise or fall together** with a certain spread existing between sight exchange and cables and a different spread between sight and long exchange. In other words, sight exchange may be regarded as the basis upon which are calculated the rates for cables and long exchange. The following table shows the quotations ruling in the New York market for various European exchanges on a day in May 1925.

The table shows that the rate for demand sterling was $4.85¼ per pound and that for sterling cables was $4.85½. This premium of ¼ cent per pound sterling is due to the fact that a payment can ordinarily be effected by cable about **6 days sooner** than by sight draft. The expense of cabling is not considered in fixing the rate; the premium is due solely to interest, which is figured at the London rate for deposits because a remittance by cable will create a deposit balance available in London usually for 6 days during which a sight draft would

Canadian Exchange—New York funds in Montreal, par; Montreal funds in New York, par.

* Since the date of this table Austria's monetary unit has been changed from the crown to the schilling. The price of one schilling represents the value of 10,000 crowns. The following quotations appeared in the New York Times on August 20, 1925:

AUSTRIA (Par 14.125 cents per schilling)				
Demand	14.125	14.125	14.125	.0014⅛
Cables	14.125	14.125	14.125	.0014⅛

be in transit. Using the sight rate of $4.85¼ and a deposit rate of 3% in London, the approximate **cable rate** is computed as follows:

Rate for sight exchange on London	$4.8525
Add: interest for 6 days at 3% (approximately 1/20% of $4.85+)	.002425
Approximate cable rate	$4.854925

For purposes of quotation this figure is $4.85½.

The buyer of a banker's 90-day bill can secure the equivalent of a sight draft by arranging to discount the bill upon arrival and acceptance in London. Assuming the acceptance fee to be 1/8% and the British stamp tax to be 1/20%, the **rate for 90-day bills** is computed as follows:

Rate for sight exchange on London		$4.8525
Deduct: Interest for 93 days (including 3 days' grace) at 4⅝%, the "for arrival" discount rate.	$.056	
⅛%, acceptance fee	.006	
1/20%, stamp tax	.0024	.0644
Approximate parity for 90-day bill		$4.7881

TENDENCY TOWARD EQUIVALENCE.—Exchange rates under normal conditions exhibit the following major tendencies:

1. In a given center the rates for various types of exchange incline to equivalence, considering the factors of **interest and expense.**
2. The rates in two or more centers incline to equivalence for each type of exchange. This is largely due to the **practice of arbitrage** whereby disparities are taken advantage of by shrewd traders for the purpose of profit.

ARBITRAGE.—In discussing arbitrage, assume the following conditions:

Cables in New York.....$4.85 per £ sterling
Cables in London.....$4.84 per £ sterling

From the above figures it is apparent that a New York banker can sell a cable for $4,840 in London and realize £1,000.

At the same time he can sell in the New York market a cable for this £1,000 and realize $4,850. His **gross profit** on the transaction is $10 from which cable and other expenses must be deducted. On the other hand, he can sell a cable for £1,000 in the New York market for $4,850 and with the proceeds buy in the London market £1,002-1-5. In the one case the profit is realized in dollars, in the other in sterling.

A hypothetical case of arbitrage between three centers will now be considered:

Cables in New York and London.....$4.85 per £ sterling
Cables in New York on Amsterdam.....$.40 per florin
Cables in Amsterdam on London ...fl.11.20 per £ sterling

$1,000 invested in New York in a cable on Amsterdam will purchase fl. 2,500. This sum in Amsterdam will purchase a cable on London for £208⅓. This amount in sterling in London will purchase a cable on New York for $1,010.42 leaving a profit of $10.42 before considering expenses. Cable expenses in this particular case would exceed the possible profit; but the illustration serves to demonstrate the manner in which arbitrage regulates rates in various active centers.

EXCHANGE AND DEPRECIATED CURRENCY.—In a gold standard country the currency begins to depreciate when future gold takes the place of

pot gold. As in the recent case of Great Britain and the United States, before he former's return to the complete gold standard exchange continued to mean n exchange of bank deposits in two different financial centers. But, whereas ank deposits in New York signified **spot gold,** bank deposits in London signified **uture gold.** A London purchase of dollars was equivalent to an exchange of ondon gold in the future, however indefinite, for spot New York gold. A ondon purchase of actual gold (obtainable then only at a premium over urrency) represented an exchange of currency for spot London gold. The ovement of specie was therefore determined by the price of gold in London nd the rate of exchange. The **par of exchange** no longer remained at $4.8665 ut had assumed a fluctuating character and might be defined as the spot cable ate which represented the **price of gold in the London market.** This fluctuating ar varied as the premium on gold varied in London, in other words as the urrency depreciated.

SILVER EXCHANGE.—It has already been stated that China and Persia here to the silver standard. In a silver standard country gold is merely a ommodity. In a gold standard country silver is a commodity. In exchanges etween gold and silver standard countries there are consequently **two pars.** he **gold par** varies with the price of gold in the silver standard country; the **ver par** varies with the price of silver in the gold standard country. Each r has its specie points. As a result, therefore, three separate markets tend universal parity: (1) gold in a silver standard country; (2) silver in a gold andard country; (3) exchange market in each country.

Practical Operations

FOREIGN EXCHANGE MARKETS.—Exchange on practically all active arkets is bought and sold in the leading financial centers of the world. In is country New York is the center of the foreign exchange market. Some ew York, Chicago and Boston banks maintain **branches in foreign centers** facilitate the transaction of their business. Checking and time deposit counts may be opened with these branches through the intermediary of the ad offices. Additional deposits can be made through the offices of such nks in this country. The foreign branch accounts may be maintained **in ollars** or **in the foreign currency.** Sometimes favorable interest is allowed on lances above certain amounts.

Other banks, notably private bankers and foreign exchange bankers, have merous **foreign correspondents** with whom they work in closest harmony, gaging in varied transactions for both individual and joint account. Sub- quent discussion of the subject will be from the angle of the foreign exchange nker with numerous correspondents.

NEW YORK MARKET.—The New York foreign exchange market centers out the foreign exchange bankers and brokers and the foreign exchange partments of the leading banks and trust companies. The **foreign exchange oker,** as his name implies, acts as an intermediary between the leading bankers d also between the bankers and others who have occasion to enter the ex- ange market. Many **interior banks** buy and sell foreign exchange but usually so in close co-operation with their New York correspondents, since such al banks do not, as a rule, maintain balances abroad. Foreign exchange arkets exist in some other cities, Boston and New Orleans, for example, t their local activities are circumscribed and few transactions of importance e consummated independently of the New York market. But it must not

be inferred that the foreign exchange bankers make the market. It is true that banking transactions exercise considerable influence on the market and that arbitrage transactions can accomplish much in regulating rates. The market is affected, however, by forces which are much deeper, that is, by fundamental conditions in world trade, which tend to provide the available supply of exchange and the demand therefor in all world markets.

FUNCTIONS OF FOREIGN EXCHANGE BANKER.—The functions of the foreign exchange banker fall into **two general classes:**

1. Purchase and sale of exchange.
2. Commercial activities such as,
   - Financing of imports and exports through commercial letters of credit issued in New York or by correspondents abroad.
   - Issue of travelers' letters of credit, travelers' checks and delegations.
   - Collection of drafts.

The **compensation** realized on the first class of transactions usually results from the margin between the prices at which the banker buys and sells the same type of exchange; in arbitrage between different types of exchange or between different markets; and from the purchase of commercial bills (inferior to bankers' bills in point of security) and the subsequent sale of bankers' bills at a higher rate. Compensation from transactions in the second class comes from commissions charged clients for the specific service performed, commissions which may sometimes be shared with a foreign correspondent.

Many of the larger city banks are now in a position to give their customers a complete foreign banking service. In order to round out this service such banks maintain special departments chiefly to expand foreign trade and to attend to the shipment of merchandise to and from foreign countries. These are essentially service departments and contribute to the income of the banks only indirectly by acting as feeders to other departments.

REQUISITES OF A COMPLETE FOREIGN BANKING SERVICE.—In order that a bank may be of greatest assistance in its foreign service to its customers, it must possess the following:

1. Knowledge of Foreign Banking Methods and the Needs of its Customers.—The bank should know the various methods used in handling the particular foreign banking problems which will best serve the needs of the customer. The customer in turn should be so specific in making his needs known to the bank that it may readily select the best available method of satisfying them.

2. Bank Personnel.—The bank should have a well trained and experienced personnel to handle all the details of complicated foreign transactions.

3. Sources of Information.—The bank should have reliable sources of information in foreign countries regarding political, economic and financial conditions as well as credit information relating to the more important business concerns of those countries.

The financial manager should assure himself that a bank is adequately equipped, or has a correspondent which is equipped, to render good service. There is a wide variance in the class of foreign service rendered by different banks.

SERVICE.—In addition to the functions enumerated above, banks which have a foreign banking service also perform the following:

Safe-keeping foreign securities.
Gathering and compiling foreign trade information.

Acting as agents for foreign governments, corporations, firms and individuals.

CREDIT INFORMATION.—Some of the larger banks maintain **foreign credit departments** through which they can furnish their clients information concerning the credit standing of foreign firms and also supply valuable information concerning commercial conditions prevailing in various countries.

TRANSLATIONS.—Business men receiving letters and various kinds of documents in foreign languages may receive authentic translations through banks which carry on an extensive foreign service. A nominal charge is usually made for such translations. In one large New York bank with an extensive foreign service there are 15 men and women in the **translation department** who read, write and speak 27 languages and who translate over a quarter million letters annually.

BANK BALANCES MAINTAINED.—In order to function as a buyer and seller of exchange the banker maintains balances not only in New York but also in all the leading financial centers; in some cases, more than one balance is maintained in the same foreign center. **A purchase of exchange** in New York means a depletion of a New York balance which is offset by a corresponding increase in a foreign balance when the exchange is remitted to the foreign center for discount or collection. **A sale of exchange** increases the New York balance but brings about a corresponding decrease in a balance abroad. Experience and business conditions generally determine the proper amounts at which the various balances shall be maintained. It is, therefore, the usual practice to offset a purchase of exchange by a sale of a similar amount, although not necessarily of the same type, either as to time or security. For example, a purchase of a 90-day commercial bill may be offset by the sale of banker's bills of various maturities, sight drafts or cables. It is even possible that a spot purchase may be offset by a future contract. The type of exchange sold will depend altogether upon the prevailing market demand and the possibilities of profit.

OPEN MARKET TRADES.—If the banker is unable to strike an approximate balance in his trades with clients he may even up his position by open market trades with other banks which are in a similar situation. Open market trading of this character usually is conducted through brokers and in round sums. It is also carried on in order to arbitrage between different types of exchange.

LENDING SURPLUS FUNDS.—It sometimes happens that the banker's various balances exceed the immediate or prospective needs of his business. He has funds available for lending and a choice of markets in which to lend. Where shall the loan be made? If the rate for futures on London is at parity with spot, regardless of any difference in interest rates, the loan will yield the same in either market provided no speculative position is taken in exchange and any transfer of funds is accompanied by an offsetting sale or purchase of futures. On the other hand, if **futures** are **above parity for spot** it will be more advantageous to lend in London. Conversely, when **futures** are **below spot,** the funds can be loaned to better advantage in the New York market. These facts may be illustrated by the following:

New York interest rate	5%
London interest rate	4%
Spot cables in New York and London	$4.85
Future cables (90 days) in New York and London	$4.862

Illustration: Assume that a New York banker has £1,000 in London, which he wants to lend for 90 days, either there or in New York, depending upon which will net him the higher return. Loaned in London at 4%, the principal and interest will amount to £1,010 at the end of the period. Suppose, however, the loan was made in New York instead. The sale of £1,000 of spot cables at the prevailing spot rate of $4.85 would make the principal amount of the loan $4,850, which immediately loaned out for 90 days at the rate of 5% would increase the sum to $4,910.63 at the end of that period. If now he succeeded, as is assumed, in buying a 90-day future cable in London for £1,010 at the rate of $4.862 when he made the loan, he would pay on this future contract at the end of the 90-day period exactly the amount of his New York dollar loan plus interest, or $4,910.63 (£1,010 × 4.862). Thus it is evident that under the conditions assumed as regards interest rates in London and New York, and rates for future and spot sterling cables, he will fare equally well whether he makes his loan in London or in New York, since in either case he will have at the end of the loan period £1,010 in London. In those circumstances, therefore, the future cable rate of $4.862 is said to be at parity with the spot cable rate of 4.85. If, however, the future rate were actually quoted in the market above this parity rate of $4.862, it would obviously pay the banker to make the loan in London. On the other hand, if the market were quoted below the parity rate, it would pay the banker to make his loan in New York. This example makes it clear that the position of the parity rate for future cables depends on the relation of the New York and London interest rates.

The **future parity of spot** may be computed by the following formula:

$$\frac{\text{Spot rate} + \text{interest at New York rate}}{100\% + \text{interest at London rate}} = \text{future parity of spot.}$$

Substituting in this formula the figures used in the foregoing illustration the future parity is ascertained in the following manner:

$$\frac{\$4.85 + (1\frac{1}{4}\% \times \$4.85)}{100\% + 1\%} = \frac{\$4.91063}{101\%} = \$4.862, \text{ approximately.}$$

TRANSACTIONS PRODUCING SUPPLY OF EXCHANGE.—Transactions producing the available supply of foreign exchange and the demand therefor center about the commercial activities of the foreign exchange banker and may be classified as follows:

1. Financing imports and exports without letters of credit.
2. Financing imports and exports by commercial letters of credit issued in New York or issued abroad through correspondents.
3. Issue of travelers' letters of credit.
4. Collection of drafts.

Were it not for the demands of foreign trade there would be comparatively little business in foreign exchange. The exporter may sell abroad on the basis of dollars or foreign currency; the importer may purchase abroad on either basis. In any case a foreign trade transaction will produce a supply of exchange or a demand for exchange in some market. The cumulative effect of such foreign trade is the **fundamental basis of the foreign exchange market.**

Financing Foreign Trade

The methods of financing foreign shipments may be divided into two groups. The first group includes the methods by which the exporting firm undertakes

to carry the foreign customer. The second group includes the methods which the importers may use to carry the financial burden.

ADVANTAGES AND DISADVANTAGES OF EXPORTER FINANCING BUYER.—The advantages are found in the greater ease of selling and the possibility of granting extensions if payment proves difficult. But these are usually more than offset by the danger that the purchaser, in time of stress, may give first attention to the local or more easily pressed foreign obligations, or may make claims based upon supposed imperfections in the merchandise which would make collection even by legal process extremely difficult and expensive.

FINANCING FOREIGN TRADE WITHOUT LETTERS OF CREDIT.—The various risks attendant upon purely domestic business are increased manifold when foreign trade is undertaken. This is due to the distance between buyers and sellers and to the fact that they are operating in different countries, under different customs and using different languages. Frequently it is difficult to determine the credit risk adequately. Funds must necessarily be tied up for a considerable period. Under these circumstances the foreign exchange banker can be of much assistance. Acting, with his correspondents, as an **intermediary between buyer and seller** he is often in a position to calculate the risk with accuracy and to finance shipments to the advantage of all concerned.

Illustration: An exporter in New York receives an inquiry from a London importer requesting quotations on merchandise of a certain sort. The **quotations** may contemplate delivery to the railroad at an interior point, delivery in New York f. o. b. (free on board steamer), f. a. s. (free alongside steamer), c. i. f. British port (cost, insurance and freight), or c. and f. (cost and freight to British port). In case of a sale f. o. b. New York, the merchandise will be delivered on board the steamer when title will pass to the buyer. If the sale be f. a. s. New York, the merchandise will be delivered alongside the steamer, at which point title will pass to the buyer. But the more common quotations are c. i. f. and c. and f.

However, the shipper assumes no risk beyond the steamer even if the sale be made according to these latter quotations. He acts merely as agent for the buyer in arranging for freight and insurance and takes these charges into consideration in calculating his selling price. Under normal conditions the **c. i. f. quotation** is the **usual procedure,** although the c. and f. quotation is often requested, particularly when the buyer is in a position to effect insurance more cheaply than the seller. Assuming a c. i. f. quotation, the seller will calculate the price (including his profit) at which he is prepared to sell at the point of embarkation. He will add the freight and insurance charges and interest on the entire outlay during the period when his funds will be outstanding according to the credit arrangements effected. If the quotation be made in dollars the seller will not need to consider the exchange risk. If the quotation is to be made in foreign currency, the question of foreign exchange rates must not be overlooked; otherwise an apparent profit may turn out to be a serious loss.

CREDIT ARRANGEMENTS.—The credit arrangements may take any one of several forms:

1. Open account.
2. Documents against acceptance (D/A)
   - (a) Acceptance by buyer.
   - (b) Acceptance by domestic bank.
   - (c) Acceptance by foreign bank.

3. Documents against payment (D/P)
   (a) Payment by buyer.
   (b) Payment by domestic bank.
   (c) Payment by foreign bank.

OPEN ACCOUNTS.—Open credit selling in foreign trade is **not the customary practice,** although such transactions do take place where conditions permit or require them. This method cannot, as a rule, be recommended for export shipments except to nearby countries like Canada or Cuba, the commercial conditions of which can be closely watched, and even then only to firms of the highest standing with which the exporter has had favorable credit experience in the past. Where the export house has efficient local representatives, who can attend to adjustments and can keep a constant check upon credit conditions, shipments on open account may be made where competition forces a liberal credit policy. In all other cases this method is not to be recommended.

TIME AND METHODS OF PAYMENT OF OPEN FOREIGN ACCOUNTS.—Payment under open account may be arranged for each individual shipment a definite period after shipment or it may be agreed that the settlement is to be made at certain times of the year, say at the end of each quarter, for all shipments made during the period. In either case the **usual procedure** is that the seller draws a draft upon the buyer and presents this draft for collection to his bank. Another method of settlement would be for the buyer to purchase a bank draft upon the exporter's city and to mail this to him upon the agreed date. In order to have the use of the funds as long as possible, the buyer may wait until the day before the funds must be in the hands of the exporter and buy a cable transfer.

Periodic settlement was at one time quite commonly made between German commission houses and their over-sea connections. Usually the agreement was reciprocal and applied to all shipments in either direction. Interest was then charged by both houses on unpaid balances and final settlements were made by drafts against the debit balances.

DRAFTS ON IMPORTER.—The absence of documentary evidence of indebtedness makes open account shipments unusually hazardous. The importer, however, may agree to produce such evidence by the **acceptance of a draft** drawn upon him by the exporter for the full amount of invoice and incidental expenses and with a due date corresponding to the original conditions of sale.

This draft, forwarded to him direct with the shipping documents which transfer ownership of the goods to him, is then returned, after acceptance, to the exporter. The acceptance of the importer has the effect of establishing his financial obligation and makes the draft readily negotiable. Although the exporter extends credit, he may at any time before maturity date of the draft obtain funds by **discounting this acceptance** at his bank.

DISADVANTAGE OF DRAFT ON IMPORTER.—The disadvantage of this method is that, as in the case of shipments on open account, the exporter makes a shipment **without any tangible security.** Until the draft is returned to him accepted, or until his bank has secured acceptance of the draft for him he has no more security than under an open account. Therefore, the majority of foreign trade transactions are consummated on a basis of documents against acceptance, or documents against payment. In either case the foreign exchange banker may play an important rôle.

DOCUMENTS AGAINST ACCEPTANCE.—In order to make certain that the possession of the goods will not pass to the customer until he has acknowl-

edged his financial obligations, the exporter may present the draft to his bank with request to secure the acceptance of the customer and to withhold the documents, which would enable the customer to obtain the goods from the transportation company, until the acceptance has been secured. This is called **"Documents against Acceptance,"** often abbreviated in correspondence as D/A.

This condition, in no way affects the length of the credit period, nor the fact that the exporter must carry the customer until the maturity of the draft. It merely provides **security for the exporter.**

ACCEPTANCE GENERALLY DEFERRED UNTIL GOODS ARE RECEIVED.—Where the distance which separates exporter and importer is great and the likelihood exists that the documents traveling by mail steamer may reach their destination long before the goods arrive, it is customary to allow the customer to **postpone his acceptance** until the goods have arrived. The purpose of this is that it might prove exceedingly embarrassing to the importer to face the payment of a draft for goods which never arrived. Acceptance of the draft would leave him no means of escape.

DOCUMENTS ATTACHED TO DRAFT.—In the case of documents against acceptance the documents in question will be, generally:

1. Bill of lading—clean or foul, straight or order.
2. Insurance certificate or policy.
3. Commercial invoice.
4. Consular invoice.
5. Miscellaneous papers.
   (a) Certificate of origin.
   (b) Anti-dumping certificate.
   (c) Inspection certificate.

BILLS OF LADING.—In the case assumed the bill of lading will be issued by the steamship company and serve as a receipt for the goods delivered to it in apparent good order. Such a bill of lading is known as **"clean."** However, if the goods are not in good order appropriate notation will be made upon the bill of lading, which thereupon becomes **"foul."** Naturally, such a document is to be avoided, if possible. It will lead to considerable difficulty, especially if the shipment is being financed by a banker under a letter of credit. A bill of lading made out direct to the consignee is known as a **"straight"** bill of lading and is **non-negotiable.** If it is made out to the order of anyone else it is an **"order"** bill of lading and becomes **negotiable** by indorsement. This form of bill of lading is imperative if the merchandise is to serve as collateral security. Usually the steamship company signs two or more copies of an order bill of lading, these constituting a **"full set"**; and a full set must be attached to a draft drawn against the shipment since any one of the set may become negotiable.

Under certain conditions it is important that the difference be noted between the **usual bill of lading,** which merely acknowledges that the goods have been received on the dock for shipment, and the "on board" bill of lading which acknowledges actual receipt on board vessel. This distinction may assume importance when the contract specifies shipment by a certain date.

INSURANCE.—When merchandise is offered as **collateral** the banker demands that it be adequately protected by insurance. The fact that ocean carriers in the bill of lading disclaim all responsibility for damage or loss except in the case of gross negligence in equipping and navigating the vessel makes it imperative to seek protection under an insurance contract. One of the docu-

ments attached to the draft is therefore an insurance policy or insurance certificate.

The conditions of sale or of a letter of credit may specify either an **insurance certificate or a policy;** or the contract may be non-committal beyond requiring adequate cover. If a policy be called for under a letter of credit it will be well to secure a policy; otherwise there may be annoying delays in securing banking accommodation because of the technical departure from the letter of the contract. Ordinarily an exporter carries an **open policy** for a limited amount covering the classes of merchandise which he ships and running for a certain period. In such a case he merely notifies the insurance company or the broker on the policy and furnishes the necessary data covering the particular shipment, such as the merchandise, amount of cover, vessel, sailing date, destination, etc.; whereupon the insurance company will furnish an insurance certificate, in duplicate, covering the shipment in question. If the certificate be made out **to the order of the shipper** it becomes **negotiable** upon endorsement, unless it is issued to the shipper upon instructions from the buyer who is effecting the insurance abroad. In the latter case the certificate is not negotiable.

INSURANCE CERTIFICATE UNDER OPEN POLICY MOST USUAL.—The certificate issued under an open policy is now more generally used than the individual policy. Some question has arisen concerning the certificate because it does not contain the terms of the parent policy. In some British courts the objection against the certificate has been sustained on these grounds. In the United States the certificate is generally accepted by the bank as evidence of adequate insurance.

BLANKET INSURANCE POLICY.—This policy describes the time and geographical limits, the kind of goods covered, and establishes a maximum limit to be covered at any one time. Under this policy it is not necessary to notify the insurer of each individual shipment.

INSURANCE BROKERS COVER NOTES OR BINDERS.—The brokers' cover note, sometimes used instead of a policy or as a temporary measure, came into use during the war, but is not looked upon as good tender by the bank.

COMMERCIAL INVOICES.—The commercial invoice must accompany the documentary draft. From it the purchaser can see how far the seller has lived up to the conditions of the **sales contract** and the banker may obtain information concerning the character and value of the merchandise offered as collateral.

Such an invoice is a much more detailed affair than the usual domestic invoice. It discloses the terms of shipment, terms of payment, name and route of steamer and amount of marine insurance. It also identifies each package as to size, weight, contents, markings and value in the currency in which payment is to be made. **Two copies** of this invoice must accompany the draft drawn against a shipment. In a few cases the commercial invoice must be **certified by a consul.**

CONSULAR INVOICE.—A consular invoice is also required in case of exports to certain countries, notably in Latin America. The forms may usually be obtained from the consul of the country of destination for a small fee. The **number of copies** which must be prepared differs but is usually three.

Such an invoice is worded in the language of the consignee's country, contains all the information in a commercial invoice and **must be certified** in this country by the foreign consul in question. For this certification another fee is charged which is sometimes quite high and in a few countries is calculated on the basis

of a percentage of the value of the goods. When this latter method is used the consular fee really has the **effect of an additional ad valorem duty** and this fee should be taken into account when quoting prices c. i. f. a foreign port, unless the buyer has agreed to pay the consular fees.

Frequently a copy of the commercial invoice or bill of lading may be certified and fulfil the same purpose. Consular fees are included in the statement of charges.

CONSULAR INVOICE BASIS OF IMPORT DUTIES.—The consular invoice is used as a basis for the calculation of the import duties. Any misstatement of the value or the character of the goods will be interpreted to have been intended as an attempt at undervaluation and may lead to difficulties for the consignee and possibly fines or even confiscation.

INVOICE SHOULD FOLLOW INSTRUCTIONS OF BUYER.—It is therefore not only necessary to be accurate and truthful in the making out of the invoices but the exporter will do well in following conscientiously any instructions he may receive from his customer. The customer is usually in a better position to know the requirements of his customs service than the exporter and the exporter will protect himself against claims on account of extra customs charges.

CERTIFICATE OF ORIGIN.—In many countries the rates of duty charged vary with the country of origin of the goods. France for example has a tariff composed of two sets of duties. The **general tariff** contains the rates applicable to all countries with which France has no special agreement. **The minimum tariff** applies to certain articles originating in countries with which France has made commercial treaties. In order to establish unquestionably the country of origin of the goods many countries require a "certificate of origin." This certificate must be attached to the document presented to the bank.

A consular invoice obviates the necessity for a "certificate of origin," but one or the other is necessary to give the importer the benefit of lower import duties under the "favored nation" clause of a treaty. A certificate merely states that the merchandise has been produced in a certain country and is entitled to existing preferential rates. A supporting oath must be made before a notary public and the certificate must be viséd by the foreign consul.

ANTI-DUMPING CERTIFICATE.—Certain countries, Canada, for example, have so-called "anti-dumping" regulations to prevent flooding of their markets with foreign merchandise brought in at prices regardless of cost of production. Under such circumstances a sworn anti-dumping certificate is required, reciting that the selling price is not less than the prevailing market price in the country of origin.

INSPECTION CERTIFICATE.—An inspection certificate may be required by the sales contract. Such a document is required as a rule in making shipments of butter, meat, and other foodstuffs. Documents of this character are issued by the Chicago Board of Trade, the New York Produce Exchange and similar organizations and **certify,** after inspection, to the **quality, quantity, character and condition of the merchandise** to be shipped. If the sales contract specifies an inspection certificate from a particular exchange, it will not be wise to substitute a certificate from some other exchange. Such technical irregularities occasionally cause much trouble and delay, especially in connection with a letter of credit.

HEALTH CERTIFICATES.—These certificates are often required for shipments of agricultural products. The certificate made out by the consul

declares that the goods are not infected but are produced where infection is not known to exist, or have been disinfected.

INSISTENCE OF BANKERS ON FULL SET OF DOCUMENTS.—Although the bank cannot and does not undertake to make any inspection of merchandise, the bank will insist that the exporter comply with all the conditions listed in the instructions received from the importer and that the various certificates be produced in proper form and indicate that the quality and quantity correspond to those in the instructions.

STATEMENT OF CHARGES.—Charges against a shipment, not included in the selling price but collectible from the consignee, are entered upon a separate record called a "Statement of Charges" and **added to the value of the shipment,** the resulting total to be paid by the buyer.

Commercial Long Bills

DRAFTS DRAWN AT TIME OF SHIPMENT.—Under normal foreign trade conditions the usual method of financing is through drafts drawn by the exporter at the time of shipment. Depending upon the **terms of credit** outlined in the sales contract these drafts may be either sight or time, in foreign or domestic currency and clean or documentary. A **sight draft** is payable upon presentation; if documents are attached for release upon payment it is known as a **documentary sight draft;** otherwise, it is a **clean sight draft.** The exporter has greater security when documents are attached to a bill, sight or time, because the importer cannot secure the documents and therefore the merchandise until he pays or accepts the draft. If a clean draft is used the importer can secure the merchandise upon arrival of the documents by mail and take care of the draft at his convenience, subject only to the pressure brought to bear upon him by the seller and the collecting bank.

A **time draft** is payable either at a specified future date or at a certain period after sight, usually the latter. It, also, may be either clean or documentary. An **exporter's time draft** will be forwarded, with or without documents attached, for the acceptance of the buyer. If the draft is of the documentary type, the documents will be released only upon the buyer's acceptance, or other satisfactory acceptance is arranged. If the draft be clean, the documents will have been forwarded by mail direct to the buyer and acceptance will be an independent act.

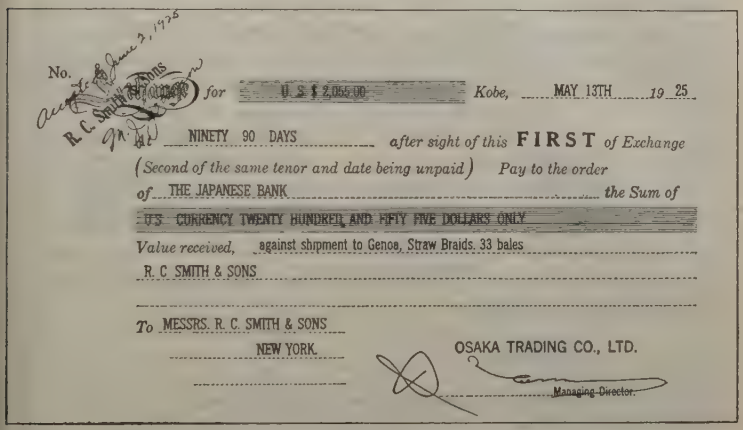
If the drafts are **drawn in dollars,** the exchange risk will rest with the buyer; if they are **drawn in the foreign currency** the risk will rest with the seller. Should the drafts be **drawn in the currency of a third country,** both the buyer and seller will be obliged to assume an exchange risk. It is, therefore, to the American seller's advantage to be able to make his price in dollars; but this can be done only in a seller's market. In a buyer's market the exporter will usually be required to quote his price in foreign currency. It is, therefore, essential that the seller understand foreign exchange if he is to conduct his foreign business effectively.

The majority of the bills of exchange arising from foreign business transactions are time drafts or **long bills** because the conditions of sale usually include a period of credit. The term "long bill" is applied to all drafts extending beyond 30 days.

The terms of sale will determine the **length of the credit period** and also the date from which the period must be counted. As already remarked, a time draft may be drawn at so many days after date, or may be drawn payable at

a definite date in the future. But neither of these forms are very common. The custom is rather to draw the bills at so many days after sight or after acceptance. It is also not unusual to include **"not until arrival of goods,"** so that the credit period begins to run from the date of arrival. In either case the actual length of the period during which the transaction must be financed by the exporter is considerably longer than the period stated in the bill.

A commercial time draft is illustrated in Fig. 4. ¶



No. 1975

for U. S. $ 2,055.00 Kobe, MAY 13TH 19 25

FIG. 4. Commercial Time Draft, with Acceptance

COLLECTING THROUGH THE BANK.—Once the exporter has drawn his draft he may **forward it for collection** or **sell** it to a foreign exchange bank. In the former case he must finance the transaction himself and wait for his returns; in the latter case neither the buyer nor the seller finances the shipment. The funds are furnished by the discount market. But since the draft must be sold with the exporter's endorsement, his contingent liability will exist until the draft is paid.

The **charges of the bank** for this service will consist of the commission for collection, the stamp tax and the postage. A stamp tax must be paid in most foreign countries when a bill of exchange is negotiated. The rate charged by the bank may vary from ⅛ of 1% to 2%.

DETAIL INSTRUCTIONS TO BANK NECESSARY.—The bank which undertakes this service must receive detailed instructions so that it may protect fully the interests of the drawer within the limits of the sales agreement (Fig. 5). In order to facilitate the giving of such instructions the banks have prepared printed slips which may be attached to the drafts to be collected and in which the drawer scratches out the instructions he wishes to have disregarded.

It is customary to notify the importer by letter that a draft has been drawn and will be presented through the exporter's bank. The character of the instructions actually given in each instance will be determined by the sales contract, the policy of the exporting concern, and the requirements of the moment. There are, however, certain points about which there must never be any misunderstanding between the bank and the drawer.

(Number)

New York, *January 3,* 19 *28*

THE ———— TRUST COMPANY OF NEW YORK,
140 Broadway, New York City

Dear Sirs:

We enclose ~~for collection~~ / as collateral for an advance the undermentioned draft with documents as enumerated. Instructions concerning the surrender of the documents attached to the draft will be found below

DRAFT		NUMBER	DOCUMENTS
No.	*6824*	*2*	Commercial Invoice
Date	*January 3, 1928*	*1*	Consular Invoice
Amount	*$13,429.41*	*3*	Bills of Lading
Tenor	*120 days date*	*2*	Insurance Certificate
Drawer	*Ourselves*	–	Certificate of Origin
Drawee	*Shanghai Trading Corporation*	–	Weight Certificate
City Where Payable	*Shanghai, China*	–	Declaration of Shipper

INSTRUCTIONS INDICATED BY "X"

☒ Documents against ~~Payment~~ / Acceptance

☒ Protest for Non-Payment / ~~Non-Acceptance~~

☐ Do not protest.

☒ Permit Drawee privilege inspecting merchandise before accepting draft.

☒ Hold for arrival of goods.

☒ Payable at collecting banks selling Check / ~~Cable~~ rate on New York on day of payment.

☐ Payable at Check rate on New York, remitting proceeds by cable, charges for our account.

☒ Interest to be collected at *6* % from date of issue until approximate arrival cover in New York.

☒ Allow Drawee interest at *6* % per annum for anticipated payment.

☒ All charges are for account of ~~Drawer~~ / Drawee

☒ Waive charges if refused by Drawee.

☐ In case of need refer to

Remarks: Should you designate "in case of need" give specific instructions concerning the authority extended

☒ In case of ~~Non-Acceptance~~ / Non-Payment advise immediately by ~~Mail~~ / Cable

☐ Special Instructions

Protest of items drawn on Colombia and Peru is waived.

It is understood and agreed that, having exercised due care in the selection of any correspondent to whom the above mentioned item may be sent for collection you shall not be responsible for any act, omission, default, suspension, insolvency or bankruptcy of any such correspondent or its sub-agent, or for any delay in remittance, loss in exchange or loss of said items or their proceeds during transmission or in the course of collection.

Yours truly,

FIG. 5. Instructions to Bank in Collecting Foreign Drafts

"IN CASE OF NEED" CLAUSE.—It must never be forgotten that the bank cannot exercise judgment in matters relating to the collection. The bank can only act upon specific instructions and should be extremely careful not to exceed the limits of these instructions. It is for this reason that in addition to careful instructions the name of a local representative is given whenever possible under the instructions "in case of need."

This local representative, who probably completed the sale, knows the policy of the concern and reference to him implies that he may be trusted by the bank to modify the original instructions to meet emergencies. It is, therefore, important that no "in case of need" reference be given to anyone in whose judgment and honesty the exporter does not have the utmost confidence. In order to forestall all possibilities of error, it is wise to draw up a detailed, limited power of attorney for these agents to cover matters of bills of exchange and to give the collecting bank a copy of this document.

LETTER OF DELEGATION.—At times, instead of drawing a sight draft and giving this to his bank for collection with documents attached, the exporter may prepare a letter of delegation. By this document, which does away with the drawing of a draft, the bank becomes the collection agent of the seller. The action of the bank will be determined by the instructions in the letter, but the exercise of judgment to meet difficult situations is reserved to the bank. The high stamp taxes levied upon foreign bills of exchange are thereby avoided and the seller is protected by the agreement on the part of the bank not to release the documents until all conditions have been fulfilled.

INSTRUCTIONS TO THE COLLECTING BANK.—First in importance, is the **disposition of the documents** which may be attached to the draft. The bank must know whether to hand these documents to the importer upon payment or to release them upon acceptance.

The next item in importance is whether the draft shall be presented **upon receipt or upon arrival of the goods.**

Whether **to protest** formally in case of non-payment or non-acceptance is another matter to be decided by the exporter. As a general rule it may be said that, except in case of very small bills, it will be better to protest and establish in this manner a clear case against the drawee facilitating any legal action which the importer may wish to take. On the other hand, a protested bill will usually mean a heavy expense and a customer lost forever. It is, therefore, a matter that must be carefully weighed, and where no local agent has been given power to act, it may often prove wise to leave the matter of protest to the judgment of the bank's representative.

It is also advisable to give certain definite instructions with respect to the **disposal of the goods** in case the draft is not honored. They may be returned, sold at auction, or turned over to the local representative. In order to avoid cable and warehouse expenses, the bank, in the absence of a responsible local representative of the exporter, should receive instructions to cover this contingency.

FINANCING THROUGH THE BANK.—The exporter who is not willing to allow his funds to remain tied up in foreign shipments longer than necessary may convert his draft into cash at the bank. The **bank charges interest** on the funds thus obtained. Where the exporter has ample funds, he may find it profitable to give the draft to the bank for collection and to realize the interest gain himself. He thereby gains the additional advantage that he has made no use of his bank credit and will be able to get more generous credit accommodation should a sudden emergency arise.

In some cases the bank will refuse to negotiate bills if economic or political conditions in the country of the drawee make collection uncertain. But generally speaking an export firm in good standing will find no difficulty in turning into cash a draft secured by the required documents.

The bank may **discount** (buy) the bill, **accept the bill as collateral** for a loan of less than the face value of the bill, or may allow the exporter to draw a long bill upon the bank which the bank will accept and thereby make easily negotiable in the market. The **usance** (period between date of issue and date of maturity) of this draft must be long enough so that the proceeds of the draft on the importer may be received in time to supply cover.

In any case the bank retains **recourse against the drawer,** no matter whether the draft is drawn payable to the drawer and endorsed by him to the bank or drawn payable to the bank. The credit risk rests as truly upon the exporter as if he had handed the draft to the banker for collection only.

The amount which exporters will be able to borrow upon their foreign drafts will differ according to circumstances. The bank looks to the **security** presented. This security consists of the financial responsibility of the drawer, the financial responsibility of the foreign customer, and the collateral behind the bill. The financial standing of the exporter will in every case be the most important factor.

The greatest risk for the banker lies in **discounting clean bills.** Such bills receive their security solely from the credit standing of the drawer and the drawee. **Documentary bills** which give the bank control over the documents representing actual merchandise shipped are, therefore, more easily discounted. The character of the merchandise determines its value as collateral. **Staple commodities** not subject to rapid deterioration are the most desirable. Such commodities can easily be disposed of should necessity arise. Manufactured articles requiring a special sales campaign and expert selling to be disposed of without loss, and **perishable goods** are obviously inferior collateral.

Where the credit standing of the exporter is not satisfactory, the bank may await cable notice of acceptance of the draft before making any loan. On the other hand the practice is not uncommon in Europe for the banks to arrange advances or to accept drafts on the basis of open account shipments. This is never done except for shippers of the highest credit standing.

LETTER OF HYPOTHECATION.—The draft will be made out either in favor of the bank or order, or may read **"to the order of ourselves."** In the latter case the endorsement of the exporter is necessary to make the instrument acceptable to the bank. The shipping documents will ordinarily be endorsed in blank or endorsed to the bank. In order to establish above dispute the legal right of the negotiating bank in the goods which the documents represent, it is customary to execute **a letter or certificate of hypothecation.** By means of this document the exporter declares:

1. That he will deliver to the bank all necessary documents.
2. That he will take out adequate insurance in the name of the bank, or that the bank may cover itself if the shipper fails to obtain satisfactory coverage. All losses not covered by the policy are to be paid by the exporter.
3. The bank is instructed under what conditions to deliver the documents to the buyer and is usually given the right to make partial delivery if circumstances make this desirable.
4. The exporter instructs the bank what action to take in case of non-

acceptance or non-payment and agrees to indemnify the bank for all costs and to pay the amount of the draft upon first notice of protest.

5. Without in any way releasing the exporter of his liability the bank is given wide power with respect to the disposal of the goods in case sale is necessary through failure on the part of the importer to live up to his obligations.
6. The bank reserves the right to call for additional collateral when there is any danger of a loss.

DETERMINING SELLING PRICE IN DOLLARS.—The manner in which the exporter determines his selling price and the amount for which his draft must be drawn, whether in dollars or foreign currency, will now be examined.

Illustration: Assume a sale c. i. f. Latin American port, of merchandise from which the exporter would be content to receive $10,000 in New York at the time of the sale. If the draft is to be drawn in dollars the exporter will make his computation as follows, after ascertaining freight and insurance charges, the bank rate for discounting this type of draft and bank collection charges:

Cash value of shipment in New York	$10,000.00
Freight to destination	1,450.00
Insurance	50.00
60 days' interest at 6% on face amount of draft	116.45
Collection charges, ¼% on face amount of draft	29.12
Face amount of draft	$11,645.57

It is assumed here that 60 days will elapse before funds collected will be returned to New York. The bank's charges in this case amount to 1¼% of the face amount of the draft; $11,500 therefore represents 98¾% of the amount for which the draft should be drawn.

DISCOUNTING DRAFT.—In accordance with previous arrangements the exporter will present a draft for this amount, in duplicate, with all necessary documents attached, to the bank which has agreed to discount it. The bank will discount the draft as outlined above and advance to the exporter $11,500, which represents the value of the merchandise to him plus freight and insurance charges incurred. However, the **exporter's contingent liability** as drawer and endorser will continue until the draft is paid by the drawee.

HANDLING OF DRAFT BY BANK.—The discounting bank will immediately **forward the draft,** with documents, to its appropriate Latin American correspondent for collection. Upon arrival at destination the draft will be presented to the buyer and the documents will be released upon payment, which may be effected in one of two ways. Either the drawee will be obliged to enter the exchange market and purchase sight dollar exchange equal to the face amount of the draft; or, if the draft contains the so-called **"exchange clause,"** the buyer will discharge his obligation by paying to the collecting bank an amount of local funds sufficient to buy, at the collecting bank's rate for the day, a sight draft on New York for the face amount of the bill. In the former case the Latin American correspondent remits the dollar draft direct to New York to reimburse the bank which has financed the shipment. In the latter case, transfer of the funds between the banks will usually be accomplished by bookkeeping entries only. If the time required for collection and remittance should exceed the estimated period of 60 days, the exporter will generally be required to meet the resulting interest loss.

DRAFTS DRAWN IN FOREIGN CURRENCY.—Assume that the same merchandise is to be sold in Great Britain at a **price fixed in sterling,** documents

against buyer's acceptance of a 60-day draft. For the sake of simplicity assume further that such a bill will be readily discountable in the London market. At what price must the sale be made in sterling? The exporter must first ascertain from the banker to whom he proposes to sell the bill the rate at which the draft is to be sold; and on the basis of this rate the draft will be drawn in sterling. As outlined in previous pages, the price for such a bill will be based on the rate for demand exchange and computed as follows:

Rate for sight exchange on London		$4.8525
Deduct:		
Interest for 63 days (including British customary 3 days' grace) at London discount rate to arrive	$.0374	
British stamp tax	.0024	
London bank's commission and New York bank's profit	.006	.0458
New York price for 60-day draft		$4.8067

A 60-day sterling draft drawn for the proper amount computed on the basis of the foregoing rate and sold under endorsement to the New York bank at the rate quoted, will net the exporter the desired amount in dollars. The seller delivers the draft in duplicate, with all necessary documents attached, to the buying bank.

BANK'S HANDLING OF DRAFT.—The New York bank now forwards the draft with documents to its London correspondent for acceptance and discount at the agreed rate. Upon acceptance of the draft the documents are released and the accepted bill becomes "clean." Following the bill's discount the net amount realized in sterling is added to the New York bank's supply of available sterling exchange. The New York bank may have already sold its own demand exchange for this amount as an offset. Or it may sell other types of exchange, depending upon market demands and other factors.

DOCUMENTS AGAINST PAYMENT.—The exporter may consider that he has done all that he is justified in doing if he undertakes to finance the transaction until the goods are delivered on the foreign shore. In this case he will demand payment upon presentation of the documents and will hand a sight draft with documents attached to his bank with instructions to collect this draft on the basis of "Documents against Payment" (D/P).

Here again he may instruct the bank to hold **for arrival of goods.** To insist upon payment on arrival of the documents, especially where it concerns shipments made from interior points on through bills of lading, would often result in a dissatisfied customer. Any delay, even that resulting from inefficiency and carelessness in routing on the part of the seller, will place a financial burden upon the importer who is forced to tie up his capital before the arrival of the goods.

PAYMENT ANTICIPATED.—In the case of a documentary payment bill it is customary to allow the buyer to **anticipate payment,** if he so desires, and upon retirement of the bill before its maturity to receive an **interest rebate** at a rate generally fixed in reference to prevailing market rates. Such bills are not readily discountable in the London market because their nominal maturity does not necessarily determine their date of payment. Hence, the New York bank which purchases them cannot sell its own demand exchange against them unless it secures loans in London; or the New York bank may market its own long bills on its London correspondent using these documentary payment bills as collateral security. Otherwise the purchasing bank must content

itself with selling exchange for future delivery or with investing in the bills until maturity.

METHODS OF REMITTANCE USED BY DRAWEE.—Depending upon credit arrangements effected, the exporter may draw upon the importer in dollars, in the importer's currency or in the currency of a third country. The importer may remit either by cable transfer, sight or time exchange. The form of remittance to be used will determine the period of the credit and therefore the amount of interest to be included in the draft. The longer the period, the greater the amount of the draft. But this difference is offset by the lesser rate at which the longer exchange can be purchased.

REMITTANCE BY SIGHT DRAFT.—Suppose the importer is to remit by purchase of a sight draft at the maturity of the bill drawn. If the bill is **drawn in dollars**, the importer may tender the collecting bank a dollar sight draft bought in the open market. If the exchange clause is included in the draft, the drawee must pay to the collecting bank in local currency a sum sufficient, at the bank's rate for the day, to purchase a dollar sight draft of the requisite amount. If the bill be drawn **in currency of a third country**, the importer must purchase a sight draft in such currency; or comply with the requirements of the exchange clause if the latter has been inserted in the draft. The collecting bank forwards the draft to New York or instructs the New York bank to charge its account for the proper amount.

REMITTANCE BY CABLE.—The importer may be required to remit by cable transfer. The **net cost** to the importer will be **the same** as though he were allowed to remit by sight or time exchange because the difference in the relative rates for the various types of exchange is offset by the difference in the amount for which the draft is drawn. Where cable transfer remittance is required, at maturity of the draft, the importer will purchase a cable transfer in the currency designated in the bill; or he will turn over the proper amount of local currency if the exchange clause governs.

REMITTANCE BY BANKER'S TIME BILL.—In some cases remittance is effected by a banker's time bill. Under such circumstances the importer may discharge his obligation at the maturity of the draft by tendering to the collecting bank a banker's time bill of the required tenor. The collecting bank will forward this bill to its correspondent, whereupon it will be presented for acceptance and subsequently discounted or held until maturity. The exchange clause may also be used in connection with this type of exchange.

BILLS DRAWN WITH INTEREST.—In the discussion so far it has been assumed that the drafts drawn by the exporter were non-interest bearing. However, in certain classes of trade with the far east it is customary to draw bills of exchange bearing interest at an agreed rate, generally 6%. In case of an interest-bearing draft the exporter draws only for the selling price of his merchandise plus expenses and usually receives the face amount of his draft upon its sale. The **amount of interest and collection charges** are added by the collecting bank and paid by the importer. The interest period is normally the time estimated to elapse from the date of the draft to the probable receipt of funds in New York or London, depending upon the currency used. If only a portion of such time is contemplated by the interest clause, the balance of the interest will already have been included in the face amount of the draft.

COLONIAL CLAUSE.—In trade with South Africa and Australasia, which use the pound sterling as their monetary unit, it is the custom to include in sterling drafts the following so-called "Colonial clause": "Payable with

exchange (British and Colonial stamps added) at the current rate in London for negotiating bills on the Colonies." The net effect of this clause is to make the bill **equivalent to sight exchange on London.** Accordingly, the exporter bases his selling price on the latter rate. At maturity of the bill, the importer meets it by paying not only its face amount in local sterling plus stamp taxes but also a further sum determined by the day's rate in London for negotiating such bills.

CASH WITH ORDER.—If the exporter refuses to carry his customer he may demand cash with order. Such terms are **exceptional** in foreign trade. The exporter receives his money before he has packed the goods, often before he has manufactured them. The importer not only finances the entire transaction but is paying his money without any security except the credit standing of the exporting firm. Should the order not be filled, or the goods be unduly delayed so as to arrive in a dull market, or be of inferior quality, or not according to the samples submitted, there remains no other way open for the importer than to bring legal action on the basis of the sales contract unless the exporter voluntarily makes adjustment. These terms are, therefore, wholly one sided and are not often used.

Where this method of selling is used the importer would probably purchase from his bank a draft upon the city of the exporter, upon New York, or if this meets with the seller's approval, upon London. The risk of changes in the foreign exchange rate is therefore added to the other expenses and risks of the importer.

FINANCING WITH LETTERS OF CREDIT.—The foregoing methods of financing foreign trade, excepting "cash with order," presuppose that the foreign buyer has a satisfactory credit rating and that the exporter either has sufficient capital to extend lengthy credits or can readily negotiate his drafts with a bank. If such is not the case it is very probable that the transactions will be completed by means of a commercial letter of credit. Here the foreign exchange banker performs another function. The buyer may secure a letter of credit from his own bank under which the exporter can draw his drafts; or, through his own bank, the importer may secure a letter of credit from a bank in this country against which the exporter may draw. The circumstances of the individual case will determine. In either case, a letter of credit arrangement will be greatly to the advantage of the seller. The credit of a bank will be substituted for that of the importer and the exporter will find a ready market for his drafts. In addition, a draft drawn on a bank will command a **higher price** than one drawn on a commercial house.

THE DURATION OF THE CREDIT.—Each letter of credit has an **expiration date.** In the absence of special instructions or amendments the bank will refuse to negotiate drafts after that date. The clause indicating the date of expiration is not always of the same form.

"Available until"; "draft under this credit must be drawn and negotiated prior to"; "bills of lading must be dated not later than ..... and drafts must be negotiated not later than ..... —" are only some of the many clauses which may be used.

The exporter must read carefully the terms of the credit in order to avoid surprises in the future. As a rule the date refers to the time when the draft and documents must be placed in the hands of the bank in the exporter's country.

CHARACTERISTICS OF COMMERCIAL LETTER OF CREDIT.—A letter of credit may be any one of **several types** but whatever the type will generally cover the following points:

LETTER OF CREDIT.

No. _____

_____ New York, _____

_____

_____

You are hereby authorized to value on

_____

at _____

for account of _____

for any sum or sums not exceeding in all _____

_____

for _____

merchandise to be shipped to _____

_____

The bills of lading to be issued to order

_____

and consular invoice and _____

bill of lading to be forwarded to _____

Insurance fully covering the merchandise to be effected by _____

_____ with loss made payable to _____

The shipments must be completed on or before _____

and the drafts drawn on or before _____

The drafts are to be advised to drawees and must be accompanied by

_____

and all the remaining bills of lading with abstract of invoice (which if attached to the drafts are to be surrendered against acceptance).

And we hereby agree with the drawers, endorsers and bona-fide holders of bills drawn in compliance with the terms of this credit, that the same shall be duly honored on presentation by above named drawees.

Drafts under this credit to contain the clause "drawn under credit No. _____ of _____ dated New York _____ and to be noted on the back hereof at the time of negotiation.

FIG. 6. Commercial Letter of Credit

1. It will embody the conditions of the credit arranged between buyer and seller and will enable the bank purchasing a draft drawn thereunder to ascertain if these conditions have been complied with.
2. It will authorize the exporter to draw upon the bank of issue or its correspondent and will contain the promise of that bank to honor drafts drawn thereunder in accordance with instructions and conditions agreed upon.

Before a letter of credit is issued **an agreement** is entered into between the importer and his bank covering the following points:

1. The buyer must agree to put the bank in funds a certain period in advance of the maturity of any draft drawn by the exporter under the credit. In addition, he must pay the bank's commission.
2. It is agreed that the bank is the owner of the merchandise and documents until the importer has met all of his obligations to the bank.
3. It is agreed that the bank shall have the right to demand additional security.
4. The agreement limits the bank's liability as to the validity of the drafts or documents and as to any mistakes by the exporter or the banks handling the drafts.

The form of the letter of credit usually appears upon the reverse side of the agreement. Figs. 6, 7, and 8 show the form of a typical letter of credit, an agreement to reimburse, and an application for a letter of credit.

COMMERCIAL LETTER OF CREDIT AGREEMENT

A. Banker & Co.,
New York City.

Dear Sirs:

In consideration of your issuing at our request your commercial Letter of Credit No. ..... (herein called The Credit) the terms of which appear on the reverse side hereof and are hereby approved by us, we hereby agree as follows:

1. (a) To provide you in New York not less than ..... days before maturity of drafts drawn under this Credit with United States gold coin at the rate of exchange fixed by you sufficient to meet payment of same at maturity; (b) in the case of sight drafts, to pay you upon demand United States gold coin sufficient to reimburse you; and (c) to pay you a commission at the rate of ..... of the amount of the Credit used, and all sundry charges and expenses paid or incurred by you in connection therewith, together with interest at ..... per annum where chargeable.

2. You may receive and accept as "Bills of Lading" under the Credit any documents issued or purporting to be issued by or on behalf of any carrier which acknowledge receipt of property for transportation, whatever may be the specific provisions of such documents. We hereby guarantee that all Bills of Lading, Invoices and/or other documents forwarded to ..... under the above Letter of Credit shall be genuine. We agree to keep the property adequately and satisfactorily covered by insurance to be effected by the seller or by us in companies satisfactory to you, and we hereby assign the policies or certificates of insurance covering the property, to you and agree upon demand to execute any necessary documents in order to make said assignment effective, and we agree to make the loss or adjustment, if any, payable to you at your option, and to furnish you if demanded, with evidence of acceptance by the insurers of such assignment.

3. The users of the Credit shall be deemed our agents and we assume all risks of their acts and/or omissions. Neither you nor your correspondents shall be responsible: for the existence, character, quality, quantity, condition, packing, value, or delivery of the property purporting to be represented by documents; for any difference in character, quality, quantity, condition or value of the property from that expressed in documents; for the validity, sufficiency, or genuineness of documents, even if such documents should in fact

prove to be in any or all respects invalid, insufficient, fraudulent or forged; for any breach of contract between the shippers or vendors and ourselves; for errors, losses, omissions, interruptions, mutilations or delays in the transmission of any messages or documents relative to this Credit, by mail, cable, telegraph, wireless or otherwise, whether or not they be in cipher; for any error, neglect, default, delay or omission of any of your correspondents or of any agency employed by you in connection with this Credit; nor for delay in giving or failure to give notice of arrival or any other notice.

4. We agree that in the event of any extension of the time of shipment or of the maturity, dating or time for presentation of drafts, acceptances or documents, or in the event of any other modification of the terms of credit, at our request, or in the event of any increase in the amount of the credit at our request, all the terms and conditions of this agreement shall be binding upon us with regard to the credit so increased or otherwise modified, to drafts, documents and property covered thereby, and to any action taken by you or your correspondents in accordance with such extension, increase or other modification.

5. We hereby recognize and admit your ownership in and unqualified right to the possession and disposal of all property shipped in connection with this Credit or in any way relative thereto or to the drafts drawn thereunder whether or not released to us on trust or bailee receipt, and we hereby vest you with the title to all of said property and to the Bills of Lading thereof, the documents of insurance thereon, and the whole of the proceeds thereof, until the payment to you of the Bills above referred to and of all sums that may be due or may become due to you from the undersigned on said Bills or otherwise, and upon our failure to carry out any term or condition of this agreement to be performed by us, or upon the filing of any petition in bankruptcy by or against us, or upon any application for the appointment of a receiver of our property, all our obligations to you howsoever arising shall be and become immediately due and payable at your option in United States gold coin without demand or notice, notwithstanding any credit or time allowed to us or contained in any instrument evidencing any of our obligations or otherwise, and you are hereby given authority immediately to sell or dispose of the whole or any part of said property solely at your discretion for your reimbursement as aforesaid, at public or private sale, at any time or times and at any place or places, upon such terms and conditions as you may deem proper, without demand or notice to us and without advertising, and to charge all your expenses in connection with said disposal of sale of said property against the proceeds of any such disposition or sale thereof, with the right upon your part in case of public sale thereof to purchase the same or any part thereof free from any right of redemption on our part, which right is hereby waived and released, and we agree to remain liable to you for any deficit which we agree to pay you on demand. The receipt by you or any of your correspondents at any time of other security of whatsoever nature, including cash, shall not be deemed a waiver of any of your rights or powers herein recognized.

6. If this agreement is signed by one individual, the terms "we," "our," "us," shall be read throughout as "I," "my," "me."

Very truly yours,

....

TYPES OF CREDITS.—The various types of credits may be classified as follows:

1. Revocable or irrevocable
2. Confirmed
3. Circular or specially advised
4. Negotiation or straight
5. Revolving

In the order of the security they offer, credits rank as follows:

1. The irrevocable—confirmed
2. The irrevocable—unconfirmed
3. The revocable—unconfirmed

Guaranty Trust Company of New York

APPLICATION FOR LETTER OF CREDIT

New York July 1, 1925.

Guaranty Trust Company of New York,
Foreign Department, Commercial Credits Div.,
New York City, N. Y.

Please issue an Irrevocable Letter of Credit and transmit same by ~~cable~~ mail

For account of ourselves

In favor of Guarani Mendoza & Co. Santos, Brazil.

Amount $26,000 Available by drafts at 90 days sight
(Sight, thirty, sixty, or ninety days)

against documents as follows:

Bills of Lading

Bills of Lading reading "Received for Shipment" or otherwise worded to same effect are acceptable against this credit.

Invoice

Consular Invoice

other documents { .

evidencing Full % invoice value of ~~C. I. F.~~, C. & F., ~~F. O. B., F. A. S.~~ Shipments
(cross out all but one)

1000 (One Thousand) Bags Coffee during July

from Santos, Brazil to New York

Drafts to be negotiated on or before August 1, 1925

Marine and War Risk Insurance to be effected by ourselves
(Shipper or Purchaser)

Partial shipments are to be permitted.

Special Instructions None

The Letter of Credit is subject to your usual terms and conditions, and in consideration of the issuance thereof we agree to reimburse you on demand, and we hereby authorize you to charge our account with you with any and all amounts for which you are liable thereunder, plus your commission and charges.

Neither you nor your correspondents shall be responsible for the description, quantity, quality or value of the merchandise shipped under this credit, nor for the correctness, genuineness or validity of the documents, nor for delay or deviation from instructions in regard to shipment, nor for any other cause beyond your control.

The Guaranty Trust Company of New York does not assume responsibility for any inaccuracy, interruption, or delay in the transmission or delivery of messages by cable and/or by mail.

James Williams & Co.
(To be signed by properly authorized official)

FIG. 8. Application for Letter of Credit

Some confusion still exists with respect to these terms and it is sometimes thought that irrevocable and confirmed are synonymous. The above interpretation of the terms is the one now generally accepted.

REVOCABLE AND IRREVOCABLE LETTER OF CREDIT.—If the credit is **irrevocable,** it is good for a stated period and cannot be cancelled by the bank without the consent of the beneficiary. A **revocable letter of credit,** on the other hand, although issued for a stated period, may be cancelled by the bank at any time with due notice to the exporter. Some letters of credit may fall into both classes; that is, they may be revocable up to a certain stage of the transaction after which they become irrevocable. In point of security offered the latter type is to be preferred.

As a rule, an exporter will be wise in refusing to act on the basis of a revocable credit. The banks do not favor revocable letters of credit, and some banks refuse to issue them for the reason that **disputes and litigation resulting from sudden cancellation** reflect unfavorably upon the bank which issued them.

CONFIRMED LETTER OF CREDIT.—There is another type which offers even greater security, known as the confirmed letter of credit. Suppose that the exporter requires that the buyer furnish a credit of this type; the buyer's bank, upon request, informs its New York correspondent of the terms of the credit issued and requests the latter to confirm the credit to the beneficiary. The New York banker thereupon transmits to the exporter a letter of confirmation embodying the terms of the credit confirmed. This confirmation binds the bank to negotiate drafts drawn according to the conditions of the credit and not only gives the exporter additional security but also will make his draft more readily negotiable in the exporter's country. An irrevocable credit may be confirmed or unconfirmed. A "revocable" credit will never be "confirmed," for obviously the bank in the exporter's country will not assume responsibilities exceeding those of the issuing bank.

CIRCULAR LETTER OF CREDIT.—A circular letter of credit is one sent direct to the beneficiary by the importer or the issuing bank, under which the exporter is at liberty to negotiate his drafts where he can. But if the letter of credit is not sent to the beneficiary, and the latter is merely notified of its terms by a letter of advice from the New York correspondent of the issuing bank, we have a credit of the type known as **"specially advised."** Under such a credit, if it be also of the **"negotiation" type,** the exporter may dispose of his drafts to best advantage; if the credit **be "straight,"** the beneficiary must negotiate his drafts through the advising bank. In the case of negotiation credits it is a general requirement that the amount of each draft purchased be entered on the back of the credit or letter of advice by the buying bank and that the letter of credit be surrendered with the draft which exhausts the credit. This precaution is taken to prevent the negotiation of drafts in excess of the amount of the credit.

REVOLVING CREDIT.—A revolving credit is one which, when exhausted, is **automatically renewed;** this renewal may take place a specified number of times or may continue until the credit is terminated by the parties thereto. Where the business between exporter and importer is continuous it is possible to establish such a credit which will automatically become available again for a new transaction after the old transaction has been liquidated. The letter of credit then serves to establish the maximum amount of the transactions which the bank is willing to finance at any one time. It may also be that the letter allows the drawing of a draft of a given size at prescribed intervals, corresponding

to the delivery times of partial shipments of a large order or of periodically forwarded goods.

AUTHORITY TO PURCHASE AND AUTHORITY TO DRAW.—An "authority to purchase" is not a substitute for a letter of credit but in some cases is issued to provide the exporter with **a market for his drafts.** Under the authority to purchase the exporter is instructed to draw on the importer. A draft drawn upon a foreign importer of limited or unknown credit standing is not readily discounted advantageously, and the exporter must depend largely upon his own credit to negotiate it. In order to facilitate the negotiation of these bills and to throw the burden of the financing upon the importer, the authority to purchase is used.

The authority is issued at the importer's request by his bank with the exporter as beneficiary, and under it the issuing bank, through its agents, purchases the drafts at the point of origin. In order to procure this service from his bank the importer must sign a contract known as the **"authority to draw."** This document, which is really a **letter of guaranty,** describes the conditions under which the exporter may draw, names the amount and binds the importer to accept the drafts. It also absolves the bank from liability and pledges the documents and merchandise as collateral security.

The authority to purchase may be **revocable or irrevocable** and the negotiating bank may merely send an advice of its agreement to negotiate or may in some cases confirm the authority. Unless the authority specifically states that drafts **"without recourse"** may be drawn the drafts carry full recourse to the drawers.

THE EXPORT LETTER OF CREDIT.—This term is often applied to a letter of credit when the issuing bank does not communicate direct with the exporter but with a corresponding bank in the exporter's country, and requests the correspondent to open the credit and to issue a letter of credit. The exporter then receives his notice from a local bank and deals only with the local bank. In this case the draft is presented to and honored by the bank issuing the credit and the liability of the exporter ceases. This is an advantage from the point of view of the exporter over an import letter of credit issued by the buyer's bank.

TERMS OF LETTER OF CREDIT.—As already stated, letters of credit may be issued either in **dollars or foreign currency.** If the credit be issued in dollars the buyer must assume the exchange risk; if in foreign currency the seller must assume this risk. In either case, however, the risk may be avoided by providing, at the inception of the transaction, for purchase or sale of the appropriate amount and type of exchange. Moreover, the credit may contemplate either **sight or time drafts.** Sight drafts will be paid upon presentation to the bank issuing the credit; time drafts will be duly accepted and paid at maturity. The particular kind of draft used makes no real difference to the exporter since his selling price includes the amount of interest accruing until the maturity of the draft in order to offset the discount taken by the bank which negotiates the bill.

DOLLAR DRAFTS AGAINST EXPORTS.—Consider the case of an export financed by a letter of credit made available in New York. The foreign bank will request its New York correspondent to advise the exporter of the credit and its terms and to confirm it to him. Drafts are to be drawn at 60 days sight. The exporter will draw his bills for an amount sufficient to net him the value of the goods sold plus expenses of shipment, etc. The amount of the draft will, therefore, be governed by the rate of discount. Suppose the exporter

wishes to realize $10,000, and his draft, after acceptance by the bank, can be discounted at 4%. $10,000 represents 99⅓% of the amount for which the bill must be drawn; the face amount of the draft will be $10,067.11, which, when discounted for 60 days at 4%, will yield $10,000 (assuming 360 days to the year). The bank which discounts the acceptance may hold it until maturity or may sell it in the open market. At its maturity the acceptance will be met by funds furnished by the importer who may pay in one of several ways. He may tender to the bank dollar time exchange equal to the amount of the acceptance and due in New York at the latter's maturity. He may furnish the bank with dollar sight exchange to reach New York at maturity of the draft. Or he may delay remittance until a few days before maturity of his obligation and furnish funds by purchase of a dollar cable. Regardless of the type of remittance selected if the exchange clause has been embodied in the bill the importer may meet his obligation by paying to his bank a sum in local currency sufficient to purchase the particular type of remittance at the bank's rate for the day.

FOREIGN CURRENCY DRAFTS.—Exports are often financed under letters of credit specifying that drafts shall be drawn in a foreign currency. Where this is true the exporter must quote a selling price which gives effect to the rate at which the foreign currency bill can be disposed of.

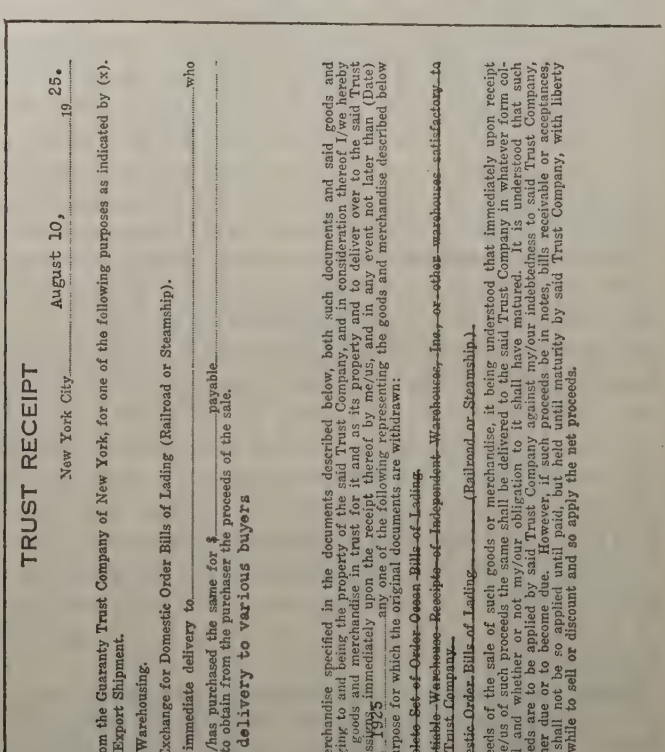
It has already been shown that the exporter's bank will pay the exporter the face value of the draft minus the discount. The amount of this discount will depend upon the amount which can be realized upon the draft after it has been accepted by the importer's bank. In other words, it depends upon the condition of the acceptance market in the importer's country. It may for this reason be often advantageous to both importer and exporter to have the credit established not in the importer's country but in a more active acceptance market. This will most likely be England, and it gives rise to the sterling letter of credit. The importer's bank notifies the exporter and instructs him to draw on a London bank. The London bank is also notified of the transaction by receiving a copy of the letter of credit from the importer's bank.

The exporter's bank discounts the draft but usually notifies the importer's bank of the fact and forwards to the latter a set of the shipping documents for the purpose of record. The London bank honors the draft presented to it by the correspondent of the exporter's bank and forwards the negotiable documents to the importer's bank.

FINANCING IMPORTS UNDER LETTERS OF CREDIT.—The methods of financing imports are no different from those described under the financing of exports. The position of the American merchant is now reversed and the same methods are open to him which are open to the foreign importer. Import letters of credit may be drawn in the currency of the country from which the goods are purchased. Trade customs, however, may change this or the exchange situation may be such that import letters of credit may be drawn in some other currency. Many commodities such as coffee and cocoa from Brazil, hides from Argentina or raw silk from China and Japan are bought on a dollar basis and the import letter of credit and drafts on New York banks are drawn in dollars. Some commodities such as wool from Australia and South Africa, furs from Australia, and rubber from the Straits Settlements are purchased on a sterling basis and the letters of credit expressed in sterling and drafts drawn on London banks.

In the case of a credit in foreign currency, the importer should **cover his exchange position** by purchasing a forward contract of exchange as a protection against an advance in exchange rates before the draft arrives for collection.

DOLLAR DRAFTS AGAINST IMPORTS.—However, comparatively few drafts in foreign currency are drawn at the present time for the purpose of financing imports into the United States under letters of credit. The position



TRUST RECEIPT

New York City, August 10, 1925.

Received from the Guaranty Trust Company of New York, for one of the following purposes as indicated by (x).

☐ 1. For Export Shipment.
☐ 2. For Warehousing.
☐ 3. To Exchange for Domestic Order Bills of Lading (Railroad or Steamship).
☐ 4. For immediate delivery to ..... who or for immediate delivery to ..... payable ..... and to obtain from the purchaser the proceeds of the sale.
☒ 5. For delivery to various buyers

the goods and merchandise specified in the documents described below, both such documents and said goods and merchandise belonging to and being the property of the said Trust Company, and in consideration thereof I/we hereby agree to hold said goods and merchandise in trust for it and as its property and to deliver over to the said Trust Company or its assigns immediately upon the receipt thereof by me/us, and in any event not later than (Date) September 1, 1925 ..... any one of the following representing the goods and merchandise described below according to the purpose for which the original documents are withdrawn:

1. ~~Complete Set of Order Ocean Bills of Lading.~~
2. ~~Negotiable Warehouse Receipts of Independent Warehouses, Inc., or other warehouses satisfactory to said Trust Company.~~
3. ~~Domestic Order Bills of Lading~~ ..... (Railroad or Steamship).
4. Proceeds of the sale of such goods or merchandise, it being understood that immediately upon receipt by me/us of such proceeds the same shall be delivered to the said Trust Company in whatever form collected and whether or not my/our obligation to it shall have matured. It is understood that such proceeds are to be applied by said Trust Company against my/our indebtedness to said Trust Company, whether due or to become due. However, if such proceeds be in notes, bills receivable or acceptances, they shall not be so applied until paid, but held until maturity by said Trust Company, with liberty meanwhile to sell or discount and so apply the net proceeds.
5.

of the dollar in the exchange markets of the world is, without much doubt responsible for this condition.

American imports, therefore, are frequently financed under letters of credit in dollars opened by American banks permitting foreign exporters to draw on

the issuing bank. Because of the demand for dollar exchange these credits are **usually of the circular type.** The foreign exporter ships his goods, draws a draft for the proper amount and, armed with his letter of credit and documents,

The delivery herein is temporarily made to me/us for convenience only, without novation, or without giving me/us any title to the documents or the goods and merchandise they represent, except as trustee and agent for the said Trust Company for the purposes herein indicated.

Said Trust Company may at any time cancel this trust and take possession of said goods and merchandise or any of said documents or of the proceeds of the same wherever said goods and merchandise and documents or the proceeds thereof may then be found or located, and in the event of suspension, proceedings in bankruptcy or assignment for the benefit of creditors on my/our part or of the non-fulfillment of any obligation or of the non-payment at maturity of any indebtedness on my/our part to said Trust Company then in any such case, all obligations, acceptances, indebtedness and liabilities whatsoever shall forthwith mature and become due and payable.

The said goods and merchandise shall at all times at my/our expense be fully insured against loss by fire and any other risk that said goods and merchandise may be subject to. On demand, the insurance policies or certificates of acceptable character shall be delivered with the Guaranty Trust Company of New York, the said Trust Company to be designated in the Policies as the Assured in the following form: Assured: The Guaranty Trust Company of New York for account of whom it may concern. Loss to be adjusted with ..... and payable to the Guaranty Trust Company of New York for account of whom it may concern.

The undersigned in further assurance, agree that insofar as the undersigned may make entries or records of transactions herein set forth or provided for in the books of account of the undersigned, such entries shall definitely indicate that said merchandise and documents and the proceeds thereof are the property of said Trust Company.

Receipt of a copy of this Trust Receipt is herewith acknowledged.

offers his bill for sale in the open market. The purchasing bank forwards the bill with documents to its New York correspondent to secure acceptance and possibly for subsequent discount to offset a sale of its own exchange. The issuing bank accepts the draft and secures the documents which are usually

released to the American importer under a trust receipt. Generally a day or two before maturity of the acceptance the importer will place his bank in funds sufficient to meet the obligation.

THE LETTER OF LIEN AND THE TRUST RECEIPT.—The importer may be in a much better position to pay the draft when due if he has been able to turn over some or all of the merchandise, before the due date. A strict interpretation of the D/P clause prevents him from obtaining possession of the goods until payment has taken place and may, therefore, really lessen the probability of a successful liquidation rather than promote it.

There are several ways open to the bank to aid the importer without jeopardizing the security of the draft. The bank may release to the importer such portion of the shipment as the importer succeeds in selling, the proceeds to be paid over to the bank which allows deliveries to be made direct to the importer's customers. In this manner the draft will be paid in instalments and upon payment in full the remaining goods will be released.

There are two objections to this practice. One is from the side of the bank. The importer will withdraw only such goods or such portion of the goods as he can readily dispose of, possibly leaving the bank with slow moving goods which form doubtful collateral. From the side of the importer the objection may be made that the exporter's bank secures full information of his selling terms and customers.

More usual, and adapted not only to manufactured goods but also to raw materials and other manufacturers' requirements is the use of the **trust receipt** (Fig. 9) **or the letter of lien.** The bank releases all the goods to the importer prior to the payment of the draft upon the execution of a document in which the importer declares that the goods are the property of the bank and are by him received "to hold said goods in trust for them." The importer agrees to turn over all proceeds from sales to the bank until the accepted bill has been liquidated in full. The goods must be so stored and handled that they may at all times be identified, since otherwise the special claim of the bank in them might not easily be established. The importer carries the financial burden of the transaction.

Travelers' Letters of Credit and Checks

GENERAL CHARACTER.—The traveler's letter of credit is a convenient medium whereby tourists may keep themselves in funds while abroad. They are issued in dollars or foreign currency by New York banks or under joint account arrangements by New York banks and their foreign correspondents. They are usually limited both as to life and amount. Fig. 10 illustrates a traveler's letter of credit issued in dollars under a joint account arrangement between a New York bank and its London correspondent under which dollar drafts are to be drawn on the New York bank. At the time of issue of such a credit the beneficiary is furnished with a **list of the issuing bank's foreign correspondents** who will purchase at the prevailing rate for sight exchange drafts drawn in the currency and against the bank named in the credit. The letter of credit and the list of correspondents must be both exhibited before a correspondent bank will purchase a draft drawn under the credit. A comparison of the beneficiary's signatures as appearing in the list of correspondents and on the draft drawn completes identification; and a comparison of the bank officers' signatures as appearing in both parts of the credit with those on file with the correspondent establishes the validity of the credit. As a further

LETTER OF CREDIT.

No. D_____ $_____ No. D_____

London,_____ New York,_____

To our Correspondents

Gentlemen:

We beg to inform you that we have accredited

_____ _____

to whom you will please furnish such funds as

_____ may require up to the aggregate amount of

_____ Dollars

say $_____ United States Currency against _____

demand drafts on _____ New York and

we engage that such drafts shall meet with due honor.

Kindly purchase drafts at the rate at which you

buy demand drafts on New York and please endorse the

amount of each draft on the back of this letter which is

available until _____ and must be returned

with the last draft.

Please see to it that the drafts are signed in your

presence and are plainly marked as drawn under

Letter of Credit No. D_____ of

dated _____

Asking for _____ your kind attention,

We remain, Gentlemen,

Yours very truly,

FIG. 10. Traveler's Letter of Credit, Issued in Dollars

precaution against overdrafts, the amount of each draft must be entered upon the back of the credit which is surrendered and returned to the drawee bank with the last draft drawn.

TWO CLASSES.—Travelers' letters of credit fall into **two general classes:**

1. The amount of the letters of credit may be paid in advance. If they are **drawn in dollars** the buyer is charged with the dollar amounts plus commission. If they are **drawn in foreign currency** the demand rate for that currency is generally used as a basis for computing the dollar cost. Redemption of any unused portion of the credit will be made generally at the same rate.

2. The credits may be unpaid but secured by the beneficiary's credit rating plus his contract to reimburse, with or without collateral security. If the drafts are drawn in foreign currency the correspondent bank will charge the withdrawal to the New York bank on the date of presentation under letter of advice. Upon receipt of this advice the issuing bank collects from its customer or charges his account at the demand rate plus interest from the date of presentation abroad. The buyer of such a letter of credit will pay the issuing bank a commission, usually about ½%. In addition, the correspondent bank sometimes charges a commission for negotiating the drafts.

The letters of credit of the **circular type** are addressed to all correspondents of the issuing bank requesting them to cash drafts drawn thereunder. If the credit be of the specially advised type it is addressed to one particular correspondent who alone will cash drafts drawn thereunder.

There is a further type of credit known as the **clean credit,** opened by mail or cable without the formal issue of a letter of credit. It is usually limited to a specified amount and runs for a particular period. It is analogous to opening a checking account abroad.

TRAVELERS' LETTERS OF CREDIT IN FOREIGN CURRENCIES.—If exchange rates for foreign currency are low when the holder buys the letter of credit, he may desire to take advantage of these low rates and purchase three letters of credit, one in pounds sterling, one in francs and one in dollars, to be used according to fluctuations in the exchange rates. If the rates for foreign currency should advance, he would use the sterling or franc letters. If the rates should fall the dollar letter would be used. This can be shown by way of illustration.

Illustration: A obtains three letters of credit, one in dollars, one in francs, and one in sterling, for the equivalent of $1,000 each with francs at $.05 and sterling at $4.70. At this time the holder can draw on his letters $1,000, fcs. 20,000 and £212: 15s. 4d.

When Foreign Rates Rise.—Should francs rise to $.06 and the holder of the letter uses all of the francs, he would be allowed to draw 20,000 francs which would then be the equivalent of $1,200, but for which he paid only $1,000.

Or, if sterling goes to $4.75, the holder of the letter of credit for £212: 15s. 4d. could use it all, an equivalent to $1,010.63, which was obtained by him for $1,000.

When Foreign Rates Fall.—In case francs fall to $.04 then the holder of the dollar letter of credit could obtain 25,000 francs or, if sterling drops to $4.60 a pound, he could obtain £217: 7s. 10d. for his $1,000 letter of credit.

TRAVELERS' CHECKS.—Travelers' checks are issued by banks, express companies and sometimes by tourist agencies. They may either be sight drafts on some bank or trust company or take the form of promises to pay upon demand. The **customary denominations** are $10, $20, $50, and $100. The

buyer signs each check at the time of purchase and again at the time of presentation. Comparison of the two signatures establishes identity. Travelers' checks issued in dollars before the war were converted abroad at fixed rates; nowadays they are generally accepted as so much demand exchange and in some cases pass as currency. Travelers' checks are sold in the United States for their face value in dollars plus a commission usually of ¾%; that is, 75 cents per hundred dollars' worth. The minimum commission is 75 cents. A traveler's check is illustrated in Fig. 11.

DELEGATIONS—LETTER TRANSFERS.—Delegations are sometimes used to make remittances abroad, especially when payments are small or periodical. The New York bank by letter of delegation instructs its correspondent abroad to pay to a certain party at a particular address a specified sum either in dollars or foreign currency. Upon receipt of the delegation the foreign bank makes the payment requested and charges the New York bank with the amount paid plus commissions and expenses. Delegations in foreign currency are sold at a rate approximately equal to demand exchange, due consideration being given to the amount of the remittance and the expenses involved.

A letter transfer is **non-negotiable.** It is generally issued by the bank in duplicate, of which only the original is delivered to the purchaser. If the original fails to reach the payee the bank then delivers the duplicate to the purchaser. It is customary among banks to honor either the original or the duplicate, whichever is presented first. The letter transfer, therefore, may be a safer way of transferring funds than the ordinary draft.

Bankers' Time Bills

TWO CLASSES.—A type of exchange frequently encountered in the market is known as "long bankers' bills" or bankers' time bills. These are of **two classes:** (1) drafts drawn by banks on their foreign branches or correspondents to mature a certain number of days after date; or (2) drafts drawn to mature a certain period after sight. The latter are the more common. The general purpose of such bills is to borrow funds abroad for short periods. In some cases, however, these bills are renewed with such regularity as to constitute almost a continuing obligation. Bankers often find it desirable or convenient to sell their own long bills in order to reimburse themselves for non-discountable commercial bills purchased. When the maturities of the two classes of paper coincide the proceeds of the commercial bills may be used to retire the bankers' long bills. The banker has an alternative in order to achieve the same result. He may contract for the future sale of spot or cables to mature with the commercial bills purchased and borrow in the local market. The cheaper method will, of course, be followed.

Again, bankers' long bills may be issued in anticipation of the receipt of funds abroad from any other source. Many times these bills are marketed solely for the purpose of **borrowing abroad** in order to lend in New York. The bills may be sold in New York or they may be sold abroad and the funds transferred to New York. In either case the proceeds are made available for use in New York. If the expense incidental to securing these funds abroad is less than the New York interest rate it will be profitable to borrow abroad and lend here, consideration always being given, however, to the relation between spot and **future rates.**

Illustration: Assume the following facts:

London "to arrive" discount rate	4%
New York interest rate	5%
Acceptance commission	⅛%
Stamp tax	1/20%
Sight rate	$4.85¼
90-day contracts for sight	4.85¼
New York rate for 90-day sight bills	4.79½

A 90-day banker's bill for £1,000 discounted abroad will realize £988: 5: as follows:

Face amount of bill		£1,000—
Less:		
1% discount	£10	
⅛% commission	1— 5—	
1/20% tax	—10	11—15—
		£ 988— 5—

Sight drafts sold in New York for this amount at $4.85¼ will realize $4,795.53 which may be loaned for 90 days at 5% and amount at maturity to $4,855.48. This latter amount, if converted into demand sterling at $4.85¼ will realize £1,000:12: or a sum sufficient to repay the loan and leave a small profit of 12 shillings. However, the sight rate may have risen enough during the life of the loan to wipe out the profit on the whole transaction. Hence the importance of providing at the initiation of the transaction against an unfavorable fluctuation in exchange. This can be done by purchase of a future contract deliverable at maturity of the loan.

THE FOREIGN EXCHANGE BROKER.—The services of the foreign exchange broker are of no little value in the foreign exchange market. These brokers are in constant telephonic communication with many buyers and sellers of exchange. They execute a majority of the **open market trades between banks.** Receiving an offer of exchange at a stated figure, the broker seeks a bid at a slightly higher figure; on receiving a bid at a certain rate, he seeks an offer at a slightly lower rate. In either case the seller makes delivery direct to the buyer at the higher figure and pays the difference to the broker as his commission. Some brokers specialize in transactions of this type. Others devote their efforts to the purchase and sale of commercial bills.

Brokers specializing in the marketing of commercial bills fall into two general classes:

1. Those who act solely as agents for the drawer, making no advances pending the sale of the bill.
2. Those who make immediate advances to the drawer, usually by meeting sight drafts attached to the bills when forwarded to the broker for sale.

The exporter whose bill has been sold through a broker of the first class draws at sight directly upon the purchasing bank, attaches the documents and his bill drawn to the latter's order and negotiates his draft at his own bank. The broker receives his commission from the seller of the bill.

Bills sold through brokers of the second class are handled in the following manner. The seller draws his sight draft with bill and documents attached upon the broker through whom the bill is offered for sale. The broker generally meets these sight drafts with the proceeds of a day loan from his bank, secured by a trust receipt covering the proceeds of the bill sold or to be sold. Upon

delivery of the bill, if it be already sold, the broker receives payment and retires his day loan. If the bill remains unsold at the end of the day the broker usually finances himself through a call loan from his bank secured by deposit of the bill of lading covering the merchandise against which the bill is drawn. Later, upon sale of the bill, the broker secures release of the bill of lading under a trust receipt, delivers the bill with documents to the purchaser and with the proceeds retires his loan.

SPECIE POINTS AND SHIPMENTS.—Under normal conditions the rates for various types of foreign exchange fluctuate in response to supply and demand within a range corresponding approximately to the **gold export** and **import points.** These specie points, so-called, are determined by the cost of moving gold in either direction. To **export gold** to England, for example, generally involves the following charges:

Packing and cartage, freight, insurance and possibly a loss of interest. This latter expense depends upon whether or not the time elapsing between payment here for the gold and receipt of its proceeds abroad exceeds the mailing period used in computing the price at which demand exchange is sold against the gold export. In addition, assay abroad of the exported gold may reveal a deficiency in weight due to various causes. This deficiency must be considered in computing the amount of sterling to be realized as proceeds. Suppose that the gold can be sold to the Bank of England at par, $4.8665 per pound sterling. We may make the following computation:

Cost of gold exported	$10,000
Expenses of export	25
Total dollar cost	$10,025
Proceeds realized abroad net of all expenses there	£2,050

The cost, therefore, of each pound of the sterling credit created abroad is $4.89024+. It is evident that gold export will not be profitable unless sight exchange can be sold at a rate in excess of this figure.

Conversely, **importation of gold** cannot be profitably undertaken unless demand exchange can be bought at a figure below the gold import point. This latter point is calculated by following the same general principles outlined above:

Cost of gold imported	£2,055
Expenses abroad	5
Total cost in sterling	£2,060
Proceeds realized in New York after assay and net of interest (20 days calculated from purchase of sight exchange to receipt of gold proceeds in New York)	$10,000

As calculated above the gold import point is $4.85436+. Demand exchange must be bought below this figure or no profit can grow out of the transaction.

Arbitrage in Securities

No discussion of foreign exchange can be complete without some consideration of arbitrage in securities listed on two or more exchanges located in different countries. A considerable number of American securities are listed and traded on the London stock exchange; a few British securities are listed on the New York stock exchange. To a lesser degree arbitrage is undertaken in securities listed in New York and European financial centers other than London. The discussion will be confined to arbitrage between New York and London.

LONDON QUOTATIONS.—It is the usual London practice to quote securities at a figure representing a percentage of par. American securities are converted, for quotation purposes, to a British par in pounds represented by **the American par divided by five.** For example, an **American stock** with a par value of $100 is converted to an **arbitrary par** of £20. If quoted in London at 90, this security is selling at 90 per cent of £20, or £18. If the American security be a **no-par value stock,** it is quoted in London at a price in pounds sterling per share. The actual price in dollars can be determined in either case only by considering the prevailing rates for sterling exchange.

Bonds are quoted in the same manner, that is, at a figure representing a percentage of par. The British par of an American bond is likewise determined by converting the American par at an arbitrary rate of $5 per pound. A quotation of 90 would therefore represent a price of £180 (90% of £200), the cost in dollars being ascertained by considering the prevailing rate for sterling exchange.

A quick method of determining the sterling price of an American stock or bond quoted in the usual London manner is as follows: in case of a stock, divide the quotation by five—in case of a bond, multiply the quotation by two.

FACTORS INVOLVED.—Before arbitrage can be undertaken with profit a number of factors must be considered; the relative price of the security in the two markets, the rate of exchange, interest while the securities are in transit, cable and insurance expenses. Securities bought or sold on the New York stock exchange usually are delivered and paid for the day following, unless the contract be "seller 7," "seller 10," or similar thereto, in which instance the seller makes delivery and receives payment seven or ten days later.

STOCK SOLD IN LONDON AND BOUGHT IN NEW YORK.—Arbitrage may be accomplished by a sale in London and a simultaneous purchase in New York of a given security; or by a sale in New York offset by a purchase in London. Let us first consider the former.

New York stock sells in London for 90 or	£18:—	:—
Deduct: Brokerage in London (assumed)	:	1:—
Net £ realized in London	£17:	19:—
To transfer these funds to New York in order to pay in dollars for securities bought in New York, sell £17: 19:— at demand rate. Net proceeds (assumed)		$87.10
Deduct: Insurance charges for securities shipped to London (assumed)		.25
Net dollars realized in New York (approximate New York quotation 86⅞)		$86.85

If the stock which can be sold in London for £18 can be purchased in New York, including brokerage, at a figure less than 86⅞, the arbitrage will result in a profit. The approximate figure 86⅞, as ascertained above, represents the **New York export parity** for the stock to be sold in London at 90. The **formula** may be stated as follows:

$$\text{New York export parity} = \left(\frac{\text{London quotation}}{5} - \text{London expense}\right) \times \text{demand rate for sterling} - \text{New York expense.}$$

To ascertain the **London import parity** of the New York purchase price, the reverse process is followed and the formula stated thus:

$$5\left(\frac{\text{New York quotation} + \text{New York expense}}{\text{Demand sterling rate}} + \text{London expense}\right)$$

BOUGHT IN LONDON, SOLD IN NEW YORK.—The second method of arbitrage mentioned above consists of a purchase in London and a sale in New York. The **New York import parity** of the London quotation is ascertained as follows:

Purchase price in London 90 or	£18:— :—
Add: Brokerage and insurance	: 2:—
Total London cost	£18: 2:—
To ascertain dollars to be transferred at once to London to pay for stock bought multiply £18:2:— by cable rate. (The amount is assumed)	$87.88
Add: 6% interest for 10 days (stock in transit), (transfer tax on sale in New York and New York brokerage expense)	.37
New York selling price	$88.25

$88.25 represents the New York import price of a stock bought in London at at 90. The formula is stated in this manner:

New York import parity = London cost + London expense × cable rate + New York expense and interest

The **London export parity** of a given New York quotation is figured in a reverse manner. The following formula applies:

London export parity =

$$5\left(\frac{\text{New York quotation} - \text{interest and expense}}{\text{Cable rate}} - \text{London expense}\right)$$

ARBITRAGE IN BONDS.—The same general principles apply to arbitrage in both stocks and bonds. However, there are certain facts to bear in mind, when trading in bonds. Bonds sold in London are subject to a **stamp tax.** Moreover, in order to allow sufficient time to mail coupons to arrive in New York at their due date, American bonds in the London market are **sold ex-interest** about 15 days prior to the interest date. If bonds are bought in New York during this period to offset a sale in London, the coupons should be clipped and cashed at maturity. If bonds are bought during this period in London for delivery in New York an adjustment must be made here for accrued interest.

BRITISH SECURITIES LISTED IN NEW YORK.—British bonds listed in New York are usually converted to an American par at the arbitrary rate of $5 per pound sterling. British shares are usually listed in New York and traded under the following circumstances: the British shares are deposited in London with the foreign branch of an American trust company. The American trustee, in turn, issues certificates of deposit which are traded in New York. It is important to bear in mind the number of British shares represented by the American certificate and to make due allowance for conversion charges assessed by the trustee.

SECTION 17

CREDITS AND COLLECTIONS

CREDIT DEFINED.—Credit is essentially the power to obtain goods, money, or services by giving a promise to return it or its equivalent at a future date. The element of return is a distinguishing characteristic. As the probability of return decreases, the soundness of the credit is proportionately lessened. Credit will, therefore, survive or disappear according to the willingness and ability of debtors to meet their obligations to return the capital received.

DISTINGUISHED FROM INVESTMENT.—Commercial or short-term credit must not be confused with **investment or long-term credit.** Debtors often default or are forced to postpone the return of capital because of the neglect at the outset to consider properly the uses to which the money, goods or services will be put, which results in the application of the capital to purposes from which its release is impossible or must be indefinitely deferred. For this reason, for example, it is considered bad commercial practice to borrow extensively on short-time notes and expend the funds for capital expenditures, such as opening additional branches, fostering subsidiaries, erecting additional buildings, or acquiring related businesses.

Concerns desiring to begin business or to expand permanently should seek to attract investors rather than to obtain the necessary capital on the basis of commercial credit. Investors do not require the return of their capital until the end of a term of years when the purposes for which the capital was advanced have been fulfilled, whereas, short-term credit capital, i.e., money or goods obtained on the basis of commercial credit, usually must be repaid promptly at the end of a short period, whether or not the borrower has achieved the purpose for which the credit was obtained.

Banks are the **largest dealers in short-term credit.** Their major function is to gather funds from a large number of depositors who may have no immediate use for them, and distribute them in the form of loans to borrowers who may have opportunities to use them with profit. It is essential to the existence of banks that they shall not become long-term lenders or investors, but adhere to the principle of lending credit. Although many banks invest some of their surplus funds in securities they properly do so only in such securities as are readily marketable.

CLASSIFICATION OF CREDITS.—From the standpoint of the financial manager credits may be classified as:

1. Banking credits
2. Investment credits, such as long-term funded debts
3. Mercantile credits
4. Retail or personal credits

Banking Credits.—These relate particularly to loans in one form or another obtained from banking institutions. They are important to the extent of their

use in furthering credit arrangements with mercantile customers who make purchases or settle their accounts by giving notes, acceptances, or other forms of negotiable paper which later may be offered to banks for discount.

Investment Credits.—These embrace issues of **bonds, debentures,** and other obligations which because of their deferred maturity may be considered as **funded or capital investments.**

Mercantile and Personal Credits.—For the purposes of this section, retail, personal, commercial and mercantile credits are treated as synonymous terms. The distinction is sometimes made that a sale of goods for resale is a mercantile credit, whereas the sale of goods for consumption is a personal credit. That is merely the distinction that may be said to exist between "wholesale" and "retail" accounts. Both are considered as one in this section because in both cases credit is extended to the "customer."

RELATION OF FINANCIAL MANAGER TO CREDITS AND COLLECTIONS.—The growth and permanence of modern business is largely contingent upon sound credit policies, and the **financial manager** is an outstanding figure in these matters. In the structural plan of almost every organization he is charged not only with the duty of making the necessary credit arrangements with its creditors, but also with the responsibility of maintaining sound credit relations with its customers.

Moreover, being in immediate touch with other phases of the concern's financial affairs, he is the logical officer to outline the basic credit policy, and it is his function to see that that policy harmonizes with the policies of other divisions of the business, such as sales, production and accounting. He is responsible for the application of the credit policy to the daily transactions.

Credit Policy

The development of a sound credit policy involves a consideration of **four major factors:**

1. Sales policies
2. The scale of production and overhead absorption
3. Margin of profit and credit losses
4. Organization problems and financial limitations

Credit policies will necessarily vary somewhat in different concerns because of the personal tendencies of the individuals who outline them. This is true, even though the businesses may otherwise be similar. But the foregoing underlying factors are none the less controlling and should result in strikingly similar and uniform policies.

CO-ORDINATION OF CREDIT AND SALES POLICIES.—Credit policies should be in harmony with profitable business building. Credit systems exist only by reason of their usefulness in the growth of a business, and they should be as liberal as possible, in order fully to promote sales expansion. In general, they should be restrained only by financial limitations of the creditor concern itself and by credit losses.

To attain a **maximum of business development** credit policies should not be evolved in a negative frame of mind; i.e., planned to reject everything at all unfavorable. Instead, they should result from a positive attitude, whereby every factor favorable to the situation receives full consideration. It is very important to gauge the efficiency of the credit department, not alone by the ratio of credit losses to sales, but by that factor considered in relation to **gross**

profits lost on orders declined. This element is an essential test of the credit policies. There are few concerns which can ignore the business building potentialities of a sound, well-defined credit policy. Excess funds may reasonably and wisely be used in extending new credits when there are apparent sales possibilities. Not many concerns have saturated the markets for their goods.

CO-ORDINATION OF CREDIT AND PRODUCTION POLICIES.—Credit policies should be fitted to production problems, particularly in businesses of a seasonal character, in order that peaks and valleys may be smoothed out. A manufacturer whose sales and production are limited in the winter months, the business being largely of warm-weather production and deliveries, desires an even, year-round production, as otherwise his **overhead** during the winter months becomes burdensome, and his working force tends to disintegrate. If he can adjust his sales and credit policies in such a manner as to bring forward to the winter months orders for goods to be delivered later, it is obviously to his advantage to do so. Credit is a recognized aid to this end.

Overhead absorption and savings are definitely linked up with maintained production, and maintained production with sales, which are in turn controlled by the selling price. The predominant factor in regulating proper overhead absorption is, therefore, selling price. An adequate and sufficiently elastic credit policy will make a price more attractive, as by the extension of special credit terms in cases where to do so will make the payment easier for the customer. Thus, by granting special datings and terms, the manufacturer may in the winter bring into his factory sales contracts for delivery and payment much later in the year, thus enabling him to operate nearer capacity in the winter. This is particularly true in non-style lines.

CO-ORDINATION OF CREDIT POLICIES WITH MARGIN OF PROFITS AND CREDIT LOSSES.—Credit policies must be balanced against both the margin of profit and credit losses. It is not enough to strive only to keep the percentage of losses at a minimum. A certain amount of loss from bad debts is not necessarily a catastrophe. Larger losses of gross profits on rejected orders is a much more important consideration.

In determining the credit policy with respect to this factor, or in measuring the real efficacy of the policy in operation, the preferable procedure is to study the percentage of losses from bad debts in connection with the percentage of orders rejected to orders received.

In the illustration below, cases 1 and 2 represent the results of two successive years. The company was more critical of poor risks in the first year and the result was that losses from bad debts were only 3% as against 5% in the year following, but the rejection of orders aggregated $500,000, as compared with no rejections the following year. The consequence of this change in policy was an increase of gross profits on the same volume of business and margin of gross profits.

	Case 1	Case 2
Orders received	$2,000,000	$2,000,000
Orders declined	500,000	none
Orders filled	$1,500,000	$2,000,000
Gross profit on orders filled (assuming that the company averaged 25% gross profit for each year)	375,000	500,000
Assume also that the credit department reports losses from bad debts as follows:		
Case 1, 3%; Case 2, 5%, or	45,000	100,000
The resulting profit would be	$ 330,000	$ 400,000

The more conservative policy followed in case 1 really cost the firm $70,000 in loss of gross profits instead of saving 2% on losses from bad debts. Hence, a mere reduction in the percentage of losses from bad debts is not alone a sufficient index to the efficiency of the credit department or its policies. It is the final balancing of losses from bad debts against **losses of gross profit** on rejected orders that measures that efficiency.

CO-ORDINATION OF A CONCERN'S CREDIT POLICIES WITH ITS FINANCIAL LIMITATIONS.—Every concern should arrange its credit policies with due regard for the limitations of its own financial structure, as well as those of its customers. The first consideration, however, is the determination of the approximate amount of credit business its capital will justify. This involves a consideration of the approximate **amount of capital** it may wisely tie up in **accounts receivable,** and in turn the portion of that amount which may be advanced to each customer or class of customers. For instance, if conditions make it unwise to carry more than $10,000 in book accounts, the concern should not undertake to sell 20 customers requiring credit lines of $1,000 each. There should be nearer $20,000 available for credit uses before undertaking to serve 20 such customers.

This illustration pictures one of the most prolific sources of over-expansion of credit and consequent financial embarrassment. To overload anything, particularly the financial structure, is to invite disaster.

Beginning with a conception of the capital available for credit purposes, the concern should seek to place that capital where it will yield the greatest return. What class of customers or what locality will be favored with the greater portion of it? What are the prevailing credit terms, and to what extent will the concern be guided in fixing its terms? Merely discussing these questions will automatically result in a more or less clearly defined credit policy. Once defined and adopted, the administrative officers are charged with its application.

REVISION OF CREDIT POLICIES.—The credit policy should be sufficiently elastic to permit of **frequent revisions** in keeping with changing conditions within the concern as well as with the general conditions within the trade or country. In order to keep informed as to the progress of the policies it will be helpful for the financial manager to study some of the **financial ratios** in the computation of which the accounts receivable are included. The ratios useful in this connection are as follows:

Current assets to current liabilities
Receivables to inventory
Total current assets to total assets
Sales to receivables

CREDIT CONTROL.—The financial executive must strive to maintain satisfactory ratios between the credit procured by the concern (its liabilities) and:

1. The proprietors' capital investment; and
2. The total current assets.

This means, first, that the **total liabilities** should rarely, if ever, be permitted to exceed the total capital and surplus of the business. When the liabilities do exceed the capital, the control of the business is very apt to pass to the creditors. A business man can have very little to say when his creditors announce that they "own more of the business than he does." Second, if the **ratio of current assets to liabilities** falls below, say 2 : 1 (except perhaps where the turnover is unusually rapid), the credit position is weakened, and operation

is made much more difficult. There may be many other faults of management which cause either or both of these relationships to show unfavorably, but it is none the less a fact that they should never be the result of a voluntary policy, that is, from the over-extension of credit to customers.

The financial manager should consider whether the credit arrangements existing with the concern's creditors is faulty, or whether the fault is due in part to erroneous policies in credits extended to its customers. If the former, the possibilities of funding the major portion of the debt or obtaining additional permanent capital are to be considered. If the latter, revisions of policy must be made immediately. Both situations pertain primarily to the relation of the concern to its creditors, but nevertheless apply with equal force to the extension and control of credit extended to customers. The co-ordination of these relationships is vital to proper credit control.

BUSINESS CYCLES.—Another prerequisite to a sound administration of credits is a recognition of major business cycles. The financial manager must be governed by them to the extent that pronounced **periods of inflation or deflation** are suitably offset by adjustments of credit policies. When prices are rising and the demand for goods is increasing, it is very natural for executives to propose outlays for additional plant facilities. The sales manager tends then to become over-optimistic concerning his selling plans; the banks are eager to make loans and additional temporary capital is thus readily obtainable. The tendency during such times inevitably invites very liberal credit extensions. At such a time the financial executive, by exercising a little foresight, can do much to avoid subsequent losses from unwise outlays of either funds or goods. On the other hand, during a period of depression, often referred to as a "buyers' market" as opposed to a "sellers' market," the financial manager may find it possible to stimulate sales by broadening his credit policies.

The Credit Department

SUPERVISION OF CREDIT DEPARTMENT.—In smaller organizations the financial manager may personally attend to the details of extending credit to customers. In larger organizations such tasks are delegated to a separate staff operating under his general supervision and direction. Such a staff is often styled the **"credit department"** or **"department of accounts,"** and is under the immediate supervision of a **credit manager.**

FUNCTION OF CREDIT DEPARTMENT.—The **amount of credit** to be extended in any one case is governed by the willingness and ability of the customer to pay his debts when due. This should never be lost sight of in any credit situation. The amount may be successfully determined, however, only in proportion to the facility with which available credit information may be gathered and interpreted.

Credit is given to those who are known personally or about whom information is available. The banker or merchant prefers to extend credit to his neighbor or countryman, rather than one remote from the community, since they have better facilities for obtaining current information concerning the nearby debtors' willingness and ability to pay.

The needs of modern business have given rise to certain recognized channels for the exchange of credit information. It is the function of the credit department to make use of such mediums, to gather, compile and interpret credit information concerning customers. This information is used in determining just what arrangements may be necessary with individual customers.

The second function of the credit department is to **follow up its credits,** to the end that debtors meet their obligations when due.

ORGANIZATION OF CREDIT DEPARTMENT.—Contact should be made by the credit department with one or more established **credit and collection agencies or bureaus** in order to aid the collection and dissemination of credit information and to obtain the benefits of co-operation. **Adequate files and records** are required, although they need be of no particular form or design. **Methods and procedures** should be outlined that will start inquiries for credit data on both new and old risks, and that will route incoming information and incoming requests for credit through proper channels. Practical safeguards should be established for fixing responsibility for infraction or disregard of the department's rules.[1]

The larger manufacturers, department stores and jobbers find it convenient to create a special department to handle disputed charges and adjust complaints by customers. It is not considered advisable to have this department too far removed from the credit department. The better plan is to maintain it merely as a sub-section or part of the credit department. Naturally, the information gathered by the **adjustment department** concerning customers who make unreasonable or unfounded claims is important information to be considered in extending future credit.

QUALIFICATIONS OF CREDIT MANAGERS.—The credit manager comes into contact with customers at a most delicate and important time. It is very necessary that he trust them to the extent of winning their confidence, by assuring them that he will give their affairs proper and fair consideration. Courage, honesty of purpose, and decision are essential.

He must be able to analyze the available information on a given risk and arrive at a conclusion as to its desirability. If the conditions fall short of a desirable risk as measured by the policy of his concern, he must tactfully refuse the account. His sincerity will do much in leaving customers in a favorable frame of mind, although credit has been refused. On the other hand, if the risk is acceptable, he should promptly say so in such a manner as to inspire the customer and by such policy develop the maximum sales possibilities of his company.

A knowledge of accounting, corporate finance, commercial law, economics, psychology and banking will be useful to the credit manager. His efficiency is certain to be measured by his understanding and application of the fundamental principles and practices in those fields.

KNOWLEDGE OF BUSINESS CONDITIONS.—The credit manager should understand the **major risks inherent in various types of business.** He should be able to judge the general prospects in a customer's particular business. The financial strength and efficiency of the customer's business and local conditions affecting his trade are all subject for study. He must know about the condition of crops, unemployment, strikes, the shifting of population and such other matters which directly affect credit risks.

The credit manager may find it advantageous to **group the customers into definite classes** according to trade, size, location, type, credit custom, etc. Each industry or trade has its characteristic terms and discounts. Communities often show special conditions not general elsewhere. Individual debtors within a community, trade or industry fall into definite groups with respect to their

[1] An excellent outline of methods and procedures for organizing and operating a credit department may be gathered from Credit Management, Olsen and Hallman, The Ronald Press Co., New York.

customs and tendencies. It is as futile to propose cash on delivery to an instalment customer as it is unwise to propose an instalment account to a "cash and carry" customer. It would be merely stupid to propose 90-day terms on open account to customers accustomed to buying on 10-day terms, or against sight draft with documents attached.

KNOWLEDGE OF REMEDIES.—The credit man must know what his remedies are in case an account is not paid when due. He is expected to collect such an account and on him falls the burden of deciding whether to try for a friendly adjustment or, in case of insolvency or fraud, whether proceedings should be begun in bankruptcy or otherwise. Observations made in the course of actual experience are the best practical guides available to the credit manager.

DUTIES OF CREDIT MANAGER.—A credit manager should establish **close personal contact with customers.** In large business houses credit is extended to so many customers that personal contact is difficult, if not relatively impossible. In such instances, however, salesmen and other representatives of the concern who make personal contact with customers can do much to gather credit information.

Credit policies cannot be separated from sales policies. The position of the credit manager is closely related, therefore, to the selling end of the business. It would be a comparatively simple matter for the credit manager to eliminate practically all bad debts, if he did not have to recognize sales possibilities. He could decline all accounts except A1 risks. Obviously, however, such a policy would seriously curtail sales and profits. The mere fact that the concern extends credit implies that it is willing to take at least the ordinary business chances of loss from uncollectible accounts. The credit manager must not restrict the function of his department to the mere rejection of all applications involving apparent risk. He should be able to distinguish with reasonable accuracy between a legitimate risk which the business is willing to assume and one that is wholly unsafe and undesirable. The maxim, "**Minimum losses with maximum sales,**" should be applied.

The credit manager must maintain a well organized department with trained assistants, co-operating in every way possible with other departments. He must also maintain a high degree of **familiarity with the accounts on the ledgers.** They must be constantly watched for signs of weakness. Such signs will prove to be his best practical guide in extending credit to former customers. He must know customers that are "slow pay"; those who often dispute the charges to their accounts, and those who frequently return merchandise. He may make frequent reference to the accounts themselves in order to maintain this vigilance. In larger concerns he may have the bookkeepers report daily, or from time to time the particulars of all accounts not running smoothly.

OPENING NEW ACCOUNTS.—Before a new account is opened or a new credit extended the credit manager should be able to foresee **a probability of payment,** together with the possibility of enforcing payment if later it should be found necessary. It is an irregular case where a credit manager is justified in extending credit which carries with it considerable speculation regarding the success of the debtor. The risks inherent in the business of the credit manager's own organization are usually ample for one concern. The only circumstances justifying credit in a speculative case would seem to be the possibility of unusual profit on the order or of future business. Such a transaction even then partakes of the nature of an investment in the customer and has no place as a legitimate mercantile credit.

SUB-NORMAL CREDIT RISKS.—Many concerns are perfectly willing to put their goods in the hands of debtors who have no free assets to stand as security therefor. Some manufacturers and jobbers appear willing to ship their goods and merchandise to debtors who can pay only if they succeed in selling those goods at a profit. Competition may force such terms, but the seller should bear in mind that at best he is a joint venturer in the business of the debtor; that he is thereby actually removing that amount of capital from his business and from his control.

The champions of sound credit policies, whose tendency is to follow conservative lines rather than the more liberal variety, will encounter much criticism. But credit is contingent on return, and a sound credit business cannot be built up in disregard of the ability of debtors to meet their obligations at maturity. It is very doubtful if any so-called era of prosperity will ever be found so continuous as to more than postpone the collapse of business founded on such a system.

WEAKNESSES DISCLOSED BY LEDGER ACCOUNTS.—As previously stated the credit manager must watch the progress of his accounts for signs of weakness. The accounts will disclose such signs as payments become irregular in time or amounts, as disputes arise, and as merchandise returns become frequent. The department must be so organized and maintained that these signs are promptly investigated and their significance understood. When weakness is indicated the alert credit manager is in a favorable position to approach the debtor tactfully and arrange for an early settlement of the account or its elimination from the books.

The credit department should gather information regarding irregularities in many other departments of the business. Frequent **complaints from customers** and **excessive returns of merchandise** often point directly to carelessness somewhere in the organization or to poor salesmanship. The credit department should detect these signals and report the circumstances in order that the faults within the organization may be corrected promptly.

DELINQUENT ACCOUNTS.—The financial executive should give special attention to **past due accounts.** Years of experience and observation in business show that when an item is past due, it is a sign of trouble. It might be stated as an axiom that a past due account is potential trouble; and the more promptly the account is taken in hand the less danger there is that a potential trouble will develop into a real loss.

To permit accounts to become past due without that fact coming automatically and surely to the credit manager's attention is inexcusable. If later it develops that his judgment in further dealing with the item has been faulty and the account lost or compromised, that is another matter. But nothing excuses him from having failed to consider the item in the first place when it became past due.

Forms of Credit

Credit as contemplated in this section is that credit usually involved in the sale of goods or services. The obligation to pay is generally represented by the conventional accounts receivable, sight drafts, acceptances, or promissory notes.

ACCOUNTS RECEIVABLE.—The earliest and simplest form of credit arising from sales is the **book account,** sometimes called an "open" or "charge" account. It comes into existence when the customer asks that his purchase be "charged" to his account. The purchaser gives no written promise to pay.

The seller assumes the burden of later proving that the goods or services for the amount claimed were sold and delivered. From the seller's viewpoint the outstanding disadvantage of this form of credit is that the charge is always **open to dispute** on grounds of non-delivery, terms, prices or quality. Moreover, the account is **not readily negotiable** because of those circumstances as well as for legal reasons. On the other hand, the seller finds it a **very practical method** for handling the account of a customer making small or frequent purchases. Many concerns, particularly those classified as retailers, wholesalers and jobbers consider the book account an important sales stimulant due no doubt to the convenience with which the sales may be made and charged. From the viewpoint of the buyer it is perhaps the most acceptable form of credit. Its advantages to buyers are so pronounced that if left to their own preferences they would doubtless prefer it to every other form of credit.

In connection with book accounts, it is especially important for the **sales slip** on which the sale or charge is first recorded to provide for a detailed record of the purchase, identification of the customer, and suitable record of terms of payment, shipment and delivery.

CLASSES OF ACCOUNTS RECEIVABLE.—Accounts may be of several classes, depending on the terms of sale or class of customer. There are, for instance, the commonly accepted 30-day or end-of-the-month accounts, instalment accounts, and special classes such as "will calls" and "leaves" as found in department stores.

ASSIGNMENT OF ACCOUNTS RECEIVABLE.—Book accounts may be assigned as collateral for loans, or they may be sold outright. In fact, the practice of borrowing on book accounts is not infrequent, although it is perhaps not to be favored unless other sources for obtaining money are not available. There are concerns which specialize in the business of lending money on the pledge of current book accounts. Their methods of doing business are considered at length in another section of this work. (See "Financial Institutions, and How to Use Them.") The assignment of book accounts is usually effected either under the notification or the non-notification plan.

Under the **notification plan** the payees (customers) are notified by the lender that he owns the accounts and that remittances are to be made to him. The outstanding objection to this plan from the sellers' viewpoint is that it gives undesired publicity. Notice in such cases is given by letter or by suitable wording stamped on invoices and statements.

The **non-notification plan** involves an added risk for the lender, as he is without the direct contact with the purchasers which he would have under the notification plan. This latter plan is to be preferred by the borrower, however, for under it he continues to bill and collect as usual, and in accordance with the agreement transfers only his receipts to the lender. The debtors have no notice of these relations.

The lender will advance normally from 70% to 85% of the accounts so assigned, retaining 15% to 30% as a margin of security until the customer pays the account.

Finance companies and banks which lend on open accounts urge that the benefits of this form of financing justify it; but credit men generally are opposed to it, particularly the National Association of Credit Men. That association has stated that publicity in this respect is necessary to prevent fraudulent practices, and it has advocated laws to require formal notice of such transactions particularly in cases of chattel mortgages. Actual business experience con-

demns the assignment of open accounts receivable whenever at all possible to avoid it.

The financial manager must consider the probability of his customer having assigned his accounts, thereby creating liens on his assets which will take precedent over the claims of general creditors in cases of insolvency.

PROMISSORY NOTES.—Sales are often made regularly to certain classes of customers on the basis of promissory notes, which are merely a written promise to pay a definite amount at a fixed or determinable date. In other cases, the note form of obligation is proposed when a running book account has attained a certain size or age. In businesses where book accounts are carried to any considerable extent, however, it is more often the case that promissory notes are taken only as a preliminary step in the **collection of delinquent accounts.** That procedure is usually an effective step in the right direction, as the average customer seems to feel a sense of responsibility about meeting his note which is not so noticeable where his open account only is concerned. The obvious corollary is that the customer offering promissory notes in settlement of his book account is exhibiting signs of financial weakness.

ADVANTAGE OF SETTLEMENT OF ACCOUNTS BY PROMISSORY NOTES.—The note form of obligation **fixes the amount of the debt** and virtually eliminates the probability of later disputes about prices, quantities, quality, etc. In this form the debt is more readily and conveniently salable in case it is desired to realize upon it before payment.

The prompt payment of open accounts and promissory notes at maturity can be assured, if necessary, by obtaining a **pledge of other assets** as security therefor, or by arranging liens on the things sold. Instalment accounts are usually supported by a contract which embodies a written promise to pay, and a pledge or a lien on the goods sold. In these respects they partake of the status of promissory notes, but in reality they are only secured book accounts. Such contracts are rarely if ever negotiable.

SIGHT DRAFTS AND TIME DRAFTS.—These two credit forms are very popular among larger concerns. Either form is an order drawn by one person (the maker) ordering a second person (the drawee) to pay a definite sum of money to a third person (the payee). Sight drafts are payable on sight, i.e., when presented, whereas time drafts are payable usually in 30, 60, or 90 days, and often require ad interim **"acceptance"** by the drawee.

As with other forms of credit, the use of the sight draft or the time draft in connection with sales is limited somewhat to special classes of customers and is more often confined to certain trades or industries. Either form may be used, however, whenever its characteristics satisfy the particular demands of the parties at interest. The sight draft is used when payment is expected at once upon presentation of the draft, whether or not title is retained by the seller until the draft is paid. The time draft is particularly suited to similar cases when payment is expected on a designated future date.

Both forms of drafts have a secondary value in the collection of book accounts. Those arising from book accounts do not rank with those originating with the sale of commodities. In either case, however, they circulate readily in banking channels, although banks generally accept "for collection only" those drafts originating in the collection of delinquent accounts. The use of drafts in this latter connection is often productive of good results because many persons accepted make a special effort to honor them rather than permit their local bank seller know that they are delinquent in meeting their obligations.

TRADE ACCEPTANCES.—Trade acceptances, as the term is commonly understood today, are time drafts which are drawn by sellers on buyers for the purchase price of commodities and are "accepted" by the buyers. Their use in connection with current sales distinguishes them from sight and time drafts. They may be used as a convenience in adjusting or closing an account for borrowed money or past due charges but they should not then be spoken of as "trade acceptances."

Use of Trade Acceptance Illustrated.—X, who is a manufacturer in Chicago, sells goods to Y, who is a wholesaler in New York. When X sends his invoice, he also sends to Y a 60 or 90 day draft drawn on Y. If Y wishes to pay X at once by means of cash, he destroys the draft; otherwise he accepts the draft by writing "accepted" across the face of the draft, indicating the place at which he wants to pay the draft when it becomes due. He then signs it and returns it to X. X can either have it discounted at his bank or hold it until it is due, and then present it to Y's bank for presentation and payment. If X desires to discount the paper he is expected to be able to show that it has arisen out of an actual commercial transaction; that is to say, the financing must have taken place through the movement of goods from producer to consumer. The trade acceptance is not intended to be given for old debts, or the purchase of fixed assets.

ADVANTAGES OF TRADE ACCEPTANCES.—The advantages of trade acceptances to the seller may be summed up as follows:

1. They establish the correctness of the amount due.
2. They practically eliminate the common abuses of unwarranted returns, excessive discounts and other unjust claims.
3. They facilitate and improve collections. Debtors often attach importance to written instruments bearing their signatures, and are likely to make preparations to honor them promptly on maturity.
4. They tend to reduce losses from bad debts, and to cause buyers to be more conservative in regulating their purchases.
5. They are an aid in financing. Their ready marketability and fixed maturities make possible more accurate forecasts of receipts, and make borrowing relatively easy.

They are **generally beneficial,** and their use is desirable wherever business customs and practice make their adoption practical. That they may not have been theretofore used is no objection to their adoption if other circumstances are favorable. They enable sellers to do business more economically and enhance their borrowing power. They furnish banks with sound, self-liquidating, two-name paper, and thereby strengthen their position. These circumstances tend to help the entire community, in the benefits of which all share alike.

BILLS OF EXCHANGE.—The term "bill of exchange" is used commercially to designate a **form of sight or time draft** drawn against shipments to or from foreign countries. (It has a broader legal meaning.) Such bills may be drawn with **"documents attached,"** in which case the goods do not come into possession of the buyer until the draft is accepted or paid, as the case may be. This form of payment is used effectively in connection with trades between parties more or less known to one another that do not require the convenience of intermediate arrangement with an international banking house, as by a letter of credit.

LETTERS OF CREDIT.—Foreign trade is handled to a large extent by means of **commercial letters of credit.** They are issued by banks to facilitate payments for purchases and sales in foreign countries. They represent merely the amount of the buyer's credit which the issuing bank guarantees. Sales made against letters of credit are therefore not more nor less than a sale for cash. The question may arise whether or not the seller is thereby extending credit to the bank, particularly where the draft is a time draft on, say, 90 days sight. The seller in that case would be extending credit to the bank, but for all intents and purposes of this article the seller may consider the bank's obligations as the equivalent of cash.

Sources of Credit Information

USE OF CREDIT INFORMATION.—The growth of sources of credit information has developed with the expansion of the credit system itself. They are now highly organized, and in many instances by specialization they are prepared to meet the most exacting demands. If used to the fullest extent, wilful fraud is about the only unfavorable phase of credits they do not effectively forecast or may not be expected to forecast. Even in cases of fraud they do much to prevent a repetition.

The responsibility for credit losses lies not so much with the sources of credit information nor with the information itself, but with the failure or neglect properly to make use of it. Credit losses are inexcusable when they arise out of failure or neglect to use available credit information. There is a strong tendency in the routine of business to pass repeat orders for an indefinite time after a credit is once established. Vigilance must be maintained after the account is opened.

CUSTOMERS' WRITTEN STATEMENTS.—The first source of information concerning a credit risk is the customer himself, from whom a personal statement, either written or oral, may be obtained. It is correct and proper to ask a new customer for a written statement of his financial affairs.

As credit extensions continue, statements should be obtained from time to time and the customer should respond willingly to such requests. Many concerns buying on credit voluntarily submit periodical financial statements.

The statements **should be signed** by the customers and should include over the signature a declaration that it is then made for the specific purpose of obtaining credit. Such statements have a definite legal standing in prosecution for fraud.

Failure or refusal to answer requests for statements may and should reflect most unfavorably on the customer. Confused or incomplete statements are very apt to make a bad impression on the seller. Upon the credit manager devolves the responsibility of evaluating the significance of incomplete or otherwise irregular statements.

CUSTOMERS' ORAL STATEMENTS.—Personal interviews are fruitful sources of credit information, but usually amount to no more than the acceptance of the customers' oral statements. The interview offers many advantages for an insight into the customers' character and behavior and it is helpful in that respect. As a result of the interview, the credit man may or may not be satisfied with the oral statements made by the customer concerning his willingness and ability to pay. Oral statements are in fact frequently accepted and credit extended thereon but this is a questionable practice unless the seller

has had previous dealings with the customer or unless the credit man can satisfy himself from some collateral source as to the customer's integrity.

The **outstanding objection to the oral statement** is that it offers nothing tangible for reference in case of later misunderstanding or dispute. It has practically no standing in law. All too often "oral statements" are "just talk." Not that they are always valueless, for many business men have the highest regard for their spoken words and experience shows that they strictly live up to them; but if the credit man has erred in accepting the oral statement as trustworthy, he has thereby burned all bridges behind him and left no second line of defense. The written statement, on the other hand, is just as conveniently furnished and is decidedly the best for all parties concerned.

OBJECTIONS TO CUSTOMERS' STATEMENTS.—There are no objections to information that may be received directly from a customer, except the general objection that it may be without verification. This fault naturally leaves the way open for unconscientious persons to impose upon the credulity of the seller by withholding adverse information.

Many concerns when submitting written statements arrange for their preparation by public accountants, thus supplying the necessary verification.

FALSE STATEMENT LAWS.[2]—The laws of nearly every state now provide for the punishment of offenders who obtain money or property on false statements of condition. The Uniform False Statements Law, enacted in a number of the states, tends to make issues clearer than was the case under the old larceny laws. It provides in substance **punishment:** (1) for the mere making of a false statement in writing for the purpose of procuring credit, with intent that it shall be relied upon; (2) for procuring property or credit upon the faith of a false statement, the person procuring the credit not necessarily being the one making the statement; and (3) for falsely representing that a previous written statement is true with respect to present conditions, thereby procuring credit.

The essence of the major crime under the new law is the making of a false statement "with intent that it shall be relied upon." The uniform law does away with any difficulties involved in the former larceny laws. The only elements of proof required against the defendant are that:

1. He made a statement, or caused it to be made.
2. The statement is false.
3. It was made with the intent that it should be relied upon.
4. It was made for the purpose of securing credit in some form or other.

By also making it a misdemeanor to make a false statement even without fraudulent intent, the statute covers **exaggerated or untrue statements** that may not have been intended to defraud anyone. The new law does not permit the defenses customary under the former larceny laws, such as the necessity for proving literally that the debtor actually got the goods, and the defense that the mere extension of a previously existing debt could not be made the basis of larceny.

If the false statement was mailed, the debtor may also be prosecuted under the federal laws, although this law (using U. S. mails to defraud) requires proof that the debtor issued a false statement in writing and secured merchandise or credit on the basis of the statement, and that the statement was sent through the mails. This section of the federal law is found in U. S. Criminal Code, Sec. 215, and reads as follows:

"Whoever, having devised or intending to devise any scheme or artifice to

[2] See also law on false financial statements in Section 6 on Business Law.

defraud, or for obtaining money or property by means of false or fraudulent pretences, representations or promises shall, for the purpose of executing such scheme or artifice or intention so to do, place or cause to be placed, any letter, postal card, package, writing, circular pamphlet or advertisement, whether addressed to any person within or outside the United States, in any postoffice or station thereof, or street or other letter box of the United States, or authorized depository for mail matter, to be sent or delivered by the postoffice establishments of the United States, or shall take or receive any such therefrom, whether mailed within or without the United States, or shall knowingly cause to be delivered, by mail according to the direction thereon, or at the place at which it is directed to be delivered by the person to whom it is addressed, any such letter, postal card, package, writing, circular pamphlet or advertisements, shall be fined not more than $1,000 or imprisonment not more than five years, or both."

In order to preserve tangible proof that a statement was sent through the mails, the National Association of Credit Men and some printers have devised statements combined with mailing envelopes, so that the statement automatically carries with it evidence of having been mailed. This result is effected by having the form cut to permit of folding and sealing, so as to enclose the printed side, leaving the blank side of the paper for address and stamp.

REASONS FOR FURNISHING STATEMENTS.—The principal reason for furnishing statements is the fact that the successful working of the credit system is dependent upon it. The jobber or merchant, for instance, who is asked for a statement of his affairs, makes like requests of his customers. Without such information no link in the chain can hold. Each concern thus contributes to the establishment and maintenance of its credit position and the entire credit structure. The credit system which is recognized as being so helpful and necessary, is materially strengthened and everyone shares in the beneficial result. The right-thinking person realizes that the credit man is entitled to certain information regarding his business and that his interests are furthered by securing the full confidence and intelligent co-operation of the enlightened credit man.

IMPROPER REQUESTS FOR STATEMENTS.—It has now become common practice among larger business houses to request statements from all credit customers. The mere fact that this practice has become so universal has taken from it the objectional aspect of inquiry, curiosity and doubt. There is no ground upon which a debtor may object to submitting a statement of his condition at the time of applying for credit, or at any other time a legitimate request is received. It should not be considered inquisitorial. It does not challenge his good faith. Instances may occur, however, where persons or firms seek statements from customers when their purpose in doing so is in no way concerned with the granting of credit. In these cases the inquiring person may seek **"inside information"** as to the standing of a competitor or customer or may desire other information. Such requests for statements should be refused. It would not seem difficult for a debtor concern to recognize such a request, unless it came indirectly through a credit agency. In that case the debtor must refuse to answer, or rely upon the integrity of the agency to see that no improper use is made of the information given.

CAUTION IN GIVING STATEMENTS.—There are notable instances where certain large and well established concerns have steadfastly refused to give statements of anything to anybody. They represent, the extreme in that direction. No objection is seen to giving statements to those directly interested in extending credit, or to recognized agencies, provided, however, such state-

ments contain no confidential information as to clientele, volume of business done, costs, or expenses or earnings, as such matters are strictly confidential and can be safely disclosed only by the exercise of the utmost discretion. A concern is justified in looking with suspicion on a general request for such data, particularly when it comes from an "agency," or when the use to be made of it is not subject to direct control by the giver. Reputable agencies do not expect such information. It may be given to banks and principal creditors if necessary to a continuation of relations with them, but it should only be given and received in the strictest confidence.

It is proper to give statements only to recognized inquirers, and then to give general information as to financial worth and history, together with references as to reputation for prompt payment.

USES OF CONFIDENTIAL INFORMATION.—The ideal of every credit manager is to treat information received by him in the same or greater confidence than he would want similar information about his own concern treated by those to whom he gives it. He should have had sufficient experience in dealing with his creditors to sense his full responsibility with respect to the limited uses that should be made of confidential information that may come into his hands from his customers.

DANGER IN STALE STATEMENTS.—To have at some time past obtained a statement from a creditor is not all that is required of the credit manager. Failures occur by the thousand every year. Successive statements are necessary where the credit extensions are continuous.

Serious losses have been sustained by reason of credit extended on the basis of statements as of six months, a year, or more preceding. Any statement that is not of current date should be questioned, and whenever possible a current statement should be obtained. If a current statement cannot be obtained, the older statement should be used with caution, and then only if it is supported by a written declaration that no substantial change has occurred since its preparation.

OWN LEDGER EXPERIENCE.—A source of credit information second in importance only to the customer himself is that found within the records of the creditor's dealings with each customer. Many characteristic tendencies of great value will appear from the study of customers' accounts, particularly when the accounts are active. The signs of weakness, as hereinbefore mentioned, such as irregular or delinquent payments, frequent complaints and merchandise returns, are almost infallible indications of ultimate loss if the account is continued without correction.

It is needless to get reports from agencies and from other creditors of the customer, when one's own book experience shows the account to be a poor credit risk and an unprofitable account. An account becomes unprofitable in proportion to the extent that irregularities appear. There may be no ultimate loss from uncollectibility; nevertheless the extra overhead expense of frequent clerical and executive attention to such accounts soon reaches the point where it is obvious that the account causes more trouble than it is worth.

The accounts should be examined periodically for evidences of customers who buy seasonal goods and return them only after the season is well advanced or has passed, or customers who buy only special offers and bargains, such as "jobs," and later return the lesser values of the lot.

Pyramiding usually foreshadows a bad debt. This condition develops as customers continue to buy but pay amounts less than the recent charges, resulting in a gradual but ever-increasing amount of debt.

Such signs as these often appear merely because of shrewd practices on the part of the customers, but unless they are controlled they will almost invariably lead to credit losses. Information obtained from outside sources, as from agencies, is useful in determining the true significance of these apparent irregularities. When the information from the outside shows similar conditions elsewhere, the customer should be reminded of the unsatisfactory condition of his account; if the information shows the conditions to be confined to the creditor concern and that other creditors are having no difficulties with the account, such information is useful in directing attention to probable faults within the creditor organization, the disclosure of which leads in turn to corrective measures.

CREDIT MANAGER'S PERSONAL EXPERIENCE.—The essence of the credit manager's function is to know when, where and how to get credit information. It is no excuse that the information coming to him from various sources is meager or incorrect. It is his responsibility to separate the wheat from the chaff, and to get the fullest information available. Not the least of the sources of information open to him are his **own personal experiences.** On these he should draw constantly. As previously mentioned, these are probably nowhere better recorded than in the ledger accounts.

Another of the credit manager's surest sources of information on credit risks is his knowledge of individuals and their movements from one concern to another, from fires to failures, or from obscurity to prominence. It is important that he recall Mr. John A. Somebody, now incorporating the Bargain Stores Company, as the same John A. Somebody who formerly failed under rather inauspicious circumstances. It will be helpful to recall that Mr. Robert G. Anybody, who has organized the Best Service Co., brings to the new firm the highest type of personal credit standing. He may read trade journals and newspapers for legal notices of business suits, and for weather, crop and industrial conditions; he should keep in touch with new incorporations and partnerships, fires, bankruptcies, assignments, etc. Information on these points normally comes in from established sources, but the duty of having it, or of bringing it in, devolves primarily on the credit manager.

SALESMEN AS A SOURCE OF CREDIT INFORMATION.—Except in retail lines salesmen usually call on customers and meet them personally. The salesmen are the only representatives of concerns who see many of their customers. Moreover, they meet them more or less frequently. Therefore, it is apparent that salesmen are in a favorable position to become acquainted with the business sagacity and local reputation of customers. So it is only natural to rely on salesmen as an important source of credit information.

It does not follow as a rule, however, that salesmen make good credit or collection men. The art of selling and the business of extending credit are dependent one on the other, but the training of salesmen, as distinguished from credit men and collectors, tends in different directions.

Salesmen of importance recognize the need of credit information and the need of making collections precisely as credit men recognize the necessity of making sales. Salesmen feel at times, however, that they should not be charged with any credit responsibility and are particularly opposed to making collections. They assume that their duty is to sell goods, regardless of the fact that goods shipped to poor risks are more nearly a gift than a sale. They are prone to forget that it requires no salesmanship to secure such an order. The vast majority of salesmen, however, do gather credit information, and it is found to be current, practical and useful. They make collections in many cases, and

rarely overlook the possibilities of future business after the remedial treatment has been applied.

Credit managers doubtless find also that salesmen co-operate with them somewhat in proportion to the amount of encouragement and assistance credit managers may be able to extend to them in the matter of making sales. If credit managers will acquaint the salesmen with the reasons they may have for declining risks they will thereby do much to retain the salesmen's interest.

Salesmen are "on the ground," and are in position to furnish information regarding customers' business ability, habits, reputation, location, references, and other local conditions. They can size up at a glance the condition of customers' stock, i.e., whether it is clean, well displayed, out-of-style, unseasonable, or not fitted to the demands of the community served. They learn the selling policies, whether cut rate or at suitable profit; whether customers buy prudently or recklessly, whether they make good selections of patterns, styles, qualities and quantities, or over-buy. The salesmen can judge of the manner in which these concerns serve their customers; whether clerks are attentive and respectful, or otherwise. The home, business and personal habits of customers come more or less under the observation of salesmen. They obtain information regarding the customers' local reputations from remarks made by competitors and neighbors or fellow salesmen, and by comparison with other concerns visited. They actually see the locations of customers' places of business, and their suitableness with respect to the trade served, competition, accessability, etc.

If the crops in a certain community have failed or are late, or any economic outlook of the community is unfavorable, the salesmen are sure to learn of it, and may approximate the effect on their customers. Salesmen see changes in transit facilities and other civic adjustments, such as the opening of new car lines and the abandonment of others. When asking customers for references, they may verify in a large measure the information given by noticing the trade brands of the merchandise on the shelves and identifying them with their respective houses. The salesmen are not detectives, but they are remiss in their duty if they do not instinctively take such matters into consideration, and report any important information concerning the customers' credit risk. In selling an **"opening bill,"** or when selling a customer for the first time, it is quite customary for salesmen to discuss credit arrangements, and even to ask for a written statement of financial condition.

VALUE OF SALESMEN'S REPORTS.—The value of the salesmen's reports depends largely upon their ability properly to interpret and evaluate the conditions apparent to them. Such reports rarely ever contain more than **hastily formed opinions,** and should be received with that in mind, making due allowances also for the idiosyncrasies and generally optimistic viewpoint of salesmen. It is well to remember also that a certain amount of "window dressing," done in order to influence the trade, may have also affected the impressions of the salesmen.

PRINTED FORMS AS AIDS TO SALESMEN.—Salesmen work fast and often write very poorly, so that it is important to provide them with every convenience possible. The value of their reports will be improved if they are supplied with printed forms designed to facilitate the making of reports, and to bring to their minds the factors in which the credit department may be particularly interested. Any special information required may be conveniently arranged for by letters to salesmen asking for exact information desired, but **printed forms** are better for reports on general conditions. The size and word-

ing of printed forms are governed by the extent to which it is the policy of the credit department to rely on salesmen for information. A long form of report can be prepared which will include practically all information necessary to the extension of credit. A short form, which would be more acceptable to salesmen, would limit the queries to matters outside of history and financial worth, and include only the salesmen's general observations and trade references. With the short-form report, credit managers would refer to agencies for the information not included in the report, and, if necessary, for verification of the report.

LONG FORM OF SALESMEN'S REPORTS.—A long form of report for use by salesmen should call for information about as follows:

NAME OF CONCERN:.....

ADDRESS:.....

PRINCIPAL PARTNERS OR OFFICERS:

Name	Nationality	Age	Capacity
.....	.....	.....	.....
.....	.....	.....	.....
.....	.....	.....	.....
.....	.....	.....	.....

* State briefly important previous connections of these members of the firm:

.....

.....

.....

Are any liable as endorser or bondsman?.....

Did any ever have fires or fail?.....

Present firm organized:.....

Name of predecessor concern, if any:.....

* Was previous business successful?.....

* If not, why not? .....

.....

* If not, how has new concern planned to overcome that condition?.....

.....

General character of trade served: Is it agricultural or industrial, wealthy or middle class, city or country, fancy or staple?.....

.....

Location with reference to principal class of trade served: Is it good, fair or poor?.....

.....

Principal lines of merchandise carried:.....

Is it suitable to trade served?.....

Estimated value of total stock carried:.....

* Is estimate high or low in your opinion?.....

What proportion of total stock is merchandise similar to our line?.....

What proportion of total stock is our line?.....

* Condition of stock: Is it clean, well-displayed, well balanced, etc.?.....

.....

Is stock insured?.....How much?.....

Cash or credit business, or both?.....

Average sales and expenses for several recent months:

Month	Sales	Expenses
.....	.....	.....
.....	.....	.....
.....	.....	.....

* Do they pay too much rent?.....Too many or two few clerks?.....

* Are they considered careful buyers?.....Good managers?.....

* Do they seem to be capable and are they making money?.....Is that the public opinion?.....

* Is local opinion as to characters of members of firm favorable?.....

* Have you heard anything to the contrary?.....
Are the members of the firm interested to any extent in other businesses?.....
.....
Value of real estate and other property in name of the concern:.....
Describe briefly:.....
.....
.....
Any mortgages, liens, or judgments?.....
If a new concern, how much cash and other tangible property was paid in?.....
.....
Buy principally from:

Names	Addresses
.....	.....
.....	.....
.....	.....
.....	.....

Banking references:.....
.....
Remarks:.....
.....
.....
.....
(Signature of Salesman)

NOTE: This form may be expanded to any extent considered desirable; as, for instance, to include a balance sheet.

The foregoing long form of report cannot be presented to the customer for his signature because it includes certain opinions of the salesman which it would not be tactful to disclose to the customer. If it is desired to have the salesmen obtain the signature requisite under the false statement laws, it will be necessary to divide this form of statement into two parts. The queries marked with an asterisk in the above form would be put on a separate sheet for the signature of the salesman only. The remainder of the queries would then be on a second sheet to which could be appended a statement for the customers' signature reading as follows:

> I have read the foregoing report and submit it as my own for the purpose of obtaining credit and to induce you to sell me (us) merchandise intending that you should rely thereon respecting my (our) financial condition.
>
> .....
> Proprietor, officer or member of the firm

SHORT FORM OF SALESMEN'S REPORTS.—A short form of report could be arranged along the following lines:

NAME OF FIRM:.....
ADDRESS:.....
LOCATION TO BUSINESS CENTER:.....
PRINCIPAL LINES SOLD:.....
Condition of stock: Is it clean, well-kept, active and well balanced?.....
Efficiency of organization:.....
Competence of management:.....
Local conditions:.....
Local reputation:.....
References:.....
.....
.....

The salesmen should make some form of report on first orders, and should always communicate important happenings to the credit department.

OTHER USES OF SALESMEN'S REPORTS.—The sales manager is often interested in knowing customers' reaction to salesmen's visits. He can get the data by special reports, or he may include his requests with the credit form as by adding other questions or preparing spaces for tabulation of the sales information. The information usually desired consists of a record of orders received, kind of goods bought each visit, and remarks as to when the customer may desire to buy, or the like. An established form of symbols or a code is most practical in reporting this information. An advantage of gathering sales statistics on a separate report would be that the report may then be used as a "route" card which the salesmen may take along on their trips. Credit reports are better filed in the office and should remain there.

WHEN SALESMEN SHOULD *NOT* ASK FOR CREDIT INFORMATION.—The discretion to be used in obtaining credit information through the sales force depends to a large extent upon the class of customers in question. **Small traders** can be approached for much more information than it is ordinarily prudent to request of larger houses. It would be unfortunate for salesmen to ask for credit information from the **larger and older concerns.** It is practically settled by custom that these concerns have established their standing with the agencies, and that they will not be put to the inconvenience and trouble of again furnishing such information to salesmen with whom they might place orders. Moreover, it will be found too expensive to have salesmen spend time gathering information which can be obtained by mere inquiry of an agency or other recognized source of such information. It is preferable to secure the salesmen's report only from the smaller or more distantly removed customers, and in cases where the credit situation with any given customer may be relatively acute.

SPECIAL CREDIT INVESTIGATORS.—Houses taking large advance orders for future delivery, as on contracts where the goods are to be manufactured, or covering delivery over an extended period, often have special representatives visit the customers for the purpose of determining and arranging the credit treatment. These representatives usually go into the subject rather thoroughly. It is customary for them to review the financial books and records, commitments, costs, etc. If the special representative is alert, tactful and properly informed, he may frequently obtain important and confidential information that is of such a delicate nature as would preclude its publication in any agency report. However, to proceed intelligently, the special investigator should know as much as possible about the account and the reasons behind his visit.

BANK REPORTS.—Credit managers do not often hesitate to call upon their immediate banking connections or any other bank that is given as a reference, or which they may have reason to believe may inform them concerning a credit risk. Occasionally, the banks' replies may be inaccurate and they may be non-committal, particularly in those cases where the credit department needlessly requests information concerning inconsequential risks, or where the inquirer is unknown to the bank. Whatever the tenor of the replies, no harm results from making reasonable requests of the banks, but unreasonable requests simply will be perfunctorily answered or ignored.

It is not in accord with the banker's ideals to discredit his depositors or his community. Moreover, his institution is not a credit and collection agency. On the other hand, the banker realizes more fully perhaps than anyone else that his business above all others is primarily based upon the credit system, and he will do all that he fairly and properly can do to insure the soundness of that system.

Banks as a source of credit information reach so far beyond the limits touched by credit agencies in the matter of confidential, vital information that inquiries should only be made in worth-while cases, and then only when the request is clothed with formal courtesy and discretion.

Unless he has specific permission from a customer to inquire direct, the well-informed credit manager will invariably seek to tap this valuable source of information through his own banking connection, relying upon that institution to transmit the request to the bank of its acquaintance from which the information desired may be obtained.

MERCANTILE AGENCIES.—Of all external sources of credit information the mercantile agencies are perhaps the **best known and most frequently used.** Beginning a few years after a disastrous panic in 1837, when losses from bad debts were enormous, two agencies were organized to gather and compile credit information. These organizations were the present R. G. Dun & Co., an outgrowth of a business founded in 1841, and Bradstreet Co., founded in 1849. With their present organizations of thousands of trained reporters, correspondents and attorneys, located in every important trading center, they have become so universally recognized as to require no introduction to the smallest and most obscure business man. They are honored today as powerful business-building institutions.

In addition to these two foremost general agencies there are also many **special agencies** which limit their activities to particular lines, such as jewelry, millinery, textiles, garments, furniture, etc. Agencies of this kind are most useful to jobbers, wholesalers, manufacturers and banks, but they are only indirectly, if at all, helpful to the retailer.

MERCANTILE AGENCY REPORTS.—Statements furnished by an agency may be limited to any particular subject inquired about, but are generally uniform and comprehensive, including for instance:

1. History of the past record of the concern or the principals conducting the business.
2. Financial statements showing assets, liabilities and net worth. These statements are as of current and earlier periods. The agency neither audits nor verifies the statements obtained by it, but requires the signature of the merchant.
3. Comments on general conditions indicated by the statements.
4. Information as to character, habit and business capacity; and as to location, business outlook, etc. These matters are reported as mere hearsay, but they should not be disregarded unless actually known to be erroneous. Often they will be found to be trustworthy.
5. Information regarding opinions and experiences of other creditors.
6. Fire record.

MERCANTILE AGENCY RATING BOOKS.—In addition to rendering reports in reply to specific inquiries from their clientele, Bradstreet Co. and R. G. Dun & Co. publish **rating books** for general reference regarding capital and credit standing. These books undergo constant revision and are republished quarterly. They purport to list every concern in business, about 2,000,000 in number. Because of the enormous number of listings, it is necessary to condense the available information under two heads, which for further brevity are represented by **symbols.**

The first symbol used denotes the relative capital or "size" of the business; and the second indicates the general grade of credit standing, whether of the the best or not so good. The two ratings are absolutely distinct and bear no

relation to each other. For example, any suspicion that might attach to a merchant's character or manner of paying would not affect his capital rating, but only his credit rating. Thus a large concern may be rated "AA" or "G", meaning that in size it is a $1,000,000 enterprise. The second rating of "1½" or "B", however, would indicate that its willingness and ability to pay its debts was not of the best. Again, the first rating of a concern might be "E" or "S", indicating $20,000 to $35,000 in size, while its second rating of "2" or "C" would signify that its credit standing was excellent.

Figs. 1 and 2 show the symbols used by R. G. Dun & Co. and by Bradstreet Co. The vertical double lines which separate the different grades of credit in these two symbol charts indicate the ratings ordinarily required by credit insurance companies before they will indemnify the shipper against loss.

In many cases it is found impossible to assign both a capital and credit rating, even though the subject pays bills promptly and is recognized as having a certain credit standing in the business community. Very often it is thus necessary to leave the capital blank, assigning only a credit rating. It will to some extent reflect the amount of credit which might reasonably be extended on the basis of all the contributing evidence. Sometimes concerns cannot be rated as to capital or credit. The lack of a rating does not always mean that the subject is absolutely without capital or credit, though it does indicate that the business is not well established.

WHEN TO GET SPECIAL REPORTS.—It is probably safe to rely on high ratings by these agencies as justifying ordinary credit extensions. It is when these agencies indicate that conditions are not the best, or when the credit asked seems relatively disproportionate to a normal amount, that **special reports** must be obtained. The need for further investigation increases precisely as unfavorable conditions are evident. Moreover, adverse information obtained from any other source should evoke further inquiry from the agencies.

When the agency ratings show unfavorably, or when they may show favorably but do not coincide with other information in hand, a special report is necessary if the seller concern is to pass upon the risk intelligently. When it is desired to ascertain the true significance of unfavorable tendencies disclosed by a customer's account on the books of the creditor concern, it is usual to obtain special reports from the outside with respect to the tendency in question.

ABILITY OF MERCANTILE AGENCIES TO FURNISH REPORTS.—The far-reaching organizations of the two large agencies render their ability to furnish reports most effective. By means of their established connections they are prepared quickly to interview a debtor concern, wherever located, and gather much current practical information at first hand. In these cases their **local representative** makes personal inquiry of the concern and of local banks and tradesmen. Their representatives are in a position to observe and hear many things which are important in the granting of credit, and while they endeavor to give weight to these factors in the published ratings, yet the special reports afford them an opportunity to present much detail from which the reader can form his own opinion and thereby grant or refuse credit on the basis of individual judgment. Special reports by bureaus or local credit organizations within the trade have the distinct advantage of bringing to light unfavorable conditions which only the exceptional customer would disclose, and which the larger agencies are unable to get.

RELIABILITY OF CREDIT AGENCY REPORTS.—That agencies do succeed fairly well is shown by the statistics of one which show that of the 111,348 business failures in the past 30 years this company printed 89⅓%

Estimated Pecuniary Strength	General Credit			
	High	Good	Fair	Lt'd
Aa Over $1,000,000	A1	1	1½	2
A+ $750,000 to $1,000,000	A1	1	1½	2
A 500,000 to 750,000	A1	1	1½	2
B+ 300,000 to 500,000	1	1½	2	2½
B 200,000 to 300,000	1	1½	2	2½
C+ 125,000 to 200,000	1	1½	2	2½
C 75,000 to 125,000	1½	2	2½	3
D+ 50,000 to 75,000	1½	2	2½	3
D 35,000 to 50,000	1½	2	2½	3
E 20,000 to 35,000	2	2½	3	3½

W	2,000 to 3,000			
X	1,000 to 2,000	D	E	F
Y	500 to 1,000	E	F	
Z	0 to 500			
Blank		A	B	C

Fig. 2. Commercial Ratings—Bradstreet Co.

with very moderate or no credit, 9⅓% with shaded credit, while the cases actually in error during that period amounted to 1⅓%. In each of the 14 years prior to and including 1900 this percentage of error amounted to 1% or over, reaching 3⅕% in the panic year of 1893. The only years in which the error has since reached 1% were 1903 with 1⅗%, and 1907 with 1⅕%. Four recent years show respectively: 4/5, 3/5, 2/5 and 1/5 of 1%.

These figures, however, are more important from the standpoint of agency efficiency than from the point of view of a credit manager. The credit manager should himself analyze the information and be trained to arrive at correct conclusions as to ratings and credit limits regardless of percentage arguments in support of agency ratings. It often happens that a firm with a high rating begins to go down hill. Later the credit rating is revised downward. At the time of failure the ratings were probably in accord with the status of the company. The real damage happened when the high ratings were accepted as a forecast of the future, whereas they were but statements of the past.

OTHER CREDIT ORGANIZATIONS.—In addition to R. G. Dun & Co. and Bradstreet Co., there have been formed many credit organizations limited to certain trades, industries and localities. The need for these organizations has developed from a desire on the part of credit men to have a "check" against the accuracy of the more general reports of mercantile agencies, and also to bring out detailed and more or less confidential information which only fellow credit men may be willing to impart. Their willingness to impart this information primarily grows out of a sincere desire on their part to strengthen the credit system in general.

There are the National Association of Credit Men, the various state associations, and numerous organizations styled "trade credit bureaus," "reciprocal service bureaus," and other suitable names, some being very extensive in their activities and others being only small groups of men representing their respective houses, who gather at luncheon, say weekly, and enter into a general discussion of credit matters. But by whatever name called, their respective members report in one manner or another their actual experiences with their customers. Incidentally each member thus emphasizes the major importance of ledger experience in connection with credit granting.

DOMESTIC INTERCHANGE BUREAUS.—The state associations of credit men operate interchange bureaus. Most of these bureaus collaborate with a central office conducted by the National Association of Credit Men, forming a national interchange credit system.

The plan of the larger state associations, such as the New York Credit Men's Association, is that all members file with that association a record of their experiences with each of their customers. The members are then supplied with a number of printed forms, one of which is filled out when information is desired on a certain risk. Upon receipt of this inquiry from a member, the association promptly mails an inquiry blank to all other members having dealings with the customer. Replies to these inquiries are in turn received by the Association, are compiled, and the result sent to the inquiring member. It is customary also to mail a copy of the final report to each member replying to the inquiry first sent out.

The function of the central clearance bureau of the National Association is to collect such data from state organizations and compile nation-wide reports therefrom for the better guidance of members doing business in more than one state.

NATIONAL ASSOCIATION OF CREDIT MEN'S RECIPROCAL FORM.—The Association has proposed the form shown in Fig. 3 as adaptable to inquiries concerning ledger experiences. Its use is dependent upon a reciprocal understanding that the concerns making inquiries will likewise reply to those they receive.

TRADE CREDIT BUREAUS.—Many trade associations organize subdepartments for the exchange of credit information. The reports of these bureaus have the advantage of specialization in a given industry and with a more or less limited class of debtors. Some of these bureaus are organized

erely to exchange experiences, while others have arranged to compile statistics repared from financial reports, etc. Their service in either case is greatly nhanced by whole-hearted co-operation on the part of the members.

ADVERSE LISTINGS.—Several of the trade credit bureaus devote the reater part of their attention to the issuance of publications of concerns in ood credit standing, and other publications of concerns not in good standing. The latter publications show in code the actual ledger experiences of the mem- ers with delinquent debtors. For instance, John Somebody & Co. is reported y name, accompanied by the letters and numerals, say A-4, B-5, D-2. Each itation refers to a member's experience; each letter indicates the size of the ccount reported, as $100, $500, or $1,000; and the figures indicate whether the ccount was charged off as a bad debt, given to attorneys, is disputed or is nerely slow.

LOCAL INTERCHANGE BUREAUS.—One of the most helpful bits of nformation concerning a customer is a knowledge of the manner in which he ays your immediate neighbor from whom he also buys or borrows. This nformation can be obtained most readily and accurately only from that neigh- or. The desire for this particular information is largely responsible for the levelopment of the local interchange bureaus. Such bureaus are merely ssociations or groups of local concerns, dealing with a definite class of customers, rho exchange their experiences with one another. Their interest is usually estricted to a particular community or locality.

The theory of this local service is identical with that of the larger organiza- ions, in that each member submits from time to time reports on the manner n which his credit customers are paying. It has been thought that these eports should include the particulars of all purchases each customer had made, hus preventing any customer from obtaining a large line at several places, but his particular objective has not met with complete success. The simple plan f reporting only the total sum owing from a delinquent customer and his nanner of paying is about all of the information that can be obtained through his source. The operation of these bureaus is somewhat more simple than in he case of the larger organizations, although there is no restriction on the scope f their activities other than the individual preferences of the members.

FOREIGN CREDITS.—The National Association of Credit Men has devel- ped a **Foreign Interchange Bureau** of very wide scope for the purpose of athering and reporting on foreign credit risks.

In addition to experience and financial reports, the bureau keeps its members nformed on **unethical practices** of foreign merchants and on economic condi- ons affecting credit in the foreign countries. It also offers facilities for the xchange of information concerning important points in foreign trade technique nd foreign credit practice.

(For further treatment on foreign credits see Section 15.)

ATTORNEY REPORTERS.—The Martindale Mercantile Agency and everal other companies publish books containing the names of attorneys roughout the United States from whom subscribers to their service may btain credit reports. The attorneys listed hold themselves out as offering pecial services in making collections for the subscribers. The agencies also epresent that the attorney's listed by them are trustworthy and, as a rule, hat they are bonded in the interests of their subscribers. It is almost imper- ive, however, to submit specific guiding questions to the attorneys if their ports are to be of the greatest advantage.

CORPORATION MANUALS—Poor's and Moody's.—Each of these manuals is published annually and covers railroads, large industrials, and public utility concerns. In each is found the most recently available income statements and balance sheets, a summary of past financial statements for several years, and a description of the important assets. They contain also a brief history of the formation and development of the corporations.

TRADE AND BUSINESS NEWSPAPERS, FINANCIAL AND ECONOMIC MAGAZINES, AND CREDIT PUBLICATIONS.—In these are to be found information of considerable value respecting conditions in particular lines of business, the trend of general financial and economic forces, as well as articles of an educational nature. *The Credit Monthly*, organ of the National Association of Credit Men, the most widely read credit periodical, publishes items of personal and general interest to credit men, and also instructive articles on credit methods, legislation, and problems affecting the work of the credit man.

The trade and business papers print, besides news of a general character, items of specific interest; such as incorporations, changes in business names, changes in personnel and organization, changes in capital, litigation, receiverships and bankruptcies, court decisions; and news items pertaining to particular lines of trade, business and finance.

BUSINESS REVIEWS AND BAROMETRICS.—The mercantile agencies, monthly letters issued by a number of the commercial banks, and reports compiled and issued by the United States government, and also private institutions and companies, give reviews of basic business and financial conditions and statistics indicating business and financial tendencies.

Granting Credit

THE CREDIT RISK.—Sound credits are vital in business building, and the desire for increased business and profits must not tempt the seller to extend credit carelessly. The loss of $5,000 may mean that the net profits on sales aggregating $50,000 have been lost. The questions that arise in every normal sale made on a credit basis are: Is the credit good? Will the customer be willing and able to pay as he promises? A small proportion of the average run of applicants for credit may be quickly disposed of as (a) unquestionably good, or (b) utterly worthless. The troublesome portion will be found between these two extremes.

In reckoning the worth or worthlessness of these intermediary hazards, the credit man should first apply the basic policies of his concern. Thus the liberal credit policies of concerns organized on the basis of large-scale production, engaged in keenly competitive lines, dealing in commodities yielding big profits, or having its credits so widely broadcast as to be able to rely somewhat on the law of averages, will admit to probable consideration many risks which the policies of a more conservative or limited organization would immediately exclude. Conversely, the concern which occupies a somewhat monopolistic position by reason of its dealings in patented or copyrighted goods, or one dealing in goods which carry a small margin of profit, such as staples, must be more exacting and exclude many risks which other concerns or specialty houses would be glad to assume.

The acceptability of a risk is finally to be determined from a consideration of the **character, capacity** and **capital** of the applicant. Is he honest and trustworthy? and what is the nature of his business or vocation? What are his present financial condition and his earning power?

. will be found true always that some excellent risks will fail, and some poor sks will ultimately succeed. Experience shows, however, that these are the ceptions and not the rule.

ELEMENTS OF CREDIT RISKS.—All credit risks consist of **two major elements: character** (willingness to pay), and **present worth and earning power** (ability to pay).

DOUBTFUL CREDIT RISKS.—Suppose that A is honest and has some money but is not working. This is not the best grade of risk because the ability to pay is affected by lack of earning power. B may be honest and also working, but is a subnormal credit risk if he has no security to offer, and the payment of his debt is contingent largely on the successful outcome of his future operations. C, a third type, is wealthy and making money, but is a poor risk because of his known dishonesty. He will be unwilling to pay although he could readily be compelled to do so. To sell to him on credit is merely inviting a law-suit.

GRADING CREDIT RISKS—POSITIVE ATTITUDE.—By taking a positive rather than a negative attitude, the risks are graded as follows: A, who is honest and has some money but who is not working, may be considered an acceptable risk if only a limited line of credit is desired, or if his present wealth appears to be sufficient to overcome his lack of income, or if his present idleness is deemed to be merely a temporary condition. B, who is honest and is working, but who has no wealth, may be deemed a favorable risk for a reasonable amount if his ability to make money and his prospects are considered to be proportionate to the credit required. And, C, who is wealthy and industrious, but dishonest, may possibly be developed into a satisfactory credit risk by tying him up with written contracts such as trade acceptances or notes, or, if necessary, by obtaining a pledge of property as security or by retaining liens on the goods sold. It is true that he represents the most undesirable class of credit applicant. He is most difficult to deal with and it is never known what unfair tactics he will resort to. His business is not desirable and possibly should be refused, but experience shows that his account has possibilities. Adequate precautions may be taken to justify the extension of credit on a risk of this character.

GRADING CREDIT RISKS—NEGATIVE ATTITUDE.—A negative view of the foregoing illustrations may be taken and the risks graded as follows: A, who is honest and has some money but who is unemployed (has no earning power) is an undesirable risk, since the terms on which credit is desired may mature beyond a time when his capital will have become impaired. B, who is honest and is working, is undesirable as a credit risk for any substantial amount because there is no wealth behind his venture with which to offset setbacks that may be encountered. C, is dishonest, and for this there is no excuse, as sound credits can be built only on confidence and integrity.

ANALYSIS OF FINANCIAL STATEMENTS.—Upon receipt of a statement submitted as a basis for credit, the credit manager's **first problem** is to ascertain the probability that the concern will be **able to pay its bills as they mature and next,** the **opportunity for forcing settlement** if that should become necessary. Usually it is sufficient to rely on the fact that the concern has **current assets in excess of current liabilities,** i.e., that it has at the settlement date sufficient cash, accounts receivable and inventory to meet its liabilities as they mature. This is where the banker gets his **2 : 1 ratio.** He assumes in favorable cases that $2 will be received in the normal turnover of current assets against every

$1 of debt that matures, and that the margin of $1 is an assurance of solvency, or that current debts will be paid as they fall due.

It is, however, the concern with limited current assets, and perhaps a burdensome debt, that comes more often to the attention of the credit manager, and that condition requires a closer analysis of the situation. To the same extent as current assets are proportionately smaller, the credit risk increases. As this risk becomes more and more in evidence, the credit manager must decline the business or reckon with the causes of that condition and the probability of its being overcome.

To form correct conclusions it is necessary for the credit manager to have a clear understanding of the meaning of the various items included in the financial statement.

DETERMINING THE AMOUNT OF CREDIT.—Assuming that the working capital (excess of current assets over current liabilities) has been ascertained to be favorable to a line of credit, what amount shall be extended? The **line of credit** should be limited by the relative proportion that the seller's goods bear to the entire business. If the free working capital is $300,000 and the seller's line of goods constitute, say, one-fifth of the entire stock carried, the maximum credit limit would be $60,000. Experience shows that a rule of this kind is rarely if ever actually adhered to. Practically every case is judged on its merits. The human element is always present, and traders will "take a chance." The credit manager must do more or less guessing, and his value as a credit manager depends largely on his ability to "guess right" in setting credit limits. This is especially true in connection with retail trade.

FACTORS GOVERNING TERMS OF CREDIT.—The essential factors governing the terms on which goods will be sold may be classified as follows:

1. Nature of the commodity sold.
2. Class of trade served.
3. Location of customers.
4. Competition encountered.

The credit manager considers in connection with the nature of the commodity, whether the sale (or the account) involves a large or small amount, whether the goods are perishable, staple or seasonal, the margin of profit involved, and the prospects for trade stimulation.

Practically every business finds it satisfactory to adopt the terms prevailing for its particular line of business or class of trade. Small tradesmen find the weekly and monthly terms, without discounts, of advantage because they coincide with pay days. Hardware dealers and mill work houses offer endless trade and cash discounts. The "general store" of the rural districts must carry its farmer customers from crop to crop. The manufacturer and the exporter often require unusually long terms in order to facilitate their trade. Jobbers and wholesalers in dry goods lines take orders and ship goods 30, 60 or 90 days before the season in which the goods are to be sold. Their regular credit terms of 30, 60 or 90 days are in such cases advanced to begin on a set date, such as April 1 or May 1 in the spring, enabling the retailer to get the goods on his shelves and sell from them before paying for them.

DISCOUNTS.—Discounts are of **two distinct types:** trade discounts and cash discounts.

The trade discount is a method by which the manufacturer may protect a wholesaler or jobber from the retailer and by which he may at the same time change his price lists without reprinting his catalogues. The goods are listed in the catalogues at a maximum (list) price, and the manufacturer furnishes each customer, according to whether he is a jobber or retailer, with a list of

trade discounts applicable thereto. Trade discounts are very effective in regulating prices as between the various classes of customers. At times they seem almost pernicious. Many concerns of somewhat monopolistic tendencies have the "trade" so completely catalogued that they set prices on sales several removes from the first transaction.

The computation of trade discounts is illustrated as follows: For instance, if the list price of an article is $100, less trade discounts of 50%, 25% and 10%, the actual price is $33.75, thus:

List price	$100.00
Less, 50% discount	50.00
	50.00
Less, 25% discount	12.50
	37.50
Less, 10% discount	3.75
	$ 33.75

Cash discounts are deductions from the price allowed if the bill is paid before its due date. The cash discount is always more than the interest for the same period would amount to. All buyers should take advantage of it.

When a customer fails or neglects to take advantage of cash discounts, i.e., when "he does not discount his bills," that fact is generally reckoned as a sign of financial weakness, and the alert credit manager forthwith curtails the credit.

Collections

IMPORTANCE.—Granting credit enables a merchant greatly to increase his sales, but to conserve its benefits he must be a good collector, quickening the turnover of his capital and minimizing the risks. A capable collector is an invaluable ally of the credit department. Careful and sound as the credit man may be, misconceptions are bound to creep in, and accounts good at the time the credit was passed upon may retrograde. The weakened condition may be reflected in tardy payments and it behooves the collector to effect the payment before it is too late. Furthermore, the collector is concerned with more than the duty of inducing delinquent customers to pay. He must be broad-gauged enough to realize that not infrequently desirable accounts find themselves unable to meet their obligations promptly and that while no proper efforts must be spared to make the collection as early as possible, he must avoid doing anything to offend and lose the account. In other words, the aim of the qualified collector is not only to collect but also to retain for his house the goodwill of a good account.

The efforts of all other departments of a business organization are rendered useless and of no effect if the collection department fails to collect accounts. It is not enough to collect the accounts **sometime;** they **must be collected with reasonable promptness,** if the working capital of a business is to function properly and profitably.

Collection problems are simplified by the one and only rule of **prompt, regular follow-up.** From the moment an account is past due, collection resistance is encountered, and must be overcome. Unrelenting regularity will overcome it.

THE COLLECTOR.—The skilful collector requires as much inspiration, as much encouragement and support, as a good salesman. The salesman is usually helped by the attractive or useful commodity he shows, or by the demand existing with the prospect, but the collector has no such aids. There

is considerable difference between talking a man into receiving something, and talking him into parting with something.

Certain conditions and suggestions will produce certain effects on the mind of any individual and will almost invariably lead to the same results, modified by the restrictions of surrounding circumstances. Therefore, if it is known who a man is, what his circumstances are (what he has), and what kind of merchandise or service was sold to him by the house, the collector should be able to tell to some degree what the mental attitude of that man should be toward his bill. It is the task of the skilful collector to be sufficiently acquainted with the facts in the case to know what the mental attitude of the customer under normal conditions should be, and then know what steps to take which will cause that customer to part with his money, if possible, willingly.

THE PLANNED APPEAL.—To deal with a man's mental attitude one must first of all, to use a selling term, get a point of contact. This is needed to secure real attention. Then, if the power of habit is known and how to use that power, or how to appeal to a man's reason, motives, instincts, emotions, pride, sense of honesty, etc., spontaneous, automatic response may usually be secured. Also, the power of suggestion that will set the subject's imagination to work should not be overlooked. And here the indirect or implied action is often more effective than the direct. For instance, a statement that certain actions on the part of the customer will compel the creditor to use other means to collect, will be found to have a far better effect on the customer (and in many cases secure the desired result) than when a direct statement is made that unless he does so and so the creditor will take certain steps. The former phrase leaves a great deal to the customer's imagination, but the latter does not, and he will invariably resent the threat and prepare to defend himself as best he can. Of course, if he is scared at the threat he will pay, but very few are scared at such a threat when this stage of operations has been reached. There is much to be said in favor of the warning sent by a chinaman to a delinquent debtor: "If you do not pay at once, I will do something which will cause you the utmost astonishment."

The really good collector or correspondent **should study his customer,** and should know or try to learn something of his station in life, his business or occupation, his habits of living, buying, paying and thinking. To do this and at the same time handle a large volume of correspondence requires the smooth operation of an adequate system.

RETAINING THE GOODWILL OF THE CUSTOMER.—One main thought must be uppermost in the minds of the credit manager and the collector when an attempt is being made to collect the account and still **retain the goodwill of the customer.** It is one of the greatest secrets to successful collecting. It is so simple that most collectors never even think about it, but mechanically continue their humdrum methods of annoying perfectly good customers to no constructive purpose, but more frequently destructive. In determining a man's credit standing, the problem is reduced to three general questions, always to be asked and answered. In collecting the problem is reduced to one general question. When an account is overdue and unpaid, the question should be asked "Why?" Then steps to find out "why" should be taken. And in finding out "why," a study should first be made of the account, the records of the transaction, the credit records of who the customer is, what he has and his previous reputation for paying obligations, and then the correspondent should draw upon his imagination, by putting himself in the customer's place, and then acting accordingly.

FOLLOW-UP PROCEDURE.—The collection follow-up should provide a definite collection routine. Reminders of indebtedness (duns) must be prompt and regular. Without the characteristics of promptness and regularity dunning statements and letters are merely excessive overhead expense and annoyance to both parties. As elementary as these thoughts may seem, the essence of successful dunning is promptness and never failing regularity. Once begun, the collection follow-up should be ceaseless until the account is collected, adjusted or written off.

Slowness of payment, which first brought an account up for the collection follow-up, may be due to a temporary lack of funds, misfortune, unforeseen happening or to supposed dissatisfaction with the goods or service. As the accounts overstep the bounds of slow pay **the first collection effort** should be tactfully worded so as to give no possible ground for offense, in case of the existence of any of these conditions. The first reminder may well be worded as a mere statement that a remittance has been withheld and conclude by inviting the customer to disclose the reason, whatever it may be, thus enabling the creditor concern to apply a remedy or some form of relief in conformity with the house policy of service and helpfulness. Thereafter, **the follow-up** must become more insistent, particularly if no reply is forthcoming. The burden of proof is thereafter on the debtor to show cause why he should not be forced to pay. He knows his credit standing will fail unless he pays his debts. The **final step** is to arrange for legal intervention, and there need be no hesitancy about it. **Intervening appeals** may be made concerning good-will towards the house, a sense of justice and fair play, a sense of honor and business obligation, and a sense of responsibility. If no correspondence develops, taking the account out of the regular follow-up, the system should provide for legal steps.

COLLECTION CORRESPONDENCE.—Collection correspondence should affect some show of individuality, and must create an impression of efficiency, co-operation, sincerity, and individual attention. Printed or mimeograph letters are not helpful. **"Trick" correspondence and "smart" methods** are of doubtful value. They are out of place with houses of good reputation and dignity, having a dependable line of goods for sale. Sane, personal letters, approaching the problem from the customer's particular viewpoint in so far as feasible are much to be preferred.

Good **collection letters** will hold attention during the period of deliberation between the time the letter is read and action is taken on it.

It is more effective to couple some high motive with all collection letters. Not that the motive should be mentioned, but the customer's attitude towards "fair play," for instance, must be stirred. Another motive that many men act upon is that of responsibility. This man does not like to feel that his practices are interfering with his community trade association or club. It is necessary to challenge some customers on the ground of approval and admiration, as a reputation for prompt payment unsullied through the years often begets action.

Some men will yield to an appeal to rivalry, the desire to surpass others in relative position and integrity.

Personal friendliness and sympathy on the part of the letter writer will appeal to the customer after he bought, precisely as it aided in persuading him to buy in the first instance. Even when drastic methods are resorted to, they should never be used without due regard to the retention of the customer's good-will. Some firms find that the mere sending of telegrams and registered letters of itself aids in begetting action on the part of some debtors. But they

should never precede a number of courteous, dignified, well written personal letters.

The collection telegram suggesting urgency has considerable psychological value. In using it, however, one must avoid liability under the laws against libel and extortion. The telegram should not contain a threat of bankruptcy or criminal prosecution. Following up a strong collection letter, the telegram, however general or cryptic its wording, very often does get the desired result.

LAWS OF VARIOUS STATES RELATING TO CREDIT MATTERS.—The laws of the various states relating to credit matters are **substantially similar,** yet there are many important **differences in their particulars.** This is equally as true with respect to the statutes concerning credits and collections as with other branches of the law. Statutes such as the Uniform Bills of Lading Act, Conditional Sales Act, Uniform Negotiable Instruments Law, Partnership Act and general statutes concerning liens, contracts, etc., have been adopted by many of the states, but not without important variations. Perhaps the most practical source of information concerning the substance of these laws as well as their variations readily available to credit men is the digest of the statutes published in the **Credit Men's Manual of Commercial Laws.**[3]

The financial manager, or his credit staff, must be familiar with these laws, more especially of course if the concern is trading in different states. It being obviously impracticable to recite these laws and their variations in a work of this character, it is suggested that no concern become involved in extensive credit arrangements in foreign states until the circumstances of the trading have been discussed with an attorney, or fully investigated through some established credit agency competent to advise in such matters. Even when trading is carried on within one state only, the need for familiarity with the principal phases of these laws in that state is essential to the welfare of the creditor concern. Knowledge of such laws becomes more and more vital as collections become more difficult, particularly when requiring legal processes to enforce payment or to recover goods.

In the section on Business Law will be found a general treatment on various phases of law of interest to the credit manager.

TRADE ABUSES.—With the tendency among business men to develop a professional spirit and to put business on an actual scientific basis, there has come a classification of many "sharp practices" that escaped criticism heretofore as being merely "tricks of the trade." Nowadays these practices are more properly considered as "trade abuses" and they are frowned upon as insidious attacks upon the integrity of business. Some of these practices are as follows:

Taking of unearned discount.
Resenting charges for interest on overdue accounts.
Claims for shortage and breakage in transit.
Cancellations.
Return of goods after display by buyer.
Deduction from remittances without notice or reason.
Defective remittances, designed to delay payment.

Every credit manager has met these trade abuses. Through the National Association of Credit Men, much is being done to counteract these conditions. Trade associations are lending a helpful hand in controlling the situation within their trade or industry.

[3] Brewster, Legal Aspects of Credit, published by The Ronald Press Co., New York, includes an excellent commentary on these laws.

SECTION 18

DEALINGS WITH EMBARRASSED DEBTORS

PURPOSE OF SECTION.—The purpose of this section is to present suggestions and possible procedures to financial executives who may have business relations with embarrassed or fraudulent debtors, or who may find their concerns facing unusual financial difficulties.

The term "financial difficulties" is hard to define with such clearness and completeness as to be universally applicable and acceptable. The term is relative and what may be considered financial difficulties in one concern may not be considered such in another. To some a temporary lack of available cash or credit resources to meet maturing liabilities will be construed as financial difficulties, even though the concern has ample assets, which, however, consist of plant, equipment, inventory, or slow but good accounts receivable. In this section the term "financial difficulties" is not used in that sense but rather as meaning the inability of a business to pay its debts, even though it eventually realizes full value on all of its assets. Such a condition is generally understood to be a state of insolvency.

REMEDIES AVAILABLE.—As a general proposition it is more economical and satisfactory to both debtors and creditors to have financial difficulties **settled amicably,** through co-operation, extensions, adjustments, or even reorganizations, than to resort to bankruptcy. This fact is becoming recognized among business men with the result that, more than ever before, concerns which are in financial difficulties are being conducted by **creditors' committees;** or if that is impossible, administered through **receiverships in equity. Bankruptcy** should be resorted to only as a last resort, and then only in cases of fraud, hopeless insolvency, or for some other equally substantial reason.

Insolvent concerns require unusual consideration. The specific remedy in each case will be governed by individual circumstances. Frequently it is necessary to reorganize the concern's financial structure through extensions and refinancing; or to compromise with the creditors through composition and assignment; or to continue the business under a committee of creditors, or through a receivership in equity, with a subsequent reorganization; or, even as a last resort, to discontinue the business and wind up its affairs through bankruptcy.

Insolvency

DEFINITION.—Insolvency in its general and popular meaning denotes the state of one whose entire assets, when converted into money in the usual course of business and without unusual haste and sacrifice, are insufficient to pay his debts. (Held so in *Lansing Boiler Works* v. *Ryerson*, 128 Fed. 701.)

"When a person is unable to pay his debts, he is understood to be insolvent.

It is difficult to give a more accurate definition of insolvency." (*Cunningham* v. *Norton*, 125 U. S. 77.)

The Bankruptcy Law states that "a person shall be deemed insolvent within the provisions of this act whenever the aggregate of his property exclusive of any property which he may have conveyed, transferred, concealed or removed, or permitted to be concealed or removed with intent to defraud, hinder or delay his creditors, shall not at a **fair valuation,** be sufficient in amount to pay his debts." (Section 1 (15), Federal Bankruptcy Law.)

FAIR VALUATION AS DEFINED BY THE COURTS.—"Fair valuation . . . . means a value that can be made promptly effective by the owner of property to pay his debts . . . . such a value excludes, on the one hand, the sacrifice price that would result from an execution or foreclosure sale, and on the other hand, the retail price that could be realized in the slow process of trade. This latter value should be excluded because it could only be gained by large expense and the many risks of a mercantile venture. 'Fair valuation' means such a price as a capable and diligent business man could presently obtain for the property after conferring with those accustomed to buy such property. Such a value will depend upon many circumstances, such as the age and condition of the stock, the season of the year, and the state of trade." (*Stern* v. *Paper*, 183 Fed. 228.)

"The **fair market value** of a corporation's assets, for the purpose of determining its solvency when it committed an alleged act of bankruptcy, was the value which the corporation might have realized on them for itself." (*In re Marine Iron Works*, 159 Fed. Rep. 753.)

DUAL MEANING OF INSOLVENCY.—"The insolvency intended by the statute was, in my opinion, an **actual or absolute insolvency,** by which is meant an inability of the company to pay all its debts from its own property. Another meaning is sometimes accorded to this term, especially in cases arising under the bankrupt act, viz., an inability of the debtor to pay all his debts as they become due, in the ordinary course of trade, as contradistinguished from the ultimate sufficiency of his property to pay all his debts upon the final liquidation of his affairs. The former is its primary or derivative, as well as its popular and literary signification. This is also its meaning, when contained in statutory provisions in relation to the frauds of insolvent debtors, except in cases where it is declared that a different meaning is intended." (*Curtis* v. *Leavitt*, 15 N. Y. 9, 200.)

The books of accounts and balance sheet of a concern do not necessarily reflect its true financial status. The facts alone govern. In *United States* v. *Guggenheim Exploration Co.*, 238 Fed. 231, it is stated: "The net income of a corporation is not to be determined by bookkeeping facts, but by real facts. The bookkeeper creates nothing; his methods, figures and records must yield to proven and established facts."

BUSINESS FAILURES AND THEIR CAUSES.—The well known credit reporting agencies of R. G. Dun & Co. and The Bradstreet Co. have for a number of years collected statistical information on business failures. The following is reprinted from "*Bradstreet's*" *Journal* of January 31, 1925:

What a Business Failure Is.—' Bradstreet's definition of a business failure is that it must involve some loss to creditors of individuals, firms or corporations engaged in ordinary commercial operations. Under this classification, failures of professional men, such as physicians, lawyers and actors, as well as of stock-brokers and real estate dealers, also old bankruptcies passing through the United States courts, have no place. Most or all of these may be, in fact

generally are, dissociated from the recognized commercial life of the country and are not included in Bradstreet's failure data. Failures to succeed without loss to creditors are, of course, not embraced in Bradstreet's returns. On the other hand, it should be clearly borne in mind that these statistics do include suspensions of banks and other strictly financial institutions even if these suspensions prove only temporary. For these and other reasons, comparisons of the failure reports made up by Bradstreet's with those issued by others cannot properly be made."

The Personal Element.—"The importance of the personal element in business had been, of course, stressed for many years previous to the time that Bradstreet's first gave a statistical basis for the frequently expressed theories that a man himself was mainly responsible for success or failure in commercial life. In 1918 the proportion of failure credited to causes which are classed as originating within the individual himself rose to its highest point, 86%, while outside influences were credited with causing 14%, and the 1919 returns were almost identical with these. In 1920 the proportion due to personal causes fell to 83.1, but in 1921 the failing trader, comparatively speaking, seemed to become a child of circumstances, many of them beyond his control, only 74.8% of the 1921 failures being due to the individual, while 25.2% were beyond his control. In 1922 the proportion chargeable to the individual was 76.8%, while 23.2% was attributed to outside causes. In 1923 the personal element was charged with 80.8% of all failures, while the non-personal causes dropped to 19.2%, and the percentages may be said to have remained static in 1924, when they were respectively 80.7 and 19.3.

"Fully to understand the references to personal and non-personal causes of failure, it will be advisable to examine Bradstreet's groupings of the causes of failure proceeding from or inherent in the individual as compared with those outside of his control:

A: Due to Faults of Those Failing:

Incompetence (irrespective of other causes)
Inexperience (without other incompetence)
Lack of Capital
Unwise Credits
Speculation (outside regular business)
Neglect of Business (due to doubtful habits)
Personal Extravagance
Fraudulent Disposition of Property

B: Not due to Faults of Those Failing:

Specific Conditions (disaster, war, floods, etc.)
Failures of Others (of apparently solvent debtors)
Competition."

What Causes Failure.—"From 1890, when these causes of failure records were first compiled, down to 1912, lack of capital was the outstanding single predisposing element in bringing about business failure. In 1912 incompetence forged to the front, but fell behind again in 1913 and 1914. From 1915 onward until 1923, however, **incompetence** led, but in 1923 **lack of capital** again took first place with a percentage of 34.2% as against 33.7% for incompetence, claiming the highest percentage of failure since 1909. In 1924, however, incompetence again forged to the front with 34.4% as against 33.3% for lack of capital; and if inexperience, itself a form of incompetence, charged with 4.7% of all 1924 failures, were combined with incompetence, it is safe to say that this

latter cause would have led all the other causes in most of the past dozen or more years. **Fraudulent disposition,** with 3.8% of all failures charged to it, was the next most important personal cause. Incompetence alone of the causes above cited seems to have increased in influence in 1924 as compared with 1923, although some of the less important causes, such as **speculation, extravagance and neglect,** also claimed more victims. The leading non-personal cause is and always has been specific conditions, under which are grouped outside happenings—floods, fires, crop disasters, trade depressions, etc. This in 1924 claimed 15.9% of all failures, as against 16.3% in 1923 and 20.9% in 1922. Competition rose in importance in 1924 with 1.9% of all failures, the heaviest proportion since 1916."

Capital, Liabilities and Credit Ratings.—"One conclusion that may be drawn from the statistics compiled as a result of consideration of the capital employed, the liabilities rolled up and the credit ratings assigned to those failing in 1924, is that the liabilities were larger than either the capital employed or the credit ratings that were extended justified. Thus, 90.1% of the 22,024

Failures, Assets, Liabilities and Number in Business in the United States Yearly Since 1893

Year	No. of Failures	Per Cent Increase or Decrease	Actual Assets, Millions	Total Liabilities, Millions	Per Cent Assets to Liabilities	No. in Business	Per Cent Failing

1893	15,508	+ 51.0	231.5	382.1	60.6	1,059,014	1.46

individuals, firms or corporations failing had not to exceed $5,000 capital or less than that amount, and 95.9% had a **very moderate or no credit rating;** but, nevertheless, 60% of them were able to fail owing $5,000 or more in the shape of liabilities. As to capital and liabilities, this showing does not greatly differ from recently preceding years; but as regards credit ratings, it may be observed that a perceptible loosening of credit is portrayed in the fact that the percentage failing in 1924 with very moderate or no credit was 95.9%, as against 95.5% in 1923, 95.1% in 1922 and 92.8% in 1921. These statistics would seem to bear out, partially at least, the assertion frequently made that credit is rather easily obtained in this country."

Failures in the United States and Canada

CLASSIFIED ACCORDING TO CREDIT RATINGS, TO LIABILITIES AND TO CAPITAL EMPLOYED

	1924		1923		1922		1921	
	No.	%	No.	%	No.	%	No.	%

SOME SPECIFIC CAUSES OF INSOLVENCY.—**Excessive operating costs** is one of the principal specific causes of insolvency. Financial executives should analyze the costs of production, reducing them to a unit basis wherever possible and compare component elements of one period with another in order to locate the cost items which are excessive. Such inquiry would reveal whether costs and expenses can be reduced, or whether it is necessary to increase the volume of business, revise major business policies or make personnel adjustments. Contact with competitors through trade associations which make a study of such problems, is often a means of solving operating, cost, and distribution problems.

LACK OF CAPITAL.—The amount of capital required by a concern is governed by a number of factors such as, the nature of the business, the volume of trade, the terms of credit allowed in purchases and sales, the time it takes to manufacture and sell the products, as well as the type and the amount of investment necessary in plant, machinery and inventory. All of these elements should be considered in determining the amount of capital a business should have for effective operation. Often excessive amounts of capital may become tied up in plant, inventories, slow or bad accounts, frozen investments or similar non-liquid items.

OVER-EXPANSION.—Insolvency is often due to over-expansion which is merely another form of **poor capital apportionment.** Over-expansion with reference to capital assets is frequently the result of obtaining more business than the concern can handle with its present facilities and attempting to meet the situation by enlarging its plant, machinery and equipment. When a concern expands beyond the safe limits imposed upon it by its available working or current assets, it tends more and more to **divert working capital into fixed** assets and finally reaches a point, if care is not exercised, where it cannot raise sufficient cash to meet its maturing obligations.

Banks are not free from blame in encouraging over-expansion. When business is good and profits are large, short-time loans are easily secured. When the profits left in the business are not sufficient to finance additional capital outlays the proceeds of short-time loans are frequently used. The inevitable day of reckoning (the due date of such loans) arrives and extensions are requested. The banker expresses his surprise that the loans cannot be repaid and states that banks are not in business to furnish capital for fixed investments but only to finance seasonal requirements. In many cases this statement should have been made when the loans were negotiated. Bankers do not want their money when the borrower is able to pay. They are very insistent when inability to pay seems imminent. The moral is that the proceeds of short-time loans should never be used to finance fixed assets.

The remedy is for the business to get additional outside funds for expansion of capital assets, either by selling new capital stock or issuing long-term bonds. If the conditions are not favorable for the sale of capital stock or bonds due to the poor credit of the concern or the unsatisfactory condition of the investment market, the concern must meet the situation in some other way. If necessary, an arrangement should be made with creditors by one of the methods suggested and outlined in remedies and reliefs of this section.

There is nothing unreasonable in the demand of creditors that those within an organization should secure funds for capital purposes. Bankers and merchandise creditors have no financial interest in profits and should not be called upon to subject their claims to the risks of a business.

There should be in the minds of the financial executives of a business at all

times the possibility of having to secure additional capital to finance any expansion of capital requirements. Dependence on short-time loans and merchandise creditors with inability to supplement such sources on short notice, has plunged thousands of concerns into bankruptcy.

EXCESSIVE FIXED CHARGES AND DIVIDENDS.—A frequent cause of financial insolvency is the desire to pay dividends before accumulating **sufficient reserves or surplus** to meet conditions which may develop in the usual life of a business.

Another cause of financial difficulties, particularly in new concerns, is excessive fixed charges. This is primarily the result of lack of proper capital apportionment in that an excessive proportion of money was raised by bond issues on new and untried enterprises.

CHANGES IN DEMAND FOR PRODUCTS.—Concerns engaged in a single line of business of a special kind often fail or get into financial difficulties when there is a change in style or demand for their products. An outstanding example is the failure of the American Bicycle Co. in 1902 due to the cessation of the bicycle fad. The recent development of the radio has had an adverse effect on the piano and phonograph trades and some phonograph concerns have suffered financial difficulties, while recent trends in the style of women's clothes have ruined many formerly prosperous corset manufacturers. The passing of the petticoat has seriously affected the cotton goods trade.

THE BUSINESS CYCLE.—Although business men and economists are not entirely in agreement as to the causes of business cycles, there are distinct evidences of increased business failures during the declining and depression periods of a business cycle.

The business and economic history of the United States shows that in a general way prices and demand for goods increase for a number of years until they reach a point, called the peak, followed by a period of reaction, accompanied by declining prices and a more restricted demand for merchandise. This period is in turn followed by a period of depression during which prices remain low and the demand for goods light. During the declining period and the depression period, failures increase for different reasons as shown in the following paragraphs:

LOSSES IN INVENTORIES.—Some concerns fail during the periods of reaction due to losses in their inventories which were accumulated at high prices, and, unless they have retained **sufficient reserves** from previous earnings, they are unable to withstand such losses. In the sudden decline of prices in 1920, many firms were caught with large inventories at high prices and the result was failure in a large number of instances.

During the period of depression that follows the period of reaction, business may be so poor and prices so low that current operating expenses cannot be met and recourse must be taken to accumulated reserves. Concerns which have not made provision for such depressions, may have their **capital impaired** to such an extent that they will be forced to discontinue business.

OTHER SPECIFIC CAUSES.—**Disasters** not provided for by insurance, or otherwise, such as fires, floods or tornadoes, may destroy assets to the extent that concerns become immediately insolvent. **Wars, tariffs, inventions, discoveries,** and the like may at once bring about a condition of insolvency in many businesses directly or indirectly affected thereby.

ECONOMIC AND FINANCIAL INSOLVENCY.—**Economic insolvency** is sometimes said to be the condition of a business when the value of all of its

assets is less than the total amount of its creditor liabilities. This condition exists when the capital is completely wiped out. Any business that continues year after year to lose money will sooner or later reach this condition unless additional capital is put into it, adjustment made with creditors, fixed charges reduced, or financial and operating policies changed so as to stop losses and recoup previous losses by later profits.

Financial insolvency is a phrase used to designate the condition of a business that possesses more assets than liabilities, but is unable to meet its obligations. This type of insolvency is more prevalent than economic insolvency and often exists in concerns that are earning large profits. This condition is not due to an inherent weakness in the business and does not always result in a loss of asset values but is merely the result of poor financial management in that there is an improper distribution of values between capital and current assets. The condition results primarily from expansion and accumulating **"frozen assets."**

INSOLVENCY AND FAILURE DISTINGUISHED.—The commonly heard expressions "a failure," "to fail," "failed," and the like, invariably relate to the final winding up of a business that cannot continue because of insolvency. Although practically every failure is due to an insolvent condition, every insolvent business does not necessarily fail. An insolvent condition may be temporary and when taken at the proper stage may often be overcome. With this exception, failure and insolvency are synonymous terms.

ILLUSTRATIONS OF INSOLVENCY.—The following hypothetical balance sheets will serve to illustrate some causes and effects of insolvency. The cases have been exaggerated in order to make the circumstances clearer. The illustrations are followed in each instance by brief comments intended to call attention to the particular point brought out.

First Illustration: Balance Sheet, December 31, 19—

Cash		$ 6,000	Notes Payable, due Jan. 2		$100,000
Accounts Receivable		7,000	Accounts Payable, due Jan. 2		40,000
Inventories		10,000			140,000
Investments		1,000	Capital Stock	$25,000	
Plant		50,000	Deficit resulting from operating losses	91,000	*66,000*
		$74,000			$ 74,000

This company cannot meet its maturing debts from its cash funds, or by liquidation or by hypothecation of its other assets and is in a state of economic insolvency. The excessive losses indicated would seem sufficient ground for winding up this business on any terms. Yet, if the losses were not so pronounced, and there was reason to hope that the business could be made very profitable, solvency could be restored by extending the maturity date of the major indebtednesses by issuing bonds or debentures for them, or by the sale of additional stock, or by the exchange of capital stock for the major indebtedness.

Second Illustration: Balance Sheet, December 31, 19—

Cash		$ 5,000	Notes and Accounts Payable, due Jan. 30		$285,000
Accounts Receivable		6,000	Acceptances Payable		125,000
Raw Materials, requiring 6 months to process, and not otherwise salable		225,000			410,000
Goods in Process		50,000	Capital Stock	$25,000	
Plant		150,000	Surplus	1,000	26,000
		$436,000			$436,000

The notes and accounts payable in this illustration must be met before the inventory can be processed and turned over. Such a concern is financially insolvent, because more than its capital and surplus is tied up in plant and frozen inventories. It needs more capital for the volume of business it has undertaken to carry on.

Third Illustration:

Balance Sheet, December 31, 19—

Cash	$ 6,000	Notes and Accounts Payable		$385,000
Accounts Receivable, of which only 25% are collectible	230,000	Capital Stock	$25,000	
Other Assets	200,000	Surplus	26,000	51,000
	$436,000			$436,000

In this instance the business has been **too liberal in extending credit.** If all the accounts receivable were collectible, but did not become due before the liabilities, the business would be financially insolvent.

INSOLVENCY OFTEN COMES QUICKLY.—Values may decline rapidly and creditors may become uneasy and refuse extensions. These two factors were much in evidence in 1920 and 1921, and as a result many formerly prosperous concerns found themselves insolvent. Realization of their condition and a general faith on the part of the creditors in the ability of the concerns later to work out of their difficulties gave rise to **creditors' committee arrangements** popular since 1921. These arrangements are, in the last analysis, agreements on the part of creditors to extend the maturity of their claims, the business being conducted in the interim under actual or partial control and supervision of a representative of the creditors.

Remedies and Reliefs

SUMMARY OF REMEDIES AVAILABLE.—Financial executives in considering plans for the relief of concerns in financial difficulties will be governed largely by the specific conditions they have to meet. The remedies which are available may be broadly classified as follows, stated in the order of their customary consideration and their desirability:

Extensions and refinancing	Receiverships in equity
Compositions and assignments	Bankruptcies
Creditors' committees	Reorganizations

Reorganizations, although closely related to refinancing and available at any stage of the proceedings prior to final discharge in bankruptcy, have been placed last in the list merely because they logically follow the termination of activities by original proprietors, and the commencement anew by the purchasers of the principal assets of the old concern.

ANALYZING THE CONDITION.—The first consideration in cases of insolvency should be to determine the exact status of the concern and if possible the causes which brought about the condition. To do this **balance sheets** should be prepared and **comparative operating statements** obtained as quickly as possible. These should then be studied for the causes of trouble and for any information they might reveal indicating whether there is reasonable hope that solvency might be restored, and how such a condition may be brought about.

FIRST STEP—LIQUIDATING AVAILABLE ASSETS.—An effort should first be made to liquidate overbalanced inventories, collect outstanding

accounts, recall distant or scattered investments, and to convert into cash, as soon as possible, any non-liquid assets upon which the continuation of business is not dependent.

OBTAINING NEW CAPITAL.—An effort should be made to obtain new capital advances from stockholders. This may take the form of **donations of stock** for resale, **cash donations** for the purpose of creating a paid-in surplus, the sale of additional stock or an issue of bonds, debentures or long-time notes to be absorbed by the stockholders or those friendly to the concern.

EXTENSIONS.—Next, an attempt should be made to obtain **extensions of the maturity dates** of the principal creditors' claims. Small creditors are usually more unreasonable and troublesome than large ones and should, if possible, be paid in full, thereby confining the creditors to as few in number as practicable.

Creditors who may not voluntarily agree to extensions of the maturity dates of their obligations may often be persuaded to agree to such extensions under creditors' committee management. This procedure is less injurious to both debtors and creditors than perhaps any other form of legal control.

Agreements by creditors to give debtors extensions of time are not binding on creditors unless supported in each instance by a consideration. Where, however, there are several creditors, who agree among themselves to give debtors extensions, the creditors can be held to their contract. In such cases the forbearance of one creditor constitutes the consideration for the forbearance of others.

Under certain circumstances it would be unwise for creditors to grant extensions. Where the investigation discloses **fraud** it would be futile to aid defrauding debtors; and where the debtors' affairs are hopelessly involved and beyond the possibility of salvation, extensions can do no good.

There are certain circumstances which would justify creditors in considering extensions in order to obtain settlement of their claims and also save the debtors. These conditions are:

1. **Honest debtors.** Where such is the case creditors are likely to have the best co-operation of the debtors so that their claims may be paid. Where debtors are not honest they deserve no further consideration from creditors.

2. **Ability of debtors.** If they have capacity and qualifications to run the business successfully with assistance from the creditors, extensions may be granted.

3. **Degree of financial embarrassment.** Where concerns have earning possibilities and are only embarrassed to the extent of their inability to convert their assets into cash, extensions should be granted as far as necessary to accomplish such conversion.

4. **Temporary conditions.** Where concerns have suffered by reason of temporary conditions which can be overcome or rectified, it is to the best interest of the creditors to grant extensions.

READJUSTMENT OF CLAIMS.—Creditors may agree to readjustment or settlement of their claims, both by extensions and by taking part in the new capital financing. This can be done only when all the creditors are reasonable and when they have faith in and are friendly to the management of the embarrassed concern. In such cases they may prefer, for their own interest, to keep the situation out of the courts and avoid the heavy expenses incident to a receivership.

This remedy is usual among the creditors of small corporations. It requires a degree of **harmonious action** that is difficult to bring about among a great

number of people. The attempt, however, was made in July, 1915, in the case of the Missouri Pacific–Iron Mountain system. The details of the plan of readjustment need not, for this purpose, be considered. The point is that in spite of the obvious merits of the plan, its remarkably strong backing and the general indorsement of the financial press and of financial authorities, the final results were disappointing. It proved to be impossible to secure the voluntary assent of all, or practically all the security holders, and it was found necessary to go through the cumbersome and expensive process of reorganization.

A similar attempt was made in 1913 in the case of the Hudson and Manhattan Co. which operates the underground railway system through the Hudson River tunnel. In this instance the number of holders of obligations was much smaller and the **plan of readjustment** was successfully carried through. This plan, wherever practicable, is by far the most economical and most satisfactory method of meeting a condition of insolvency. Its success, however, is always dependent upon the presence of a fair degree of mutual confidence and good faith among the various parties concerned.

Compositions

DEFINITION.—"Composition with creditors is an arrangement between a debtor and his creditors, the latter agreeing with the debtor, and mutually among themselves, to receive and the debtor to pay, a certain part or portion of the demands in full payment and discharge of the debt." (*Anderman* v. *Meier*, 91 Minn. 413.)

"A composition agreement is an agreement as well between the creditors themselves as between the creditors and their debtor. Each creditor agrees to receive the sum fixed by the agreement in full of his debt." (*Reynolds* v. *Pennsylvania Oil Co.*, 150 Cal. 629.)

"In all compositions the creditors are moved by some advantage to be obtained in a distribution of property or money by the debtor, or by fixed payments to be made by him securing to each a certain proportion of his assets." (*Henry* v. *Patterson*, 57 Pa. 346.)

The form of composition agreements is immaterial provided they contain the elements essential to sustain validity. These elements are (1) concession to an embarrassed or insolvent debtor; (2) mutuality of contract between the creditors. (*Crawford* v. *Krueger*, 201 Pa. 348.)

TYPICAL FORM OF AGREEMENT.[1]—

COMPOSITION WITH CREDITORS

TO ALL TO WHOM THESE PRESENTS SHALL COME, We, Who Have Hereunto Subscribed Our Names and Affixed Our Seals, Creditors of Y. Z., of ....., ..., Send Greeting:

Whereas,* the said Y. Z. does justly owe and is indebted unto us, his said several creditors, in divers sums of money, but by reason of losses, disappointments, and other damages happened unto the said Y. Z., he is become unable to pay and satisfy us of our full debts, and just claims and demands, and, therefore, we, the said creditors, have resolved and agreed to undergo a certain loss, and to accept of ..... cents for every dollar owing by the said Y. Z. to us, the several and respective creditors aforesaid, to be paid in full satisfaction and discharge of several and respective debts:

Now, Know Ye, that we, the said creditors of the said Y. Z., do, for ourselves, severally and respectively, and for our several and respective executors and administrators, partners and assigns, covenant, promise, compound, and agree, to and with the said Y. Z., his (heirs),

[1] Birdseye's Abbot's Clerks and Conveyancers Assistant.

executors and administrators, by these presents, that we, the said several and respective creditors, executors, administrators, partners, and assigns, shall and will accept, receive and take of and from the Y. Z., his (heirs), executors and administrators, for each and every dollar that the said Y. Z. does owe and is indebted to us, the said several and respective creditors, the sum of ..... cents for and upon every dollar, in full discharge and satisfaction of the several debts and sums of money that the said Y. Z. owes and is indebted unto us; to be paid unto us, the said several and respective creditors, our several and respective executors, administrators, partners, and assigns, within ..... months next after date of these presents. And we, the said several and respective creditors, do severally and respectively, for ourselves, our several and respective executors, administrators, partners, and assigns, and not jointly for each other, or the representatives, etc., of each other, covenant, promise, and agree, to and with the said Y. Z., his executors and administrators, that the said Y. Z., his executors, administrators, and assigns shall and may, from time to time, and at all times within the said term of ..... months next ensuing the date hereof, assign, sell, or otherwise dispose of his property, at his and their own free will and pleasure, for and towards the payment and satisfaction of the said ..... cents for every dollar the said Y. Z. owes and is indebted, as aforesaid, unto us, the said respective creditors; and that neither we, the said several and respective creditors, nor any of us, nor the executors, administrators, partners or assigns of us, or any of us, shall, or will, at any time or times hereafter, sue, arrest, attach, or prosecute the said Y. Z. or his property and chattels, for any debt or other thing now due and owing to us, or any of us, his respective creditors aforesaid; so as the said Y. Z., his executors or administrators, do well and truly pay, or cause to be paid, unto us, his said several and respective creditors, the said sum of ..... cents for every dollar he owes and is indebted unto us respectively, within the said space of ..... months next ensuing the date hereof† (or, if several payments are to be made, state them here).

In Witness Whereof, we have hereunto set out hands and seals the day and year first above written.

(Signature of witness) E. F. (seal)

PARTIES.—One creditor alone cannot make a composition. (*Latapee* v. *Pecholier*, 14 Fed. Case No. 8101.) Two or more creditors agreeing to a com-

[2] Birdseye's Abbot's Clerks and Conveyancers Assistant.

osition, it will be valid and binding on them and on the debtor where there s no requirement that the agreement to become effective must be entered into y a greater number of creditors. (*Van Bokkelen* v. *Taylor*, 62 N. Y. 105.)

Where the composition agreement provides that it shall not become effective until a certain number of creditors, all or a majority shall have agreed to it, the composition does not become operative until the required number agree. (*Day* v. *Jones*, 150 Mass. 231.)

The debtor may enter into a composition with only one class of creditors such as the unsecured creditors. (*Zoebisch* v. *Van Minden*, 120 N. Y. 406.)

"An agreement for composition may be entered into by a part of the creditors of an insolvent debtor, and in such a case it will be binding upon those only who enter into it. In such a case, the creditors who do not enter into the agreement may proceed to collect or to settle their claims in their own way. If such a creditor makes a better settlement than those who agree to the composition, or obtains any other advantage, he will be permitted to retain it." (*Atlas Engine Works* v. *Seymour First Nat. Bank*, 50 Ind. A. 549.)

REASONS FOR UPHOLDING COMPOSITION AGREEMENTS.—"Arrangements of this nature are of frequent occurrence and of the greatest practical importance, especially in commercial circles. The peace and tranquillity of the whole commercial world, or of great numbers in it, as well as that trust and confidence which are the life of trade and commerce, are to a great extent dependent upon the validity and finality of such settlements. It would not be easy to estimate, but the numbers are not small, in all our large towns and cities, of persons engaged in commercial pursuits who stand upon such settlements as the foundation of their credit and solvency; and, such foundation being taken away, pecuniary ruin must not only come to themselves, but loss and disaster must likewise fall upon many others, who acting on the faith of the settlements, have entered into commercial dealings with, and given extensive credits to, the debtors making them. And this condition of things, owing to the misfortune of some, the incapacity of others, and the dishonesty or extravagance of still others as also to the contractions and expansions of the circulating medium and fluctuations of the money market, which are always occurring at periods more or less frequent, always has existed, and probably always will exist, in all commercial communities. The indifference of the law to such settlements, or the easy and successful disregard of them by the assenting creditors, or any of them, must therefore always be attended with widespread disturbance and mischief, and be the constant source of distrust and alarm. Hence it is that the law is not indifferent to them, but guards and upholds them with a solicitude and watchfulness proportionate to the evils which must follow if it were otherwise, or if they were easily to be set aside, or broken up and abandoned for slight and trivial causes. For it is of the constitution of these agreements that they cannot be impeached or disregarded by one creditor without at the same time opening the door to all others, and annuling the settlement to all intents and for all purposes. Such are the constituent elements and essential qualities of them, that they must bind and conclude all the creditors joining in their execution or they will bind and conclude none. If one creditor is permitted to go behind and disregard the agreement every other must have the same privilege; and thus the whole settlement falls to the ground and loses all force by the successful attack or impeachment of one." (*Johnson* v. *Parker*, 34 Wis. 596.)

CAUTION IN CONSIDERING THE ACCEPTANCE OF COMPOSITIONS.—Composition settlements are usually proposed by debtors who submit terms

of compromise to creditors, either individually or at a meeting called for that purpose. A meeting of creditors is better than making the proposal to separate creditors for the reason that creditors are then in a position to discuss the debtors' status and to decide promptly. Where creditors are numerous and scattered, there is likely to be delay and there may be some who are not familiar with the condition of debtors or may not be favorably disposed to the debtors' proposal.

Offers in composition should never be considered by creditors when there is well-founded suspicion of fraud on the part of debtors. Creditors are entitled to know all the facts and figures of the debtor's business and where the funds are coming from to pay the creditors agreeing to the compositions. Prudence dictates that the creditors should insist on having the money, or satisfactory security for it, actually put up before consenting and signing composition agreements.

WHEN TO AGREE TO COMPOSITIONS.—Composition settlements under certain circumstances are the most effective and most economical means of dealing with embarrassed debtors. When debtors are honest, this form of settlement is due them by creditors. In the final analysis the losses to creditors in making such settlements are some of the hazards of business which they must expect. Creditors must join at times with debtors in carrying the losses incidental to business. Such arrangements have often enabled debtors to regain their position in commercial activity with subsequent increase of business and profits to themselves and their creditors with whom they continue to transact business.

The creditors are naturally interested in obtaining as large settlements as possible of their claims. Compositions are at times preferable for two reasons: (1) the amounts of settlement are definite; (2) the amounts realized are likely to be greater than can be expected from forced liquidations accompanied by heavy court and legal expenses.

To take **a concrete example,** the balance sheet of a business shows that the total assets amount to 75% of the liabilities. As a going concern, the assets may be worth that much, but if forced liquidation is resorted to the assets may, and very likely will, realize a great deal less than the book value. With this situation it is apparent that the business is insolvent. If the business is forced into bankruptcy, with the expenses and losses incident to such a procedure, the creditors could consider themselves fortunate if they receive liquidating dividends aggregating 25% of their claims. A composition settlement of 50% of the claims would be better for all concerned. The creditors would receive 50% of their claims instead of 25% and the debtor would have 25% to continue and rehabilitate the business and would still have his business which under bankruptcy would probably have been taken from him.

FORCING COMPOSITION SETTLEMENTS ON OBSTINATE CREDITORS.—Where a number of creditors, say 75%, agree to accept a composition settlement proposed by a debtor and the remaining 25% refuse to agree to such terms, it is possible to **force the proposed settlement** on the minority by the following procedure: Three or more of the creditors file a petition in bankruptcy, but before adjudication the debtor asks for a creditors' meeting for the purpose of considering an adjustment, which if granted, stays the bankruptcy proceedings. At the creditors' meeting the debtor is examined and then a composition settlement is proposed by the debtor. The assenting creditors, representing a majority, both in number and amount, agree to accept this settlement and petition the court to have it confirmed. On confirmation

he composition settlement becomes binding on all the creditors. In this way he debtor can obtain relief without incurring the disgrace and loss incident to n adjudication in bankruptcy.

Assignments

DEFINITION.—What are generally referred to as assignments for the benefit of creditors, or general assignments, or more correctly, assignments in trust for the benefit of creditors, are usually the **transfer of all assets or property** of insolvent debtors, to trustees, to sell such property and distribute the proceeds among the creditors of the insolvent debtors.

"An assignment is substantially a transfer, actual or constructive, with the clear intent at the time to part with all interest in the thing transferred and with a full knowledge of the rights so transferred." (*Ormond* v. *Connecticut Mut. L. Ins. Co.*, 145 N. C. 140.)

ADVANTAGES OF ASSIGNMENTS.—Assignments for the benefit of creditors are a means embarrassed debtors may have to adjust their affairs. Such methods combine the advantages of amicable adjustments with some of the aspects of bankruptcy. The advantages of such methods over bankruptcy are:

1. The **expenses of administration** are less than in bankruptcy proceedings.
2. Under assignments a **time limit** is **not set** for settling the affairs of debtors, and trustees may hold the assets together until they can be sold under favorable conditions, whereas in bankruptcy they are frequently sold at forced sale.
3. There is **less publicity** attached to assignments than to bankruptcy proceedings.
4. The administrations of debtors' estates under assignments are **private matters** between trustees and creditors, whereas in bankruptcy they are open to the public and are matters of public record.

STATE INSOLVENCY LAWS.—All states have insolvency laws whereby debtors may assign their property to trustees for the purpose of liquidation and distribution of proceeds among creditors.

In most states the laws provide that assignments shall be recorded in the offices of the county clerks where debtors reside or have their principal places of business, and that sworn statements be filed by them showing their inventories of property and their creditors.

The state courts have **jurisdiction** in assignments under the state insolvency laws. Assignees are answerable to and are under the supervision of the insolvency judges, who may also:

1. Approve composition settlements.
2. Authorize the filing of suit for the recovery of property transferred to defraud creditors.
3. Restrain debtors or witnesses from leaving the jurisdiction.
4. Authorize payment of dividends.
5. Exercise practically all the powers vested in a court of equity.

ASSIGNMENTS ARE ACTS OF BANKRUPTCY.—Under the Federal Bankruptcy Laws assignments for the benefit of creditors are **acts of bankruptcy** and as the federal laws supersede and are paramount to state laws, dissatisfied creditors may have assignments set aside by filing petitions in bankruptcy. The result is to take the administration of the property out of the jurisdiction

of the state insolvency courts and place it in the hands of a receiver or trustee in bankruptcy under the Federal Bankruptcy Laws.

Although creditors have this privilege it is not always best to exercise it, particularly not if they are satisfied as to the good faith of the debtor and honesty and ability of the assignee.

In some jurisdictions however, notably New York, there is little possibility of state receivers remaining undisturbed. Certain lawyers who specialize in federal bankruptcy practice, aided by unrepresentative creditors, rush into the federal courts, invoke their powers, and thus secure the emoluments which the cases afford, and in many cases the creditors who are not directly represented suffer from carelessness or mal-administration.

RIGHTS OF CREDITORS.—Creditors have the right to object to assignments and may file petitions in bankruptcy. Where creditors have consented to assignments they are estopped from filing petitions in bankruptcy. For this reason creditors should not consent to assignments until they know all the facts and have absolute faith in the assignees. The creditors have a right to an accounting from assignees, and if this is not furnished pressure can be brought by proper application to the courts.

THE ASSIGNEES.—Assignees may be **named by debtors** when making assignments; where none are designated, the court will select them. Debtors have the right to select their own assignees, and are under no obligation to consult the wishes of creditors provided the persons selected are capable of performing the duties of the office. Although selected by debtors, the assignees are supposed to **act in the interest of the creditors.** Assignees may or may not be creditors of the assignors.

FORM OF ASSIGNMENTS.—In most states the statutes require that every assignment for the benefit of creditors must be in writing and sometimes other formalities are required. The writing usually is in form similar to that set forth in the next paragraph. Such instruments should be drawn with the same care as any other deed of conveyance.

The instrument consists of two principal parts:

A. The **transfer to the assignee** which vests in him the title to the property
B. The **declaration of trust**, which directs him how to dispose of it.

The instrument is made up of the following components:

1. The commencement
2. The recital
3. The consideration
4. The transfer
5. The description of property
6. The declaration of trust and direction to the assignee
7. Power of attorney to the assignee
8. Covenant by the assignee
9. The concluding clause

FORM OF ASSIGNMENT[3]

(Without Preferences)

Know all men by these presents, that whereas, I, A. B., of ....., am indebted to divers persons in considerable sums of money, which I am at present unable to pay in full, and am desirous to convey all my property for the benefit of all my creditors without any preference or priority.

Now, Therefore, I, the said A. B., in consideration of the premises, and of one dollar to me paid by Y. Z., of ....., the receipt whereof is hereby acknowledged, have granted, bargained, sold, assigned, transferred, and set over, and by these presents do grant, bargain, sell, assign, transfer, and set over, unto the said Y. Z., all my lands, tenements, hereditaments, goods, chattels, property, and rights in action of every name,

[3] Birdseye's Abbot's Clerks and Conveyancers Assistant.

nature, and description, wheresoever the same may be, except such property as is by law exempt from execution.

To have and to hold the same unto the said Y. Z. in trust, to sell and dispose of the said real and personal property, and to collect the said rights in action, with the power to compound for the said rights in action, taking a part for the whole, where the said Y. Z. shall deem it expedient so to do; and then in trust to apply the proceeds of the said property and rights in action in the following manner:

1. To pay the costs and charges of these presents, and the lawful expenses of executing the trust hereby created, and the wages or salaries actually owing to the employees of the said A. B.

2. To distribute and pay the remainder of said proceeds to the creditors of me, the said A. B., for all debts and liabilities which I may be owing or indebted to any person whatever; provided, however, that if there shall not be sufficient funds with which to pay all my said debts, then the said debts are to be paid ratably and in proportion.

3. The residue and remainder of said proceeds if any there be, after paying all my said debts in full, the said, Y. Z. is to repay to me, or to my executors, administrators, or assigns.

In Witness Whereof, I have hereunto set my hand and seal, this day of

In presence of ..... A. B. (Seal)

.....

SUPPLEMENTAL SCHEDULES.—Assignments are usually accompanied, as required under the laws of some states, by three schedules which are generally referred to in the assignments and which become parts of them. They are:

1. An inventory of assigned property
2. A schedule of creditors
3. A schedule of debts due the estate

FORM OF INVENTORY SCHEDULES.[4]—The following is a full and true inventory of all the estate, both real and personal, of the copartnership firm of A. B. & Co., in law and equity, and the incumbrances existing thereon, and all the vouchers and securities relating thereto, and the value of such estate, according to the best knowledge and belief of the individuals composing said copartnership:

Statement of Property of Estate

Description of Property and Where Situated	Incumbrances	Estimated Market Value Above All Incumbrances	Vouchers and Securities

FORM OF SCHEDULE OF CREDITORS.—The following is a schedule of the names of the creditors, the general nature of such indebtedness and the amounts thereof:

Schedule of Creditors of Estate

Name of Creditor	Residence	Amount Due to Creditor, and Nature Thereof	Consideration of Indebtedness, and When Contracted	Judgment, Mortgage, Collateral, or Other Security for Indebtedness

[4] Birdseye's Abbot's Clerks and Conveyancers Assistant, p. 168.

FORM OF SCHEDULE OF DEBTS DUE THE ESTATE.—The following is a statement of the debts due the assignor, the general nature of said indebtedness and the amounts thereof:

Schedule of Debts Due to Estate

Name of Debtor	Amount of Claim	Good	Doubtful	Bad	Remarks

FORM OF AFFIDAVIT TO INVENTORY AND SCHEDULES[5]

STATE OF NEW YORK)
COUNTY OF NEW YORK) ss.:

A. B., of ....., and C. D., of ....., copartners, members of the copartnership firm of A. B. & Co., formerly doing business in the city of ....., being severally sworn, say, and each of them for himself says, that he has read the foregoing inventory and schedules, and that the same are in all respects just and true according to the best of his knowledge and belief.

.....
.....

Sworn to before me, this .....
day of ....., ...
.....

SPECIAL PROVISIONS—RELEASE OF DEBTOR.—Assignments are sometimes made on condition that the creditors shall accept the provisions made for them in full satisfaction and discharge of their claims. The validity of such stipulations has been sustained in some states, in others they have been held void.

LIMITATION OF TIME.—Sometimes assignments contain a clause limiting the time in which creditors may accept the terms. The various states are **not in accord** in the interpretation of such provisions. Where allowed, the time must be reasonable in view of the facts of the case, and cannot be too long, or too short, so as to operate against the interest of the creditors.

If the time is too long, it delays the creditors in the collection of their claims and may reduce the possibility of obtaining full value for the property of debtors. If the time is so short as not to afford sufficient time for proper investigation, it may raise a presumption of fraud.

EXECUTION OF ASSIGNMENTS.—Assignments, as well as the schedules, should be dated and executed. In most cases the instruments are under seal, and if real property is conveyed, this formality should not be omitted. The instruments must be executed by the assignors or by their attorneys in fact acting under valid powers of attorney for that purpose.

Assignees in some states are required to **formally accept** the trust by signing the instruments. Ordinarily this is required where the instruments contain covenants to be performed by the assignees.

Generally, assignments are good even if the assignees do not sign and execute the instruments. Acceptance and entering upon the performance of the trust bind the assignees as if they had entered into formal execution of the instruments.

[5] Birdseye's Abbott's Clerks and Conveyancers Assistant.

ATTESTATION.—In some states assignments must be sworn to by the assignors. In practically all states such instruments should be executed before witnesses.

RECORDING ASSIGNMENTS.—In some states assignments are not valid until they are recorded in a public office, generally the county clerk's office, within a certain time after execution. If **real estate** is assigned and the property located in some other place, a certified copy of the assignment must be filed in the county where the real estate is located.

DELIVERY OF ASSIGNMENTS.—To complete the transfer of property under assignments it is necessary to deliver the instruments to the assignees. The record of the deed in the county clerk's office is prima facie evidence of delivery.

DELIVERY OF PROPERTY.—Property transferred under assignments should be reduced to possession by the assignees as soon as practicable. The real estate passes by mere delivery of the deed. Personal property should be taken possession of by the assignees. Constructive delivery is permitted where physical delivery is impracticable. The federal courts have laid down a rule that unless the assigned property follows the deed and is transferred to the assignee, the assignment is deemed fraudulent and void against creditors.

DUTIES OF ASSIGNEES.—When assignees receive assignments from debtors, they are formally and officially recognized as assignees. Their duties are:

1. To give public notice of assignment and their appointment as assignees.
2. To execute bonds for the faithful performance of trust.
3. To take possession of the property listed in the schedules accompanying the assignments.
4. To collect the debts due the assignors.
5. To sell the property transferred under the assignments.
6. Out of the proceeds of sale and debts collected, to pay the expenses of realization and distribute to creditors dividends on their claims. Dividends are usually paid from time to time as funds accumulate in the hands of assignees.
7. To turn over to the assignors funds left in the hands of assignees after paying the claims of the creditors in full.
8. To file an accounting which generally closes the estate.

Assignees hold a **fiduciary relation** to their assignors and to the creditors. Good faith is essential. They may be held liable personally for misconduct or breach of trust. They are expected to make an accounting of their transactions and may be removed from office for violation of trust. They are liable for property or money lost by negligence.

NOTICE TO CREDITORS.—One of the first duties of assignees is to give **notice to creditors of the assignment.** This is usually done by publication in one or more newspapers. In most states public notice is required by statute.

The notice is generally in the form of an advertisement setting forth that the debtor has made an assignment for the benefit of his creditors and that so and so was appointed assignee, and requests creditors to present their claims to him, and the debtors to pay their accounts to him. The following form may be used:

FORM OF NOTICE TO CREDITORS[6]

In pursuance of an order of Hon. ....., of .... county, notice is hereby given to all persons having claims against .....

[6] Birdseye's Abbott's Clerks and Conveyancers Assistant.

..... (assignors), lately doing business in the city of .....
....., under the firm name of ....., to present the same, with the vouchers thereof duly verified, to the subscriber, who has been duly appointed assignee of said ....., for the benefit of creditors, at his office, No. ..... street, in the city of ....., on or before the ..... day of .....

Dated ....., day of .....

....., Assignee

SALE OF PROPERTY ASSIGNED.—The most important duty of assignees is to sell the property assigned in order to obtain cash to **settle claims of creditors.** Assignees cannot appropriate property to their own use even though they charge themselves with the cost price. They are expected to exercise diligence and good faith in the sale of property, and if they manage sales with gross carelessness so that the interest of one party is advanced at the expense of another, they are personally liable to the injured parties for their losses.

MANNER AND TERMS OF SALE.—Assignees are not required, generally, to sell property within a prescribed time, but should use their discretion to obtain the best prices. They should, however, sell within a reasonable time. If they delay unreasonably, this may be construed and is sometimes considered as evidence of fraud.

Property may be sold at private or public sale, whichever is to the best interest of the creditors. Where property cannot be sold at a fair price at private sale it should be sold at public auction after giving the creditors reasonable notice as to the time, place and purpose of the sale.

The **terms of sale** in some states may be for cash or credit, in other states assignees are forbidden to sell on credit.

COMPENSATION OF ASSIGNEES.—Assignees are entitled to compensation for their services. This is sometimes set forth in the assignment, which may fix a definite amount or stipulate in general terms. Where such is not the case, they are entitled to reasonable compensation, which in most states is held to mean the equivalent of that received by executors and trustees of estates. Assignees' fees are prescribed by statute in some states. The compensation is ascertained and awarded by the court when assignees present their accounting.

Where assignees render **legal services** for estates, they cannot charge for such services beyond the amount allowed and included as part of their compensation as fixed by law.

When assignees are guilty of misconduct, carelessness or breach of trust, no compensation will be allowed them. Likewise, if they mismanage the estate or refuse to render an account.

ASSIGNEES' ACCOUNTING.—In most states assignees must present to the proper court accountings of their administration of estates before they can be discharged. To do this, they should keep **full and detailed records of all receipts and disbursements** made by them, and preferably keep a separate bank account in their names as assignees. Where they fail to keep such records and mingle the estate property with their own, they will be charged with the value of the property turned over and sold by them. Assignees should be prepared to show their accounts to creditors and assignors at any time.

CREDITORS COMING IN UNDER ASSIGNMENTS.—Creditors receiving notice of an assignment have a choice of one of **three alternatives:**

1. Accept the provisions made by the assignment.
2. Disregard the assignment and proceed as if none had been made.
3. Reject the assignment as illegal or fraudulent.

Creditors accepting the provisions made by an assignment may signify their intention by:

1. Becoming parties to the instruments.
2. Formally accepting by giving notice to assignees.
3. Presenting their claims to the assignees for payment.

FORM OF PROOF OF DEBT.[7]—The following is a form of proof of debt:

PROOF OF DEBT

STATE OF .....}
COUNTY OF .....} ss:

....., being duly sworn, doth depose and say: That he is .....; that the annexed statement of the account of ....., lately doing business at ..... in the state of ....., is just, true and correct; that there is now due ....., the sum of ..... dollars; that no part thereof has been paid or satisfied, and that there are no set-offs or counterclaims thereto to the knowledge or belief of deponent.

.....

Sworn to before me this .....
day of ....., ...

.....

When creditors have cause to believe that assignments are fraudulent, they may file a bill in equity praying to have them declared void and set aside. Usually such a petition also includes a petition for an injunction to prevent further proceedings under such assignments, and for the appointment of receivers for the property.

ASSIGNMENT LAWS OF NEW YORK.—The assignment laws on the statute books of New York are believed to be the latest and most scientific examples of such state laws. These laws provide:

1. The assignment shall be recorded in the county clerk's office where the debtor resides, or has his principal place of business.
2. The debtor within 20 days thereafter shall file with the county clerk his sworn schedules showing all his creditors and an inventory of all his property. If a debtor fails to file such schedules, the assignee must do so and the debtor can be compelled by court order to furnish the assignee with the required information to make out the schedules. Where an assignee neglects to file such schedules within 10 days he may be removed by the court on application of any creditor.
3. The books, records and papers of the debtor are open to inspection by any creditor.
4. The debtor must submit to an examination under oath, if so ordered by the court.
5. Creditors must file claims which must be verified.
6. The assignee may advertise for claims.
7. Reasonable notice, usually 10 days, must be given to all interested parties of:
   (a) Proposed sales of the property.
   (b) Payment of dividends.
   (c) All hearings on controversies.
   (d) All compromises proposed.
   (e) Filing final accounting of the assignee.
   (f) Discharge of the debtor from his debts.

[7] Birdseye's Abbott's Clerks and Conveyancers Assistant.

8. The court may authorize the assignee to:
   (a) Continue the debtor's business for limited periods.
   (b) Bring action to recover property transferred in fraud of any creditor.
   (c) Pay dividends to creditors who failed to file claims in time, unless one year has elapsed.

9. The court has power to:
   (a) Discharge the assignee after a composition.
   (b) Punish for disobedience of its orders.
   (c) Restrain the debtor or witnesses from leaving the jurisdiction of the court and may generally exercise all the powers of a court of equity.
   (d) Order a jury trial of any claim or other disputed matters.

10. Assignees, under the New York laws, may receive a **commission** not to exceed 5% of the amount coming into their hands, unless such commission is less than $200, when the court may allow that sum; and additional compensation if the business is to be continued. The court will also allow the necessary expenses of the estate.

11. The New York laws allow, as **preferred claims,** wages and salaries, for work done within three months of the making of the assignment, up to $300 per employee. Other preferences are allowed only to the extent of one-third of the assigned estate, after deducting such wages and salaries. Where the estate is insufficient to pay all of the preferred claims, the proceeds are to be applied pro rata.

12. The assignor may be discharged from his debts on petition and with the consent of creditors having two-thirds of the claims against the estate.

Creditors' Committee Management

DEVELOPMENT OF THE SYSTEM.—In recent years, particularly since 1921, the creditors' committee system of handling the affairs of businesses in financial difficulties has assumed considerable importance. The extension and rapid development of this method is due largely to the wasteful operations and unsatisfactory results obtained, so far as creditors were concerned, through the more formal and drastic proceedings under equity and bankruptcy receiverships.

The management of embarrassed businesses through creditors' committees seems to have had its inception, in a general way, in the bondholders' protective committees formed during the period of railroad receiverships from 1883 to 1899, when a large number of railroads were placed in the hands of receivers. Through the operation of bondholders' committees a number of these companies were reorganized without foreclosure. In the decade from 1889 to 1899 no less than twenty railroad systems aggregating 4,000 to 5,000 miles of lines and representing over $300,000,000 in securities were reorganized in this manner.

The idea was not applied, except in isolated cases, to trading and industrial concerns until shortly after the World War. At that time embarrassments were so widespread and involved so many commercial and industrial concerns that some means had to be found to alleviate conditions which, under ordinary equity or bankruptcy receiverships, would have led to worse business disasters. Out of this situation the informal system of creditors' committee management evolved.

ECONOMIC CONDITIONS OF 1920 AND 1921 A FACTOR.—The general business and economic conditions in 1920 and 1921, in so far as they related to manufacturing and trading, may be briefly summarized as follows:

1. For several years there was a period of rapidly advancing prices of commodities, coupled in many instances with increasing difficulty in obtaining adequate quantities of merchandise.

2. Many firms accumulated inventories and contracted for future needs in large quantities and at increasing prices.

3. As prices rose, buying resistance developed, which culminated in a general, although unorganized, "buyers' strike." Business suddenly met with a cessation of sales and orders.

4. Prices of goods, raw and finished, suddenly fell. In many lines of business there was a general cancellation of orders and repudiation of purchase contracts.

5. Replacement values of goods on hand and on order under contract, suddenly showed considerable losses. Inventory losses made inroads on accumulated surplus. Balance sheets no longer showed the ratio of current assets to current loans required by the banks.

6. The banks demanded either a reduction of the loans or an increase in current resources.

7. The situation was met in numerous instances by the proprietors obtaining from sources, such as the sale of stocks and bonds, funds to save their businesses. In some instances mortgages were placed on plants, but, in many cases, the situation could not be met in this way.

8. Bankers and other creditors realized that if the embarrassed companies were forced to liquidate their quick assets at forced sale, the proceeds would not, in many cases, pay their loans. On the other hand, if the businesses should be continued, the merchandise could probably be sold at fair values and the loans and indebtedness be met.

That this condition was due in many instances to lack of economic foresight did not relieve the situation. No matter what the causes were, leading business men and bankers realized that it was necessary to work out the best solution to conserve their interests. To resort to court receivership or bankruptcy under the conditions in 1920 and 1921, would have made matters worse. Realizing this, the larger creditors, in many instances the banks, formed committees to administer or liquidate the affairs of such embarrassed debtors.

In certain sections of the country, particularly New York, the creditors' committee method of solving business difficulties received more consideration than elsewhere. The prominence of banks on such committees was due to the fact that large loans were made by them on inventories at inflated values. This condition became so general that the phrases **"in the hands of the banks"** or **"in the hands of the creditors,"** became commonplace.

REQUISITES OF AGREEMENT.—Negotiations leading to the operation of businesses by creditors' committees involve the following:

1. That the existing creditors **subordinate and extend their claims.**
2. That the banks or creditors **advance sufficient new money** to operate the businesses, the new advance to be entitled to a priority in repayment.
3. That the management of the businesses pass into **the hands of committees** chosen by the creditors.
4. That the **businesses be returned to the proprietors when the debts are paid in full.**

The foregoing requisites may be incorporated in a single contract between the business managers or proprietors who are in financial difficulties, the creditors who subordinate their claims and extend aid, and the bankers who advance the new money. The same result may be accomplished by a series of agreements as each situation is met, the one being made conditional upon the others.

TYPICAL AGREEMENT.—In an article on Creditors' Committee Receiverships, by Arthur Stone Dewing, which appeared in the *Harvard Business Review* for October 1922, there appears a typical form of agreement which is reproduced. A simple form of creditors' agreement was used to secure the control and extension of debts in the case of an embarrassed electric light company. The names were changed, otherwise the document is the same as used.

"The Essex Electric Trustees of Ohio represented the holding company for the four electric companies. In order to secure administrative control of the entire organization, a majority of the stockholders of the Essex Electric Trustees created a voting trust, of which three of the creditors—Messrs. Field, Wald and Shedd—were the appointed voting trustees. This document was the ordinary voting trustees' agreement.

"In addition to the five large creditors who signed at the end of the agreement, three other smaller creditors with debts aggregating less than $5,000 signed at a later time. Money was provided by assessment on all the parties signatory to the agreement, which was used to pay off, at approximately 40 cents on the dollar, all the smaller creditors whose claims were less than $1,000, and one claim of $2,500 was compromised in the same manner. In addition to the amount requisite to compromise these smaller claims, money was advanced by assessment to operate the companies. Altogether $47,000 was so raised. In return for the assessment the first mortgage prior lien 7% bonds were given at par. These bonds, obviously, were a first lien on the entire property and came prior to all the claims.

"It should be noted that this particular agreement ran for a longer period than was usually the case with embarrassed manufacturing or mercantile businesses. It being a public utility, it was felt that a longer time would be required to either put the company on its feet or else to sell it."

The creditors' agreement was as follows:

THE UNDERSIGNED CREDITORS of the companies named below in Article 1 hereof (hereinafter referred to as the Companies) in consideration of $1.00 and other valuable considerations to each in hand paid, receipt whereof is hereby acknowledged, do hereby SELL, ASSIGN, TRANSFER, SET-OVER AND CONVEY To Fred Field, Albert Wald, George S. White, Byron D. Black and Warren Shedd and the survivor or survivors of them (hereinafter referred to as the Trustees), all their several claims against the Companies (the amounts and nature of which are or may be set after their respective signatures) in trust, nevertheless, for the purposes and upon the terms as follows:

ARTICLE 1. The names of said Companies are stated below in this Article 1 and they are or may be designated in the column headed "Debtor Companies" at the end of this assignment by the letter preceding such Company in this Article 1.

A—Tremont Electric Light Company
B—Paris Electric Light & Power Company
C—Service Electric Light Company
D—Lafayette Electric Company
E—Essex Electric Trustees of Ohio

ARTICLE 2. This assignment is made for the purpose of allowing time and opportunity to work out a reorganization, rehabilitation or readjustment of the Companies or any of them in such manner as to the Trustees, in the exercise of their best judgment, shall seem best for all parties to the end that the claims hereby assigned may be paid or discharged.

To the end stated in the next preceding paragraph, the Trustees are hereby granted full power to deal with the claims hereby assigned in their absolute discretion and as if they were absolute owners, including, without limiting the generality of the foregoing, the right to take such action as they may see fit for enforcing such claims or to delay taking such action; to compound, compromise, allow time for payment or extend the time for payment of such claims with or without taking bonds, notes or other evidences of indebtedness or

security for the same; to take stock, bonds, notes or other securities of the companies or any of them in exchange for or in place of the claims hereby assigned, or any of them; to permit or cause or suffer the companies or any of them to incur future indebtedness and other liabilities for operating expenses, additional capital requirements, and other purposes, which new liabilities may have priority over the claims hereby assigned; to pay, or permit or cause or suffer to be paid or secured in priority to the claims hereby assigned any other claims now existing against the companies or any of them, and in general to use the broadest discretion in dealing with the claims hereby assigned, to the end that the companies may be reorganized, rehabilitated or readjusted financially. Provided, however, that no claim hereby assigned shall be so dealt with as to give any claim hereby assigned priority over any other claim hereby assigned, but only so that all shall be upon a parity and shall be entitled to share pro rata in the proceeds of any payments made to the trustees on account of any such claims and in any securities received by the trustees.

Article 3. Any payments made to the Trustees or any of them on account of any of the claims hereby assigned shall be a full discharge thereof in accordance with the terms of such payment and the person paying shall not be under any obligations to see to the application of the money so paid.

Article 4. The Trustees may act by a majority with or without any meeting of the trustees and any trustee may resign by delivering his written resignation to the other Trustees or any of them, and the Trustees as at any time constituted may appoint a successor to fill a vacancy caused by resignation, death or other disability.

Article 5. The Trustees may take advice of counsel in acting under this instrument and shall be absolutely protected in acting upon such advice, and the Trustees shall each be liable only for his own wilful malfeasance or default and not for that of any other trustee or for any act or omission in good faith.

Article 6. It is the intent of this instrument that it shall be interpreted liberally to the end that the Trustees may have the fullest and broadest powers, rights and discretion in dealing with the claims hereby assigned for the purpose of reorganizing, rehabilitating or readjusting the companies or any of them to the end that the claims hereby assigned may be paid or discharged.

Article 7. This trust shall terminate on June 5, 1924, and a majority of the Trustees may terminate it at any time prior thereto, and upon its termination the claims hereby assigned shall be reassigned to the assignors if the same are then in their present form; but if any thereof have been paid or exchanged for bonds, notes or other obligations, or otherwise changed in form, then the signers hereof shall be entitled to share in all the property then held hereunder pro rata and the trustees may allot the same in their discretion and may determine in their absolute discretion the value of the same for the purposes of such allotment and may sell all or any part for the purpose of allotting the proceeds in money and every such allotment may be made upon terms of such sum or sums as the Trustees shall think proper being paid or allowed for equality.

In Witness Whereof, the undersigned have hereunto set their hands and seals this 5th day of June, 1919.

NAME OF CREDITOR

Letter Designating Debtor Company	Amount of Debt	Nature of Debt
....	$52,000	Power contract
....	26,000	Loans (Demand)
....	35,000	Merchandise
....	45,000	Loans—time and demand
....	17,000	Construction contract

CREDITORS' COMMITTEES.—Creditors in appointing committees generally give the **larger creditors** representation and also attempt to select the men best qualified to manage the debtors' affairs. The number of men serving on committees is governed by several factors, such as the magnitude of the concerns, the number of creditors, the different interests, etc., and may be any number the creditors decide upon. For efficiency committees should be as small as conditions permit. Committees of three can handle business problems more easily than larger ones. Sometimes it is, however, necessary to have large committees in order to obtain the support and co-operation of certain large creditors. Where this is necessary it is desirable to appoint small but active **executive committees** with considerable authority. In practice, the banks which subscribe additional money are the most influential members.

HOW COMMITTEES OPERATE.—Generally, the committees formulate and supervise the policy to be followed in handling the debtors' affairs. The **details and actual operation** are often delegated to one of the committee members best qualified to deal with the specific situation. Frequently the creditors employ a qualified man to act as their representative and pass on all matters relating to the routine management of the business. He is often appointed as treasurer, comptroller and sometimes as a kind of business advisor to the debtor. This appointee virtually acts as a trustee and arranges that all the creditors are dealt with alike and in accordance with the agreement creating the creditors' committee. He should be able, in a short time, to advise the creditors whether the business is in a position to recover or whether it is best to liquidate its affairs. If the former is possible, the committee will continue to administer its affairs and gradually pay the debts of the concern. If the business cannot be continued as it is constituted, it may be necessary to reorganize it and the creditors be forced to take stocks or bonds in the reorganized company in payment of their claims. Creditors' committees in such cases attend to the reorganization and generally dominate the board of directors of the reorganized company. If reorganization is not feasible and it is necessary to liquidate through a receiver in equity, creditors' committees are frequently instrumental in having their representatives selected as receivers.

SOURCE OF AUTHORITY.—The source of authority of creditors' committees is the **voluntary agreement** or contract between the embarrassed debtors and creditors. On the one hand, the creditors delegate to committees chosen from their members their rights to proceed in the best manner to conserve their interests and, on the other hand, the embarrassed debtors surrender the control of their businesses to the committees for the purpose of liquidating their debts.

ADVANTAGES OF CREDITORS' COMMITTEES.—By reason of the source of authority creditors' committees do not possess the legal powers of court receivers. On the other hand, creditors' committees or the executives chosen by them have certain **advantages over court receivers.** Some of these advantages are greater freedom of action and adaptability to changing business conditions without the hampering influence of legal precedent and necessity for obtaining judicial approval for every important business move.

Efficiency and Economy.—The **expenses and costs** of creditors' committees are less than those of court receivers. The members of creditors' committees, by reason of their position to safeguard their interests, give much valuable time to work out solutions of the debtors' problems and sometimes act without compensation. Receivers are entitled to certain statutory fees and in addition in actual practice, receivers invariably have counsel and other assistants, all

of whom are paid out of the estate of the debtor before the creditors are considered.

In many cases the members of creditors' committees and their counsel are substantially compensated for their services. But usually this follows successful administration.

Creditors' committees, by reason of their position, which is one of self-interest, will scrutinize carefully all the expenses of administration and reduce to a minimum such expenses which they cannot eliminate entirely. Court receivers, although theoretically charged with the same care, are not so vitally interested and do not watch expenses so closely.

Creditors' committees are sometimes **composed of business men** in the same or similar lines of trade as the debtors' and know the inherent business problems of the debtors. In addition business men, by training and experience, generally possess those qualities of initiative, courage, and independence of judgment required to meet business crises which have never come up before. Court receivers, on the other hand, are court appointees, very frequently lawyers, often without business training and experience, and by reason of their legal training are cautious, governed by legal precedent and court authority. Such qualifications, good as they are in professional life, are not suited to straighten out the involved affairs of embarrassed concerns.

Expeditiousness.—Administration under court receiverships is often a long drawn out affair, frequently prolonged wherever possible by the receiver and the attorney for the receiver for reasons of self-interest. Creditors' committees, on the other hand, are chiefly interested in settling the claims of the creditors quickly and being relieved from their work as soon as possible.

Publicity.—Unfavorable financial publicity has a detrimental influence on any business. Under creditors' committees concerns are not subject to the widespread publicity incident to procedure under court receiverships. The only publicity under creditors' committees is that caused by credit reporting agencies and credit departments of banks and creditors. This is limited to a comparatively restricted group in the business community more or less directly concerned with the debtor's business. The general public, and sometimes the employees of embarrassed concerns, frequently are not aware of the existence of creditors' committees, whereas court receiverships receive broad publicity through the open court records and proceedings and the public press.

Business Organization Retained.—Under creditors' committees the personnel of business organizations are generally kept intact with the exception of unnecessary and inefficient employees, and possibly the treasurer or comptroller who may be temporarily superseded by the representatives of the creditors' committees. The employees will continue working in the interest of the concern since they hope for its continuance as a going business. When court receivers are appointed, although the personnel may be retained, they generally sense the lack of security in their positions and seek employment elsewhere as soon as possible. This tends to break down the operating efficiency of the business organization.

DISADVANTAGES OF CREDITORS' COMMITTEES.—Court receivers by reason of their positions have certain **authority and power** which creditors' committees do not possess and for that reason the committees must resort to negotiations and other methods to accomplish their purposes.

Setting Aside Unprofitable Contracts.—Court receivers may set aside existing contracts which are burdensome or unprofitable. This is sometimes one of the reasons receiverships in equity are resorted to. Concerns, although solvent

may be tied up with contracts, the enforcement of which would render the businesses insolvent. This was the situation in 1920 and 1921, when many concerns were under contract to take commodities which, in view of the sudden decline of prices, could be bought at much lower prices in the open market. Committees of creditors could accomplish the same purpose by having on the committees the holders of the burdensome contracts and by pointing out to them that insistence, on their part, of fulfillment would cause insolvency and the possible appointment of receivers. Business men, by reason of experience and expediency, are generally inclined to adjust such contracts and retain the good will of their associates and customers rather than be the direct cause of receiverships or bankruptcy, in which case the holders of such contracts would be likely to suffer most.

Setting Aside Claims.—Receivers in equity may set aside and exclude **questionable claims of creditors.** They have authority to review with thoroughness the validity of claims and reject those which are questionable. Committees of creditors could accomplish this by ordinary court action without injury to the concerns or could negotiate and compromise excessive or doubtful claims. Business men possessing the necessary qualities of diplomacy can often effect adjustments of claims of legal validity with greater economy, by reason of business expediency, than by resorting to the uncertainties of formal receiverships in equity or bankruptcy.

Stopping Creditors' Actions.—The greatest power of court receivers lies in stopping the actions of all creditors. The receivers take over concerns and creditors are precluded from taking any further action and must file their claims which are subject to the scrutiny and approval of receivers. Creditors' committees do not possess such powers to stop unreasonable creditors who do not join with them. Their powers are limited to persuasion and negotiation, and if they fail, their only solution is to pay off such creditors. As a matter of policy it is often best to make arrangements, wherever possible, to pay off the small creditors.

Receiverships in Equity

NATURE OF EQUITY RECEIVERSHIPS.—**Courts of equity** assume control and direction of properties in litigation through the appointment of receivers who are the representatives of the courts. **Receivers** are appointed on application of creditors to prevent fraud, protect property from injury, or preserve it from destruction.

RECEIVER DEFINED.—A receiver, as defined by Pomeroy ("Equity Jurisprudence," 3rd Ed., p. 1330) is "a person standing indifferent between the parties, appointed by the court as a quasi-officer or its representative, to hold, manage, control and deal with the property which is the subject matter of or involved in the controversy, under the court's direction, either, (a) where there is no one entitled competent thus to hold it; or (b) where two or more litigants are equally entitled, but it is not just and proper that either of them should retain it under his control; or (c) where a person is legally entitled but there is danger of his misapplying or misusing it; or (d) where he is appointed in like manner and under like circumstances for the purpose of carrying into effect a decree of court concerning the property."

If the estate includes property in several states in which there are creditors, a receiver is appointed in each state. The receiver appointed at the domicile is called the **principal receiver**; those appointed elsewhere are called **ancillary receivers.**

RECEIVERS' POWERS AND DUTIES.—Receivers are subject to the **control and supervision of the court** in their management of property or funds placed in their charge. As soon as appointed, receivers make out a complete inventory of the property and effects coming into their hands. Statutes governing the activities of receivers should always be consulted in cases of receivers in equity.

Receivers must usually proceed to wind up concerns instead of indefinitely continuing them. But in some instances, they may be carried on with the approval of the court. Receivers have certain **discretionary powers** in managing and controlling property in their care. When they exercise discretion and good faith, their acts will ordinarily be confirmed.

Receivers may, with the approval of the court, borrow money to meet necessary operating expenses. Such indebtedness takes precedence over all other debts.

Receivers should pass, in the first instance, upon the **validity and propriety of claims** presented.

Compensation of receivers is fixed by statute, or by the Court in special cases.

RECEIVERS' ACCOUNTS.—Receivers in equity are not required to keep books in any prescribed way. They should, however, keep such accounts as will enable them at any time to prepare such statements of their custodianship as may be required by the court or the creditors. They should inventory all assets taken over by them at what they believe to be fair realizable values. Particular care must be taken to separate the liabilities of estates from those incurred by the receivers. They should keep a record of cash received and disbursed by them.

RECEIVERSHIPS IN EQUITY—THEORY AND PRACTICE.—The purpose of the various laws relating to receiverships in equity is to **conserve the assets** and distribute the proceeds equitably and ratably among the creditors and the debtors. The practical operations of the laws have not always reached this ideal and have proven to be expensive to both debtors and creditors.

The New York *World* in 1923 made an investigation of the operation of equity receiverships under the Federal Courts in New York City. For that purpose its investigators have analysed 233 separate cases and published their results. Although this investigation was confined to the equity receiverships in New York City under the Federal Courts of the Southern District of New York, the conditions and results of the system are probably the same in other parts of the country. Some of the more prominent features of such receiverships brought out by that investigation are worthy of the attention of every financial executive.

VOLUME OF BUSINESS.—From January 1, 1917, to December 31, 1923, the Federal Courts of the Southern District of New York had taken over 233 separate business enterprises with nominal assets of over $750,000,000, not including unimportant ancillary receiverships.

The investigation revealed that the courts either on judicial orders or in receivers' reports have **authorized payments** of $7,695,498.46 as follows:

Compensation for receivers	$3,405,086.96
Compensation of attorneys for receivers	2,610,636.83
Compensation of other attorneys	883,780.82
Compensation of special masters	151,731.49
Compensation of appraisers, accountants, engineers, etc.	644,262.36
	$7,695,498.46

FEW BUSINESSES SAVED BY RECEIVERSHIPS.—In a great majority of instances such receiverships ended the business life of the concerns. Out of 233 firms put in liquidation, only 35 have reorganized on a basis to give creditors nominal payment in full. Such payments in nearly all of the 35 instances have been made by stocks, bonds or notes of the reorganized firms and not in cash. The value of such securities depends entirely on the future success of the reorganized companies.

Before acquiescing in an equity receivership financial executives should ascertain whether other more desirable alternatives have been exhausted. Adjustments by compositions or management by creditors' committees are usually much better for both debtors and creditors. Before consenting to equity receiverships the following objections should be considered:

There have been repeated appointments of certain lawyers to positions as receivers, attorneys for receivers or special masters out of which the recipients made large incomes. The services rendered may or may not have been worth the cost. In some liquidations the allowances to receivers and attorneys, with other expenses of the receiverships, have exhausted from 50 to 100% of the funds that would otherwise have been available for the unsecured creditors

The receivers have frequently conducted operations for the court at a loss, thereby further depleting the assets available for distribution among the creditors. In some instances, however, the operations of the businesses enabled the receivers to sell them as going concerns to the advantage of creditors.

As a result of receivers conducting businesses, instances have occurred where receivers' certificates of indebtedness have been dishonored because when the receivers completed their operations, there was not even enough left to pay these certificates, to say nothing of the claims of the creditors.

RESULTS OF RECEIVERSHIPS.—The New York *World* said that returns on all the 233 cases were incomplete, and it was impossible to determine exactly how much the creditors received, compared with the $7,700,000, paid to receivers, attorneys for receivers, etc., for administering the properties but that approximate figures could be given. Out of a total of 233 receiverships the general unsecured creditors fared as follows:

In 26 receiverships the creditors received nothing. In 28 cases they ended in adjudication in bankruptcy with slight chances of recovering anything. In 42 cases it was indicated that creditors would receive not more than 75% of their claims as allowed. In most of them, the percentage was much less than this, in some instances running as low as 1%. In 24 cases the reports indicated that the creditors would receive something in excess of 25% but less than 100%. In 29 cases creditors were not paid in full and the available data was insufficient to warrant even a guess as to how much they would eventually receive. In 49 cases not the slightest indication was found of what was ultimately going to happen to the creditors. In 35 cases it was indicated that the creditors would be or were paid in full by the issuance to them in most instances of stocks, bonds or notes of a reorganized company. Actual cash payment in full was made in only a few instances.

REPORTS OF U. S. ATTORNEY GENERALS ON RECEIVERSHIPS.—Another view of the expensiveness of receiverships in general, whether in equity or in bankruptcy, may be found in the annual reports of the Attorney General of the United States as quoted by the Merchants' Association of New York in a report of its Committee on Bankruptcy Reform dated March 6, 1924. These figures show that the **expenses of administering bankrupt estates** during

1918, 1919, 1920 and 1921 averaged 40% of the amounts paid to general creditors; which were as follows:

	Amounts Paid to General Creditors	Expenses	Percentage of Expenses on the Amounts Paid General Creditors
1918.....	$18,667,790.00	$ 6,798,367.00	36.4
1919.....	16,130,469.00	6,565,916.46	40.7
1920.....	13,673,820.00	6,355,443.13	46.4
1921.....	12,786,254.87	4,834,640.64	37.8
Totals....	$61,258,333.87	$24,554,367.23	40.0
Average..	$15,314,583.47	$ 6,138,591.81	40.0

In the Southern District of New York the figures show an even larger percentage than for the United States as a whole. The figures for the Southern District of New York show 62% as follows:

	Amounts Paid to General Creditors	Expenses	Percentage of Expenses on the Amounts Paid General Creditors
1918.....	$1,683,183.00	$1,120,440.66	66.5
1919.....	1,255,549.00	1,028,927.13	81.9
1920.....	1,181,507.00	758,475.63	64.1
1921.....	1,606,614.22	646,726.74	40.2
Total.....	$5,726,853.22	$3,554,570.16	62.0
Average..	$1,431,713.30	$ 888,642.54	62.0

The most significant element of the expenses of these cases seems to be the unusually large portion paid for **fees and expenses of attorneys** and others not officers of the court. As shown in the following summary, prepared from the reports of the Attorney General, the amounts paid to court officers for the four years averaged only 33.3% of the amounts paid to attorneys and for other expenses for the United States as a whole, and only 29.7% for the Southern District of New York.

	1918	1919	1920	1921	Average
For the Entire United States:					
Fees and expenses of Referees, Marshals, Receivers and Trustees..	$1,236,618	$1,864,923	$1,626,202	$1,413,930	$1,535,418
Attorneys, and other expenses.....	5,561,748	4,720,991	4,729,240	3,411,710	4,605,922
Totals.....	$6,798,366	$6,585,914	$6,355,442	$4,825,640	$6,141,340
Percentage of amounts paid to Referees, etc., on amounts paid attorneys and for other expenses.....	22.2	39.5	34.3	41.4	33.3
For the Southern District of New York:

ACCOUNTANTS AS RECEIVERS—EXPERIENCE IN ENGLAND.—The financial executive should take an interest in the type of receivers who are being appointed. If experienced business men cannot devote the necessary time to the work it may be that the British system could be adopted in the United States.

Lawyers are not usually appointed in Great Britain as trustees and receivers. The creditors prefer that **a public accountant** should act in this capacity and a small committee of two or three creditors generally co-operates with the accountant in the winding up of the business. The creditors control the proceedings in about 85% of the cases. In the other 15%, the appointment of an official receiver (who is an officer of the high court of justice) is usually to punish the debtor. Such official receiver may ignore the wishes of the creditors, who have no control over him, as he takes his orders from the high court. As a matter of fact, that usually means that he administers the affairs without interference of any kind. The only way in which lawyers are employed in British bankruptcies is in the presentation of petitions in bankruptcy, drawing deeds of arrangement with creditors and acting as legal counsellors in a very restricted degree for the trustee. Special applications to the court by official receivers, or to the creditors by accountants acting as trustees must be made before lawyers may be employed by trustees in bankruptcy. The official reports of the inspector general in bankruptcies show only two kinds of trustees, namely, official receivers and non-official trustees.

British creditors appear to have a pronounced preference for accountants as trustees in the belief that accountants will work in co-operation with the creditors and thus bring about the best adjustment possible in the circumstances. These facts should be impressed upon the American business man and also upon courts. It is not certain that trusteeships or receiverships are likely to prove the most lucrative part of an accountant's practice, but, in the interest of the public, the man best fitted to administer affairs should be appointed, and the old theory of appointing friends of the court or political lame ducks which has sometimes prevailed should be entirely abandoned. The purpose of proceedings in bankruptcy and administration of bankrupt estates should be the protection of the creditor rather than the personal glory and emolument of the one appointed administrator.

Bankruptcy

GENERALLY THE LAST RESORT.—Bankruptcy is the last resort, either for debtors involved in financial difficulties, or for creditors who seek to obtain adequate settlement of their claims. Although such proceedings are definite and conclusive, they **ruin debtors' credit standing,** and, as shown by experience, yield to creditors smaller financial returns of their claims than could be obtained by other methods.

Bankruptcy in some instances is necessary, particularly where recourse must be taken to recover property that may have been concealed or transferred, or in cases where there may be an element of fraud. Sometimes even in such cases less drastic procedures would serve the same purpose.

Bankruptcy is objectionable because of the **relatively small dividends** paid to creditors. This is sometimes due to the failure of creditors to assert their rights. The National Association of Credit Men, in the Credit Men's Diary and Manual of Commercial Laws, 1921 states that:

"The unsatisfactory outcome in many bankruptcy cases can be traced to the failure of creditors to exercise their full rights and perform their full duties, and the National Association of Credit Men will continue to urge that its members take an active part in the administration of all bankrupt estates in which they may be so unfortunate as to become involved, not only that the realization in such cases shall be as great as possible, but more especially to protect the system from abuse and discourage frauds and extravagance in its administration.

"It must be remembered that loss is inevitable when insolvency occurs, but a careful administration and a painstaking interest in each case will serve to minimize losses and increase dividends. The small dividends paid by many bankrupt estates can be accounted for wholly through lack of interest and attention on the part of creditors. . . ."

LIMITATIONS OF THIS SECTION.—Reference to the works of **Remington, Collier** and **Loveland,** who are authoritative writers on the subject, may be necessary to supplement the brief discussion of several phases of the law as presented in this section. Generally it is recommended that reputable counsel be employed when involved in any legal matter, particularly that of bankruptcy. As a matter of fact, it is imperative that debtors and creditors do so to protect, properly, their legal rights.

National Bankruptcy Law

SOURCE OF AUTHORITY.—The Constitution of the United States in Article 1, Section 8, Clause 4 provides that: "Congress shall have power to establish . . . . uniform laws on the subject of bankruptcies throughout the United States."

"The Constitution of the United States authorizes Congress, in its wisdom, to enact bankruptcy legislation, and when such action is taken it is the supreme law of the land on the subject." (*Lea* v. *George M. West Co.*, 91 Fed. 237.)

BANKRUPTCY LAWS OF THE UNITED STATES.—Congress under Constitutional power thus granted has enacted four successive bankruptcy laws. The Act of 1800, repealed in 1803; the Act of 1841, repealed in 1843; the Act of 1867, repealed in 1878; and the Act of 1898 which was amended in 1903, 1906 and 1910.

BANKRUPTCY LAWS IN FORCE AT PRESENT.—The Bankruptcy Laws in force at present consist of (1) the Act of 1898, (2) its amendments, (3) certain General Orders adopted by the Supreme Court of the United States, and (4) the equity rules of that court.

BANKRUPTCY AND INSOLVENCY LAWS.—**Insolvency laws** are state laws which vary in the different states in their scope and operation, whereas the **bankruptcy laws** are federal laws which apply uniformly throughout the United States and supersede the various state insolvency laws.

The prevailing state insolvency and federal bankruptcy laws are similar in many respects. Both are designed to effect a safe custody of the property of insolvent debtors and a fair distribution of such assets among the creditors in payment of claims. Both are measures to relieve the debtors, although differing

in scope. In proceedings before it the Supreme Court of the United States considers the two terms, insolvency and bankruptcy, as practically synonymous, particularly in interpreting cases under the bankruptcy laws.

The insolvency laws of the several states and the federal bankruptcy laws, despite their apparent similarity, are, however, **distinctly different** in rank, operation and effect. The bankruptcy laws discharge absolutely the proved debts (except claims of the United States) and debtors, whereas the insolvency laws, originally intended to relieve debtors from arrest and imprisonment, leave their obligation to pay their debts in full force. State insolvency laws differ in the various states and are subordinated to, and are of no effect wherever they are in conflict with the federal bankruptcy laws.

The terms "bankruptcy" and "insolvency" are not entirely synonymous. In general usage insolvency refers to the condition when debtors cannot pay their debts as they mature, whereas bankruptcy refers to the formal act or process of becoming bankrupt under the federal laws. Many persons and concerns at certain times may be found to be unable to meet their debts as they mature and are technically insolvent. They do not, however, become bankrupt until they have been judicially adjudicated to be such by courts having jurisdiction.

PURPOSE OF BANKRUPTCY.—"The Bankruptcy Act . . . . was designed to relieve unfortunate but honest debtors, and to secure a proper distribution of their assets among their creditors. The latter object is quite as important as the former." (*In re Scott*, 126 Fed. 981.)

"The distribution of the property is the principal object to be attained—the discharge of the debtor is incidental and subordinate." (*In re Swofford Bros. Dry Goods Co.*, 180 Fed. 549.)

"The cardinal principle of the Bankruptcy Act is to grant to creditors only those rights which would have been theirs if bankruptcy had not supervened, and to save to the bankrupt and his family every right and exemption which would have been theirs as against creditors enforcing their claims by ordinary judicial process." (*Thomas* v. *Woods*, 173 Fed. 585.)

DEFINITIONS.—The Bankruptcy Act defines certain words and phrases used in the Act and proceedings relating thereto.

Debtors, within the meaning of the law, may be individuals, partnerships or corporations.

Adjudication means the date of the entry of a decree that the defendant in a bankruptcy proceeding is a bankrupt, or, if such a decree is appealed from, the date when such a decree is finally confirmed.

Creditor includes everyone who has a demand or claim provable in bankruptcy.

Corporations include limited partnerships and other associations having subscribed capital which alone is responsible for the debts.

Debt includes any debt, demand or claim payable in bankruptcy.

Petitions means a paper filed in a court of bankruptcy.

Conceal includes in its meaning, falsify and mutilate.

Secured creditors include creditors who have security for their debts upon the property of bankrupts.

Transfer includes the sale and every other mode of disposing of property, absolutely or conditionally, as a payment, pledge, mortgage, gift or security.

Wage-earner means an individual who works for wages, salary, or hire at a rate of compensation not exceeding $1,500 a year.

A bankrupt is a debtor who is unable to meet his debts and who has been judicially declared a bankrupt in accordance with the terms of the law.

To the Hon **Judge of the District Court**
of the United States for the **District of**

The Petition of
of the of , in the County of
and District and State of

State Occupation or Profession

Respectfully Represents: That he has had his principal place of business [*or has resided or has his domicile*] for the greater portion of six months next immediately preceding the filing of this Petition at within said Judicial District; that he owes debts which he is unable to pay in full; that he is willing to surrender all his property for the benefit of his creditors, except such as is exempt by law, and desires to obtain the benefit of the Acts of Congress relating to Bankruptcy.

That the Schedule hereto annexed, marked A, and verified by your petitioner's oath, contains a full and true statement of all his debts, and (so far as it is possible to ascertain) the names and places of residence of his creditors, and such further statements concerning said debts as are required by the provisions of said Acts.

That the Schedule hereto annexed, marked B, and verified by your petitioner's oath, contains an accurate inventory of all his property, both real and personal, and such further statements concerning said property as are required by the provisions of said Acts:

Wherefore, your Petitioner Prays: that he may be adjudged by the Court to be a bankrupt within the purview of said acts.

Petitioner.

Attorney for Petitioner.

United State of America,
District of } ss.
County of

I, , the petitioning debtor mentioned and described in the foregoing Petition, do hereby make solemn oath that the statements contained therein are true, according to the best of my knowledge, information and belief.

Subscribed and sworn to before me this day of A. D., 19 } . Petitioner

Official Character.

N. B.—Oaths to the above petition, and the schedules thereto annexed, may be administered by officers authorized to administer oaths in proceedings before Courts of the United States, or under the laws of the State where the same are to be taken; and diplomatic or consular officers of the United States in any foreign Country.

Petitioner's attorney cannot act as notary.

FIG. 1. Petition in Bankruptcy

VOLUNTARY BANKRUPTCY.—A debtor is a **voluntary** bankrupt when he petitions the court that he be adjudged a bankrupt. In effect he is asking the court for the relief afforded by the law.

Voluntary bankruptcy proceedings **are deemed inadvisable** even in extreme cases and should not be made use of except as a last resort. Where, however, debtors are hopelessly involved and overwhelmed with business losses caused by economic conditions which cannot be overcome or through errors of judgment resulting in losses which are so great as to preclude a reasonable possibility of being able to recoup them in the ordinary course of business, justification exists for voluntary petition in bankruptcy. The bankruptcy laws are designed to give relief in such cases.

Even in such situations other steps should be taken, if possible, rather than resort to voluntary bankruptcy. **Amicable settlement** with the creditors or administration of debtors' affairs by creditors' committees is preferable. Such a course is likely to be less costly to all concerned and avoids, to a degree, the stigma of actually having been adjudged a bankrupt.

The **form of petition** to be used by voluntary bankrupts is shown by Fig. 1.

INVOLUNTARY BANKRUPTCY.—Involuntary bankruptcy is the result of a petition of one or more creditors to a court that a debtor be declared a bankrupt. The petition must be based on the commission of an **act of bankruptcy** and be made by a proper number of creditors. The form of creditors petition is set forth in Fig. 2.

TO THE HONORABLE ....., Judge of the District Court of the United States for the ..... District of ....*New York*....:

THE PETITION OF ..... respectfully shows:

THAT ....., of ....., *New York*...., has for the greater portion of six months next preceding the date of filing this petition, ...*had his principal place of business*.... at ..... *Street*, ..., *New York*.... in the County of ....., and State and District aforesaid, and owes debts to the amount of ....*$1,000*....

THAT YOUR ....*petitioners are creditors*.... of said ....., having provable claims amounting in the aggregate, in excess of securities held by ....*them*...., to the sum of ....*$500*.... That the nature and amount of your ....*petitioners'*.... claims are as follows:

..... *& Company—machinists' supplies furnished—balance due $300*....

.....*—paint furnished—balance due $150*....

.....*—automobile hire—balance due $210*....

AND YOUR ....*petitioners*.... further ....*represent*.... that said .... is insolvent, and that within four months next preceding the date of this petition the said ..... committed an act of bankruptcy, in that ....*he*.... did heretofore, to wit, on the ....*tenth*.... day of ....*December*.... A. D. 19.., pay to ....., the sum of ....*Two Hundred* ($200) .... Dollars, with intent while insolvent to prefer said creditor over others.

WHEREFORE, YOUR ....*petitioners pray*.... that service of this petition, with a subpoena, may be made upon ....., as provided in the acts of Congress relating to bankruptcy, and that ....*he*.... may be adjudged by the Court to be a bankrupt within the purview of said acts.

....

....

Attorney. Petitioners.

NOTE: To be acknowledged in joint jurat by all petitioners before an authorized official.

FIG. 2. Creditors' Petition in Bankruptcy

When acts of bankruptcy have been committed, particularly those involving the element of fraud or injustice to creditors, or if some of the creditors are opposed to an amicable settlement of debtors affairs, the most effective means of meeting the situation, to protect the interests of all the creditors, is through the definite and exclusive processes of the bankruptcy laws.

WHO MAY BECOME BANKRUPT.—

Voluntary.—All persons, **natural or artificial,** including partnerships, capable of contracting, except municipal, railroad, insurance, and banking corporations, who owe debts, may become voluntary bankrupts. (Section 4, Bankruptcy Law.)

Involuntary.—Natural persons, except wage-earners whose compensation does not exceed $1,500 a year, or farmers or persons engaged chiefly in tilling the soil, owing debts to the amount of $1,000 or more, may become involuntary bankrupts (Section 4b, Bankruptcy Law.)

Unincorporated companies, partnerships and corporations, except municipal, railroad, insurance and banking corporations, having debts of $1,000 or over, may become involuntary bankrupts. (Section 4b, Bankruptcy Law.)

Partnerships, during the continuance of partnership business, or after dissolution but before final settlement, may be adjudged bankrupts on petition of the members of such partnerships or of their creditors.

All the members of a partnership may unite in a voluntary petition. A non-joining member has the right to resist such a petition. Individual **partners** may file personal voluntary petitions in bankruptcy independent of the partnerships.

Where some of the partners are adjudged bankrupts and some are not, the partnership property will not be administered in bankruptcy, without the consent of the non-bankrupt partners; such partners shall settle partnership business as expeditiously as possible and account for the interest of the partners adjudged bankrupt.

The bankruptcy laws regard partnerships for administrative purposes as **distinct entities** from the partners who constitute the firm.

Marshaling of Assets refers to the application of assets, to the liquidation of debts of the firm and the individual members thereof, and applies where firm assets and individual assets of its members are before a court of equity for distribution, as in the case of insolvency of the firm and of its members individually. (*United States* v. *Lewis*, 92 U. S. 618.) The rule then is that firm debts must be paid out of firm property, and private debts out of private property; and no resort can be had by the one class of creditors to the fund belonging to the other until their own fund has been first exhausted. (*Pahlman* v. *Graves*, 26 Ill. 405.)

Creditors of a partnership can look only to the surplus of the separate estate of the members of the firm after the payment of the separate debts, and separate creditors can seek indemnity only from the surplus of the joint fund after the satisfaction of joint creditors. (*McCulloh* v. *Dashiells Adm.*, 1 Har. & G. 96.)

The procedure to be followed by creditors of partnerships is the same as against individual debtors.

ACTS OF BANKRUPTCY.—There are **five acts of bankruptcy** specified which, summarized, are:

1. The fraudulent conveyance or concealment of property.
2. An illegal preference while insolvent.

3. The seizure of a debtor's property under legal proceedings not vacated within 5 days, the debtor being at the time insolvent.
4. The making of a general assignment for the benefit of creditors, or the application for the appointment of a receiver of an insolvent, or the appointment of such receiver.
5. An admission in writing of insolvency and of a willingness to be adjudged a bankrupt.

One or more acts of bankruptcy must be proved before a debtor may be declared bankrupt.

1. **The first of these acts occurs when the debtor conveys, transfers, conceals, removes or permits to be concealed or removed, any part of his property with intent to hinder, delay or defraud his creditors.**

The intent to defraud creditors is the essence of this act and must be shown with reasonable certainty and clearness in the creditors' petition. A mere suspicion is not sufficient to sustain a petition to have the debtor declared bankrupt.

Transfer includes the "sale and every other and different mode of disposing of or parting with property, absolutely or conditionally, as a payment, pledge, mortgage, gift or security."

Conceal includes also "secrete, falsify and mutilate."

2. **The second act of bankruptcy is committed when the debtor transfers, while insolvent, any portion of his property to one or more of his creditors with intent to prefer such creditor or creditors over his other creditors.**

Preference is the essence of this act. The important point is that the preference is made intentionally and with the acquiescence of creditors while the debtor is insolvent.

What Constitutes Preference.—To establish a preference, insolvency must be alleged and found as a fact, and the intent of the debtor to prefer must be proved. Therefore, the provisions of the Bankruptcy Act forbidding transfers, etc., of assets after insolvency does not invalidate payments made in the usual course of business before the commission of an act of bankruptcy and not in contemplation thereof, though the enterprise, if wound up at the time, would in fact be unable to meet its obligations. In other words, it cannot be said that all payments, transfers, etc., after or in contemplation of insolvency are preferences, if made in due course of business and if not made with a view to prefer one creditor to another. For instance, if after or in contemplation of insolvency a security is given for a debt then created, without fraud in fact, and intended merely to adequately protect a loan made at the time, the transfer of the security is not a preference.

Two illustrations of preferences, taken from reported cases, are given below:

November 6, 1899, Lyon owed Batten & Co. $1,888.61 for advertising. This account was reduced by cash payments until at December 31, 1899, $630.47 was due. During December additional advertising was done for which Lyon was charged $546.02. And it is for this sum that claim was filed. The court refused to allow this claim unless Batten & Co. surrendered the sum of $210.15 alleged to have been paid to them by the bankrupt while insolvent. The $210.15 which was thus held to be a preference, represented a check, dated January 20, 1900, delivered to the payee January 2, 1900, in payment of the final one-third of the account for $630.47. The previous payments on this

amount were made prior to January 20, the day the debtor became insolvent; but the third check, the one in controversy, was deposited by Batten & Co. in their bank on January 20, and was paid by the drawee bank on January 21, one day after insolvency.

One Sizer on December 23, 1899, sold to the bankrupt merchandise of the value of $232.46, for which he received

Jan. 24, 1900	Cash	$ 29.68
Jan. 24, 1900	Note, payable and paid Apr. 23	200.00
Jan. 31, 1900	Cash	2.78
		$232.46

At subsequent dates Sizer sold the bankrupt merchandise as follows:

Mar. 10	$357.80
Aug. 16	20.62
	$378.42

It was held that the payment on April 23 of the note for $200 was a preference, and should be returned as a condition of proving debts arising on and after March 10.

On March 10, after the giving of the note and before its maturity (April 23) and payment, the bankrupt bought goods amounting to $357.80, so that at such date the bankrupt owed Sizer the note representing an account for goods sold and the additional sum of $357.80. While the payment was distinctly on the note, and for the purpose of extinguishing it, yet it was a partial payment of a portion of the whole amount of the indebtedness owing from the bankrupt to the creditor.

Preferences obtain only in bankruptcy proceedings. But it is often found desirable in proceedings in insolvency, in cases where there may be present the essentials of a preference, to supersede the insolvency proceedings by a petition in involuntary bankruptcy in order to invoke the rule of preferences and thus insure an equitable distribution of the estate.

3. The third act of bankruptcy occurs when the debtor has, while insolvent, suffered or permitted any creditor to obtain a preference through legal proceedings, and has not vacated or discharged such preference at least 5 days before final disposition of any property affected by such preference.

Preference through legal proceedings constitutes the essence of this act, which is also termed the **passive act of bankruptcy.** The debtor commits no overt act but merely permits, while insolvent, certain creditors to obtain an advantage over others through legal process. Debtors who permit judgments and liens to be obtained against them are the chief offenders.

What Constitutes Preference Through Legal Proceedings.—"A person shall be deemed to have given a preference if, being insolvent, he has, within four months from the filing of the petition and before adjudication, procured or suffered a judgment to be entered against himself in favor of any person or made a transfer of any of his property, where the effect of the enforcement of such judgment or transfer will be to enable anyone of his creditors to obtain a greater percentage of his debt than any other of such creditors of the same class.[8]

A chattel mortgage, a lien, a sale, payment on a note, giving security on an

[8] Bankruptcy Laws, Section 60.

existing debt, and every other mode of disposing of or parting with property or the possession of property, absolutely or conditionally, as a payment, pledge, mortgage, gift, or security, is a transfer, and, contingent upon the facts, may be a preference.[9] Creditors who have received preferences, conveyances, etc., may not have their claims allowed unless such preferences are surrendered.

When Preferences May be Set Aside.—Preferences are **voidable** by the trustee and the property may be recovered from persons benefited thereby if:

(a) Given within 4 months of the petition in bankruptcy.

(b) Given for a pre-existing debt after filing petition and before adjudication.

(c) The debtor was insolvent when the preference was made and within four months of the time the petition was filed.

(d) The person receiving the preference then had reasonable cause to believe that the enforcement of the transfer of property would leave the debtor insolvent and would effect a preference under the bankruptcy law.

4. A debtor commits the fourth act of bankruptcy when he makes a general assignment for the benefit of creditors, or, being insolvent, has a receiver or trustee put in charge of his property under the laws of a state.

The making of such assignments is frequently done for the purpose of bringing the estates of debtors under the jurisdiction of the state courts. Such an act is, however, ground for bankruptcy under the federal statutes.

The **assignment section of the Bankruptcy Law** is sometimes a barrier to more economical settlement. This act of bankruptcy is frequently looked upon as a stumbling block in the federal law standing in the way of proceedings under the various state insolvency laws, state assignment laws, creditors' committees, and other remedies, which are sometimes available in certain states, and to be preferred, where feasible, to the more drastic proceedings in bankruptcy.

Where Bankruptcy Act Does Not Apply.—Where the assignment is made for a valid consideration, or insolvency cannot be affirmatively shown, an act of bankruptcy is not committed.

5. The fifth act of bankruptcy occurs when a debtor admits in writing his inability to pay his indebtedness and his willingness to be adjudged a bankrupt on that ground.

Admission by the debtor is sufficient. Under this section the debtor virtually becomes a voluntary bankrupt.

Although willingness to be adjudged a bankrupt is to be deprecated, conditions may arise in business wherein it would appear to be the only solution. An insolvent debtor would be justified in resorting to the remedies under this section when he is forced by harsh and unreasonable creditors, particularly if some of them may be in a position to obtain unfair advantages over others who are more reasonable.

PETITIONS IN BANKRUPTCY—GENERAL.—Proceedings are begun by filing a formal petition in bankruptcy, voluntary or involuntary. The successive steps are based on subsequent petitions and motions in accordance with the nature of the proceeding.

The Bankruptcy Act does not prescribe the form or contents of the petition in either voluntary or involuntary proceedings. The general orders in bankruptcy of the Supreme Court prescribe the forms to be used, but in the case of an

[9] Bankruptcy Laws, Section 1, Sub. 25.

involuntary petition the form leaves a blank as to the nature and amount of petitioners' claims and as to the act of bankruptcy complained of to be filled in by the petitioners. The general character of these forms has afforded opportunity to pervert the Act by confusing the proceedings in voluntary and involuntary bankruptcies.

Certain **prescribed forms** are used which are uniform throughout the country. These forms are largely self-explanatory. Specimens of the more important ones are reproduced in this section. Should readers have occasion to use such forms complete sets may be obtained from law stationers.

The courts require reasonable accuracy and completeness in the preparation of all the papers used in proceedings in bankruptcy. Various schedules must be filed in triplicate, each copy signed by the petitioner, and affidavits made to accompany the schedules. The forms indicate where signatures and affidavits are required.

Debtors' schedules must contain full statements of assets and liabilities setting forth the major items specifically and with such detail as to be capable of identification. Damage suits and creditors' claims of whatever nature, although apparently groundless, should be stated at the maximum amount alleged to be due. **Contingent liabilities** should also be stated.

The bankrupt or any creditor may take exception to the petition and plead against the proceeding. The parties may question any material facts alleged in the petition, such as the jurisdiction of the court and whether or not an act of bankruptcy was committed, or statements made regarding the provable claims of the petitioning creditors.

PETITION BY DEBTORS—VOLUNTARY.—Individual debtors filing voluntary petitions in bankruptcy should use petition shown in Fig. 1 and schedules shown in Figs. 3 to 14.

The petitions and schedules for **partnerships or corporations** are substantially the same as those for individuals, with slight changes in the wording of the petitions to identify the partnerships or the corporations. The corporate form of petition shown in Fig. 15 must be accompanied by schedules similar to those for individuals. (Figs. 3 to 14, inclusive.)

In partnership petitions, each partner must file a complete set of schedules of his personal assets and liabilities.

Statement of all Debts of Bankrupt.

SCHEDULE A. (1) No._____

Statement of all creditors who are to be paid in full or to whom priority is secured by law.

CLAIMS WHICH HAVE PRIORITY.		AMOUNT Dollars.	Cents.
1. Taxes and debts due and owing the United States.			
2. Taxes due and owing to the State of or to any County, District or Municipality thereof.			
3. Wages due workmen, Clerks or Servants, to an amount not exceeding $300 each, earned within three months before filing the petition.			
4. Other Debts having priority by law.			

Insert in all cases, ledger page, names of creditors and their residence, if known, or unknown, so state, when and where debt was contracted; nature and consideration of the Debt, and whether contracted as partner or joint contractor, and, if so, with whom.

FIG. 14. Summary of Debts and Assets

To the Honorable

Judge of the District Court of the United States for the District of

The Petition of

a . *Corporation having its principal office at , in the County of and District and State of , and engaged in the business of

Respectfully Represents:

the said Corporation is incorporated by and under the laws of the State of that it has had its principal office and its principal place of business for the greater portion of six months next immediately preceding the Filing of this Petition at within said judicial district; that it owes debts which it is unable to pay in full; that it is willing to surrender all its Property for the benefit of its Creditors, except such as is exempt by law, and desires to obtain the benefit of the Acts of Congress relating to *Bankruptcy;* and that its Board of Directors has duly authorized such acts on its part and the statement herein made in its behalf.

That the Schedule hereto annexed, marked A, and verified by the oath of your Petitioner's contains a full and true statement of all its debts; and (so far as it is possible to ascertain) the names and places of residence of its Creditors, and such further statements concerning said debts as are required by the provisions of said acts:

That the Schedule hereto annexed marked B, and verified by the oath of your Petitioner's contains an accurate inventory of all its Property, both Real and Personal, and such further statements concerning said Property as are required by the provisions of said acts:

Wherefore your Petitioner Prays, That it may be adjudged by the Court to be a Bankrupt, within the purview of said Acts.

(SEAL) Petitioner.

by

Attorney.

United States of America, District of ss.

the of the

the Corporation and Petitioning Debtor mentioned and described in the foregoing Petition, does hereby make solemn oath that the Statements contained therein are true, according to the best of his knowledge, information and belief; that the reason why this verification is made by deponent and not by the Petitioner herein, is that said Petitioner is a Corporation; and that Deponent is the officer of said Corporation duly authorized by its Board of Directors to execute and verify said Petition on its behalf.

Subscribed, and sworn to before me, this day of A. D. 19 .

* "Moneyed, Business or Commercial."

FIG. 15. Debtor's Petition in Bankruptcy—Corporation

PETITION OF CREDITORS—INVOLUNTARY BANKRUPTCY.—The first petition in involuntary bankruptcy is filed by the creditors. Where there are twelve or more creditors, an involuntary petition may be filed by three or more creditors having provable claims aggregating $500 or more above the security held by them. Where there are less than twelve creditors, one creditor having provable claims amounting to $500 or more, above any security held by him, may file a petition.

For the purpose of determining how many creditors must join in a petition the following are not counted unless they are parties to the petition:

Relatives by blood or marriage within the third degree.
Employees of the alleged bankrupt.

The petition must allege specifically one or more acts of bankruptcy in such detail that the court can act on the petition without going into matters outside of the allegations set forth therein. The form of creditors' petition is substantially as outlined in Fig. 2 (page 962).

The alleged bankrupt, within ten days after the creditors' petition in bankruptcy is filed, must furnish detailed schedules in the same manner as in the case of a voluntary bankruptcy.

EXEMPTIONS OF BANKRUPTS.—The bankruptcy laws provide for the exemptions specified in the statutes of the state in which the bankrupts were domiciled for 6 months immediately preceding adjudication. In *Hanover National Bank* v. *Moyses*, 186 U. S. 181, it was held that bankrupts are allowed the exemptions prescribed by state laws in force at the time of the filing of the petition in bankruptcy. The bankruptcy courts may determine the rights of bankrupts to the exemptions claimed, but are guided by the decisions of the state courts as to the meaning and the construction of such laws.

Reference should always be made to the exemption statutes of the state in which debtors live. In many states certain articles are enumerated such as (1) horses, work animals, vehicles, farming utensils, tools and implements of trade, library and implements of professional men, etc., which are used as a means of gaining a living; (2) food, wearing apparel, household furniture, earnings and wages, life insurance money, pensions, proceeds of exempt properties, etc. In many cases, however, the exemption statutes are subject to exceptions and to varying interpretations.

Creditors' Meetings and Notices

CREDITORS' MEETINGS.—As soon as a petition in bankruptcy is filed with the court all the known creditors are notified to attend a meeting (Fig. 16), at which time the **bankrupt may be examined, the creditors prove their claims, and a trustee is appointed.** In urgent cases the court will immediately appoint a **receiver** pending the meeting of creditors and appointment of a **trustee.**

Notices of meetings and proceedings in bankruptcy are given by the referees unless otherwise ordered by the courts. Creditors are entitled to 10 days' notice by mail of all.

1. Meetings of creditors.
2. Examinations of the bankrupt.
3. Hearings, upon application for the confirmation of compositions.
4. Proposed compromises of controversies.
5. Proposed sales of property.
6. Declarations and times of payment of dividends.

7. Filings of the final accounts of trustees and times and places where they will be examined and passed on.
8. Proposed dismissals of proceedings.

Creditors are entitled to 30 days' notice of all applications for **discharge of bankrupts.**

Subsequent meetings may be held when all the creditors who have claims, agree in writing, or at the call of the court at the request of one fourth of the creditors whose claims were allowed.

IN THE DISTRICT COURT OF THE UNITED STATES, for the ..... District of ..... In the Matter of ..... Bankrupt.

TO THE CREDITORS OF ....., of ....., in the County of ..... and district aforesaid, a Bankrupt:

NOTICE is hereby given, that on the ..... day of ..... A. D. ....., the said ..... was duly adjudicated bankrupt and that the first meeting of his creditors will be held at my office, Room ....., ... in ..... on the ..... day of .... A. D. ....., at ..... o'clock in the (forenoon) at which time the said creditors may attend, prove their claims, appoint a trustee, examine the bankrupt and transact such other business as may properly come before said meeting.

.....
Referee in Bankruptcy

Dated at .....

FIG. 16. Official Notice to Creditors of First Meeting

VOTING AT CREDITORS' MEETINGS.—**Secured creditors** may not vote except for the amount of their claims in excess of the value of the security.

Unsecured creditors may vote. A majority vote in number and amount of claims of all creditors who are present and whose claims have been allowed, may pass on matters submitted to them.

FILING PROOF OF CLAIMS.—All claims of creditors must be filed and proved in a formal manner to the court or referee (Figs. 17 to 20, pages 982 to 985.) Proof must be in writing, signed and sworn to by claimants setting forth details and dates of all items, the consideration therefor, collateral held against them, payments made and maturity dates. All claims must contain a statement to the effect that the sum stated to be due is justly owing.

A statement must be made regarding the **consideration** given for the claim, as for instance: "That the consideration of the said debt is groceries bought by and delivered to said John Doe."

When the proof of claims covers **open accounts** there should be submitted with it a statement of the accounts together with duplicate bills.

Original written instruments should be attached to and made part of the proof of claims where the debts are founded on such instruments. Probably a safer method is to attach photostatic copies and retain the originals. In case of lost or destroyed instruments there should be set forth in the proof of debt, the facts of the indebtedness and the loss or destruction of the instruments.

Secured creditors may prove their debts for the full amount and have their liens foreclosed in the bankruptcy court, or they may exhaust their security and file claims for the balance.

Endorsers, guarantors and sureties may prove, in the name of creditors, any claim upon which they are secondarily liable and which the creditors have failed to prove.

FIG. 20. Proof of Debt Due Corporation, with Power of Attorney

There must be shown in the proofs of debt whether the claimants are individuals, partnerships or corporations.

REPRESENTATIVES OF CREDITORS.—Where creditors cannot attend proceedings in bankruptcy they may be represented by agents. To empower such agents to act for creditors it is necessary to give them **powers of attorney** which may be made part of, or attached to, the proof of claim.

FILING OF CLAIMS.—Claims are lost unless they are proved within one year after the date of adjudication, excepting that, under unusual circumstances where creditors are without fault, they may be permitted to file their claims later.

When proved and accepted by the court, claims are allowed in the meaning of the statute. Whenever possible it is advisable to obtain an acknowledgment from the referee that the claims have been allowed. Creditors should feel free to follow their allowed claims and inquire after their progress.

DEBTS WHICH MAY BE PROVED.—Debts which may be proved against the estate of a bankrupt are:

1. Those which are founded on legal contracts, express or implied.
2. Fixed liabilities, as evidenced by a judgment or an instrument in writing, absolutely owing at the time of the filing of the petition against him, whether then payable or not, with any interest thereon which would have been recoverable at that date or with a rebate of interest upon such as were not then payable and did not bear interest.
3. Court costs assessable against an involuntary bankrupt who was, at the time of the filing of the petition against him, plaintiff in a cause of action which would pass to the trustee and which the trustee declines to prosecute after notice.
4. Debts that are founded upon a claim for taxable costs incurred in good faith by a creditor before the filing of the petition in an action to recover a provable debt.
5. Debts founded upon provable debts reduced to judgments after the filing of the petition and before the consideration of the bankrupt's application for a discharge, less costs incurred and interests accrued after the filing of the petition and up to the time of the entry of such judgments.

Unliquidated claims against the bankrupt may, pursuant to application to the court, be liquidated in such manner as it shall direct, and may thereafter be proved and allowed against his estate.

DEBTS WHICH MAY NOT BE PROVED.—Where there are no present liabilities under contracts at the time proof of debt is made, claims are not provable. Such is the case when rent becomes due at a future time.

DUTIES OF BANKRUPT.—After bankruptcy proceedings have been taken and the court has appointed receivers the bankrupt should:

1. Attend the first meeting of his creditors, if directed by the court or a judge thereof to do so, and the hearing upon his application for a discharge, if filed.
2. Comply with all lawful orders of the court.
3. Examine the correctness of all proofs of claims filed against his estate.
4. Execute to his trustee transfers of all his property in foreign countries.
5. Execute and deliver such papers as shall be ordered by the court.
6. Immediately inform his trustee of any attempt, by his creditors or

other persons, to evade the provisions of this Act coming to his knowledge.

7. In case of any person having to his knowledge proved a false claim against his estate, disclose that fact immediately to his trustee.

8. Prepare, make oath to, and file in court within 10 days, unless further time is granted, after the adjudication, if an involuntary bankrupt, and with the petition if a voluntary bankrupt, a schedule of his property, showing the amount and kind of property, the location thereof, its money value in detail and a list of his creditors, showing their residence if known, if unknown, that fact to be stated, the amounts due each of them, the consideration thereof, the security held by them, if any, and a claim for such exemptions as he may be entitled to, all in triplicate, one copy of each for the clerk, one for the referee, and one for the trustee.

9. When present at the first meeting of his creditors, and at such other times as the court shall order, submit to an examination concerning the conducting of his business, the cause of his bankruptcy, his dealings with his creditors and other persons, the amount, kind, and whereabouts of his property, and, in addition, all matters which may affect the administration and settlement of his estate; but no testimony given by him shall be offered in evidence against him in any criminal proceeding.

Provided, however, that he shall not be required to attend a meeting of his creditors, or at or for an examination at a place more than 150 miles distant from his home or principal place of business, or to examine claims except when presented to him, unless ordered by the court, or a judge thereof, for cause shown, and the bankrupt shall be paid his actual expenses from the estate when examined or required to attend at any place other than the city, town, or village of his residence.

EXAMINATION OF THE BANKRUPT.—From the time the petition is filed the alleged bankrupt is subject to examination by the court. Such examinations are open to creditors and may be held in open court, in chambers, or, as is usually the case, before a referee, whose acts are, of course, for practical purposes, those of the court itself.

Creditors should attend and interest themselves with such examinations either in person or by representatives. These examinations are important, particularly in cases where fraud may have been committed, or where assets may have been concealed, or where books and records may have been destroyed.

Even though the financial interest of creditors may be relatively small, or the amount of money likely to be recovered negligible, creditors should at all times recognize the importance of exercising their rights under this phase of the law relating to the examination of the bankrupt and should unreservedly lend their interest and support to it. Debtors who know that their creditors, who are familiar with their mutual transactions, are going to subject them to severe and close examinations are not as likely to commit frauds or conceal their assets.

REFEREES—APPOINTMENT AND DUTIES.[10]—Courts of bankruptcy shall . . . . appoint referees for a term of two years, and may, in their discretion, remove them because their services are not needed or for other cause. Referees shall (1) declare dividends and prepare and deliver to trustees dividend sheets showing the dividends declared and to whom payable; (2) examine all schedules of property and lists of creditors filed by bankrupts and cause such

[10] Bankruptcy Law, Section 39.

as are incomplete or defective to be remedied; (3) furnish such information concerning the estates in process of administration before them as may be requested by the parties at interest; (4) give notices to creditors as herein provided; (5) make up records embodying the evidence, or the substances thereof, as agreed upon by the parties in all contested matters arising before them, whenever requested to do so by either of the parties thereto, together with their findings therein, and transmit them to the judges; (6) prepare and file schedules of property and lists of creditors required to be filed by the bankrupts, or cause same to be done, when the bankrupts fail, refuse or neglect to do so; (7) safely keep, perfect and transmit to the clerks the records herein required to be kept by them when the cases are concluded; (8) transmit to the clerks such papers as may be on file, as needed in any proceedings; and (9) preserve the evidence taken before them. Referees shall not act in cases in which they are interested; practice as attorneys in any bankruptcy proceedings; or purchase, directly or indirectly, any property of an estate in bankruptcy.

TRUSTEES—APPOINTMENT AND DUTIES.[11]—The creditors of a bankrupt estate shall, at their first meeting after the adjudication or after a vacancy has occurred in the office of trustee, or after an estate has been reopened, or after a composition has been set aside or a discharge revoked, of if there is a vacancy in the office of trustee, appoint one or three trustees of such estate. If the creditors do not appoint a trustee as herein provided, the court shall do so. Trustees shall account for and pay over to the estates under their control all interest received by them upon the property of such estate; collect and reduce to money the property of such estate; deposit moneys in designated depositories; disburse money only by check or draft on the depositories; furnish such information concerning the estates as may be requested by parties in interest; keep regular accounts showing all amounts received and from what sources and all amounts expended and on what accounts; lay before the final meeting of the creditors detailed statement of the administration of the estate; pay dividends within ten days after they are declared by the referees; and set apart the bankrupt's exemptions.

TRUSTEE'S TITLE.[12]—The trustee, upon appointment and qualification, is vested by operation of law with the title of the bankrupt, as of the day he was adjudged a bankrupt, except as to exemptions, to all (1) documents, (2) interests in patents, etc., (3) powers which he might have exercised for his own benefit, (4) property transferred to him in fraud of his creditors, (5) property which prior to the filing of the petition he could by any means have transferred or which might have been levied upon and sold under judicial process against him, and (6) rights of action arising upon contracts, etc.

RECEIVERS—APPOINTMENT AND DUTIES.—Receivers are appointed by the court to receive and preserve bankrupts' estates. Their appointment usually follows in instances where there is immediate danger of waste, neglect or fraud if the bankrupts remain in possession. Their tenure of office is frequently short, as trustees are usually appointed at the first meetings of the creditors.

The debtor, or the creditors, may petition for the appointment of a receiver. The following form (Fig. 21) shows the substance of a petition by creditors for the appointment of a receiver:

..... and ..... and .....
....., the petitioning creditors in the involuntary petition in bankruptcy pending herein against ....., the alleged bankrupt above named, move the court for an order appointing a receiver herein, and for a warrant to issue to such receiver, authorizing and directing ..... to seize the property of said alleged bankrupt and to hold the same pending the hearing upon said petition; and this ..... for upon the ground that it is absolutely necessary, for the preservation of the estate, that..... ..... be appointed; that said alleged bankrupt has committed an act of bankruptcy in that heretofore to wit, on the ..... day of ..... A. D. ....., ... did transfer and pay to ..... the sum of ..... Dollars, with the intent, while solvent, to prefer the said ....., ... creditors, over the other creditors of the said .....; and that said alleged bankrupt has neglected and is neglecting, and is about to further so neglect ..... property that it has deteriorated and is hereby deteriorating, and is about to further deteriorate in value, and this is so from the following facts, to wit: That on, to wit, the ..... day of ..... A. D. ....., the said alleged bankrupt ceased operations at ..... factory, and the same is now shut down; that the yards of the said alleged bankrupt are not protected or sheltered, that the buildings are open, and that the machinery and stock in said yards and building are not properly guarded and protected against the weather and trespassers; and that the yards, building, and machinery are in a dilapidated condition.

FIG. 21. Petition for Appointment of Receiver

ADMINISTRATION IN HANDS OF RECEIVER.—The Bankruptcy Act as drawn, was intended to place the administration of the estate in the hands of a trustee selected by the creditors. The appointment of a receiver was regarded as something quite incidental (Fig. 22). In point of fact, in actual operation the administration of the estate has come largely, if not predominantly, into the hands of a receiver appointed shortly after the filing of a voluntary or involuntary petition.

Judge Learned Hand says: "In the City of New York practically all the administration takes place in the hands of the receiver." One of the lawyers especially familiar with this branch of the law says that the **interim** business is the whole thing in large cases. Another lawyer, equally familiar with the practice, said: "My opinion is that the best part of the administration of any estate is conducted by the receiver and not by the trustee." In many instances the receiver appointed by the court is continued as trustee.

A large proportion of bankruptcies, estimated by a number of the witnesses as at least 75%, are what may be called "small bankruptcies" where the assets are less than five thousand dollars and generally not in excess of two or three thousand dollars. Dun's Review of Business Conditions for 1922 shows that fully 90% in number of the commercial failures in the United States are those of manufacturers and traders. These debtors ordinarily have on hand a stock of merchandise, either finished or in course of manufacture, frequently of a reasonable character, which it is necessary to protect from spoilation by the immediate appointment of some person to care for it. Hence the necessity generally of the prompt appointment of a receiver when a petition is filed.

The bankruptcy law authorized the court to "appoint receivers or the marshals upon application of parties in interest, in case the court shall find it absolutely necessary, for the preservation of estates to take charge of the property of bankrupts after the filing of a petition and until it is dismissed or the trustee is qualified." [Section 2 (3).] But the limitation as to absolute necessity is liberally construed and it may be said to be the all but universal practice to appoint a receiver.

There is no provision in the statute for the appointment of a custodian other than the implication arising from the provision for the payment of fees "when the receiver or marshal acts as a mere custodian." (Section 48 d.)

The courts sometimes appoint persons who are termed custodians but they are really receivers appointed under the authority above cited, though their duties are limited by the order of appointment. The marshal may be appointed to take charge of the property.

At a Stated Term of the United States District Court for the District of ....., held at the Court Rooms thereof,

.....on the.....day of....., 192..

Present—Hon....., Judge.

In the Matter of Alleged Bankrupt.	*In Bankruptcy* *No.*

WHEREAS, an involuntary petition in bankruptcy has this day been duly filed in the office of the Clerk of this Court, against the above-named alleged bankrupt , and it appearing that a subpoena has duly been issued against said alleged bankrupt , as required by law, and upon reading and filing the annexed petition of..... and a bond of the said petitioning creditor having been duly filed and approved; and it appearing that the granting of this order is necessary to preserve the assets of the above-named bankrupt,

Now, it is, on motion of ..... attorneys for said petitioning creditor,

ORDERED, that.....be and...he hereby is appointed temporary receiver of all goods, wares and merchandise, accounts, account books, chattels, choses in action, real estate and all other property of whatsoever nature and wheresoever located, belonging to or being the property of or in the possession of the above-named alleged bankrupt ; and it is further

ORDERED, that said receiver give a sufficient bond to the People of the United States in the sum of.....($.....) dollars, conditioned for the faithful performance of his duties as such receiver; and it is further

ORDERED, that said receiver be and he is hereby empowered forthwith to take possession of all property, assets and effects of whatsoever nature and wheresoever located, now owned by or in the possession of said alleged bankrupt , and of all and any property wheresoever located and of whatsoever nature, being the property of said alleged bankrupt , and in the possession of any agent, servant, officer or representative of said alleged bankrupt , as well as any and all real property belonging to said alleged bankrupt ; and said receiver is authorized to do all and any such acts and take all and any such proceedings as may enable him forthwith to obtain possession of all and any such property, and to keep and preserve the same until further order of this Court; and it is further

ORDERED, that all persons, firms, and corporations, including said alleged bankrupt , and all attorneys, agents, officers and servants of said alleged bankrupt , forthwith deliver to said receiver all property, assets and effects of whatsoever nature and wheresoever located, including merchandise, accounts, notes and bills receivable, drafts, checks, moneys, securities, and all other choses in action, account books, records, chattels, lands and buildings, life and fire and all other insurance policies, in the possession of them, or any of them, and owned by the alleged bankrupt ; and said alleged bankrupt ordered forthwith to deliver to said receiver all and any of such property now in the possession of the said alleged bankrupt ; and it is further

ORDERED, that all persons, firms and corporations, including all creditors of said alleged ankrupt ; and the representatives, agents, attorneys and servants of all such creditors, nd all sheriffs, marshals and other officers, and their deputies, representatives and servants, re hereby jointly and severally enjoined, restrained and stayed from removing, transferng, disposing of, or attempting in any way to remove, transfer or dispose of, or in any ay interfere with any property, assets or effects in the possession of the said alleged bankupt , or owned by said alleged bankrupt and in the possession of any officers, agents, ttorneys or representatives of said alleged bankrupt ; and all said persons are further njoined, stayed and restrained from executing or issuing or causing the execution or issunce or the suing out of any Court, of any writ, process, summons, attachment, replevin, xecution, or any other proceeding for the purpose of impounding or taking possession of r interference with, any property owned by or in the possession of said alleged bankupt or owned by said alleged bankrupt and in the possession of any agents, servants r attorneys of said alleged bankrupt ; and each and all of said persons, firms or corporaions having process against the said alleged bankrupt are hereby jointly and severally estrained, stayed and enjoined from taking any steps, measures or proceedings or doing ny act or thing in any action wherein the said alleged bankrupt may be either plaintiff, efendant, petitioner or respondent, and from causing, procuring, suffering or permitting he same to be done; and it is further

ORDERED, that all persons, firms and corporations be and they hereby are enjoined from isturbing or interfering with gas, telephone service, heat, electrical service, water supply r any other utility of like kind, furnished to said alleged bankrupt , and are hereby njoined from cutting off or disconnecting the furnishing of any such utilities to said lleged bankrupt except upon three days' notice in writing to said receiver; and all persons, rms or corporations owning real or personal property, including any lands or buildings n which is located any property of said alleged bankrupt , are enjoined, pending the rther order of this Court, from removing or interfering with any property of said alleged ankrupt.

FIG. 22. Order Appointing Receiver in Bankruptcy

DEBTS, PRIORITY AND DISCHARGE.—In bankruptcy proceedings, ebts due creditors take rank as follows:

1st. Taxes and debts due the United States.
2nd. Actual and necessary costs of preserving the estate.
3rd. Filing fees and reasonable expenses paid by creditors in recovering to the estate property transferred or concealed by the bankrupt.
4th. Costs of administering the estate, including attorneys' fees.
5th. Wages of workmen, clerks, salesmen, servants, earned within 3 months and not exceeding $300 for each claimant.
6th. Debts given priority by the laws of the various states.
7th. General creditors.

When a creditor has security for his debt, the security must be surrendered r sold before the principal debt can be realized upon. A similar doctrine has een adopted in some states in connection with their insolvency laws (16 Mass. 08; 9 M.A.L. 387). In many states, however, this principle marks a disnction between the Bankruptcy Law and the insolvency laws.

A discharge in bankruptcy releases a bankrupt from all of his provable debts, xcept such as are:

1. Due as a tax levied by the United States, the state, county, district, or municipality in which he resides.
2. Liabilities for obtaining property by false pretences or false representations, or for wilful and malicious injuries to the person or property of another or for alimony due or to become due, or for maintenance or support of wife or child, or for seduction of an un-

married female, or for breach of promise of marriage accompanied by seduction, or for criminal conversation.

3. Have not been duly scheduled in time for proof and allowance, with the name of the creditor, if known to the bankrupt, unless such creditor had notice or actual knowledge of the proceedings in bankruptcy.
4. Were created by his fraud, embezzlement, misappropriation, or defalcation while acting as an officer or in any fiduciary capacity.

Section 68 of the Bankruptcy Act provides that in case of **mutual debts** or credits between the estate of a bankrupt and a creditor, the account shall be stated and one debt shall be set off against the other and the balance only shall be allowed or paid. But a set-off or **counterclaim** shall not be allowed in favor of any debtor of the bankrupt which, (1) is not provable against the estate, or (2) was purchased by or transferred to him after the filing of the petition, or within 4 months before such filing, with a view to such use and with knowledge or notice that such bankrupt was insolvent, or had committed an act of bankruptcy.

Claims may be contested by objection of other creditors at the time of filing. Otherwise the claim as proven will usually be allowed by the referee.

COLLECTION AND DISTRIBUTION OF ASSETS.—The courts of bankruptcy are authorized to cause the estates of bankrupts to be collected and reduced to money and distributed, and to determine controversies in relation thereto, except as provided in the law.

Dividends.—Dividends are paid in equal proportion on all allowed claims except those which are secured or have priority. The **first dividend** must be paid within 30 days after the adjudication where (1) the money of the bankrupt's estate, in excess of the amount necessary to pay priority and lien claims, is equal to or more than 5% of the amount of the allowed claims; but (2) not more than 50% of the funds may be paid out on the first dividend. **Subsequent dividends** are declared whenever the amounts to be distributed shall equal 10% or more of the allowed claims. The judge of the bankruptcy court may order that dividends be declared oftener and in smaller proportions. **Final dividends** cannot be declared until at least three months after the first dividends have been declared.

CREDITORS' RIGHTS UNDER SUBSEQUENT CLAIMS.—Generally speaking creditors rights to dividends are not affected by proof and allowance of their own or other claims subsequent to the date of a dividend. Creditors who have received dividends or in whose favor dividends have been declared are not affected by allowance of claims subsequent to the date of payment or declaration of such dividends. Creditors whose claims are allowed after dividends have been declared, are to be paid dividends in the same ratio as those already received by the other creditors, if the estate equals that much before other creditors are paid any further dividends.

COMPOSITIONS IN BANKRUPTCY.—A composition is an agreement between a debtor and his creditors by which the creditors consent to accept in discharge of their claims a lesser sum than the amount due.

A composition in bankruptcy may be affected only **on confirmation by the court.** The debtor may move to have the bankruptcy proceedings against him dismissed when he has delivered to the court the amount agreed upon under an accepted composition for distribution to his creditors.

PROCEDURE IN COMPOSITION.—After the petition has been filed, the debtor may offer to settle with his creditors at a certain per cent of their claims. If such offer is accepted in writing by a majority in number of all creditors whose claims have been allowed and this number represents a majority in amount of allowed claims, the offer is submitted to the court for confirmation. Before the application for the confirmation of the composition offer may be filed in the court, the consideration to be paid by the bankrupt to his creditors and the money necessary to pay all debts which have priority and the cost of the proceedings, must be deposited in a place designated by and subject to the order of the judge. The offer will not be considered by the court until the bankrupt has been examined in open court or at a meeting of his creditors, and has filed in court a schedule of his property and a list of his creditors. The judge will confirm the composition if satisfied that, (1) it is for the best interests of the creditors; (2) the bankrupt has not been guilty of any of the acts or failed to perform any of the duties which would bar his discharge; and (3) the offer and its acceptance are in good faith. Upon the confirmation of a composition, the creditors are paid in accordance with its terms and the case is dismissed.

It is made an offense to extort or attempt to extort any money or property from any person as a consideration for acting or forbearing to act in bankruptcy proceedings.

Every composition is in its spirit if not in its terms an agreement between the creditors themselves as well as between them and the debtor, that each shall receive the sum or security which the agreement stipulates to be paid or given and nothing more, and that upon this consideration the debtor shall be discharged. Every agreement made by one creditor for some advantage to himself over other creditors who unite with him in a composition of their debts is fraudulent and void.

The referee on the application for confirmation files a certificate: "That the bankrupt has in all things conformed with the requirements of the act and done nothing prohibited thereby and that he is entitled to his discharge or confirmation," and also his certificate in addition, "that he does or does not regard the composition for the best interests of the creditors and that the offer and acceptances are in good faith and have not been made or procured by any hidden means."

The act directs that upon the confirmation of the composition the consideration shall be distributed as the judge shall direct. It is the practice to distribute the consideration not merely to the creditors whose debts have been proven but to all persons who appear to be creditors upon the schedules.

CONTROL RETAINED BY COURT.—The court retains control of the bankrupt's estate until the consideration under the composition has been distributed. Section 12 E of the statute reads: "Upon the confirmation of a composition the consideration shall be distributed as the judge shall direct, and the case dismissed." From these words, it is evident that the hand of the court is not removed until the terms of the composition have been fully carried out.

When creditors have once accepted a composition which is confirmed, they cannot thereafter withdraw their acceptance, except on the ground of fraud. At any time within 6 months after a composition has been confirmed, the court may set aside the composition on application of parties interested upon proof of fraud in procuring the composition. When a composition is set aside or is not confirmed the bankrupt's estate is administered in bankruptcy in accordance with the provisions of the statute.

DISCHARGE OF BANKRUPT.—The **bankrupt's right of discharge** is statutory. It may be denied, however, if, for instance, he has failed to keep proper books from which his condition might be ascertained, or has destroyed or concealed his books. It must appear that there has been an **intent to conceal** from creditors the true financial condition. Mere failure to keep books, or bad bookkeeping, might not be sufficient to establish such an intent. Mutilation or destruction of essential records, such as receipts and vouchers, probably would be sufficient.

The court may also **revoke a discharge** if the bankrupt has:

1. Committed an offense punishable by imprisonment.
2. Destroyed, concealed, or failed to keep books of account or records, with intent to conceal his financial condition.
3. Obtained property on credit from any person upon a materially false statement in writing made to such person for the specific purpose of obtaining such property on credit.
4. At any time, subsequent to the first day of the first 4 months immediately preceding the filing of the petition, transferred, removed, destroyed, or concealed any of his property with intent to hinder, delay, or defraud his creditors.
5. In voluntary proceedings been granted a discharge in bankruptcy within 6 years.
6. In the course of proceedings in bankruptcy refused to obey any lawful order of or to answer any material question approved by the court.

A petition and an order for the discharge of a bankrupt are substantially as shown in Figs. 23 and 24.

....*K. G. Namer*...., of ....*Bontown*...., in the County of ....*Independence*.... and State of ....*New York*...., in said district, respectfully represents that on the ....*first*.... day of ....*February, 19—*.... he was duly adjudicated a bankrupt under the acts of Congress relating to bankruptcy; that he has duly surrendered all his property and rights of property and has now fully complied with all the requirements of said acts and of the orders of the court touching his bankruptcy.

WHEREFORE, ...*he*.... prays that ....*he*.... may be decreed by the court to have a full discharge from all debts provable against his estate under said bankrupt acts, except such debts as are excepted by law from such discharge.

Dated this ....*25th*.... day of ....*February*.... A. D. ....*19—*....

....*K. G. Namer*....

Bankrupt

FIG. 23. Petition for Discharge of Bankrupt

IN THE DISTRICT COURT OF THE UNITED STATES, for the ....*Western*.... District of ....*New York*....

WHEREAS, ...*K. G. Namer*...., of ....*Bontown*...., in said district, has been duly adjudged a bankrupt, under the acts of Congress relating to bankruptcy, and appears to have conformed to all the requirements of law in that behalf, it is therefore ordered by this court that said ....*K. G. Namer*.... be discharged from all debts and claims which are made provable by said acts against ....*his*.... estate, and which existed on the ....*tenth* .... day of ....*December*.... A. D. ....*19—*.... on which day the petition for adjudication was filed by ....*him*....; excepting such debts as are by law excepted from the operation of a discharge in bankruptcy.

WITNESS THE HONORABLE ....*Thomas Maillam*...., Judge of said District Court and the seal thereof, this ....*25th*.... day of ....*February*.... A. D. ....*19—*....

.....

(Seal of the Court) Clerk

FIG. 24. Order for Discharge of Bankrupt

ACCOUNTING.—The bankrupt does not have to keep any special books. After preparing the schedule to be filed with the court, his only functions of an accounting nature are, perhaps, to furnish the court with the information that may be requested.

EXPENSES OF ADMINSTRATION.—The **expenses of administration** of a bankrupt's estate are paid out of the assets of the estate and constitute a preferred claim. Actual and necessary expenses are allowed by the court to whom they must be reported in detail and under oath.

FEES AND COMPENSATION OF OFFICERS.—**Referees** receive as compensation the following:

$15 deposited with the clerk when petition is filed.
25 cents for each proof of claim filed, which is paid from the assets of the estate.
1% of all money paid to creditors.
½ of 1% of all money paid to creditors in case of a composition settlement.

Trustees receive $5 deposited with the clerk when the petition is filed and the following fees:

Not to exceed 6%	on the first $500	paid to creditors including lien holders.
" " " 4%	from $500 to $1,500	" " " " " "
" " " 2%	from $1,500 to $10,000	" " " " " "
" " " 1%	on excess of $10,000	" " " " " "

Or in event of a composition settlement, ½ of 1% on amounts paid to creditors.

Receivers or marshals when acting as mere custodians and not carrying on business:

Not to exceed 2% on the first $1,000 or less paid to creditors.
" " " ½ of 1% on excess of $1,000 " " "

Clerks receive $10 filing fee.

Offenses and Penalties in Bankruptcy

PUNISHABLE OFFENSES.—A person may be punished by imprisonment, for a period not exceeding 2 years, upon conviction of having knowingly and fraudulently committed one or more of the following offenses:

1. Concealed from his trustee, while a bankrupt or after his discharge, any property belonging to his estate in bankruptcy.
2. Made a false oath or account in relation to any proceeding in bankruptcy.
3. Presented under oath a false claim or proof against the estate of a bankrupt, or used any such claim in composition personally or by agent, proxy or attorney or as an agent, proxy or attorney.
4. Received from a bankrupt, after a petition was filed, any material amount of property with the intent to defeat the Bankruptcy Act.
5. Extorted or attempted to extort money or property from any person as consideration for acting or forbearing to act in bankruptcy proceedings.

Any person may be fined and imprisoned for **secreting or destroying any documents or records** involved in a bankruptcy proceeding. Prosecution for such offense must be made on indictment which must be brought within one year after the offense was committed.

The Trustee.—A trustee may be removed and punished by imprisonment for a period not exceeding 5 years for having knowingly and fraudulently appropriated to his own use, embezzled, spent or transferred any property belonging to

a bankrupt estate which came into his charge as trustee, or secreted or destroyed any document belong to such bankrupt estate.

The Referee.—A referee may be punished by forfeiture of office and a fine not exceeding $500 upon conviction of having committed one of the following offenses:

1. Acted in a case in which he is personally, directly or indirectly, interested.
2. Refused to permit a reasonable and lawful inspection of the accounts and records of the bankrupt estate.
3. Pledged, directly or indirectly, property of a bankrupt estate in which he is referee.

The Bankrupt.—An involuntary bankrupt is subject to punishment for contempt of court for a failure to file his schedules within 10 days, as required by the Bankruptcy Act and by the order of adjudication. (*In re Schulman*, 164 Fed. 440.)

Reorganizations

DEFINITION OF REORGANIZATION.—The Revenue Act of 1924 defines the term **reorganization** as follows:

1. A **merger or consolidation,** including the acquisition by one corporation of at least a majority of the voting stock and at least a majority of the total number of shares of all other classes of stock of another corporation, or substantially all the properties of another corporation.
2. A **transfer by a corporation** of all or a part of its assets to another corporation, if immediately after the transfer the transferor or its stockholders, both, are in control of the corporation to which the assets are transferred.
3. A **recapitalization.**
4. A **mere change in identity, form, or place of organization,** however effected.

REORGANIZATIONS AFTER FINANCIAL DIFFICULTIES.—Stockholders and creditors generally fare better under some form of reorganization in which they still **retain an equity** in their original investment, or in which their claims are recognized, even though reduced, than by sacrificing the assets of their corporations at forced sale.

Railroads and public utility corporations often have valuable franchises which must be operated to be retained and which may be lost by non-use while industrial corporations frequently have good will of considerable value. The plants and equipment of such companies may be of great value when used for the purposes for which they were designed, but at forced sale would probably realize but little for any other purpose. In addition, such corporations may have operating organizations which have taken years to develop. All of these may be conserved by reorganization.

UNDERLYING CAUSES OF FINANCIAL EMBARRASSMENT.—The favorite excuse of corporate officials for financial embarrassment or insolvency of their corporation is lack of working capital. This superficial and general statement is of little value as a basis to undertake a reorganization, as it is not specific enough. Generally, financial difficulties are due to a combination of causes, some of which are, unprofitable expansion, sudden cessation of sales, destructive competition and the payment of capital charges in excess of earnings. Detailed investigation is necessary to determine how much each cause contributed to the difficulty. The outstanding cause is **poor management.**

This is readily proven by consideration of the vast number of enterprises which have been built up from small beginnings, financed exclusively by undrawn earnings, and which have been in constant competition with older and richer concerns. Capital in itself is almost a minor factor in business success. Management in itself is a factor which outweighs all other factors combined.

CONFLICT OF INTERESTS IN REORGANIZATIONS.—In most financial reorganizations the interests of creditors and stockholders are in conflict in that one or the other, or both, usually must sacrifice part of their claims or equities to consummate the reorganizations.

These **interests** may be grouped as follows:

1. Creditors, including bondholders.
2. Stockholders.
3. Bankers who propose to underwrite the reorganization plan.

In complicated reorganizations these groups will be subdivided into as many classes of creditors and stockholders as the circumstances and financial structure of the concerns may demand.

Creditors.—The creditors may be broadly classified as current creditors and bondholders. Among the **current creditors** there may be some who are preferred and must be paid in full. Federal and state taxes as well as wages of employees are among these. Practically all reorganizations must provide sufficient cash to liquidate such claims. The larger ordinary commercial creditors may be induced to compromise their claims by taking part payment in cash, long-term notes and securities of the reorganized corporation.

Bondholders.—There may be a number of bond issues which have **claims in conflict** with one another. The underlying issues which are well protected are in better position to enforce their rights than the junior issues, which may be called on to make greater relative sacrifices of their interests to effect the reorganizations. In many railroad reorganizations prior lien bond issues are not disturbed and are not even represented.

Stockholders.—The interests of **preferred and common stockholders** are governed by the nature of their securities. If the preferred stock is preferred as to assets in dissolution, the holders are ahead of the common stock issues in reorganizations and will be called on to sacrifice less on their stock than the common stockholders. If a reorganization involves **assessment on the stockholders,** the assessment on such preferred stockholders is generally less than on the common stockholders.

Bankers.—There may be one or more banking houses who are seeking to handle a reorganization. Such banking houses are likely to be in touch with the different classes of bondholders and advise them. This is particularly the case where a banking house brings out a bond issue of a corporation which subsequently defaults, and represents the bondholders in the reorganization, in order to protect them as far as possible.

BANKERS SHOULD BE CONSULTED.—The active assistance of good banking houses is essential to a successful reorganization for several reasons.

1. They generally are called upon to furnish temporary loans.
2. They are often expected to underwrite the reorganization.
3. They have experience in reorganizations.
4. As outsiders they are in a better position to view the situation impartially than those who have conflicting interests.

COMPROMISE OF CONFLICTING INTERESTS.—In most reorganizations there is a complex **struggle between the various groups** or interests. During the period of negotiations there may be arrangement between certain groups and differences between others. To consummate the plan of reorganization it is necessary to carry on negotiations between these interests and compromise here and there. As reorganizations are the result of agreement, it is necessary to obtain the assent of a large proportion of the holders of each class of securities. Provision must sometimes be made to pay creditors who do not agree to the reorganization. If their number and the total amount of their claims is large, it may prevent the reorganizers from carrying out their plans, in which case it may be necessary to liquidate.

BUYING IN PROPERTY AT FORCED SALE.—When a reorganization cannot be accomplished by agreement, some of the larger security holders may raise enough money to buy in the assets at foreclosure sale and organize a new company. This new company has no legal relation with the old one and although often referred to loosely as a reorganization, is strictly a dissolution of the old company and the creation of a new one. Such a procedure is sometimes resorted to fraudulently for the purpose of forcing out minority stockholders.

TYPES OF REORGANIZATIONS.—Reorganizations are divided into **three classes:**

1. Reorganizations **caused by insolvency,** generally induced by the enforcement of the rights of creditors through the foreclosure of mortgages. Such reorganizations involve the formation of new corporations to acquire the property of the insolvent companies.

2. Reorganizations of capitalization **because of financial difficulties,** which, however, do not involve the formation of new corporations.

3. The reconstruction of the capitalization of corporations **for some other reason** than that of insolvency, or to correct defects of financial structure. Generally such recapitalizations are necessary for internal reasons.

Reorganizations may also be classified as **voluntary or negotiated reorganizations,** which are undertaken without the intervention of court procedure, and **litigated reorganizations,** which are undertaken through the intervention of the courts. Voluntary reorganizations may often be consummated without loss or sacrifice on the part of the creditors, and frequently require only an adjustment of the stock ownership of the shareholders. Negotiated reorganizations may be undertaken through creditors' committees and may involve some sacrifice of the claims of creditors, or the acceptance of securities of the reorganized company in payment of a part of their claims. Litigated reorganizations may be brought about through receiverships in equity or by bankruptcy proceedings.

Reorganizations by agreement are of two kinds. The first requires the readjustment of the rights of stockholders with the co-operation of bondholders and other creditors, without the necessity of disturbing the legal existence of the concerns. Reorganization of this kind saves the cost of receiverships. However, security holders can only be persuaded to sacrifice a part of their interest where they can be shown that the sacrifice is necessary and if it is not made voluntarily by them, their companies will be forced into insolvency, resulting in a greater loss to them.

Where the bonded indebtedness is large and the interest charges too great to be carried by a company, the bondholders may be induced to forego their claim for definite interest for a contingent income from income bonds or

dividends from stock. This was done in 1912 by the Hudson & Manhattan Railway Co., which did not earn enough to pay its interest charges on $67,000,000 mortgage bonds. The bondholders were induced to accept in place of one-half of their holdings an equal amount of income bonds, the interest on which, for a number of years, was non-cumulative.

The second method of reorganization by agreement involves the **voluntary sale of all the property** of the old corporation to a new one in return for its stocks and bonds.

LITIGATED REORGANIZATION.—Where a corporation is insolvent and its property sold by legal process to pay off its bondholders and creditors, the **corporate entity** does not pass to the purchaser, although such purchaser may be a committee representing certain of the bondholders, creditors or stockholders of the corporation. The old company may continue its legal existence or may be dissolved by appropriate formalities prescribed by the statutes of the state where the company was incorporated. The purchaser of the plant or business may operate the property free from all claims or liabilities of the old company. The properties so purchased become a part of the assets of the new company formed to operate them.

PROTECTIVE COMMITTEES.—As soon as a corporation is considered to be in financial difficulties the various creditors, bondholders and stockholders appoint committees to represent their interests. One committee may represent the bondholders, another the preferred stock, another the common stock, and another the general creditors. Sometimes in the larger railroad companies there are various committees representing each of the different bond and stock issues.

Such committees are usually **self-appointed** and really consist of groups of individuals who have determined among themselves that it is necessary for them to obtain co-operation from other creditors, bondholders or stockholders in the same position, to join with them to protect their interests.

The members of such committees should be carefully chosen. Unless they are in good standing, or are associated with firms or banking houses in good standing, the security holders may be skeptical as to permitting them to represent their interests.

DEPOSIT AGREEMENTS.—A part of the function of reorganization managers is to have the deposit agreements drawn up by their attorneys. While security holders are not always required to sign such agreements, the procedure is usually arranged so that they **automatically become parties** to the reorganization agreements upon depositing their holdings and accepting the certificates of deposit issued by the depository. The **certificates of deposit** represent the securities deposited, and where the securities are listed on the stock exchanges, these certificates are also generally admitted to trading on those exchanges.

In the preparation of deposit agreements great care is required in order to give the committees sufficient power to cover every emergency which they are likely to meet. As there are as many parties to such agreements as there are security holders, there is little or no opportunity to correct mistakes after the agreements are once formulated and accepted.

Most bond issues are governed by a clause in the mortgage or indenture, providing that in case of default a certain proportion may combine in order to act in any proceeding. The committee managers generally try to get control of enough bonds deposited under the terms of the depository agreement in order to have their plans adopted and prevent action by a rival committee.

PROVISIONS IN AGREEMENTS.—The agreements creating protective committees should provide:

1. That such committees shall have power to add to their members, to accept resignations and fill vacancies.
2. Committees should be authorized to act and bind all by a majority vote.
3. Members should be eligible to vote by proxy and provision should be made to protect the committees and depositories against mistakes and errors made in good faith.
4. Committees should be authorized to employ accountants, engineers, attorneys and other experts, and arrange for their compensation and such other expenses as are necessary, and pledge the depositors' securities as collateral for their payment.
5. Provision should be made for the payment of the committees' compensation and expenses which shall be binding upon the depositors. Generally the agreements set forth maximum limits of the committees' compensation and expenses, and in many cases, the members agree to serve without compensation.
6. The agreements usually give the committees power to adopt a plan of reorganization of their own or one prepared by someone else. However, it is a common provision to require that any plan or agreement of reorganization shall be left with the depository subject to examination by all the depositors and that notice of the filing of the plan should be published at stated intervals. In such cases, depositors may withdraw their securities within a given time, if the reorganization plan is unsatisfactory to them, upon payment of their pro rata share of the expenses to date.
7. It is rarely wise to have the same committee represent different interests, because when such questions arise in reorganizations as to the equitable adjustment of differences in various classes of securities, a committee representing conflicting interests cannot properly represent these different interests.

REORGANIZATION COMMITTEES.—After the several protective committees have been formed they generally enter into negotiations with one another and the receiver, if one has been appointed, with a view to arranging the best possible terms for the interests they represent. To bring about a general agreement of the conflicting interests of the various committees requires an extended series of conferences, negotiations and compromises. Unless there is some influential person or banker, or sometimes the receiver, who can assume the task of reconciling the various interests and bring them together to accept a workable plan of reorganization, recourse must be had to some other method. Generally this is accomplished by selecting one, two, or three members from each protective committee to serve on the **reorganization committee.**

The **functions** of reorganization committees are threefold:

1. Investigation to determine the cause of the financial difficulty.
2. Formulation of a plan to overcome the difficulty.
3. Reconciliation of the various interests so that a workable plan can be accepted and carried into execution.

Membership on the reorganization committee of a large concern calls for considerable ability in corporate finance. The detailed work is usually carried out by a secretary or by counsel.

PROVIDING CASH DURING REORGANIZATION.—Frequently committees on reorganization require considerable sums of money while plans are being formulated. This money may be provided in several ways. It is usually furnished by **assessment** upon the holders of securities. The assessment is levied on the stockholders and sometimes bondholders who are interested in

saving their equity in their securities so that they may participate in the reorganization. Usually it is customary to arrange in advance with a firm of bankers to **underwrite the cash requirements.** This is generally coupled with an agreement which provides that they will purchase such securities, offered to the old security holders, as are not taken by them. An announcement of such an agreement seems to have the effect of practically insuring participation of the greater part of the security holders. The underwriters charge a commission for undertaking this obligation which is virtually equivalent to payment of premiums for insurance. If all the security holders pay their assessments, no advances may be required from the underwriters. On the other hand, if only part of the security holders pay their assessments, the underwriters furnish the remainder of the cash and purchase the securities which would have gone to the assessed security holders had they assented to the plan. Committees frequently borrow money to pay maturing coupons on bonded debt. This is only done when the value of the pledged property is believed to be in excess of the bonded debt.

CONFIRMATION OF PLANS OF REORGANIZATION.—The action of a reorganization committee in **declaring the plan operative** does not necessarily mean that the plan has been executed. It simply means that the depositors are bound to the plan and that the committee has determined to make every effort to carry it into execution. Even after the plan is operative it may be modified or abandoned. It may take from one to three years to carry through a complete reorganization.

TYPICAL PLANS AND AGREEMENTS OF REORGANIZATION.—A Plan and Agreement of Reorganization consists of **two parts**—the plan and the agreement. On the first page of the **Plan** there are as a rule the names of the members of the joint reorganization committee and the secretaries of the various committees which have joined to form the reorganization committee. On the second page there is an introductory statement beginning with a presentation of the causes which led to the insolvency, the investigations made by the committee and a summary of the results that have been arrived at. Next follows the plan itself. There appears first a statement of the present outstanding securities. That is followed by a statement of the cash requirements and a description of the securities and a statement of the proposed distribution of the new securities among the old security holders. Generally a table is provided which shows at a glance how each class of security holders will fare. Then follows a statement of the terms and conditions of the cash payment to be made by assessment of the security holders. Then is shown the reduction of capitalization and the reduction of fixed charges to be accomplished by the new organization and what provision is made for the unsecured creditors.

As distinguished from the Plan, which contains the financial details of the reorganization and such information regarding the means for executing it as should be communicated to the security holders, the **Agreement** is a fuller statement of the powers of the reorganization committee, the rights of the participants in the Plan and the machinery for carrying the Plan into execution.

OPPOSITION COMMITTEES.—The various protective committees may continue to negotiate with one another but they generally follow the lead and advice of their representatives on the reorganization committee. Sometimes certain large security holders who are not represented on the reorganization committee may undertake to form an opposition committee. If this committee is successful in obtaining a sufficient number of proxies from other security holders, there may be a merger of the two committees as it is essential for the

success of every reorganization that there be agreement among the various groups of security holders.

An effort to secure an inordinately high price for the property is one of the favorite devices of those who seek to interfere with reorganizations. Opposition to reorganizations may come from security holders who are sincerely opposed to the plans from honorable motives, but very often such action is taken by some who institute litigation at a critical moment in the hope of creating a nuisance and thereby induce the reorganization managers to give them unusual advantages over the ordinary creditors. In other words, they hold up the proceedings for a price.

PROCEDURE IN REORGANIZATIONS.—The procedure in reorganizations may be divided into five phases which are here presented consecutively, but in operation may be concurrent or at least overlapping. These phases have numerous subdivisions in accordance with the nature of each problem, some of the more prominent ones being given herein. These phases are:

1. Examinations
2. Agreements of committees
3. Operation of companies during reorganization
4. Satisfying creditors
5. Making plans effective

EXAMINATIONS.—The first step in reorganizations to be taken by committees appointed for that purpose is to have thorough examinations made of the concerns. Such examinations should cover the following lines: **accounting; engineering or operating; legal and business or economic.**

Accounting.—Thorough examinations and analyses should be made of the accounts of the concerns to be reorganized to determine **their assets and liabilities and earning capacity.** Such examinations will also aid in ascertaining the cause of difficulties. To accept financial statements issued by the old management would be extremely unsafe. Furthermore, it would be practically impossible to work out practical and effective plans of reorganization until correct statements of assets, liabilities, proprietory interest, earnings and expenses are obtained.

Engineering or Operating.—Sometimes it is necessary to have engineers make examinations to ascertain the **status of the property,** what may be required and what it would cost to provide adequate facilities suitable for the operation of the reorganized company.

Legal.—The legal aspects of these investigations are important, in ascertaining the **rights of the parties,** such as the different classes of creditors, bondholders, and stockholders and in laying the foundation for future negotiation for the purpose of providing the proper procedure to establish the reorganized company.

PUBLIC ANNOUNCEMENT OF EXAMINATIONS IN VIEW OF REORGANIZATION.—It is generally necessary to make a public announcement to get the interest of all the bondholders and different classes of stockholders in order to secure deposits of their holdings.

AGREEMENT OF COMMITTEES.—A second step in reorganizations consists of working out **tentative agreements** between the various committees representing the different interests. These negotiations are carried on while the examinations are under way, but final agreements cannot be made, however, until all the examinations are completed.

OPERATION OF THE COMPANY.—The third phase is the operation of the company during the period of reorganization. The reorganization manager

or the receiver, if one is appointed, must make arrangements for conducting the business with all possible economy. The internal operating organization may be reorganized with a view to obtaining greater economy and efficiency. Those branches or products which are not essential or are unprofitable may be disposed of or discontinued.

ASSESSMENT ON STOCK.—Frequently stockholders are required to pay assessments to provide needed cash. Usually this is the only means committees have of raising additional cash. The stockholders in order to preserve what equities they still have, often respond and pay such assessments. Legally speaking, their equity may be wiped out, but they generally seize the opportunity to take stock in the new company for their assessment in the hope of eventually recovering a part of their loss.

Preferred stockholders can sometimes be induced to surrender their preference by any one of several different methods. For instance, common stock may be given them for their accumulated dividends which have not been paid, and they may also accept new preferred stock without the cumulative feature in the reorganized company. In some cases they may be induced to part with their rights of preference by receiving new common stock, share for share, in exchange for their preferred. In such a case, the old common stock would either accept a much smaller proportion of new common, or else, as described in the preceding paragraph, would be wiped out entirely, except upon the payment of an assessment.

MAKING REORGANIZATION PLANS EFFECTIVE.—The **final step in a reorganization** is to put the plan into operation. This is essentially a legal phase. After the reorganization committee has formulated plans acceptable to the various committees of security holders or to the courts, if the company is in the hands of a receiver, it becomes necessary to arrange for the exchange of old securities for new ones, levy and collect assessments and complete whatever details the revised plans call for. Where there is a unanimous acceptance by the security holders no difficulty is involved. When it is impossible to effect reorganizations in the manner described, it may be necessary for those security holders who agree to form a new company and bring about a judicial sale of the property of the old corporation and to arrange for the purchase of such property by a new company to be organized by the assenting security holders.

In those cases where the reorganization can be made effective only through **judicial sale,** the reorganization committee representing the assenting security holders may use securities evidencing debt, which have been deposited with it, in payment of the property. After acquiring the property the new company will issue its securities to the former security holders of the old company in accordance with the terms agreed upon.

REORGANIZATION THROUGH FORECLOSURE.—In most of the reorganizations of companies owning considerable real property where there are conflicting interests on the part of stockholders and various classes of bondholders, it is usually necessary to resort to foreclosure under one or more issues of mortgage bonds in order to force through the plan of reorganization. The **procedure** may be briefly summarized as follows:

The protective committees appointed by bondholders select their representatives to serve on the committee on reorganization, which formulates its plan of reorganization for submittal to the various interests. Meanwhile, the proceedings in foreclosure are under way. The property is sold, bought in by representatives of the committee on reorganization and stocks and bonds distributed in accordance with the prearranged plan.

After the plan of reorganization has been approved by the bondholders and the court has entered the decree of foreclosure, the property is sold at public sale. The following is a part of the **notice of sale** of the National Conduit & Cable Co., Inc:

NATIONAL CONDUIT & CABLE COMPANY, INC.
NOTICE OF SALE

NOTICE IS HEREBY GIVEN, pursuant to an Amended Foreclosure Decree, made August 15, 1923.... that I, ROBERT H. GAY, appointed Special Master in and by the aforesaid Decree, will sell at public auction to the highest bidder or bidders, upon the premises at the main office building of the defendant, National Conduit & Cable Company, Inc., opposite the passenger station of the New York Central Railroad Company, in the Village of Hastings-on-Hudson, County of Westchester and State of New York, at 1.30 o'clock P. M., United States Eastern Standard Time, on the 14th day of September, 1923, the properties in said Decree described and thereby ordered to be sold, to wit:

I. All properties of every kind, character and description covered by the lien of the First Mortgage of the defendant, dated April 1, 1917; and

II. All other properties of every kind, character and description of the defendant and of its Receiver.

A brief general description of the properties to be sold at said sale is as follows:

I. Properties subject to lien of First Mortgage:

All those certain lots, pieces or parcels of land and land under water of the Hudson River, with the buildings and improvements thereon erected, situate, lying and being in the Village of Hastings, Town of Greenburgh, County of Westchester and State of New York, bounded and described as follows:

(*Here follow descriptions of the properties*)

Said sale will be made in the manner provided by said Decree and subject to the terms and provisions thereof, and all bids for any property offered will be received and noted only on condition that said property may subsequently be offered, knocked down and sold, as in said Decree provided.

There will first be offered for sale separately and as one parcel, all of the properties embraced within Parcel Three. There will next be offered for sale separately and as one parcel, all of the properties embraced within Parcel One, including the so-called "North Plant." There will next be offered for sale, separately and as one parcel, all of the properties embraced within Parcel Two, being the so-called "South Plant." There will next be offered for sale separately and as one parcel, all of the properties embraced within Parcel One and Parcel Two. There will finally be offered for sale as an entirety, all of the properties of the Company embraced within Parcels One, Two and Three. If the highest bid received and noted for said properties, when so offered for sale as an entirety, shall equal or exceed the aggregate of the highest bids therefor when offered for sale in parcels, then all of said properties shall be stricken off and sold as an entirety to the highest bidder therefor. If, however, the highest bid received and noted for said properties as an entirety shall be less than the aggregate of the highest bids therefor when offered in parcels, then the parcels offered for sale shall be stricken off and sold to the highest bidders for said respective parcels.

Article Tenth of said Decree provides that the Receiver shall, not less than ten days prior to the date fixed for the sale, file with the Clerk of said Court, an advisory statement or statements showing as definitely as practicable, as of the last day of the preceding month, all indebtedness, obligations, liabilities, contracts, leases, agreements, claims and demands, and reference is hereby made to said statement or statements.

As more fully provided by said Decree:

I. Said sale will be made without valuation, appraisement, redemption or extension.

II. In case of adjournment or postponement of the sale, the Special Master, without further notice or advertisement, may proceed with the sale on any day to which the same may have been adjourned.

III. The Trustee or any holder of the bonds or any creditor or any stockholder of the Company or any party to this Consolidated Cause or to any constituent cause may bid at the sale, and if a successful bidder, may purchase in his, its or their right.

Upset Prices

IV. The Special Master will not accept any bid:

For Parcel One, less than $300,000.00.

For Parcel Two, less than $600,000.00.

For all properties covered by the Lien of the First Mortgage being Parcels One and Two together, less than $900,000.00.

For Parcel Three, less than $2,100,000.00.

For all properties as an entirety, being Parcels One, Two and Three together, less than $3,000,000.00.

V. The Special Master will receive no bid from anyone offering to bid who shall not, prior to any offering by the Special Master under said Decree, deposit with the Special Master and deliver to him as a pledge that he will make good his bid in the event of its acceptance, in cash or certified check of some National Bank or Trust Company in the City of New York, acceptable to the Special Master, and made and endorsed to his order, or in the First Mortgage Six Per Cent Ten Year Sinking Fund Gold Bonds (hereafter called "bonds") of the defendant (such bonds to be in bearer form, and, if coupon bonds, accompanied by the coupon of October 1, 1921, and all subsequent coupons) or in respect of Parcel Three in claims against the said defendant which have been heretofore presented to and filed with the Receiver in this Consolidated Cause or in the constituent causes or either of them, and admitted or allowed by the Receiver accompanied by proper and appropriate assignments thereof to the Special Master; in respect of Parcels One and Two, partly in cash and/or certified check, and/or partly in such bonds but in the same relative proportions; and in respect of Parcel Three partly in cash, and/or certified check and/or partly in bonds and/or partly in such claims accompanied by such assignments, but in the same relative proportions.

1. In case of Parcel One, when offered separately, the sum of $30,000 in cash or such certified check, or $60,000 face amount of such bonds;
2. In case of Parcel Two, when offered separately, the sum of $60,000 in cash or such certified check, or $120,000 face amount of such bonds;
3. In case of Parcels One and Two, when offered together, the sum of $90,000 in cash or such certified check, or $180,000 face amount of such bonds;
4. In case of Parcel Three, when offered separately, the sum of $210,000 in cash or such certified check, or $420,000 face amount of such bonds or an equivalent face amount of such claims accompanied by such assignments;
5. In case of Parcels One, Two and Three, when offered together, $300,000 in cash or such certified check, or $600,000 face amount of such bonds or an amount in cash and/or such certified check and/or such bonds at least sufficient to qualify the bidder to bid for Parcels One and Two, and the balance in the requisite face amount of such claims.

A deposit made by any bidder for a separate parcel may, so far as applicable, be applied on account of the required deposit, in order to qualify him to bid for the same property when offered for sale with any property when offered as an entirety.

Any deposit received from an unsuccessful bidder will be returned to him when the property shall be struck down. The deposit received from the successful bidder or bidders will be applied on account of the purchase price of the property purchased by such bidder or bidders.

If any sale shall not be confirmed, the deposit made by the accepted bidder at such sale will be forthwith returned to such bidder.

The deposit made by any successful bidder shall, in accordance with the provisions of said Decree, be forfeited in the event of his failure to comply with any order of the court within ten days after the entry thereof, requiring payment of or on account of the balance of the purchase price.

The purchaser (which term includes purchasers and includes also the successors and assigns of any purchaser) to the extent permitted by said Decree and otherwise in accordance with the provisions thereof, may turn over to the Special Master on account of the purchase price. at their distributive value, bonds, coupons and claims entitled to be paid out of the proceeds of sale.

In lieu of bonds, coupons or claims tendered for deposit to qualify a bidder or tendered by a purchaser on account of the purchase price, the Special Master will accept the certifi-

cate of any national bank or trust company in the City of New York, N. Y., acceptable to the Special Master, that it holds, subject to the order of the Special Master, bonds or notes of the required character in bearer form and, if in coupon form, accompanied by the specified coupons.

The term, "in bearer form," as used herein with reference to securities includes both securities expressed to be payable to bearer and securities accompanied by an assignment in blank duly executed.

VI. Any successful bidder may assign, transfer and set over his bid, in whole or in part, and all or any part of his rights and interests under the said Decree.

Any purchaser, his successors and assigns, may enter his appearance in this consolidated cause and in the constituent causes, and exercise the rights thereafter conferred by said Decree. Any purchaser, his successors or assigns, shall have the right for a period of two months after conveyance of the property purchased by him, to elect whether or not to assume or adopt any lease or contract made by the Company, as part of the property embraced in said conveyance; and may elect not to take or accept any part of the property purchased by giving written notice of his election to the Special Master at any time prior to the execution and delivery of the deed or other instruments of conveyance from the Special Master, but no such election shall diminish or affect the purchase price, to be paid by such purchaser.

Neither any purchaser nor the successors or assigns of any purchaser shall be required to see to the application of any purchase money.

VII. The purchaser or purchasers of Parcel One, Parcel Two or Parcel Three, their successor or successors and assigns, as part of the purchase price, and in addition to the accepted bid of such purchaser, shall pay, satisfy, assume and discharge:

(A) Any unpaid compensation which has been or shall be allowed to the Special Master heretofore appointed in said Consolidated Cause, and any unpaid compensation that has been or shall be allowed to the Receiver in said Cause or in either of the constituent causes and his solicitors, and also any unpaid indebtedness and liabilities and all contracts and guarantees of the Receiver made or incurred in said Cause, or in either of the constituent causes, and any other administrative expenses incurred or to be incurred in the management or operation of the properties purchased and otherwise in the discharge of his duties as such Receiver between July 15, 1921, the date of his appointment, and the date of the delivery by the Receiver of possession of the properties sold;

(B) Any unpaid claims of creditors of the Company which have been or shall be admitted by the parties in interest or adjudged by said Court to be prior in lien or superior in equity to the mortgage.

(C) All just and legal indebtedness of the Company payment of which was authorized by the order of said Court appointing the Receiver in said Cause or in either constituent cause, and which shall not at the time of delivery by the Receiver of possession of the property sold have been paid or satisfied, to the extent that they have not been paid or shall not have been paid out of moneys in the possession of the Receiver.

VIII. For a more particular description of the property to be sold and of the terms of sale, and for the provisions of said Decree, and other information, intending purchasers are hereby referred to the said Decree and to the record in said Consolidated Cause and in the constituent causes on file in the office of the Clerk of said Court, and to the statement or statements of the Receiver to be filed with the Clerk of said Court as directed by said Decree.

Dated August 17, 1923.

ROBERT H. GAY,
Special Master

FIXING THE UPSET PRICE.—A very important problem in connection with the foreclosure sale is fixing the **upset (minimum) price.** This should be sufficiently high so as not to be unfair to the non-assenting bondholders, but should be sufficiently low so that the distributive share of the proceeds of sale payable to the non-assenting bondholders is not so large as to impose a serious burden upon the reorganizers or to discourage bondholders from participating in the plan of reorganization. Sometimes reorganizations have been held up for years because the courts, either at their own motion or at the instance of

non-assenting bondholders, stockholders, or creditors, have fixed the upset price so high that the reorganizers were unable or unwilling to provide the cash necessary to go on with the reorganization.

BUYING IN THE PROPERTY.—Part of the plan of reorganization provides for acquiring the property of the insolvent corporation. The committee on reorganization generally appoints a sub-committee designated as the **purchasing committee** to purchase the property at the foreclosure sale. This subcommittee must have definite instructions as to how high it shall bid in case there are competitive bidders. As a rule the purchasing committee can pay the major part of the purchase price by surrendering the bonds which have been placed with the protective committee while rival bidders, unless they represent a rival bondholders' committee, must pay in cash. As a protection against bogus or hold-up bids, the decree of foreclosure sale requires that a substantial deposit be made to qualify in the bidding.

The foreclosure sale should be conducted fairly and openly and in strict compliance with the decree and published terms of the sale, so that there is no basis for a successful attack upon the sale, particularly if there are a substantial number of non-assenting security holders.

As stated in the previous paragraph, when the property is sold under foreclosure, the reorganization committee may **use the bonds deposited with it in part payment of the purchase price.** The value at which each bond is accepted in this payment is par plus unpaid coupons if the price is equal to or more than the amount of the indebtedness. Otherwise that value is only that proportion of par and unpaid coupons which the committee's holdings is of the total bond issue. If the reorganization committee controls a large part of the outstanding bond issue, it is in a better position than any other purchaser, who would have to pay entirely or mostly in cash. Thus, if the committee controls $4,000,000 bonds out of a total issue of $5,000,000, and the purchase price is $4,500,000, it need only raise $900,000 in cash, as its bonds will be accepted at a valuation of $3,600,000, or 80% of the purchase price, since that is the proportion of the bond issue it holds. (This leaves the unpaid interest out of consideration.) On the other hand, a competitor who had no bonds to deliver in payment would have to pay the total price of $4,500,000 in cash.

After the sale, the property should be transferred to the reorganization committee, or to the new corporation, if it is formed. The committee then publishes notices that new securities are ready for distribution and that each depositor will receive his share of new securities upon surrendering to the depository his certificate of deposit.

VOTING TRUSTS.—Very often where corporations are in the process of reorganization, they must continue in operation and in order to be sure that the security holders of the corporation will adhere to the policy contemplated in the reorganization, it is desirable to appoint trustees for stockholders to insure the control of the corporation during that period. Ordinarily the question of electing directors of the company and officers is left to the voting trustees, but questions of a radical nature such as the sale of the property, increase of capital stock and the creation of a mortgage, are generally presented to the holders of the voting trust certificates for their approval or disapproval.

WHAT BECOMES OF NON-ASSENTING STOCKHOLDERS.—The stockholders of a corporation who do not agree to a plan of reorganization and who refuse, or are unable, to pay the assessments, or exchange their stock for the securities of the new corporation, are in the position of holding stock which is frequently of little or no value. A concrete instance of such a case is the fate

of the holders of some 25,000 shares of the Northern Pacific Railroad Co. who refused to exchange their shares for those of the new reorganized company, the Northern Pacific Railway Co. The reorganization was completed without them and these 25,000 shares of the old company became worthless.

COURTS' POWER IN REORGANIZATIONS.—The courts have **no power to force a reorganization plan** upon unwilling minority bondholders. Any attempt to do so would be, and has been, construed as contravening the doctrine of the sanctity of contracts, and as such has been declared in violation of the Federal constitution. Courts not infrequently interfere in reorganizations but only on the ground that some legal right of one class of the participants has been violated. The only way open to the reorganizers, representing the majority bondholders, to get rid of an objecting minority is to pay them off in cash for the amount of their share in the proceeds received in the foreclosure sale, which may be the full amount of indebtedness or only a percentage of it, depending upon the amount brought by the sale.

This, however, is only true of the holders of bonds secured by the mortgage being foreclosed. Junior bondholders, unsecured creditors, and stockholders are all at the mercy of the reorganizers, as the courts will not interfere with the mortgage bondholders in the full enjoyment of their rights, which frequently result in their getting possession of practically all the property owned by the company. However, the courts have ruled that the reorganizers must deal equitably as between the other classes of security holders. They cannot, for example, admit the stockholders into the reorganization and "freeze out" the unsecured creditors.

PURPOSES OF REORGANIZATION.—The purposes of reorganization are to discover the causes of a company's difficulties and to find and apply the proper remedies, which may be classified as follows:

1. Remove the cause of financial embarrassment.
2. Repair, if possible, the loss caused by the trouble.
3. Satisfy creditors who are in a position to insist upon cash settlements.
4. Provide capable management.
5. Furnish sufficient working capital and such new fixed assets as may be necessary.
6. Reconstruct the financial plan.

REMOVING THE CAUSES OF FINANCIAL DIFFICULTIES.—The primary object of reorganization is to remove the cause of financial difficulties. Unless this is accomplished all plans of reorganization are futile. The railroad history of the United States furnishes numerous instances of reorganizations which have failed to go to the root of their troubles. The Atchison, Topeka & Santa Fe Railroad and the Philadelphia & Reading Railway each went through three reorganizations. In each case the succeeding reorganized companies expanded faster than their capital and returns warranted. This was due primarily to overextension on their available capital. In both instances the earlier reorganizations failed to accomplish their purposes because they did not go to the root of their trouble.

BREACH OF TRUST BY DIRECTORS.—Where the financial difficulties are due to misfeasance or malfeasance on the part of the directors, they should be called to account in legal proceedings for the recovery of money wherever possible. Such situations should be carefully investigated before legal action is taken. In the case of the insolvency of J. B. Greenhut & Co., a large New York department store, a committee of creditors made an investigation and reported as follows:

"As a result of the numerous conferences that have been held, four matters in particular are calling for investigation on the part of the merchandise creditors:

1. The recent deposit of large amounts of cash with banks and trust companies which were heavy creditors of the J. B. Greenhut Company, while merchandise creditors remained unpaid.
2. The heavy salaries paid to corporate officers, including one annual salary of $100,000 and two of $50,000 each.
3. The issue of a very large amount of second mortgage bonds some four years ago for the purchase of real estate from persons connected with the corporation.
4. The marked difference between the most recent financial statements given by the bankrupt to the mercantile agencies and the showing disclosed by the report of the receivers."

REORGANIZATION OF MANAGEMENT.—An investigation will reveal the faults of the old management and whether a new management is required. In too many cases incompetent and extravagant management is retained.

If extensions are necessary, the creditors may want some assurance that a satisfactory management will be chosen and kept in power. If new capital is required, the old stockholders or creditors may be asked to furnish it. They will, however, be reluctant to do this unless they are assured that a capable management is going to conduct the business.

In many reorganizations the larger creditors may insist on having their representatives added to the board of directors, and very often **such creditors dictate the policy** of the reorganized company. Generally the bankers who furnish additional funds for the reorganization insist on having their representative on the board of directors and very often designate who shall be the treasurer, comptroller, or president. As a rule these representatives are helpful in the rehabilitation of the management as well as necessary in the refinancing.

PROVIDING WORKING CAPITAL.—Very often the cause of failure is lack of working capital and some plan must be devised to furnish additional funds. Material and machinery supply men may be induced to give further credit to an insolvent concern when they can be shown that such assistance is indispensable to save the concern from bankruptcy. When such creditors have confidence in the new management they will grant such assistance for two reasons: (1), such further aid may save their whole claim, and (2), the new management may continue as a good customer.

RECONSTRUCTION OF FINANCIAL PLAN.—Where the **capitalization is too large** in proportion to earnings, the company must reduce or recast its capital structure. Several questions naturally arise. How much should the nominal or book capital be reduced and what class of the security holders shall bear the sacrifice in the reduction, and in what amount? When additional funds are required what securities will be given and what interest will they carry? All these things are the subject of negotiation and must be settled before a reorganization can be made effective.

RESULTS OF REORGANIZATIONS.—In a broad sense financial reorganizations are more than **a series of compromises** and forced sacrifices imposed on security holders. When reorganizations are worked out properly they result in providing concerns with new financial bases which replace the old ones that have proved faulty. The readjusted financial structure should enable them to continue business thereafter under more favorable conditions and be in better position to earn profits for their stockholders.

Every reorganization seeks to accomplish one or more of the following results:

1. Raise additional capital for operation of the business.
2. Reduce fixed charges.
3. Simplify the financial structure of the company.
4. Provide facilities for raising capital in the future if needed.
5. Liquidate urgent obligations.
6. Eliminate unprofitable lines.
7. Provide for unpaid dividends accumulated on preferred stock.

ADDITIONAL CASH FOR OPERATION.—Generally the **most urgent problem** in the reorganization of corporations is to obtain additional funds for working capital and to liquidate indebtedness. Three possible ways of accomplishing this are:

1. Selling securities.
2. Assessing stockholders, or both stockholders and bondholders.
3. Liquidation of current indebtedness by issuing bonds or stock in payment.
4. Sale of assets.

If securities of other corporations are owned these may be available for sale; but usually this expedient for raising capital is exhausted before the receivership occurs. Sometimes there are assets sufficiently free from lien to permit the issuance of new securities which are marketed at a heavy discount. The tendency is to treat old security holders harshly in order to provide issues that are attractive to outside investors.

Assessments are levied on common stockholders in nearly every reorganization, the ostensible reward being an interest in the reorganized concern. Occasionally preferred stockholders and junior bondholders are assessed; in short, any security holder not fully protected by marketable assets may be assessed. If he refuses to pay, a new corporation is organized which at judicial sale turns in prior lien securities in payment for property of the corporation, thus automatically wiping out the junior security holder. In return for the assessment the person assessed is usually given new stock of nominal value and possibly something in securities of better grade. In the reorganization of the San Francisco Railway Co. in 1916 an assessment of $50 per $100 par of old first preferred, second preferred, and common was levied. In return stockholders received $50 par of prior lien bonds and a bonus of common stock—the first preferred receiving $100 par of new common, the second preferred $90, the old common $82.

If the assessment is too drastic it may not be profitable for the stockholder to pay; consequently the assessment should be made sufficiently attractive to secure the money asked. It is the experience of most persons paying assessments in railroad reorganizations that the increase in value of their holdings following the reorganizations has fully justified paying the assessment.

Funding floating indebtedness by issuance of long-term securities is practicable only when the company is fundamentally prosperous and is merely suffering from temporary shortage of cash. This plan was pursued in both Westinghouse reorganizations. In the reorganization of the Goodyear Tire & Rubber Co., in 1921, the merchandise creditors received 125% of the amounts due them on January 1 of that year, for merchandise actually delivered, in prior preference 8% cumulative stock; while in the case of commitments for merchandise not delivered prior to January 1, 1921, but for which specifications and prices had been fixed on that date, they received 75% in cash and 28% in preference shares.

REORGANIZATION PLAN.—The following is a typical reorganization plan for raising capital for operation.

NEW YORK, MARCH 28, 1924

To the Stockholders of

PIERCE OIL CORPORATION

Enclosed herewith you will find notice for a Special Meeting of the stockholders of Pierce Oil Corporation to be held on May 7, 1924, and the report of the Company for the year ended December 31, 1923.

The annual reports for the years 1921 and 1922 which have been heretofore sent to the stockholders, and the report enclosed herewith for the year 1923, show plainly the unsatisfactory result of operations during the last three years, together with the principal causes that have contributed to this result, and the critical financial condition of the Company that has existed for some time past.

The total losses for these three years amount to $16,797,453, without giving effect to discount on capital stock, unadjudicated claims and contingent liabilities, which aggregate a further $2,466,024; amounting to a total of $19,263,477. A part of this loss, including, among other things, the judgment in favor of the Receiver of the International & Great Northern Railway Company (amounting with interest to approximately $2,200,000) should properly be regarded, however, as a charge against earnings for the period prior to 1921, rather than as a charge against the earnings for the last three years.

As a result of these losses, and of other large sums expended unproductively, the Company's credit position had been destroyed prior to July, 1923, when the present board of directors and management took charge of its affairs; it was then without working capital to conduct its business; it was unable to meet its most pressing obligations; and it is only by reason of the generous action of certain directors and of others interested in the welfare of the Company, who advanced large sums on the Company's unsecured notes bearing six per cent interest, that receivership has been averted up to the present time.

Since July, 1923, the Company has been able to meet the difficult trade conditions caused by the low market prices for petroleum products only by the most drastic economy and with the assistance of the above mentioned advances. Operating expenses have been reduced in the amount of $1,300,000 per annum and efficiency has been improved, as a result of which the Company has been enabled to maintain its trade position until it is now operating at a small profit.

While this indicates that the business is inherently sound, it by no means meets the critical situation with which the Company is confronted, as there is urgent need for additional funds which cannot be supplied from earnings, or borrowed under existing conditions of the Company's credit and capital structure.

The purposes for which new money is required are:

(1) The International & Great Northern judgment (amounting with interest to approximately $2,200,000) is now on appeal; and provision must be made to meet this situation. Inventory in excess of $2,500,000 is pledged to secure this judgment. If this judgment is affirmed upon appeal, unless new money can be raised to meet it, this inventory must be sold which would result in a receivership for the Company.

(2) Approximately $650,000 is being borrowed by the Company at a prohibitive cost by means of the pledge of accounts receivable. Aside from the expense of this arrangement, into which the Company was forced by its unfortunate financial situation, it is destructive of the Company's credit and should be terminated at once.

(3) Certain directors, and others interested in the Company's welfare, have made advances in amount of $650,000 on the unsecured notes of the Company, which they cannot be expected to extend indefinitely, and have also recently advanced an additional $500,000 on an acceptance credit as to which they are inadequately secured.

(4) The manufacturing and marketing plants require an immediate expenditure of about $2,000,000 to put them in a competitive operating condition. Parts of the plants are in a rundown condition and must be repaired at once. The present refining equipment is in large part inadequate and out of date, and the

marketing department is in urgent need of improved facilities. These improvements and betterments in the amount of $2,000,000 will, in the opinion of independent engineers, result in a large increase in earning power.

(5) The Company is in need of a substantial increase in its working capital if it is to be enabled to operate profitably and to take advantage of favorable market conditions.

No plan for raising the necessary new capital by a bond issue has seemed feasible to your directors because the terms of the indenture securing the debentures now outstanding would necessitate their retirement, in that event, at 107½%, thus requiring the raising of $1,720,000 of additional capital for this purpose alone. Furthermore, the interest and sinking fund charges of a bond issue of large size would necessarily be so great as to create a fundamentally unsound financial structure, and, in view of the Company's present credit situation, it would be impossible to market any such security except upon destructive terms.

In order to meet this unfortunate situation, and at the same time save the property from the grave dangers with which it is threatened and secure for the business the large additional earnings which it is believed will result from the proposed plant expenditures and the establishment of sound credit, your directors, after careful consideration, have agreed upon the plan which is now presented for your approval. This plan, in the judgment of your directors, offers the most practicable method for saving and reestablishing the business of the Company without an assessment on the stockholders, and without compelling them to furnish the required capital at the peril of losing their entire investment.

Your directors accordingly have, subject to the approval of the stockholders, made the following arrangements:

1. A new corporation is to be organized under the name of Pierce Petroleum Corporation, or some other name, with 2,500,000 shares of no par value stock, all of one class and all of which are to be issued. This new Company will acquire, either directly or through subsidiaries, all of the assets (except treasury stock), and will assume all of the liabilities, of the old Company, and will issue and deliver to the old Company not more than 1,200,000 shares and not less than 1,100,000 shares of its stock, the exact amount to be determined as stated in the next paragraph.

2. The new Company will offer to the stockholders of the old Company the right to subscribe for 1,300,000 shares of its stock at $7.00 per share, this right to be given to the stockholders of the old Company in the ratio of five shares of new stock for every one share of preferred stock of the old Company and one-half share of new stock for every one share of common stock of the old Company. The stockholders of the old Company will also be given the privilege of applying, subject to allotment, for additional stock of the new Company at the price of $7.00 per share, and such applications will be filled pro rata out of any part of the 1,300,000 shares not subscribed for by the stockholders under their initial rights. For every share of stock subscribed for by the stockholders under their initial rights, or allotted to them upon application, 1/13th of a share of new stock will be added to the minimum of 1,100,000 shares provided above to be issued and delivered by the new Company to the old Company, making a maximum of 1,200,000 shares.

3. If the plan is approved by the stockholders, subscription warrants for stock of the new Company in the ratios above set forth will be mailed to the stockholders of record as of a date shortly after such approval. These warrants will provide that payment must be made in full on or before a date which will be specified in the warrants. Accompanying the subscription warrants will be application forms giving the stockholders the privilege above mentioned to subscribe, subject to allotment, to such part of the 1,300,000 shares as shall not be subscribed for under the subscription warrants. Payment in full for any additional stock so applied for will be required as in the case of subscriptions under warrants.

4. To insure that the necessary new capital will be obtained and that the entire 1,300,000 shares of the new Company will be sold for cash, even though the stockholders take less than that amount, your directors have entered into an agreement, subject to the stockholders' approval, with a syndicate consisting of Messrs. Lehman Brothers, Goldman, Sachs & Co., Hornblower & Weeks, and their associates (among whom are directors of your Company) to underwrite the offer to stockholders by agreeing, subject to the conditions therein contained, to purchase at $7.00 per share any of the stock not subscribed for by the stockholders. As compensation for its agreement to underwrite such offer, the syndicate is to receive a commission of 75 cents per share for every share underwritten;

and, for every share which the syndicate shall be required to take up owing to the failure of the stockholders to subscribe, an additional commission of 75 cents, together with 1/13th of a share of new stock. Compensation will be paid at the rate of 10 cents per share underwritten to each of the three banking houses for their services in organizing and managing the syndicate.

If the foregoing plan is approved by the stockholders the following additional proposals, which are hereby submitted by your directors but not as a part of the plan, will be separately voted upon:—

(a) Your directors have entered into an agreement for settling the judgment which the Receiver of the International & Great Northern Railway Company has obtained against your Company amounting with interest to approximately $2,200,000, provided the approval of sufficient stockholders is obtained, by the payment of $1,550,000 in cash, and the Receiver has agreed to accept this amount in settlement on a condition that payment be made on or before July 5, 1924. In the meanwhile the argument of the appeal from this judgment which was set for April 1, 1924, has been postponed until the fall term of the Court. Your directors are of the opinion that this settlement is in the best interests of the Company in view of the situation as a whole and of the large additional loss that would result should the judgment be affirmed. A resolution will accordingly be submitted to the stockholders approving a settlement upon these terms.

(b) A resolution will be submitted to the stockholders authorizing an arrangement whereby such of the stockholders of the old Company as shall desire to avail themselves of the opportunity may be enabled, by surrender of preferred and common stock together, to receive shares of the stock of the new Company which are to go to the old Company. The provisions of such arrangement will be as follows: Every stockholder who surrenders one share of preferred stock and eight shares of common stock of the old Company will receive in exchange a maximum of slightly over eight shares or a minimum of not less than seven and two-fifths shares of stock of the new Company (depending upon whether the maximum of 1,200,000 shares of the new Company, or a lesser amount, goes to the old Company as above provided), together with a pro rata share of any dividends received by the old Company upon stock of the new Company in its treasury, subject to the following two conditions: Firstly, the exchange cannot be made until July 1, 1925, and no stock may be deposited for exchange after that date, and secondly, the exchange cannot be made unless at that time a total of at least 25,000 shares of preferred stock and 200,000 shares of common stock of the old Company are deposited for exchange.

Attention is directed to the fact that if this proposal is adopted the exchange will be entirely voluntary; and those stockholders who do not desire to avail themselves of it will continue to hold their shares of existing stock of either class with their relative rights unchanged, and such shares will continue to represent the same pro rata interest in the stock of the new Company to be received by the old Company which they would have represented if this proposal had not been adopted.

If this proposal is adopted stockholders will be advised some time prior to July 1, 1925, of the further necessary steps to be taken by them.

Enclosed herewith is a balance sheet of the new Company (certified by Messrs. Price, Waterhouse & Co.) giving effect to the proposed plan and based upon the minimum amount of new capital to be raised. The fixed assets, as set forth in this balance sheet, are valued on a conservative basis, and upon such balance sheet no value is placed upon oil lands or oil leases, either in the United States or in Mexico, because of the difficulty of correctly valuing such properties at the present time and until their true value has been more fully demonstrated. Furthermore, no value whatever is placed in such balance sheet upon unadjudicated claims in favor of the Company, which it is believed amount to a substantial sum.

The special meeting of stockholders, to be held on May 7, 1924, has been called to approve the proposed plan, to authorize the sale of the assets of the old Company to the new Company in accordance therewith, and to act upon the other matters specified in the notice of meeting.

For the purpose of this special meeting, the stock transfer books of the Company will be closed at the close of business on April 7, 1924, and will, unless otherwise ordered by the board of directors, be reopened on the day following the final adjournment of the meeting.

Application will, in due course, be made to list the stock of the new Company on the New York Stock Exchange.

A proxy is enclosed herewith. Inasmuch as a large vote of the stock of the Company is required to carry out the proposed plan, you are earnestly requested to execute and mail your proxy immediately, unless you can attend the meeting in person.

All stockholders are urged, in order that they may be enabled to vote upon the plan and to assure the receipt by them of the subscription warrants, to promptly—and in no event later than April 7, 1924—have transferred into their own names or into the names of their nominees all shares of stock owned by them, if standing in the names of others.

The plan outlined above is proposed by your directors after careful consideration. If the plan is approved, your directors believe that, with the added working capital and improved plants and marketing facilities, together with the reduction in expense and increase in efficiency already apparent, the business should again show substantial earning power. On the other hand, if the plan is not approved, your directors are of the opinion that a receivership for your Company is likely to result. In such event the stockholders, both preferred and common, will be faced with the alternative either of paying an assessment on their stock sufficient to meet all the Company's liabilities or else of jeopardizing their entire equity in the property.

By order of the Board of Directors,
W. H. Coverdale,
Chairman of the Board

Be sure: (1) To have transferred into your name or into the name of your nominee all shares of stock owned by you, if standing in the names of others; and (2) To execute and mail the enclosed proxy immediately.

PIERCE OIL CORPORATION

PROXY

KNOW ALL MEN BY THESE PRESENTS, that I, the undersigned, being a stockholder of PIERCE OIL CORPORATION, a Virginia corporation, have constituted and appointed, and do hereby constitute and appoint W. H. Coverdale, W. W. Colpitts, Herbert H. Lehman, J. W. Prentiss, Arthur Sachs and Alvin Untermyer, or any one or more of them, my proxies, agents and attorneys in fact, for me and in my name, place and stead, to vote all shares of stock in said corporation owned by me or standing in my name, at a special meeting of the stockholders of said corporation to be held at the principal office of said Corporation, Room 915, Mutual Building, City of Richmond, State of Virginia, on May 7, 1924, and at any adjournment or adjournments of said meeting, upon any act, matter or thing that may be brought before said meeting, and without limitation of the general powers hereby conferred especially to vote in favor of:

1. Authorizing the sale, assignment, transfer, conveyance and delivery by the Board of Directors of the Corporation of all of the property, assets and property right of the Corporation (other than treasury stock) as an entirety, to a corporation to be formed under the name of Pierce Petroleum Corporation, or some other name (hereinafter called the "New Company") and/or its subsidiaries, such New Company to have an authorized capital of 2,500,000 shares of no par value, in consideration of not more than 1,200,000 and not less than 1,100,000 shares of the New Company and in further consideration of the assumption by the New Company of all the liabilities of the Corporation (except capital stock) and upon such further terms and conditions as may be determined at the meeting and as the Board of Directors in their discretion may deem advisable, the certificate of incorporation and by-laws of the New Company to be in such form and to contain such provisions as the Board of Directors of the Corporation may determine and authorizing the Directors to cause the New Company to offer to the stockholders of this Corporation the right to subscribe for 1,300,000 shares of stock of the New Company at $7.00 per share, this right to be given to the stockholders of this Corporation in the ratio of five shares of stock of the New Company for every one share of Preferred Stock of this Corporation and one-half share of stock of the New Company for every one share of Common Stock of this Corporation and further to cause the stockholders of this Corporation to be given the privilege of applying, subject to allotment, for additional shares of the New Company at the same price, such applications to be filled pro rata out of any part

of the 1,300,000 shares not subscribed for by the stockholders under their initial rights; such right and privilege to be given for such period and upon such further terms and conditions as the Board of Directors of this Corporation may deem advisable, and ratifying an agreement dated March 24, 1924, between the Corporation and certain bankers (to be submitted to the meeting) providing upon the terms and conditions in said agreement set forth, for the underwriting by a syndicate of the offer of stock of the New Company to the stockholders of this Corporation as above set forth, and under which agreement Directors of this Corporation, either directly or indirectly, are to receive compensation and participate in such syndicate; and authorizing the Board of Directors and officers of the Corporation to do all things necessary or proper to carry out such agreement.

And if such authorization and ratification shall be voted, to vote in favor of:

(*See note below.*) 2. Approving settling the claim of the Receiver of the International & Great Northern Railway Company against the Corporation by the payment of $1,550,000 in cash.

3. Decreasing the Preferred and Common Stock of the Corporation, actually issued and outstanding, by the purchase for retirement of any multiple of one share of Preferred Stock together with a like multiple of eight shares of Common Stock (but not less than a total of 25,000 shares of Preferred Stock and 200,000 shares of Common Stock) tendered for purchase on July 1, 1925, and thus decreasing the actually issued and outstanding Preferred and Common Stock to an amount equal to the stock now issued and outstanding less the stock so tendered for purchase, but in no event to an amount less than $1000; the purchase price of such stock to be a pro rata amount of the stock of the New Company received by the Corporation together with a sum equal to dividends, if any, received by the Corporation upon such stock.

4. Taking such further action with respect to any of the foregoing matters as the meeting may deem advisable and transacting any other business that may properly come before the meeting.

All of the powers enumerated to be exercised by my aforesaid proxies, agents and attorneys in fact, or any of them as fully and effectually as I might or could do if personally present and voting at said meeting with full power of substitution in the premises, hereby ratifying and confirming all that my said proxies, agents and attorneys in fact, or any of them, or their substitute or any of their substitutes may lawfully do by virtue hereof, and hereby revoking all former proxies and powers of attorney given by me or in the premises. If more than one of the above-named proxies shall be present and voting in person or by substitute at said meeting or any adjournment, thereof, a majority of the proxies so present and voting in person or by substitute shall exercise all the powers hereby granted.

In Witness Whereof, I have hereunto set my hand and seal this ..... day of ....., 1924.

.....(L. S.)

Note.—Any stockholder who does not desire to approve settling for $1,550,000 the claim of the Receiver of the International & Great Northern Railway Company should strike out paragraph 2 of this proxy.

The Corporation will affix the stamp required by law.

TYPICAL CASH REQUIREMENTS OF A REORGANIZED COMPANY.—The cash requirements of a reorganized company may be illustrated in the requirements under the plan or reorganization of the Atlanta, Birmingham & Atlantic R. R. Co., in 1917, which were as follows:

Obligations of receiver for equipment acquired during receivership, tax loans, claims and judgments, interest, etc.	$1,105,491.52
To retire outstanding equipment obligations issued prior to receivership, with interest	930,237.50
Legal expenses of counsel for trustees in the foreclosure of the A. B. & A. R. R., Georgia Terminal and Alabama Terminal R. R. mortgages and the sales thereunder	66,000.00
Reorganization expenses, including trustee's fees and disbursements, partly estimated	185,224.93
Compensation and expenses of Receivers' Certificates Committee in con-	

nection with the purchase and management of the properties, the organization of the new company, the negotiating of the underwriting, etc.	84,546.05
Compensation which may be allowed by the court to the receiver and his counsel	112,500.00
Commission to syndicate managers and underwriting syndicate	216,000.00
To treasury of New Company for working capital, improvements and repair of equipment ($288,000)	900,000.00
Total	$3,600,000.00

RAISING MONEY BY SALE OF ASSETS.—In 1923, the President of the American Cotton Oil Co. sent a circular to the stockholders in which there was set forth the following:

When I assumed the presidency in May, 1923, I studied the affairs of the company and as a result I recommended that the company should proceed on the basic plan of expanding the profitable end of the business and curtailing that which has proved unprofitable. In particular, I recommended to the directors that the manufacture and sale of "Gold Dust." "Fairy Soap," and other profitable products be pushed and that the cottonseed oil business be curtailed. The curtailment of the cottonseed oil business will mean that we can advantageously concentrate it into a few of our plants, rendering the balance unnecessary for our purpose. The sale of these plants will not only relieve us of the burden of superfluous assets and heavy carrying charges, but will furnish us with cash toward meeting our $8,000,000 of notes maturing next September.

SIMPLIFYING THE FINANCIAL STRUCTURE.—Reduction of capital stock is a frequent object of reorganization by agreement.

Illustration: The X. Y. Z. Co., according to its own statement as of June 30, 19—, has $1,000,000 of preferred stock and $3,000,000 of common stock outstanding. Both preferred and common shares are of $100 par value. The surplus amounts to $1,045,000, and among the assets is $1,000,000 of good-will. An audit of books made as of the same date shows obsolete properties, doubtful accounts, and valueless investments to amount of approximately $1,000,000 to be written off. Good-will, however, is left untouched. The following statement based on such valuation is submitted by accountants, showing surplus reduced from $1,045,000 to $45,000:

X. Y. Z Company

Balance Sheet as at June 30, 19—

(Before reduction of capital)

Assets		Liabilities	
Cost of Properties and Equipment, including Good-Will.	$ 4,500,000	Bonds Outstanding	$ 2,500,000
Securities Owned, of Subsidiary and Other Companies	1,300,000	Short-Term Notes	500,000
Sinking Fund Deposit	220,000	Accounts Payable	1,525,900
Cash	235,000	Notes Payable	490,000
Accounts Receivable	1,172,300	Accrued Items	31,200
Notes Receivable	1,370,000	Bond Interest, payable July 1, 19—	62,500
Material, Supplies, and Finished Parts	981,600	Dividend Declared and Unpaid	120,000
Contract Work in Course of Construction	476,300	Sundry Operating Reserves	189,000
Accrued and Prepaid Items	58,400	Indorsement on Notes Discounted	850,000
		Capital Stock:	
		Preferred	1,000,000
		Common	3,000,000
		Surplus	45,000
	$10,313,600		$10,313,600

Stockholders now decide to write off the good-will of $1,000,000 and to add $500,000 to surplus, by reducing the common from $3,000,000 to $1,500,000. Preferred stock is to remain as before.

Status after Reorganization.—The reduction in total par of common stock does not mean that the company's net worth is less than formerly, nor that a holder of stock has lost anything by charter amendment. The net worth of the company is now $3,045 000, as it really was before. Each of 15,000 shares of common stock has a book value of $136.33, found by dividing their total book value of $2,045,000 by the number of shares. The book value of preferred stock remains at $100 per share.

The financial structure of a corporation may be simplified by **cancelling good-will and patent rights** in the same manner as outlined in the previous paragraph.

In a letter sent by the American Milling Co. to its stockholders asking them to vote on a proposed reduction in the amount of capital stock, the following paragraph appeared:

> The good-will and patent rights add nothing to a solid financial basis on which to operate your property and a statement containing items of this character injures us in banking circles to such an extent that your officers are handicapped in making a proper financial showing, and in addition to this we are compelled to pay $2,800 capital stock tax per annum on this excess which would be saved to you by making the change.

REDUCING FIXED CHARGES.—One of the primary causes of insolvency among railroad and public utility corporations is that such companies may have fixed charges which are greater than their incomes can meet. In such cases the safe course in reorganization is to cut down these fixed charges by replacing a portion of the bonds with capital stock.

It has been stated that out of seven **railroad reorganizations** in the period from 1893 to 1898, every one showed a decrease in fixed charges, the average being 31%. As to **industrial reorganizations,** the results of 27 companies show that fixed charges were reduced on the average about 25%. This percentage probably measures fairly well the excessive amounts of bonded and other obligations which were issued above the limits of prudence under the old financial plan.

If the junior bondholder who is asked to accept a reduction in the principal and possibly in the rate of interest of his holdings, is at the same time given preferred and common shares up to the full par value of his former bondholdings, or perhaps a little above, he is inclined to accept the reduction much more readily. He may feel, quite properly, that there is at least a chance of his recovering in future all the capital that he has lost.

In the reorganization plan of the Virginia-Carolina Chemical Co., announced August 10, 1925, the fixed charges, including those on the floating debt, were entirely eliminated, the mortgage bonds, debentures, bank and trade debt being replaced by two classes of preferred stock and common shares in the proportions shown in the schedule following. The plan was somewhat out of the ordinary, in that it did not provide for any assessment of the stockholders. On the contrary, as the schedule shows, the first mortgage bondholders were to be partly paid off in cash. The aggregate amount of cash thus involved was to be $12,417,480 and the amount was provided from the proceeds of the sale of the stock of several subsidiary companies and other property subject to the mortgage securing the bonds. The new company was to begin without any bonded debt and any current liabilities other than certain reserves and current bills and accounts not yet due, and with approximately $19,500,000 of net working capital.

Existing Securities	Outstanding	Will Receive			
		Prior Preferred Stock	Partic. Preferred Stock	Common Stock	Cash
	$	$	$		$
1st Mortgage 7s	24,348,000	14,487,000	.....	.....	12,417,480
Each $1,000		595			510
7½% Debentures	12,250,000	.....	15,006,250	245,000 shs.	.....
Each $1,000			1,225	20 shs.	
Bank Debt	4,209,000	.....	4,882,440	84,180 shs.	.....
Each $1,000			1,160	20 shs.	
Trade Debt	963,000	.....	1,117,080	19,260 shs.	.....
Each $1,000			1,160	20 shs.	
Preferred stock (guaranteed—Consumers Chemical Corporation)	355,200	.....	442,224	7,104 shs.	.....
Each $1,000			1,245	20 shs.	
Preferred Stock	215,686 shs.	.....	.....	107,843 shs.	.....
Per share				½ sh.	
Common Stock	349,805 shs.	.....	.....	23,321 shs.	.....
Each share				1 1–15 shs.	
TOTAL		14,487,000	21,447,994	486,708 shs.	12,417,480

PRINCIPLES GOVERNING FIXED CHARGES.—In practice, experience shows the advisability of keeping in view, in the rearrangement of fixed charges, the five following principles:

1. The maximum fixed charges after reorganization should not exceed the absolute minimum of net earnings.
2. As large a proportion as possible of the charges should consist of interest on bonds. Sinking funds with their requirements, guaranteed dividends, rentals, and the like, should be avoided as much as possible.
3. The losses should fall most heavily on the junior security holders generally, leaving the first lien securities—unless the reorganization is exceedingly drastic—practically untouched.
4. The nominal value of the new securities received by security holders in old company should be reduced as little as possible.
5. Bondholders whose claims are scaled down should be given an opportunity to participate in any future increases of earnings.[13]

MODERN REORGANIZATIONS OFTEN DRASTIC.—The tendency of the present day methods of reorganization is to adopt drastic measures, if they are necessary, and to avoid half way measures. In reorganization to reduce fixed charges the tendency is toward the reduction of bond issues and the increase of the stock capitalization. This is frequently necessary to bring about effective reorganization.

The ratio of exchange of bonds for shares of stock varies with each reorganization and is governed by the exigencies of each case. **Junior bondholders** are often asked to accept in exchange for their holdings a smaller percentage of new bonds plus a certain amount of **income bonds** or **preferred stock.** The total nominal value of the new securities is generally equal to the bonds given up in exchange. The preferred stockholders are often asked to pay an assessment and surrender their old shares and receive a designated amount of preferred and common stock. Sometimes they receive preferred stock for their assessment

[13] Daggett's Railroad Reorganization.

and common stock for the preferred stock surrendered. The common stockholders are generally asked to pay an assessment and surrender their old stock for which they receive senior securities for the assessment and new stock which approximates in nominal value the shares surrendered.

PROVISIONS FOR FUTURE CAPITAL REQUIREMENTS.—Among the principal reasons for reorganizations is a provision for future capital requirements. Many corporations have from time to time, put out different issues of bonds and preferred stocks, some of which may have had conflicting claims. At times these security issues stood in the way of further financing. Reorganization may be necessary to consolidate a number of smaller issues or to replace them by a few large issues. These new issues may not alone be large enough to meet the ultimate requirements of the reorganized concerns but may carry with them provisions that additional securities may be issued as conditions may demand and outside circumstances warrant.

THE CLAFLIN REORGANIZATION.—As an interesting illustration of some of the principles of reorganizations the history of the failure and reorganization in 1914 of the great wholesale dry goods house of H. B. Claflin Co. may be briefly stated.

This company was organized in 1843. After a long period of prosperity the firm began to feel the effects of severe competition from jobbing houses in western trade-centers, and in order to meet this competition it began to build up its own retail outlets. Through certain controlled companies, particularly the Associated Merchants Co. and the United Dry Goods Co., 35 well-known department stores in various important cities were brought under the control of the Claflin interests. These stores naturally purchased most of their goods through the H. B. Claflin Co.

It is questionable whether the close relationship thus established between a wholesale house and retail stores was really valuable to either party. Of course, it enabled the H. B. Claflin Co. to carry on extensive operations for a long period; but its apparent size and prosperity turned out to be largely artificial and unsound. So far as the retail stores were concerned, it was evidently of no advantage to them to be compelled to purchase most of their supplies from a given wholesale establishment.

When the failure was first reported it was thought that the total Claflin liabilities amounted to about $34,000,000, but it soon became evident that large amounts of notes had been issued and obligations incurred of which there was no clear record. The relationships of the many companies included in the combination had become so involved that it was months before the receivers could obtain even the approximate amount of the liabilities; and in the end the total liabilities were placed at about $45,000,000.

It was found that the financial transactions of all the various department stores were being handled in New York, and that the active managers of those stores knew nothing about many of the liabilities which the treasurer of their company, sitting in his New York office, had created. For instance, the Hennessy Corporation, which operated stores in Butte and Anaconda, Montana, had on its books obligations amounting to only $83,000. The president of this company had no knowledge whatever of the existence of any other obligations; but he was suddenly advised after the receivership of the Claflin Co. that approximately $1,700,000 in notes of the Hennessy Corporation had been issued and after having been indorsed by the Claflin Co., were discounted in New York. The same practice was followed with subsidiary companies all over the country. In this way an enormous amount of "accommodation" paper was

put out. The parent company's contingent liability on this paper, however, was not shown in the financial statements it had submitted to bankers and to those who bought its commercial paper through note-brokers.

The scheme of reorganization finally agreed upon was based upon the idea that the wholesale business and the retail business of the combination ought to be separated. The *Dry Goods Economist* pointed out that, while the day was gone when a general jobbing house located in New York could do a great national business, there was still an important field open to the H. B. Claflin Company in handling business within a short distance of New York.

The plan for reorganization provided that the noteholders receive in exchange for their old notes 15% in cash and 85% in three-year collateral-trust income notes issued by the new company which was to be known as the Mercantile Stores Corporation. The Mercantile Stores Corporation was to own all the stock of the insolvent department stores in the combination, and turn these into cash as rapidly as possible. It was also provided that a new company, known as the H. B. Claflin Corporation, should continue that portion of the wholesale business which had proven profitable. All the stock of the H. B. Claflin Corporation was to be owned by the Mercantile Stores Corporation.

Under this plan the new corporations were enabled to begin their operations without any current indebtedness. The plan of reorganization was somewhat unusual in that it did not call for any new capital and at the same time freed the subsidiary corporations from current liabilities.

As far as the old stockholders of the H. B. Claflin Company were concerned, nothing was ever realized. The Mercantile Stores Corporation, however, distributed over $17,000,000 in cash to the creditors of the old company, and then having carried its liquidation of assets as far as could be done without unjustifiable losses, was reorganized in 1919 as an operating company under the title of Mercantile Stores Company, Inc. The H. B. Claflin Corporation was purchased in 1917 by, and merged with, Claflins, Inc.

OTHER REASONS FOR REORGANIZATIONS.—This section has discussed reorganizations for reasons of financial difficulties. Other reasons for reorganizations may be summarized as follows:

1. Reorganizations because of certain laws such as the monopoly laws.
2. Segregation of companies because of laws dissolving their relations.
3. Recapitalizations as preliminaries to consolidations.
4. Recapitalizations as preliminaries to refinancing.
5. Recapitalization for tax purposes.

DISSOLUTION OF CORPORATIONS.—A corporation may be dissolved, if the stockholders consent, by **complying with the proper legal procedure of the state in which the company was organized.** The various state statutes differ widely in their requirements for dissolution.

Where all the assets of insolvent corporations are sold, and the proceeds of sale have been applied towards the payment of debts, such corporations for all practical purposes are dissolved. Legally they still exist, but are merely shells and without substance, and no longer function as business entities.

REAL ESTATE TRANSACTIONS

REAL ESTATE AND REAL PROPERTY RIGHTS.—Real estate is usually considered to be land and the buildings erected on it. It is called "property." Property, however, has two aspects, first, **the material thing** or things themselves, and, secondly, the **legal right** to possess, use and dispose of the things. The law recognizes and protects property rights. Property has also two divisions, real property and personal property. **Real property** is a technical legal term meaning any interest in land, the duration of which is measured by a life or lives, or which is to be forever. Real property rights are also called **estates.** Real property is governed by the provisions of the **Real Property Law;** at death such real property rights as survive pass directly to the heirs or devisees of the deceased. Unless there be some provision in the will, or there be a court order directing it an executor or an administrator does not handle the real property in an estate.

ESTATE IN FEE SIMPLE.—An estate in fee simple is the **largest and most important estate** recognized. It is the estate held by the ordinary owner of real estate. When real estate is bought and sold, it is this estate which is understood to be contemplated by the bargain. This estate may be defined as the right to own land and buildings in one, his heirs and assigns forever. It may be sold by the owner at any time, or devised by him under a will. It passes by operation of law to his heirs if he die without a will. There are variations of the estate known as **fee simple conditional** and **fee determinable.** The character of the first of these is that the ownership in fee shall continue as long as a condition is fulfilled; with the second, the vesting of the fee may be determined by the happening of a certain event. Practically, these two variations are little known in modern business.

LIFE ESTATES AND REMAINDERS.—When a person holds property for and during the term of his natural life only, his property right is called a life estate. The estate terminates with his death. Another person or persons must necessarily, at all times during the life estate, have the right to obtain the property on the death of the life tenant. This right is that of remainder and the one owning it is the **remainderman.** When the remainderman finally receives the property, his estate is said to **vest in possession,** and he has then an estate in fee simple. All remainders are not the same. There are some under which a person or persons, or a designated class of persons, or the legal representatives of such persons, will with certainty get the property; they are **vested remainders.** Other remainders may depend upon the happening of an event; that is, they are **contingent** upon such event. Thus a grant to A for life, then to B if living, but if B be not living, then to C, gives C a **contingent remainder.**

DOWER.—In New York and most of the other states, a man's widow has what is called a dower right in his real property. This right attaches to all

eal property owned by the husband at the time of the marriage, or that he may acquire during the marriage. Dower becomes effective at the husband's death, and gives the widow the **use of, or income from, one-third of his real property** for the remainder of her life. It ceases with the widow's death. It is because of dower that a wife's signature is required when real property is acquired by deed from a married man, or when money is loaned to him on a mortgage. Dower can at any time be released to a third party, but the usual rule is that it cannot be released to a husband except by a prenuptial agreement.

CURTESY.—When it is allowed by law, curtesy is the life interest of a husband in all real property owned by his wife at her death, which she has not disposed of by will. A woman during her life may sell property, conveying it by her signature only, and in a similar manner, may mortgage her property. She may also dispose of her property by will without reference to the husband. There is an additional feature of curtesy in that there must have been children born alive of the marriage. The rule stated is that of New York State. Curtesy has been abolished in some states, and some have different rules regarding it.

JOINT ESTATES.—The fee simple estate is sometimes held by two or more persons at the same time, as when a man dies and leaves his real estate to his several children. All of the children own it at the same time. Each child is said to own an undivided interest, and they own it as **tenants in common.** If there are two, each owns an undivided one-half interest; if three, an undivided one-third, and so on. These **undivided interests** may be conveyed; at death they pass to the heirs and devisees of the respective owners. It is sometimes provided that these several persons shall own as **joint tenants,** and not as tenants in common. The feature of a joint tenancy is survivorship. When one of the joint tenants dies, the survivor or survivors get his share. A joint tenant cannot dispose of his interest by will, but he may convey it by deed during his lifetime. Such action breaks the joint tenancy as to the grantee's share. Unless it is the clear intention to create a joint tenancy, the law will assume a tenancy in common. The ownership of a piece of property by husband and wife is as **tenants by the entirety.** Neither party acting alone can convey or otherwise alienate any interest in the property. The survivor of the two becomes the sole owner of the property in fee simple.

CLAIMS AFFECTING REAL ESTATE.—There are many claims or rights of creditors which affect real property. When the right of a creditor is such that he can sell or require the sale of the debtor's real estate, the right is called a **lien.** The **principal liens** are—mortgages, judgments, mechanic's liens, taxes and assessments, decedent's debts and inheritance taxes.

Mortgages.—When money is borrowed on real estate security, the lender obtains two instruments, one is a bond or note, and the other a mortgage. The **bond or note** is the evidence of the debt with a promise of repayment, together with interest provisions; the **mortgage** is the transfer of the title of certain real property as security for the debt. In most states the mortgagee does not get actual title, merely having a claim or lien upon the property. Because of his lien the mortgagee can cause a sale of the property in the event of a default in the payment of the debt. More complete information regarding mortgages is given in other parts of this section.

Judgments.—A judgment is a determination of the rights of parties by an action at law. Judgments which are liens on real property are, of course, **money judgments.** After the judgment is obtained it is docketed; that is, it is made a matter of record in the office of a public official. In New York judgments become a lien on real estate when they are docketed, and the **lien continues for**

10 years from the date of the judgment. A sale of the property is effected by delivering **a writ of execution** to the sheriff, who thereupon, after proper advertising, sells all the right, title and interest of the debtor in whatever property the sheriff can find. The judgment is a lien on all property, both real and personal, which the debtor may own, but in selling under execution of a judgment, the sheriff does not search the title to the property he sells, and, consequently, can sell only such rights as the debtor may have. The sheriff does not deliver a deed to the successful bidder until eighteen months after the sale. In the meantime the **owner and subordinate lienors** have the right to redeem the property from the sale. As judgments are sometimes reversed on appeal, they can be bonded, and filing a bond approved by the court frees the property from the lien. Upon payment of a judgment, a satisfaction piece should be obtained and filed so that the record may be cleared.

Mechanic's Liens.—Those who perform labor or furnish material for the improvement of real property are entitled by law to hold the property for the amount of their claims. They have a lien on the property known as a mechanic's lien. The statutes of the state in which the property is located set forth in detail the character and extent of the lien, and how it is obtained, enforced and discharged.

The Mechanic's Lien Law of the State of New York (Chapter 33, Consolidated Laws) may be used as an illustration. It must be emphasized, however, that the laws of other states differ in important respects. Under the New York law the mechanic or material man files a notice in the office of the clerk of the county in which the property is located. This notice must contain the essential facts of the claim and a description of the property against which it is filed. The filing must be within 120 days of the date upon which the last labor was performed, or the last material furnished. The lien is subject or subordinate to all prior liens of record against the property. It continues for one year from the date of filing and then expires. In order to sell the property to enforce the lien, a legal action known as a **foreclosure,** must be conducted. The owner of the property may contest the action and offer a defense, in which case the issue is tried in court. If the result of the action is a judgment for the lienor, a sale of the property is had, subject to the prior liens. The proceeds of the sale, after taking out costs and disbursements, are applied to the lienor's claim.

Often when one mechanic's lien is filed against a piece of property, a number are filed, especially where several contractors have been engaged in the improvement. Under the law there may not be separate actions on each lien, but the first action brought brings in the other lienors. There is one sale, and the liens are marshaled in order of filing, and the proceeds of the sale used to pay them in their proper order. An owner of property upon which a mechanic's lien has been filed may wish to have the claim disposed of quickly; he may not wish his property encumbered by a lien. He may, under the law, notify the lienor that he must start his action within 30 days, and he can, if he so desires, bond the lien or deposit the amount of it in cash with the county clerk. The bond or the deposit of money serves to free the property from the lien.

In order to better enable mechanic's lienors to realize on their claims, the New York law provides that if the holders of 75% in amount of the liens come to an agreement, they can borrow money on a trust mortgage in order to finish the work under construction. All of the mechanic's liens become subordinate to the mortgage thus made. On completion of the work the same percentage of lienors can agree to a sale of the property, the proceeds of which are used to pay the lienors' claims. Such sale would, of course, be subject to any prior

mortgages, or other liens, including the mortgage made by the lienors themselves to obtain the money to finish the construction work.

The amount of a mechanic's lien is the amount due on the contract, or in the absence of a contract or agreement, the reasonable value of the work performed or material furnished. Sub-contractors may file liens, but their claims, being not directly against the owner, can be enforced only for the amount due by the owner to the general contractor under the terms of the contract between them. Care should be exercised by an owner not to anticipate payments to a general contractor, for in the event of an action by a sub-contractor on a mechanic's lien, the owner may be required to pay again the amount of the anticipated payment.

Decedent's Debts.—When a person dies, his property passes either by will or by operation of law to others. The creditors of the deceased have a claim, however, against all the property in the estate, both real and personal. This claim has the character of a lien, for the creditors can compel a sale of the property if the debts are not paid. The debts of the decedent are paid out of the personal property in the estate as far as it will go; if insufficient, recourse is had to the real property. Proof of payment of debts is usually required when title to property comes through a decedent's estate.

Inheritance Taxes.—The federal government, and most of the states, impose an inheritance or estate transfer tax. These taxes are liens on the real and personal property in the estate, and payment must be made before clear title to the property can be given.

Corporation Franchise Tax.—The State of New York and many other states tax corporations annually for the privilege of doing business in the state. The tax may be based upon the net income of the corporation, its capital stock, or the amount of capital employed within the state. The tax can be enforced against the corporation and its property can be held for its payment. In closing real estate titles in New York it is customary to write to the Tax Department in Albany to ascertain the standing of the corporation with relation to its franchise taxes.

Conditional Bills of Sale.—A conditional bill of sale is an agreement for the sale of an article of personal property containing a provision that the title to the property shall remain in the vendor until the purchase price is paid. If the articles are to be used in the improvement of real property, the conditional bill of sale will prevent them becoming part of the real property until the condition is disposed of. The New York law requires that in order to give notice to others the conditional bill of sale must be filed in the register's or county clerk's office at or before the time of the delivery of the goods to the premises.

Other Encumbrances.—There are claims, rights and interests involving real property which are not in the nature of liens but whose existence must be recognized. They often constitute real objections to the passing of a title and are reported in the results of a title search. Restrictions, easements, and encroachments are encumbrances and are explained in connection with contracts. Municipal zoning regulations, orders of governmental department and violations of rules and ordinances should also be considered, although often not encumbrances in a legal sense.

Taxes, Assessments, and Water Charges

TAXES.—Taxes may be defined as a regular proportional and enforced contribution to the support of government. Taxes on real estate become liens

on the property affected on the day the taxes become due and unless paid will eventually result in a sale of the property. Interest and penalties accrue if payment is not made within a specified time.

TAX LEVIES.—Taxes may be levied at various times during the year, and for several purposes, as for instance, there may be a school tax, a state, town and county tax, a village tax, etc. In New York City taxes are levied in one amount but are due in two installments, the first half on May 1, and the second half on November 1 of each year. Taxes must be levied in a legal manner, that is to say, there must be notice to the property owner and an opportunity for him to be heard. The tax levy becomes a lien on all property affected by it, and a tax search is always made when purchasing real property, or making loans on it. Owners should see that the taxes on their property are paid as they become due and mortgagees should have searches made in order to preserve the mortgage lien.

MUNICIPAL BUDGET.—In the consideration of taxes and the method in which they are levied, it may be observed that there are several important steps. The first of these may be considered to be the budget. The budget is the estimated amount to be spent by a governmental authority within a certain period of time. New York City makes up its budget on or before December 25. From the budget is deducted the estimated amount of city revenues, and the balance represents the amount that must be raised by taxation. The greater part of this amount consists of a levy on real property.

ASSESSED VALUATION.—The second important step in levying taxes is to determine the assessed valuation of the property to be taxed. New York City will be used as an example. Each of the five boroughs of the city is divided into sections and a deputy tax commissioner assigned to each section. Every parcel of real property is mapped and listed, and the duty of the deputy commissioner is to value each one of these parcels separately. In making these valuations he considers the **land value** first. To this he adds the amount that the **building value** adds to the land value. This second figure may be the actual cost to reproduce the building; but in the case of old buildings, or obsolete buildings, or buildings that are not the proper improvement for the land, it may be a much smaller figure. The report of the deputy commissioner is made showing first the land value, and then the land and building together. This total can, of course, not be more than a fair market value of the property.

TAX RATE.—Having the budget, or amount to be raised by taxation, and the total assessed valuation of the land to be taxed, the first figure divided by the latter will give the tax rate, and the tax rate applied to the valuation of any particular parcel gives the taxes charged against that parcel. The Board of Aldermen of New York City fix the tax rate on March 3 of each year. The tax rolls are thereafter delivered to the Receiver of Taxes who computes the amount of tax for each parcel of real estate.

REVIEW OF ASSESSED VALUATIONS.—Since the amount to be raised by taxation cannot be changed, the only chance for the property owner to have his taxes reduced is to have the commissioners lower the assessed valuation. If, when the assessment rolls are made up, he finds that the value placed against his property is, in his opinion, too high, he has an opportunity to protest and be heard by the commissioners in the matter. His complaint may be on the ground, either, that it is **inequitable,** that is to say, higher than similar property, or that it is **excessive,** that is, more than it is really worth. He may present facts that will result in the commissioners reducing his valua-

tion. If they refuse to make the reduction, he may carry the matter higher by legal action known as a **proceeding certiorari.**

ASSESSMENTS FOR PUBLIC IMPROVEMENTS.—Assessments must not be confused with assessed valuations. Assessments are charges by the public authorities for the purpose of paying the **cost of some improvement.** They are levied once for all, and on a certain date become a lien on the property affected. In New York City assessments become liens on the property 10 days after being entered in the assessment record books, and bear interest if not paid within 60 days after becoming liens.

How Assessments Arise.—A municipality, or other governmental authority, may under its **right of eminent domain** take property for public purposes. This often involves a **condemnation proceeding.** The result of the proceeding is to award damages to the owners of the property taken. The proceeding also, in some cases, levies the total cost, that is to say, the amount of the awards together with expenses, as an assessment on the property benefited. The court will fix the area of assessment and the basis upon which the amount of the assessment against each parcel benefited is levied. **Local improvements,** such as sidewalks, curbs, paving and sewers, do not involve a legal proceeding. Public authorities, such as a board of assessors, figure the total amount of the cost of the improvement and mathematically apportion it among the parcels of property benefited by the improvement. The improvement that causes the assessment to be levied is made by the municipality after due notice and letting of contracts and inspection of the work. Proper legal procedure must be followed throughout.

Installment Assessments.—Assessments for improvements frequently are of large amounts and are, therefore, burdensome to property owners. In order to relieve this burden the assessment may be spread over a period of years and the assessment is levied by the authorities as an installment assessment. There are other assessments that are levied in one amount but which may be converted into 5 or 10 year or more annual installments at the request of the property owner. The deferred portion of all installment assessments bears interest. The installments become liens on their anniversary dates, and if not paid when due additional interest is charged.

WATER CHARGES.—Water is a commodity and is frequently furnished by a private company, in which case the charge does not become a lien on the property. If furnished by a municipality the charge does become a lien and will be enforced against it. There are **two methods of computing charges for water.** One is a **flat rate per annum** usually computed on the amount of frontage of the house on the street, taking into consideration the water outlets within the house; the other is a charge based on **actual consumption as registered by a meter.** In New York City the frontage charge becomes a lien on January 1 of each year. Meter charges become liens, as the meters are read by the inspectors from the Water Department, the charge at that time being entered on the books and bills sent to the owners.

ENFORCEMENT OF THE LIEN OF TAXES, ASSESSMENTS AND WATER CHARGES.—There have been several methods in use for the enforcement of tax arrears. This may be in the form of a **sale of the property,** or the **sale of a lease on the property** for a period of years, or the **sale and transfer of a tax lien** on the property. The last method is the one provided by law in New York City at the present time, and is probably the most effective way for the collection of the arrears when the property affected is of any appreciable value. Under this system the City, at regular intervals, makes up a list of

taxes, assessments and water rates unpaid and in arrears for a specified time. The total amount of arrears against any parcel, together with interest, and a small charge for costs, constitutes the total tax lien. A public auction is held at which the liens are sold to the person or persons bidding the lowest rate of interest. The maximum interest rate that may be paid is 12%. In other words, if the arrears of taxes amount to $1,000 and the city is selling a tax lien of that amount, it would be put up at the auction, and the first bidder may offer to buy it at 12% interest. Another offering to buy it at 11% would get it, unless someone else offered to buy it at a still lower rate. An instrument known as a **certificate of transfer of tax lien** is delivered to the successful bidder and he then has a first lien on the property for the amount he paid the city bearing interest at the rate he bid. It runs for 3 years with the interest payable semi-annually. It **may be foreclosed** for non-payment of interest, for non-payment of subsequent taxes or assessments, or for principal at the end of 3 years. The foreclosure is similar to that of a foreclosure of a mortgage.

TAX SEARCHES.—In many localities taxes appear on the collector's books in the name of the owner of the property, and searches have to be made against those names in order to ascertain unpaid taxes. This is inaccurate and often makes searching difficult and the results uncertain. The **block and lot system** in use in New York City and other places is considered to be more effective. Under this system all property within the jurisdiction is mapped, divided into blocks, and the blocks into lots. The lots are not of any given size, but rather represent a unit of ownership. In making tax searches, a description of the property is compared with the maps in the Tax Department. These maps will show the section, block and lot by which the property is known on the tax records. All charges for taxes, assessments and water rates are listed with respect to lot and block number, and a search is readily and accurately made.

Contracts for Purchase or Sale of Real Estate

NECESSITY FOR CONTRACT.—The ownership of real property differs from personal property in one very important particular; **ownership of personal property** is evidenced almost entirely by possession, while **ownership of real property** is evidenced by **possession** together with **title,** i.e., the chain of instruments (deeds, mortgages, etc.) on the public records which indicate who owns the property and the liens and encumbrances upon it. Consequently, while personal property may ordinarily be transferred by mere delivery, the conveyance of real property involves not only the transfer of possession but the search, by the purchaser, of the public records to ascertain that the seller has proper **title.** Such title examination requires some time. There has, therefore, arisen the manner of selling real estate by means of contract, enabling the purchaser to bind the bargain but avoid paying more than a deposit until he has had opportunity to examine the title.

The agreement to sell real estate is governed by the same rules of law which affect every contract, namely, there must be competent parties, offer and acceptance, legal consideration, and subject matter. There is the further provision that contracts for the sale of real estate **must be in writing** and signed by the party to be bound. This means practically that contracts for the sale of real estate must be signed by both parties. The contract is usually prepared in duplicate and one copy taken by the seller and the other by the purchaser.

IMPORTANCE OF CONTRACT.—Too much emphasis cannot be laid upon the importance, not only of having a written contract, but also upon its pro-

visions. In addition to the legal requirement that the contract be in writing, there is the practical reason that there are usually many details agreed upon, and a failure to reduce these to writing would result in many disputes as to what was actually agreed upon. Then, too, it must be borne in mind that **the essential part** of the entire transaction is **the contract.** The closing of title, delivery of deed, manner of apportioning rents, taxes, etc., are governed entirely by its provisions. All negotiations are deemed to be merged in the contract. Nothing may be added to it. It is, therefore, necessary that care be taken to state in the contract everything agreed upon.

FORM OF CONTRACT.—Slightly varying forms of contract are used in the different states. In general, however, any form of contract contains six general divisions:

1. Statement of parties
2. Description of property
3. Liens and incumbrances
4. Financial statement
5. Closing date and place
6. General stipulations

In certain states, notably California, there is coming into use a **three-party form of contract of sale,** comprising the buyer, the seller and a trustee. This form is used so that the deposit on the contract may be held in escrow until the title is closed. It prevents the seller receiving any money until the validity of his title is assured. Its chief objection is that, since the broker's commission is due on the signing of the contract, the seller is compelled to advance the commission from other funds.

STATEMENT OF PARTIES.—The names of the buyer and seller are usually stated in the contract, though that is not necessary, provided they sign the contract. An **infant** is not bound by his contract to sell and may recover or retain his real estate even if he has received the consideration and spent it. **Persons of unsound mind** are not bound by their contract. The question of competency seldom arises with regard to infants or insane persons as a practical matter. There is, however, one class of persons whose competency must always be examined, that is, **persons acting in a fiduciary capacity,** such as attorneys in fact, executors, and trustees. A purchaser, before contracting to purchase property from such a fiduciary, should always make sufficient investigation to satisfy himself that the fiduciary has authority to sell the property for the price and upon the terms agreed upon, otherwise the fiduciary has no authority to contract.

DESCRIPTION OF PROPERTY.—The property to be transferred should always be described with sufficient particularity to permit of absolute identification of the property. It is not needful that the description be drawn with as much particularity as the description in the deed, for the reason that the contract will be carried out within a short period of time, while the deed must identify the property forever. Consequently, it is often satisfactory to use a description by street number in the contract because the building will probably not be destroyed and so completely obliterated as to prevent identification within the contract period. In a deed, however, such a description should not be used as complete removal of the building might in later years create a question as to the exact location of the property.

The **usual methods of describing real estate** are: (1) metes and bounds, (2) monuments, and (3) map.

Metes (distance) and bounds (direction) is the usual method of describing city property. That form of description is used in the contract reproduced on page 1037. A description by **monuments** makes use of the physical features of the terrain to identify the boundaries of the property. For a specimen

see page 1039 where a farm is diagrammed and then described by monuments. Both the foregoing types of description have for their purpose the identification of the property by going around it. Special care must be exercised by the seller to describe no more than he owns and by the purchaser to see that the description includes all he intends to buy. Monuments are **always dangerous** for the reason that physical features—trees, fences, water courses and the like—are apt to disappear or change. A metes and bounds description is more desirable, but if the data is unavailable and monuments must be used, try to select such as will be most permanent. Very often a combination of the two methods of description is used. In fact, wherever in a metes and bounds description reference is made to a line running through a wall or to the centre line of the block, monuments are being used.

The **description by map** is used usually in suburban areas which are being developed. A tract is acquired and a surveyor makes a map indicating roads and lots. This map is given a title and filed in the office of the county clerk or register of the county in which the tract is located. The various lots are designated on the map as is also each block. The tract is then physically opened by indication on the ground of the streets (which may or may not be physically prepared) and the lots are usually staked off. When a lot upon such a development is transferred, it is customary not to describe it by metes and bounds, but rather to describe it by reference to the map. This is done by a form of description which designates the map and then refers to the lot or lots and the block in which they are located; for example, all that certain lot known and designated upon a certain map entitled "Map of property of James Brown, at Ocean View, Nassau County, New York" surveyed June 1, 1924, by William Smith, Civil Engineer and Surveyor and filed in the office of the Clerk of the County of Nassau, as and by the lot numbers 10, 11 and 12 in block B.

Statement of Liens and Encumbrances.—It should always be remembered by the seller that his duty under the contract is to give a title free of all liens and encumbrances except such as may be excepted by the contract. Consequently, any such as exist and subject to which the property is to be sold, must be made known to the purchaser and inserted in the contract. In like manner the purchaser should scrutinize the liens and encumbrances mentioned in the contract to be sure they do not jeopardize his ownership or use of the property. These matters are usually inserted in the contract after the description, though several are mentioned at other places. Brief scrutiny may be given the liens and encumbrances most usually mentioned.

Tenancies.—The rights of tenants should always be mentioned in a contract, this for the reason that unless they are mentioned, the seller can be compelled by law to deliver an empty house. He is sufficiently protected if he merely states that the premises are sold "subject to the rights of tenants." The purchaser, however, is buying the property relying to a considerable extent on its present earnings. He has been told in the negotiations that the rents are a certain amount. He would probably not be willing to purchase the property if the rents were considerably less than the amount stated to him. He also may be relying considerably upon the length of term of the various tenancies. He, therefore, should insist that the contract state not only that the premises are sold subject to rights of tenants, but should have inserted in the contract the details of the rent and length of term of each tenancy.

Restrictions.—Restrictions may and often do very greatly **affect the value of property.** If the restriction is a **set back,** it prevents more than a certain amount of the lot being built upon. If it is a restriction as to use it may greatly

decrease the earning power of the property. Other types of restrictions will affect the desirability of the property. If the purchaser is acquiring an **unimproved lot,** he is concerned for the reasons just stated. If he is purchasing **improved real estate,** he should desire to know that there are no restrictions which are violated by the existing structure and its present use. The seller, if there are restrictions on the property, should state them in the contract without fail, as otherwise he is undertaking to deliver a title which he cannot, since he cannot give title free of the restrictions. The purchaser should see to it that the restrictions where stated are stated with sufficient particularity so that he may know what he is purchasing—if unimproved property, something upon which he can build what he has in mind; or if improved property, that he can continue its present use.

Zoning Restrictions.—In New York and many other cities the municipal authorities have laid out various zones in which the use of premises are restricted. These restrictions usually apply to height of building, use of building, or area which may be built upon. Such zoning restrictions are a serious matter to the purchaser. They are equally serious to the seller, for if he fails to mention them, he is undertaking by his contract to give a title which he cannot make good. The purchaser on his part should either know exactly in what zone the property is located or else have the contract state it definitely.

Easements.—Easements may be defined for practical purposes as certain rights to which one piece of property is entitled as against neighboring property, such as the right to have a party wall continue to stand partly on each piece of property, and driveway easements. In large cities, where land is quite valuable, it is often desirable to have one driveway between two buildings serving the garages at the rear of the lots. Each garage will stand upon the land of its owner. The driveway will be equally upon each lot. This gives each owner an additional 3½ or 4 feet, since instead of each owner having a 7 or 8 foot driveway, one driveway serves both. If such an easement is created, neither owner can, without consent of the other, sell the property except subject to the neighbor's right to the continuation of the driveway easement. Consequently, the seller, in such circumstances, would be unable to give good title unless he stated in the contract that the premises are sold subject to the easement. Of similar nature and effect are the consents which may have been given by the seller or previous owner of the property for trolley, subway and elevated railroad use of the street, maintenance of gas, electricity and telephone lines under or over the property.

Survey Variations.—Buildings, fences and other structures often fail to stand exactly on the boundary line of property. Occasionally the man who is selling his property is in the position where either he encroaches on his neighbor or his neighbor encroaches upon him. Either of these situations may make the title unmarketable, in which event the seller cannot carry out his contract unless he has stated in the contract the fact that he is selling the property **"subject to any state of facts an accurate survey may show."** While this protects the seller, the purchaser should see to it that he either knows the exact situation by having examined the survey, or else have the contract state the exact nature of the variation so that he may decide before signing the contract whether or not he wishes to buy the property in that condition.

Installment Assessments.—Wherever real estate is benefited by a local public improvement, some part or all of the cost of the improvement is levied as an assessment against the various pieces of real estate benefited. Such assessments are liens upon each piece of property. It is the seller's duty,

except where otherwise agreed, to pay all such assessments as exist at the time the title is transferred. Occasionally such assessments, when large in amount, are apportioned over a period of years, being what are known as "installment assessments." The contract, to protect the purchaser, particularly where the premises are in a developing neighborhood, should contain a provision under the terms of which the seller binds himself to pay all future installments of any such assessment.

Departmental Violations.—In New York and many other cities there are various departments which have jurisdiction of the use and erection of buildings. These departments have the right to enforce their orders, but their orders are not liens against the property until some legal action is taken by the municipality. This creates a peculiar situation. There may be orders issued against the property which will cost considerable money to carry out. If the owner sells the property without carrying out the order and before any legal action has been taken, he is able to give a marketable title and compel the purchaser to take it. Yet the order continues and the purchaser will be compelled to carry it out. It is for this reason that contracts often, in order to protect the purchaser, contain a provision which states in substance that all notices, orders and violations of any municipal department shall be considered as liens and be removed by the seller.

Personal Property.—The description of a piece of land in a contract by implication obligates the seller to deliver not only the land but all **buildings and fixtures** thereon erected; this by reason of the rule of law which states that anything definitely and permanently fixed to the land or the building is considered as part of the land. There are, however, many articles about which question might arise. In order to avoid dispute it is customary to insert in the contract a provision stating that all personal property used in or appurtenant to the premises is included in the sale.

FINANCIAL STATEMENT.—The financial statement in the contract may take **four parts:** (a) deposit; (b) cash on closing; (c) existing mortgage or mortgages; (d) purchase money mortgage. The deposit and cash on closing are present in practically every contract. The remaining two parts may or may not be present depending upon whether there is an existing mortgage or mortgages, subject to which the property is sold, and whether or not the parties have agreed upon a purchase money mortgage.

The **amount of the deposit** is not fixed by law, but normally will be from 10% to 15% of the total price. The amount of cash on closing will be the balance remaining after deducting from the price the total of deposit, existing mortgage, and purchase money mortgage. It is customary for the deposit on the contract to be paid on the signing of the contract in cash or uncertified check. There is no necessity for a certified check in view of the fact that title does not then pass to the purchaser. It is usual to provide that the payment on closing be made in cash, although at the time of closing it is customary to accept a certified check.

As to the **existing mortgage,** there should be a statement with some particularity of the amount of said mortgage, the date the principal becomes due, the interest rate, and the dates when interest is payable. The contract should also provide for, not only the amount of the purchase money mortgage, but its terms—the date of payment of principal or installments thereof, the interest rate and the interest payment dates. Customarily it is provided that the **purchase money bond and mortgage** be drawn by the seller's attorney and that the purchaser pay the expense, i.e., cost of drawing the bond and mortgage,

mortgage tax, if any, recording fees and internal revenue stamps on the bond. The contract also often provides for special clauses in the purchase money mortgage, such, for instance, as the subordination and lifting clause, and the default in prior mortgage clause. The **subordination and lifting clause** has the effect of reciting that the purchase money mortgage is subordinate to whatever prior mortgages there may be and provides that the purchase money mortgage shall remain subordinate to any renewal or replacement of the prior mortgage. The default in prior mortgage clause permits the holder of the purchase money mortgage to foreclose his mortgage should the purchaser or later owner of the property default in any of the terms or conditions of the prior mortgage or mortgages. This is an important clause, as it makes it possible for the holder of the purchase money junior mortgagee to keep the holder of the prior mortgage quiescent while he (the holder of the junior mortgage) is foreclosing his own mortgage, thereby avoiding the necessity of refinancing the entire property which would happen if the prior mortgage were foreclosed.

CLOSING DATE.—It is customary to state in the contract of sale a date upon which title shall be closed. By this is meant the date upon which the **final payment** shall be made and **a deed delivered** by the seller to the purchaser, who then becomes entitled to possession of the property. The date set is usually sufficiently after the date of the contract to permit of examination of the title by the purchaser. This period is usually from 30 to 60 days. Contracts for the sale of real estate are not considered by the courts as being contracts in which time is of the essence. Consequently, even though the contract fixes a time and place of closing, either party may, upon reasonable excuse, demand an adjournment of closing. If it is desired to prevent this, it may be done by inserting in the contract the stipulation that "time is of the essence of this contract," or similar words. It should be borne in mind, however, that even though either of the parties may be entitled to an adjournment, nevertheless, when the title is finally closed, it may be closed as of the original closing date should the other party desire it. Normally in the sale of improved property, if the adjournment has been secured by the seller, the purchaser will insist upon the title closing as of the original date. This is for the reason that the rents usually will exceed the carrying charges.

GENERAL STIPULATIONS.—In addition to the provisions of the contract which have already been discussed, there are certain other general clauses which usually are inserted. Since it is impracticable for the seller to collect rents and pay charges up to the exact date of closing title, it is usual to provide for an adjustment of such running items as **rent, interest on mortgages, insurance premiums, taxes and water charges.** A reference to the subsection on "Closing of Title" will indicate just how this purpose is accomplished. The contract binds the seller not only to deliver possession but to convey the title by preparing, executing, acknowledging and delivering, at his own expense, a deed in proper form to convey the fee title to the purchaser. **The deposit is made a lien** upon the specific real estate described. This is of great value to the purchaser in enforcing his rights upon a default. He may seek relief from the property directly, without the circuitous method of suing the seller and then enforcing his judgment against the property. In order to avoid any question as to who shall carry **insurance** pending the closing of title, it is usual to provide that the seller, who already has insurance, shall carry the risk until the title closing. The contract should, by a clause inserted, bind the successors and assigns of the parties. In this way, even if a party die, his heirs or legal representatives may be compelled to carry it out. The **brokerage clause** is usually

included in the contract. It is not a necessary part. The purchaser seldom agrees to pay the broker; his agreement is with the seller. The only object of the provision is to prevent the seller from later denying the broker's employment and accomplishment.

EXECUTION OF CONTRACT.—The execution of the contract of sale may involve **four acts,** namely, signing, sealing, witnessing and acknowledging. The instrument must be **signed.** This is generally accomplished by having buyer and seller each sign both copies of the contract. Each then keeps a copy bearing both signatures. The instrument **need not be sealed.** The only practical effect of sealing at the present time in New York State is that the statutory period of limitations to bring action upon the instrument is greater than upon an unsealed instrument. Until recently the seal was held to prohibit either party from considering the other as a dummy and going behind the dummy for relief, in the event of default, against the undisclosed principal. That rule of law has been abrogated in New York, though it is still the law in many states. The instrument **may be witnessed,** although that is not necessary. It is, however, customary to have one or two witnesses sign their names as such. The instrument **need not be acknowledged** and in fact seldom is acknowledged. Occasionally the purchaser desires to record the contract. If that is to be done, the parties must acknowledge their signatures and the **certificate of acknowledgment** be attached to the instrument.

NON-PERFORMANCE.—In the event of non-performance of the contract, certain rights and obligations arise as between the parties. **If the purchaser default** in the contract, he is subject to the ordinary rules of law that he may be held to pay any damages for the loss of the seller's bargain; that is, the difference between what the property was actually worth and what the purchaser had agreed to pay for it. As to the **seller,** the law differs somewhat from the ordinary contract. The seller is undertaking to give title. Title at the best is a conjectural matter. The seller may think he has a marketable title but some error may have been made in previous examination of the title, or there may be discovered some flaw of which he had no knowledge, such as a forgery. The law, therefore, looks more leniently upon the seller than upon the purchaser. If the seller fails to carry out his contract because of the fact that his title is bad without his knowledge, the law will not compel him to do more than refund the deposit and pay the purchaser's legitimate expenses for the examination of the title. If, however, the seller either knew that his title was bad or should have known it, or willfully refuses title, then the law compels him to pay the purchaser's damages for loss of the bargain, namely, the difference between the purchase price and the actual value of the property. Legal advise should always be sought before any step is taken. It is well, however, to bear in mind that the purchaser should never serve notice on the seller that because of the seller's failure to carry out the contract the purchaser considers the contract cancelled. This step is very often taken before securing legal advice. Its result is disastrous to the purchaser for the reason that he thereby waives the right to enforce his lien upon the property for the amount of the deposit and his expenses.

CONTRACTS FOR EXCHANGE.—In the contract of sale one party has agreed to deliver real estate, the other party has undertaken to give money or promises (mortgages), or both. Occasionally the parties wish to exchange real estate either on an even valuation, as to equity above mortgages, or with additional cash. In such a case the contract of exchange is used. The following

shows the form of exchange contracts used by the title companies in New York City.

Form of Contract for Exchange of Real Estate

AGREEMENT, made and dated , between

hereinafter described as party of the first part, and

hereinafter described as party of the second part, for the exchange of real property.

WITNESSETH, as follows:

The party of the first part, in consideration of one dollar, the receipt of which is hereby acknowledged, and of the conveyance by the party of the second part hereinafter agreed to be made, hereby agrees to sell, grant and convey to the party of the second part, at a valuation, for the purpose of this contract, of

Dollars,

ALL that land with the buildings and improvement thereon, in the

The premises which are to be conveyed by the party of the first part shall be conveyed subject to the following encumbrances:

The party of the second part, in consideration of one dollar, the receipt of which is hereby acknowledged, and of the conveyance by the party of the first part, hereinbefore agreed to be made, hereby agrees to sell, grant and convey to the party of the first part, at a valuation for the purpose of this contract, of

Dollars,

ALL that land with the buildings and improvements thereon in the

The premises which are to be conveyed by the party of the second part shall be conveyed subject to the following encumbrances:

The difference between the values of the respective premises, over and above encumbrances, for the purpose of this contract, shall be deemed to be

Dollars, and that sum shall be due and payable as follows, by the party of the

The deeds shall be delivered and exchanged at the office of

at o'clock on 19 .

It is agreed by the respective parties hereto that

brought about this exchange and that the brokerage shall be paid as follows:

Encroachments of stoops, areas or cellar steps if any, upon any street or highway.

Each of the parties shall give and each of the parties shall accept a title such as the Title Guarantee and Trust Company will approve and insure.

Rents and interest on mortgages, if any, are to be apportioned, and the risk of loss or damage to the premises by fire, until the delivery of the deeds is to be borne by the respective sellers.

If there be water meters on the premises, the respective sellers shall furnish readings to dates not more than thirty days prior to the time herein set for closing title and the unfixed meter charges for the intervening time shall be apportioned on the basis of such last readings.

All personal property appurtenant to or used in the operation of said premises is represented to be owned by the respective sellers and is included in this exchange.

This contract covers all right, title and interest of the respective sellers, of, in and to any lands lying in the bed of any street, road or avenue, opened or proposed, in front of or adjoining the premises to be conveyed to the centre line thereof, and all right, title, and interest of the respective sellers in and to any awards made or to be made in lieu thereof, and in any award for damage to said premises by reason of change of grade of any street; and the sellers will execute and deliver to the purchasers, on closing of title, or thereafter, on demand, all proper instruments for the conveyance of such title and the assignment and collection of such awards.

If there be a mortgage on the premises and such mortgage has been reduced by payments on account of the principal thereof, then the seller agrees to deliver to the purchaser at the time of delivery of the deed a proper certificate executed and acknowledged by the holder of such mortgage and in form for recording, certifying as to the amount of the unpaid principal sum of such mortgage and rate of interest thereon, and the seller shall pay the fees for recording such certificate.

All notes or notices of violation of law or municipal ordinances, orders or requirements noted in or issued by the Tenement House Department, Fire Department, Building Department, Department of Water Supply, Gas and Electricity, or any other State or Municipal Department having jurisdiction, against or affecting the premises at the date hereof, shall be complied with by the seller and the premises shall be conveyed free of the same, and this provision of this contract shall survive delivery of the deed hereunder. The seller shall furnish the purchaser with an authorization to make the necessary searches therefor.

Subject to Building Restrictions and regulations contained in a resolution or ordinance adopted July 25, 1916, by the Board of Estimate and Apportionment of the City of New York, and amendments and additions thereto now in force.

Each of the parties agrees to convey the property hereinbefore described as sold by such party respectively, free from all encumbrances, except as above specified, and to execute, acknowledge and deliver to the other party, or to the assigns of the other party, a deed in proper statutory short form for record containing the usual full covenants and warranty, so as to convey to the grantee the fee simple of said premises free from all encumbrances except as herein stated. The deed, in each case, shall be drawn at the cost of the party of the first part thereto.

The stipulations aforesaid are to apply to and bind the heirs, executors, administrators, successors and assigns of the respective parties.

WITNESS the signature and seals of the above parties.

An examination of the form indicates its close similarity in principle to the contract of sale. There are, however, several points which should be noted. The parties may state any **value** upon their respective properties which they wish, provided the **cash difference** is not altered. Usually the values are inflated. This gives rise to the necessity of fixing definitely the **amount of brokerage.** The contract for exchange, therefore, usually contains a clause stating the names of the brokers for each party and the specific commission which shall be paid to each of them. If there is **one broker** working for both parties, it is customary to have the contract specify just what commission he shall be paid by each. Great care should be exercised in preparing a contract of exchange in order to avoid the confusion growing out of the fact that each party is agreeing to convey real estate and each piece is subject to mortgages, tenancies and other liens.

ILLUSTRATIVE CONTRACT OF SALE—The following is a typical form of contract. James Brown is selling to Martin Smith premises No. 12 Walnut Street, in the Borough of Manhattan, City of New York, and which are shown upon the diagram in Fig. 1.

The premises are improved with a six-family apartment building, rents $3,000 per year, the tenants having yearly leases. The price is $18,000, to be paid as follows: $2,000 on the contract, $4,000 on closing of title, $3,000 by delivery of the purchaser's bond and purchase money mortgage to secure that amount with interest at 6% per annum and payable in semi-annual installments

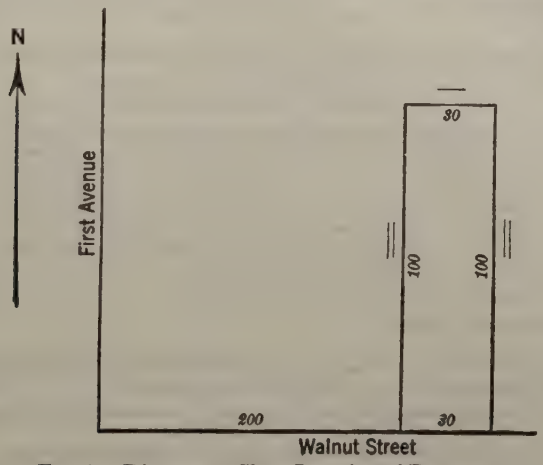

FIG. 1. Diagram to Show Location of Property

of $500 and interest, until paid; the balance, $9,000 by the purchaser taking title subject to a mortgage to secure that amount. It is agreed that title shall be closed in 30 days from date of contract and that John Jones is the broker in the transaction.

Typical Contract of Sale of Real Estate

AGREEMENT made and dated *June 15th, 1925* between *JAMES BROWN,*

hereinafter described as the seller, and *MARTIN SMITH,*

hereinafter described as the purchaser,

WITNESSETH, that the seller agrees to sell and convey, and the purchaser agrees to purchase all that lot or parcel of land, with the buildings and improvements thereon, in *the Borough of Manhattan, City, County and State of New York, bounded and described as follows, to wit:*

BEGINNING at a point on the northerly side of Walnut Street, two hundred (200) feet easterly from the corner formed by the intersection of the northerly side of Walnut Street and

the easterly side of First Avenue; running thence northerly parallel to First Avenue one hundred (100) feet; thence easterly parallel to Walnut Street thirty (30) feet; thence southerly again parallel to First Avenue one hundred (100) feet to the northerly side of Walnut Street, and thence westerly along the northerly side of Walnut Street thirty (30) feet to the point or place of beginning.

The premises are sold subject to an existing mortgage of $9,000.00 hereinafter mentioned. Also subject to the rights of the present tenants each of whom has a lease for one year expiring September 30, 1925, and the gross rentals being $3,000.00.

The price is

$18,000.00

Dollars, payable as follows:

$2,000.00

Dollars on the signing of this contract, the receipt of which is hereby acknowledged.

$4,000.00

Dollars in cash on the delivery of the deed as hereinafter provided.

$9,000.00 by the purchaser taking title subject to a mortgage to secure that amount which mortgage becomes payable January 1, 1928, and runs with interest at 6% per annum.

$3,000.00 by the purchaser executing and delivering on the closing of title his bond and purchase money mortgage to secure that amount covering the above described premises and to be paid as follows: $500.00, six months after the date of closing title and a like amount semi-annually thereafter until the full amount of said mortgage is paid, with interest at 6% per annum payable with each installment. Said bond and mortgage shall be drawn by the attorney for the seller at the expense of the purchaser who shall pay the mortgage tax, recording fees, and revenue stamps on the bond. Said mortgage shall contain the usual junior mortgage clauses including the subordination and lifting clauses and defaul. in prior mortgage clause.

Said premises are sold subject to:

1. Building restrictions and regulations in resolution or ordinance adopted by the Board of Estimate and Apportionment of the City of New York, July 25th, 1916. and amendments and additions thereto now in force.

All personal property appurtenant to or used in the operation of said premises is represented to be owned by the seller and is included in this sale.

This sale covers all right, title and interest of the seller of, in and to any land lying in the bed of any street, road or avenue opened or proposed, in front of or adjoining said premises, to the centre line thereof, and all right, title, and interest of seller in and to any award made or to be made in lieu thereof, and in any award for damage to said premises by reason of change of grade of any street; and the seller will execute and deliver to the purchaser, on closing of title, or thereafter, on demand, all proper instruments for the conveyance of such title and the assignment and collection of any such award.

If at the time of the delivery of the deed the premises or any part thereof shall be or shall have been affected by an assessment or assessments which are or may become payable in annual installments, of which the first installment is then a charge or lien or has been paid, then for the purposes of this contract all the unpaid installments of any such assessment including those which are to become due and payable after the delivery of the deed, shall be deemed to be due and payable and to be liens upon the premises affected thereby and shall be paid and discharged by the seller upon the delivery of the deed.

The following are to be apportioned:

1. Rents and interest on mortgages.
2. Rents of gas ranges.
3. Insurance premiums on existing policies.
4. Taxes and water rates for the calendar year.

If there be a water meter on the premises, the seller shall furnish a reading to a date not more than thirty days prior to the time herein set for closing title and the unfixed meter charge for the intervening time shall be apportioned on the basis of such last reading.

All notes or notices of violation of law or municipal ordinances, orders or requirements noted in or issued by the Tenement House Department, Fire Department, Building Depart-

ment, Labor Department, Health Department, or other State or Municipal Department having jurisdiction, against or affecting the premises at the date hereof, shall be complied with by the seller and the premises shall be conveyed free of the same, and this provision of this contract shall survive delivery of the deed hereunder. The seller shall furnish the purchaser with an authorization to make the necessary searches therefor.

The deed shall be in proper statutory short form for record, shall contain the usual full covenants and warranty, and shall be duly executed and acknowledged by the seller, at the seller's expense, so as to convey to the purchaser, the fee simple of the said premises, free of all encumbrances except as herein stated.

All sums paid on account of this contract, and the reasonable expense of the examination of the title to said premises are hereby made liens thereon, but such liens shall not continue after default by the purchaser under this contract.

The risk of loss or damage to said premises by fire until the delivery of the deed is assumed by the seller.

The deed shall be delivered upon the receipt of said payments at the office of

John Jones, 18 East 14th Street, Manhattan, N. Y.

at *2 P. M.* o'clock on *July 15th* *1925.*

The stipulations aforesaid are to apply to and bind the heirs, executors, administrators, successors and assigns of the respective parties.

The seller agrees that

John Jones

brought about this sale and agrees to pay the broker's commission therefor.

WITNESS the signatures and seals of the above parties.

(*Signature*) [L. S.]

DESCRIPTION BY MONUMENTS.—The following in connection with the diagram in Fig. 2, on the next page, describes a property by monuments.

ALL that certain farm known as HILL TOP FARM at Scodack Landing, Ulster County, New York, which is more particularly bounded and described as follows:

COMMENCING at the southwesterly corner of said farm at the intersection of Little Brook with Sunset Turnpike; running thence northerly and northeasterly along said Little Brook to the point where said Little Brook is intersected by the stone fence forming the northeasterly boundary of the farm herein described; running thence southeasterly along said stone fence to an oak tree where the Sheep Lane crosses said stone fence; running thence along said Sheep Lane to its intersection with Sunset Turnpike, and thence along Sunset Turnpike to the point or place of beginning.

Title Examination and Insurance

NECESSITY FOR TITLE EXAMINATION.—Ownership of real property is evidenced by possession and title. In early days possession alone existed; there were no instruments in use. As long as the owner stayed in possession he was safe. Once let him leave the property and upon his return, he might find another in possession. The real owner was in a predicament because it was his word against the trespasser, and the trespasser usually succeeded in his claim because he had possession. This resulted in great fraud and a remedy was sought. There consequently arose the custom of evidencing the transfer of ownership by means of a deed signed by the seller and delivered to the purchaser. The custom later was made law under the Statute of Frauds. Thus a trespasser was unable to secure any advantage by stealthy seizure of possession since he was unable to show a deed to him.

FIG. 2. Diagram of Property Described by Monuments

DOCTRINE OF NOTICE.—Later the "doctrine of notice" was evolved. It was recognised that a person in possession might have a right to the property and the mere fact that he was in possession was actual notice to the world of his possible claim. That was quite fair as the person in possession was usually the owner. However, with the development of renting, mortgaging, etc., it became necessary to formulate some plan to protect those persons who owned and had let the property and those who had an interest, by lien or encumbrance, upon the property.

This situation was solved by **the recording acts** under which, in brief, a **public office** is designated, county clerk or register, in each county, and all instruments affecting real estate in that county are there recorded. All instruments properly recorded are presumed to give **"constructive notice"** to all persons. Everyone is presumed to know their contents and effect and is bound by them.

It is, therefore, necessary that a purchaser, prospective lender on mortgage or tenant, not only inspect the premises, but also **search the title** by having an examination made of the public records. This examination may be made by a skilled attorney or **title examiner.** He, however, does not guarantee his work except against carelessness, and even then he may be financially incapable of reimbursing his client for loss.

TITLE INSURANCE.—It is, therefore, far better to have the **title examined and insured by a title insurance company.** The theory of title insurance is that the applicant pays a charge which covers not only the cost of the examination but also contributes to a fund from which losses are paid. This charge is paid only once. Upon receiving an application for title examination, the company first makes a thorough examination of the title, this before it is insured. Whatever liens or encumbrances are revealed by the search are reported. The seller or mortgage borrower then clears up such of them as he has not excepted in his contract of sale, or if borrowing, such of them as would jeopardize the lien of the mortgage. The title is then closed and the deed and other instruments delivered. The **policy of title insurance** by which the purchaser or mortgage lender is insured is then delivered. In some states the policy insures only against defects of title which the records might reveal. In New York and most other states the insurance is absolute, covering forged records, misstatements and unrecorded instruments. The policy usually is in four subdivisions:

1. General agreement
2. Schedule A
3. Schedule B
4. General conditions

The **general agreement** is the first page and names the insured, the **amount of insurance** (being the price, if a sale, or amount of mortgage if a loan), is dated and signed by the title insurance company. **Schedule A designates** the estate of the insured—fee, life-estate, mortgagee, etc.—states how the estate was acquired by the insured, and gives a description of the property. This description should always tally with the deed or mortgage. **Schedule B** names those defects of title, liens and encumbrances against which the company does not insure. It will be noted that the company does not insure against any liens or encumbrances which its search revealed unless they have been cleared up. The last part of the policy is a statement of the **general conditions of the company's obligation.** First, the company guarantees that the title is marketable and in the condition stated in the policy. The company agrees to reimburse any loss to which the insured may be put in defending litigation and enforcing the title insured. Second, where the title is not in the condition insured, the company agrees to make good any loss the insured may sustain. The company reserves the right to defend any litigation through its own counsel.

When the insured later sells the property, he should use care to describe the property exactly as in his policy and to except those matters stated in Schedule B. He is thus undertaking to sell only what has been insured to him.

Title Closing

PREPARATION FOR CLOSING.—The closing of title is the point to which the contract leads. In fact, closing is merely the **performance of the contract** and everything is done exactly in accordance with its provisions. Each party should be prepared with all necessary information and instruments which will be desired at the closing. These matters should be prepared in advance in order that there may not be undue delay. Since the closing follows the terms of the contract, each party should come to the closing with it in hand. There are, however, various matters concerning each which require attention.

The Seller.—The seller should prepare, and either have executed or be ready to execute **his deed.** Usually it is better for the seller to be present at the closing, as there are often matters arising which may require his signature. He will do well to have ready **the bond and purchase money mortgage** (if the contract calls for such). He should have all his **insurance policies** and papers to prove

present status of existing mortgage (if it has been reduced or extended), also **latest receipts** for interest, taxes, water-rates. If the property is in possession of a tenant or tenants under written lease, the seller should be ready to produce the **lease or leases.**

It will be borne in mind that the purchaser has been having the title examined. In many cases the examiner calls for proof by affidavit of various matters or shows encumbrances upon the title which the seller must remove in order to carry out his contract. The seller will do well to arrange to have the purchaser, as soon as he receives his report of title, advise the seller of any such matters. This enables the seller to dispose of them before or at the closing instead of not becoming aware of them until the closing and being compelled to ask an adjournment in order to dispose of them.

The Purchaser.—In addition to his contract the purchaser should have his report of title and a survey. The **report of title** shows the condition of the seller's title. There may or may not be liens and encumbrances shown on the report. If there are none, all is well. If there are any liens and encumbrances, they will fall into either of two classes, i.e., those subject to which the property is being sold or those not excepted in the contract. Those not excepted must be removed by the seller. As to those which are to remain, it may be that proof will be required of their present status; thus, with a mortgage, proof may be necessary to show reduction or extension. All liens and encumbrances should be reported, to the seller as soon as known, so that he may have opportunity to remove them or get needed proof.

The report of title shows only the condition of the title. It does not indicate the physical situation, i.e., position of structures on the premises. A **survey** is necessary for this purpose. By it may be determined encroachments and other physical facts which may very seriously affect the title. In addition to the report of title and survey, an **inspection of the premises** should be made. This is important not only to make sure that there has been no change in the physical condition of the property, but also that every person in the premises may be questioned as to what interest he claims in the property, and if a tenant, the terms of his letting.

The purchaser should be financially prepared to conveniently close the title. Under the terms of the contract, he is to pay a certain sum. Adjustments of various items will, however, be made at the closing which will somewhat vary the amount. A satisfactory arrangement is for the purchaser to have a **certified check** for something less than the amount named in the contract, and cash or blank checks to cover the balance.

THE CLOSING.—The parties and their representatives will gather at the time and place of closing stated in the contract. Should it be necessary to take an **adjournment,** such adjournment should be agreed upon, reduced to writing and signed by the parties or their representatives. When the title is finally ready to be closed, and all parties are gathered, the purchaser should first examine his report of title to ascertain exactly the final condition of the title and what instruments and proofs he desires. He should also make certain that the survey and inspection are satisfactory, and most important, that there is no doubt of the identity of the seller. The deed, bond and mortgage (if there is one) and other instruments should then be examined for form and substance, and if proper, should be executed by the respective parties. Among other things the purchaser should always take from the seller a **letter of notification** to the tenants advising them of the sale.

ADJUSTMENTS.—Nothing now remains but the adjustment of items which the contract provides shall be apportioned, and the computation of the amount which the purchaser shall pay. This may be more easily explained by an **example.**

Assume the following facts: The price is $20,000; $1,000 was paid on signing contract; $4,000 is to be paid on the closing. The purchaser takes title subject to an existing mortgage of $10,000 and gives back his bond and purchase money mortgage for $5,000. It is agreed in the contract that interest on mortgage, taxes, water-rates, insurance premiums and rents shall be apportioned. The data with reference to the **items to be apportioned** is revealed by the title search or inquiry on the closing. Assume that the following facts have been ascertained: Interest on the existing mortgage runs at rate of 6% per annum and is payable January 1 and July 1. Taxes (since the premises are in New York City) are payable May and November 1 and amount to $288 for each half year. There is a water meter in the premises and the last receipted bill shows a charge of $13.65 for the period from January 1 to March 31. The building is insured for $15,000 for three years, dated March 1 immediately preceding the closing; premium $36. Three families are in possession as tenants, paying respectively $125, $100 and $75 per month, the rent of all tenants being due on the first of each month in advance and having been paid for the month in which title is closed. Title is closed on June 15.

Statement of Adjustments.—The statement of adjustments is prepared in **credit and debit form;** the credits in favor of the purchaser and debits in favor of the seller. Using the example, the **credits** would be as follows: Amount paid on contract $1,000; existing mortgage $10,000; interest on that mortgage at 6% from January 1 to June 15, $275, this for the reason that the interest is not paid in advance, and the purchaser on July 1 will pay the mortgage lender a full six months' interest; next, the purchase money mortgage $5,000; rents $150, since the seller has collected for the full month of June, and title is passing in the middle of the month. The **debits** allowed to the seller: Price $20,000. The tax adjustment is apparently complicated for the reason (often not understood) that taxes in New York City are levied for the calendar year; the payment on May 1, therefore, covering the period expiring June 30. Consequently, in the instant case, the purchaser must allow the seller the tax for one-half a month which based on the amount of $288, paid May 1, for the half year, would be $24. The fire insurance premium was paid in advance by the seller for 3 years on March 1. Only 3½ months' premium has been used, so that the seller receives an allowance for the unexpired term $32.50.

The adjustments when figured are usually set up as indicated on the following form, by which is ascertained the balance due, and which amount when paid by the purchaser to the seller completes the transaction. The instruments are delivered and recorded usually by the title company's representative and the bill of the title company paid. In due course the title insurance policy is delivered to the purchaser.

Credit		Debit	
Paid on contract	$ 1,000.00	Price	$20,000.00
Existing mortgage	10,000.00	Taxes, ½ month	24.00
Interest, 5½ months	275.00	Insurance	32.50
Purchase money mortgage	5,000.00		
Rents, ½ month	150.00		
Total credits	$16,425.00	Total debits	$20,056.50
		Total credits	16,425.00
		Balance	$ 3,631.50

Adjustments on Mortgage Loan.—The computation upon a mortgage loan is much simpler. All liens must be disposed of by the borrower, who also pays all expenses in connection with the loan. Such items as unpaid taxes, assessments and water rates are computed with interest to date. To the sum of these is added the expenses for the title examination, drawing papers, survey, mortgage tax (if any), recording, and revenue stamps. The total of all the above is deducted by the lender, who will pay them from the amount of the loan and pay the balance to the borrower.

Deeds, Bonds and Mortgages

PURPOSE OF THE DEED.—The deed is the instrument by which title to real property is transferred. It is the means by which the seller divests himself of title and which, when delivered to the purchaser, vests legal title in him and evidences his ownership of the property.

FORMS OF DEED.—There are **two principal types** of deed—the bargain and sale deed and the quit-claim deed. An understanding of the two is desirable. The **bargain and sale deed,** regardless of what covenants it may contain, always uses the word "grant" while the **quit-claim deed** omits "grant" but uses the words "remise, release and quit-claim." The use of the word "grant" implies in law a warranty on the part of the grantor that the grantor has possession of the property either personally or by his tenants or agents. Consequently, if one desires to convey an interest which is vague, conjectural or only a possible cloud on the title, he should never use other than a quit-claim deed. In that way he does not warrant anything but simply transfers whatever interest (if any) he may have in the property.

The bargain and sale deed has several variations: the full covenant and warranty deed, the executor's deed, the deed with covenant against grantor's acts, and the simple bargain and sale form without any covenants. Each is used to accomplish a definite purpose. It must be borne in mind always that the title search reveals only what the records show; there may be outstanding unrecorded instruments, misstatements on the record or forgeries. These are not apparent at the time of transfer, but may later arise to cause trouble. The purpose, therefore, of all the covenants is, to the extent of each, to bind the seller to protect the purchaser against, not only present existing undiscovered defects of title, but also those which may develop in the future. The full covenant and warranty deed contains usually five covenants and warranties. The wording varies somewhat in the different states but the substance is practically the same. These covenants are as follows:

Seizin.—"That the said ..... seized of the said premises in fee simple and has good right to convey the same." The grantor warrants that he has possession, title and the right to sell. For a breach of this covenant the seller may recover his damage up to the price he paid with interest.

Quiet Enjoyment.—"That the party of the second part shall quietly enjoy the said premises" is a guarantee that the purchaser shall not be disturbed in his possession of the property. Mere threats or claims are not a breach of this covenant. Any expenses to which the purchaser may be put in making good his right of possession are recoverable.

Encumbrances.—"That the said premises are free from encumbrances." Under this covenant the purchaser may recover from the seller any amount

which he may necessarily expend in paying off any encumbrances which are not excepted in the deed.

Further Assurance.—"That the party of the first part will execute or procure any further necessary assurance of title to said premises." The grantor agrees to procure and deliver any other instrument which may later appear to be requisite to give full title to the purchaser.

Warranty.—"That said.....will forever warrant the title to the said premises." This is the most important covenant. It is an absolute guarantee of full title. Should later developments show the title bad, the purchaser may recover the price and interest.

Following is a form of warranty deed with full covenants:

Warranty Deed with Full Convenants

THIS INDENTURE, made the day of

, nineteen hundred and twenty

Between

, part of the first part,

and

, part of the second part,

WITNESSETH, that the part of the first part, in consideration of

Dollars,

lawful money of the United States,

paid by the part of the second part, do hereby grant

and release unto the part of the second part,

and assigns forever,

ALL

Together with the appurtenances and all the estate and rights of the part of the first part in and to said premises.

To Have and to Hold the premises herein granted unto the part of the second part,

and assigns forever

And said

covenant as follows:

First.—That said

seized of the said premises in fee simple, and ha good right to convey the same;

Second.—That the part of the second part shall quietly enjoy the said premises;

Third.—That the said premises are free from incumbrances;

Fourth.—That the part of the first part will execute or procure any further necessary assurance of the title to said premises;

FIFTH.—That said
will forever warrant the title to said premises.

IN WITNESS WHEREOF, the part of the first part ha hereunto set

hand and seal the day and year first above written.

IN PRESENCE OF:

State of
County of } ss.:

On the day of , nineteen hundred and twenty ,

before me came
to me known to be the individual described in, and who executed, the foregoing instrument, and acknowledged to me that he executed the same.

State of
County of } ss.:

On the day of , nineteen hundred and twenty ,

before me came , the subscribing witness to the foregoing instrument, with whom I am personally acquainted, who, being by me duly sworn, did depose and say that he resides in

that he knows

to be the individual described in, and who executed the foregoing instrument; that he, said subscribing witness, was present, and saw execute the same; and that he, said witness, at the same time subscribed h name as witness thereto.

Executor's Deed.—It will be noted that the full covenant and warranty deed places a heavy burden on the seller. He should certainly know all about his title before he signs such a deed. An executor, acting under power of sale in a will, or other fiduciary, knows little of the title and is unwilling to make such rigorous guarantees. He is, however, ready to covenant that he, himself, has done nothing harmful. He will therefore use the bargain and sale deed with but one covenant: that against grantor's acts "the said..... covenants that he has not done or suffered anything whereby the said premises have been encumbered in any way whatever."

PREPARATION OF DEED.—It is desirable that legal instruments be prepared by counsel. Yet an understanding of certain points will be found helpful. The deed is **a single paper;** it is not prepared in duplicate as are contracts. It must be signed by the seller (sometimes designated grantor or party of the first part). It may be sealed, though that is not necessary in most states. The deed is **to be recorded** and, therefore, the signature of the seller must be proven by either the acknowledgment of the signer or the deposition of a subscribing witness. A **corporation** executes an instrument by affixing its seal. That is the important act. The seal is affixed by one of its officers so authorized by its directors or governing board. Such officer must be sworn and acknowledge the seal affixed to be the corporate seal, to have been by him affixed, and that he was properly authorized to do so.

Most states recognize the **dower right of a wife.** She must, therefore, release her dower in some way, in order for the purchaser to receive full title. This is customarily accomplished by having her join in the deed with her husband. The deed is not void if undated; the date is merely a memorandum.

The **description of the property** conveyed should be full and complete. It ould be sufficient to identify the property exactly at the present time and in e future. If monuments are designated, they should, if possible, be such as ill remain indefinitely.

Bearing in mind the effect of the covenant against encumbrances, it is neces- ary to enumerate in the deed all **liens and encumbrances** subject to which the roperty is being conveyed. These are usually set forth following the habendum; e., the clause reading "to have and to hold the premises herein granted unto he party of the second part, his heirs and assigns, forever."

PURPOSE OF BOND AND MORTGAGE.—The deed is the instrument sed to convey title unconditionally. The mortgage is merely a pledge and, herefore, conditional. When a loan is secured and land given as security, two nstruments, the bond and mortgage, are usually used. In some states a note s given instead of the bond. In some states, too, by reason of inconvenience nd delay in foreclosing, a deed of trust is used in place of the mortgage.

THE BOND.—The forms of the bond and mortgage are all very similar; hose given below being the New York forms. Each of the instruments as a definite purpose. **The bond** is in **three main divisions:** (1) the **acknowl- dgment of indebtedness;** (2) the **promise to pay;** and (3) **default provisions.** The borrower (designated as obligor or party of first part) admits his indebted- ess to the lender (obligee or party of second part) in a certain sum. He then roceeds to promise to repay this loan at a certain time or times with interest t a certain rate. If there are two or more borrowers, the lender usually insists hat their obligation be joint and several so that he may collect from all or one r any combination which is most convenient to him.

If the loan is payable at one time, the wording printed in the specimen bond nay be used. If, however, the principal is to be **paid in instalments,** changes o fit the case must be made as for example,

..... which sum said obligor does hereby covenant to pay o said obligee, his legal representatives or assigns, in instalments as follows: $1,000.00 r more thereof on the ..... day of ..... next ensuing, and a like um or more quarterly thereafter, until the full amount of principal is paid; together with he interest thereon from the date hereof and on the unpaid balance from time to time t the rate of 6% per annum and payable quarterly with each instalment of principal.

The **default provisions** have for their purpose the preservation of the pledge nd of the lender's equity. They consist usually of the interest clause, tax lause, fire insurance clause, and a blanket clause. The **interest and tax lauses** give the borrower a certain period of grace, and if he defaults, ermits the lender to recover his loan before a large amount of interest has ccumulated, or large amounts of taxes have been levied which become liens uperior to his mortgage. The lender wishes to be protected against impairment f the security by fire, and this clause compels the borrower to secure such **nsurance** for the benefit of the lender. Should the borrower fail to do so, the ender, himself, may procure it and demand payment of the principal sum. The **blanket clause** is added to bring into the bond, by reference, all the terms nd conditions of the mortgage.

The bond must be signed. It need not be sealed in most states. It is not ecorded; consequently in many states it is neither witnessed nor acknowl- dged. Dower has no bearing on the bond, and consequently the wife of the orrower need not sign unless she is a co-owner of the property, in which event is usual to have her join in the bond.

THE MORTGAGE.—The mortgage is the means by which real property is pledged as security for the bond. The borrower is the **mortgagor** or party of the first part; the lender is the **mortgagee** or party of the second part. The wife of the mortgagor must join in the instrument to release her dower, or else execute a separate paper. The amount of the loan and the time and manner of payment should coincide exactly with the bond. The same rules with reference to the description of the property in a deed govern a mortgage.

Following the description are certain covenants of the mortgagor. They are all for the benefit of the mortgagee. The nine covenants given in the form below are known as the **standard clauses.** The first clause is a promise to repay the loan. Therefore, even if the bond should be lost or destroyed, the terms of the bond, as stated in the mortgage, may be enforced. The second and fourth clauses are similar to the bond. The third clause prohibits impairment of the security by removal or demolition of structures on the property. Any such act may be enjoined. By the fifth clause the mortgagee, if he forecloses his mortgage, may apply to the court for a receiver to collect rents and manage the property for his benefit pending the foreclosure action. The sixth clause goes beyond the fourth clause in that the mortgagee may prevent sale of the property, or an interest in it, for defaulted taxes by paying them himself, adding the amount to the principal of the loan and collecting it from the proceeds of foreclosure sale. The seventh clause enables the mortgagee to compel the borrower to sign and deliver a statement of the amount due. This is important if the mortgagee wants to sell his mortgage, as the purchaser usually demands such a statement. The eighth clause clarifies the method of giving notice to the borrower. The warranty in the ninth clause has the same meaning as the similar clause in the full covenant and warranty deed.

In addition to the foregoing standard clauses, there are others often used. **The Brundage clause** permits the mortgagee to declare the mortgage immediately due in the event of new laws adding to taxation of the mortgagee's rights under either bond or mortgage. **The sale-in-one-parcel clause** avoids the necessity, where the mortgage covers several parcels some of which have been sold since the loan, of the mortgagee's selling the parcels separately, but lets him sell all the parcels in one large parcel.

Junior mortgages contain usually the following **clauses:**

This mortgage is subject and subordinate to ..... mortgage ..... given to secure the payment of ..... Dollars and interest, recorded in the office of the ..... of the County of ..... in Liber ..... of mortgages, page ....., now a prior lien on said premises and shall remain subordinate to any renewal or extension thereof or any new mortgage given to replace the same not in excess of $.....

And It Is Hereby Expressly Agreed, that should any default be made in the payment of the interest on ..... said prior mortgage.., and such interest remain unpaid and in arrears for the space of ten days, or should any suit be commenced to foreclose ..... said prior mortgage.., then the amount secured by this mortgage and the accompanying bond shall become and be due and payable at any time thereafter at the option of the owner or holder of this mortgage.

And It Is Hereby Further Expressly Agreed, that should any default be made in the payment of the interest on ..... said prior mortgage.., the holder of this mortgage may pay such interest, and the amount so paid, with legal interest thereon from the time of such payment, may be added to the indebtedness secured by this mortgage and the accompanying bond, and shall be deemed to be secured by this mortgage and said bond, and may be collected thereunder.

Of these the first is known as the **lifting clause.** By it the junior mortgage, in the event of payment of the prior mortgage, is held up (lifted) and prevented from taking the place of the prior mortgage, while a new prior mortgage is being negotiated. This clause is most important to the borrower. The second clause is known as **default-in-prior-mortgage-clause.** Its terms are self-evident. It makes it possible for the junior mortgagee to prevent default and foreclosure of the prior mortgage while he is foreclosing his own mortgage.

The mortgage is executed by signing it. It may, though in most states it need not, be sealed. Since it is to be recorded, it should be either acknowledged or attested by a subscribing witness. In many states there is a **mortgage tax.** In New York this tax is ½ of 1% of the principal, which is collected by the recording office.

ENFORCEMENT OF BOND AND MORTGAGE.—The lender is not compelled to resort to the mortgage. If there be a default, he may, if he wishes, sue on the bond, just as on any other promissory instrument. Ordinarily the loan is made in reliance upon the property, and recourse is had to it. Acting under the mortgage the lender may do one of three things: (1) become a mortgagee in possession; (2) foreclose by advertisement; or (3) foreclose by legal action.

A **mortgagee may take possession** only with the borrower's consent. This is seldom given. This relief is unsatisfactory for the further reason that the mortgagee in possession has no title to the property but is simply entitled and bound to manage the property, pay the carrying charges, apply the net profits to his loan, and ultimately, when he has recovered the amount of his loan and interest, turn back the property to the borrower.

Foreclosure by advertisement is quick and inexpensive. All that is required is advertisement and sale of the property in accordance with law and a deed to the purchaser at the sale. However, this remedy is seldom used for the reason that the purchaser has no adequate means of securing possession if the borrower refuses to surrender the property.

The **usual method** is to **foreclose by action.** This, as its name states, is a legal proceeding in a court having jurisdiction. Legal process is served upon the borrower, owner and all persons having liens subordinate to that of the lender. They all have opportunity to object to the claim of the lender. If an issue is raised, it is tried and decided. If decided in favor of the lender, or if there is a default, the court, either itself or by a referee, computes the amount due the lender. The property is then advertised for sale and sold under the direction of a referee or other officer designated for the purpose. The proceeds of the sale are applied to pay the expenses of the sale and the action. Taxes and other public liens are then paid. The balance is then applied to pay the lender's claim and interest. If there is more than sufficient, the surplus is deposited in the county treasurer's office (in New York City, the chamberlain) and is the property of the owner of the premises, subject to whatever other liens there may be. If there is not sufficient to satisfy the lender's claim, a judgment may be entered against the borrower for the amount of the deficiency, and enforced and collected from other property of the borrower.

Form of Bond

KNOW ALL MEN BY THESE PRESENTS,

THAT

hereinafter designated as the obligor , do hereby acknowledge to be indebted to

hereinafter designated as the obligee, in the sum of

dollars, lawful money of the United States, which sum said obligor do hereby covenant to pay to said obligee,

or assigns, on the day of nineteen hundred and , with interest thereon, to be computed from the day of , 19 , at the rate of per centum, per annum and to be paid on the day of next ensuing the date hereof, and thereafter.

And It Is Hereby Expressly Agreed That the whole of the said principal sum shall become due at the option of said obligee after default in the payment of interest for days, or after default in the payment of any instalment of principal for days, or after default in the payment of any tax, water rate or assessment for days after notice and demand. All of the covenants and agreements made by the said obligor in the mortgage covering premises therein described and collateral hereto, are hereby made part of this instrument.

Signed and sealed this day of , 192

Form of Mortgage

THIS MORTGAGE, made the day of nineteen hundred and twenty , between

, the mortgagor,

and

, the mortgagee.

WITNESSETH, that to secure the payment of an indebtedness in the sum of

dollars,

lawful money of the United States. to be paid on the day of , nineteen hundred and , with interest thereon to be computed from , at the rate of per centum per annum, and to be paid

according to a certain bond or obligation bearing even date herewith, the mortgagor hereby mortgages to the mortgagee.

And the Mortgagor covenants with the Mortgagee as follows:

1. That the mortgagor will pay the indebtedness as hereinbefore provided.
2. That the mortgagor will keep the buildings on the premises insured against loss by fire for the benefit of the mortgagee.
3. That no building on the premises shall be removed or demolished without the consent of the mortgagee.
4. That the whole of said principal sum shall become due after default in the payment of any installment of principal or of interest for days, or after default in the payment of any tax, water rate or assessment for days after notice and demand.
5. That the holder of this mortgage, in any action to foreclose it, shall be entitled to the appointment of a receiver.
6. That the mortgagor will pay all taxes, assessments or water rates, and in default thereof, the mortgagee may pay the same.
7. That the mortgagor within days upon request in person or within days upon request by mail will furnish a statement of the amount due on this mortgage.
8. That notice and demand or request may be in writing and may be served in person or by mail.
9. That the mortgagor warrants the title to the premises.

IN WITNESS WHEREOF, this mortgage has been duly executed by the mortgagor.

On the day of , nineteen hundred and twenty before me came , to me known, who, being by me duly sworn, did depose and say that he resides in , that he is the of , the corporation described in, and which executed, the foregoing instrument; that he knows the seal of said corporation; that the seal affixed to said instrument is such corporate seal; that it was so affixed by order of the board of of said corporation; and that he signed name thereto by like order.

Leases and Letting Agreements

DEFINITIONS.—The relation of landlord and tenant arises when one as owner or lessor grants to another, as tenant or lessee, the right to use real property in return for a definite periodical return in money, goods or services. That which is received by the landlord for the use of the land is called rent. The amount of the rent may not always be known definitely in advance, but if not known, the agreement will provide for a method of fixing the amount in the future. The **lease or letting agreement** is the agreement governing the tenancy. Its principal features are those stating the parties, premises, rent and term. The agreement need not be in writing unless the term is a period of more than one year. Under the Statute of Frauds a **lease for more than one year** must be in writing to be enforceable.

TENANCIES CONSIDERED AS TO TERM.—The term of a tenancy is important because of the fact that different legal classifications are based upon its term. Three classes are recognized: (1) month to month tenancies; (2) tenancies at will; and (3) tenancies for years.

Month to Month Tenancies.—A month to month tenancy is one in which the term is definitely fixed at one month for an agreed rental. It is the general understanding that the tenancy will continue for further successive monthly periods and the agreement is a **self-renewing one.** No action being taken by either party, it will be assumed the tenant may remain and that he will be liable for the rent from month to month. Tenancies of this kind have sometimes been called "monthly tenancies" but recent decisions indicate that "month to month" is a better name for them.

Under the New York law, a month to month tenant may remove at the end of any month without notice and without further liability for rent. The landlord, however, must give the tenant **30 days' notice** of his intention to terminate the tenancy. In making a rental of this kind, if it is to last for one month only, the landlord must as soon as making the agreement give the tenant notice to quit. If he fails to do so, the tenant may continue for the second month, or until the month ending at least thirty days after he receives the notice.

Verbal agreements for a month to month tenancy are legal and binding but it is advisable to have a written letting agreement if one can be obtained. The following may be suggested as a properly worded short form of agreement:

AGREEMENT dated ..... 192.., between .....
....., landlord, and ....., tenant.

The tenant hires from the landlord and the landlord lets to the tenant the following premises in the borough of ..... of the City of New York, to wit:

.....
.....
.....

The term begins ..... and ends .....

The rent is ..... Dollars, payable in advance. The tenant hereby agrees to permit applicants to inspect the interior of said premises between the hours of 10 A. M. and 5 P. M. daily and at or before the end of said term of this agreement to give up and surrender to the landlord full possession of said premises.

WITNESS the corporate seal of the landlord and the signature of one of its officers and the hand and seal of the tenant.

.....
.....

Tenancy at Will.—A tenancy at will is an **indefinite tenancy.** It is an agreement, written or oral, letting real property to a tenant upon a stipulated rental but without regard to the length of the term. It continues at the will of either party. It is, however, very similar to a month to month tenancy, especially if the rent is to be paid in monthly installments. Thirty days' notice of intention to terminate the letting is usually required on the part of both the tenant and the landlord.

Tenancy for a Year or Longer.—A lease for one year may be either oral or written. If the term is to be for more than one year, the lease must be in writing in order to be enforceable under the Statute of Frauds. The tenant is not entitled to receive notice of the landlord's intention to require him to remove at the end of the term. If he does not remove, he can be dispossessed. The landlord has the privilege, also, of considering him a holdover tenant for another term of one year at the same rent. A third option to the landlord is that he may notify the tenant that if he remains he does so as a month to month tenant. Unless a tenant is dispossessed, or notified that he is to be a month to month tenant, he has the right to hold possession for a further term of one year.

FORM OF LEASE.—There are a number of stationers' forms of leases, and many other special forms used by owners and agents. These various forms usually contain the clauses that are considered standard for all leases. The **"Gilsey" form** of lease may be mentioned as a well-known standard form in New York. The lease should be dated, give the names of landlord and tenant, describing them as such, a description of the premises, the length of the term (the date term shall commence and that on which it shall end), the amount of rent and how it is to be payable. A statement is sometimes made as to the use to which the tenant shall put the premises.

COVENANTS IN LEASE.—The agreement would be complete as a lease if it was signed at the end of the foregoing provisions. However, there are many contingencies that may arise and for which provision must be made by special clauses or covenants in the lease. Practically all of these covenants are inserted for the purpose of protecting the landlord. The only assurance the tenant gets is that he shall quietly and peaceably enjoy the use of the premises for the term of the lease, provided he pays the rent and performs all the covenants of the lease. Some of the **more important special clauses or covenants** usually included in a lease are those which provide as follows:

1. The tenant will take care of the premises, returning them to the landlord at the end of the term in good condition.
2. The tenant shall comply with orders issued by the various governmental departments having jurisdiction.
3. The tenant shall not assign the lease, sub-let the premises, or make any alteration without the landlord's consent in writing. The premises shall not be occupied for a purpose deemed disreputable or hazardous.
4. The tenant shall notify the landlord of any fire, and the landlord shall then repair the damage. If the damage is extensive the lease may terminate at the time of the fire.
5. The landlord and his agents may inspect the premises in reasonable hours, making necessary repairs and alterations. The landlord shall have the right to show premises, under certain restrictions, to prospective purchasers or tenants and may place "To Let" and "For Sale" signs on the building.
6. If the premises become vacant during the term, the landlord shall have the privilege of re-entry, and may also re-let the premises as the agent of the tenant. This clause should be so worded that a surrender and acceptance may not be implied, and that the liability of the tenant shall continue.
7. Many leases require the tenant to insure the plate glass for the benefit of the landlord, also to pay water charges, and sometimes taxes.
8. Tenant frequently holds landlord free from liability for damages to both persons and property.

SECURITY DEPOSITED UNDER LEASE AND GUARANTIES.—It is equently required that the faithful performance of the terms of a lease on the rt of the tenant be guaranteed by the deposit of a sum of money with the ndlord. Interest may be allowed on the deposit. A guaranty may also be in e form of a surety bond or agreement of guaranty made either by a surety mpany or one or more individuals. The lease will embody the clauses referring the deposit or guaranty.

TERMINATION OF LEASES.—All leases terminate on the last day of their rm without notice except, as has already been stated, certain notice must be ven under a month to month tenancy, and tenancies at will run indefinitely d require notice to terminate. Leases may be terminated before the end of e term by a **surrender of the premises by the tenant** and acceptance as such rrender by the landlord. A surrender may be definitely expressed as such, it may be an implied surrender and acceptance, as when the tenant abandons e premises and the landlord takes physical possession of them. If a lease is worded, a breach of the conditions may act as a limitation of the term, and e landlord may exercise his option and consider the lease terminated by the each. If a landlord causes or permits the premises to become uninhabitable ch condition might be construed to be a constructive eviction of the tenant, t this would not usually apply to lettings under which entire control of the emises passed to the tenant. The tenant could, if constructively evicted, nove and consider the lease terminated. A lease would usually be terminated the property were destroyed by fire or otherwise. The taking of property for blic purposes under the exercise of the right of eminent domain also acts a termination of a lease.

DISPOSSESS PROCEEDINGS.—A dispossess proceeding, sometimes called a nmary proceeding, is one brought by the landlord in a court of minor jurisdiction for the purpose of evicting a tenant from the premises. The right of dis-

possess is governed strictly by statute. It can be exercised only for (1) failure of the tenant to pay the rent as it becomes due; (2) failure of the tenant to remove at the end of the term—this is the dispossess of a holdover tenant; (3) use of the premises for unlawful purposes; (4) failure to pay taxes and assessments on the premises when the lease requires the tenant to pay them; (5) in the event of the tenant taking the benefit of an insolvent act, or if he is adjudged a bankrupt, provided, however, the lease is only for a term of 3 years or less. The dispossess proceeding consists of the filing of a petition setting forth the facts and the grounds for asking for a **warrant of dispossess.** The tenant is served with notice and has an opportunity to answer in court on the return day. If judgment is rendered for the landlord, a warrant of dispossess is issued. A **city marshal,** or other officer, is empowered to actually evict the tenant from the premises. A certain amount of discretion is allowed the court in dispossess proceedings, and leniency is often exercised in the case of illness or other matters that may appeal to the compassion of the judge.

EMERGENCY RENT LAWS.—Emergency rent laws were enacted in New York and some other states during and following the World War for the purpose of relieving the distress of tenants due to insufficient housing facilities and in order to restrain landlords from exacting unreasonable rents. They act as a **suspension of the right of dispossess** in many cases. Holdover tenants cannot be dispossessed at the end of the term of the lease unless it can be shown that they were objectionable tenants, or that the premises are required for the immediate use of the owner, or that the building is about to be demolished for the erection of a new building for which plans have been filed, or that stockholders in a building to be occupied co-operatively require possession for their own use. The rent laws have also had the effect of preventing landlords from dispossessing tenants for non-payment of rent where the rent can be shown to be unjust or unreasonable, and the terms of the lease oppressive. These laws are more or less temporary in character and were enacted because of the existing emergency.

GROUND LEASES.—Many large buildings are erected on leased land. Under leases of this kind, called "ground leases," the land is leased for a net rental for a long term of years. The tenant pays all charges and agrees to erect on the premises a building according to specified plans. The building becomes part of the land as soon as erected, but it is equitably the property of the tenant who has the right of possession during the term of his lease. The lease may provide for one or more renewal terms, also for a method of arbitration or otherwise for fixing the rent of the land for each successive term of the lease. The lessee of a plot upon which a building is to be erected has the problem of figuring the gross return from the proposed building. From this he will deduct the ground rent, all the expenses of maintenance, operation and repair of the building, interest on his investment, and amortization of the cost of the building. Anything left over after paying all of these charges would be a net return or profit on his operation.

The problem of the owner of the land in making a ground lease consists of a consideration of the following factors:

1. **Rent to be paid.** This should be sufficient to yield the owner a fair return on the value of his property. It is usually a net rental.

2. **Length of the term.** This should be sufficient to induce the lessee to erect the proposed building at his own expense. As the value of the land is likely to increase, provision is often made for a readjustment of the ground rent at the end of certain periods. For instance, if the lease is made for 21

years with the privilege of further renewals for terms of 21 years each, the rental of the land may be fixed by arbitration or otherwise, at the end of each of the terms.

3. **Building to be erected.** The owner of the land should know that the proposed building is an adequate improvement; that it will be carried through to completion; that if there are old buildings to be demolished, he will be secured against loss pending the erection of the new building. The new building becomes part of the land and is, therefore, the property of the owner, subject, however, to the terms of the lease.

Agency and Brokerage

DEFINITIONS.—A person who brings about real estate transactions between principals is called a broker, and his compensation is called **commission.** Commissions are paid him for each transaction and are in proportion to the amount involved in the transaction. If his compensation is a salary instead of a commission, he is a salesman and not a broker. A broker is usually the **agent** of one of the parties to the transaction. He may act as the agent of the owner in procuring a purchaser for property, or he may act as agent for the purchaser in securing a piece of property. He may also act as agent for a borrower in procuring a loan. Other transactions brought about by brokers are exchanges of real property and placing mortgage loans.

EMPLOYMENT OF BROKER.—For a broker to have a **legal claim for commission** on a transaction, it is necessary that he be able to show that he was employed by the one from whom he claims a commission. Simply bringing a purchaser to the owner of a piece of property does not give a broker legal claim for commission. A transaction resulting from such act would not make the principal liable for payment of a commission to the broker unless employment can be shown. The courts have held that owners cannot be enticed into the payment of a commission; it must have been their intention to employ the broker. Expressing it in another way, it has been said that volunteers are not paid for their services.

The best **contract of employment** for a broker is a written one. New York and some other states do not require that an authorization to sell property be in writing, but some states do require written authority. In New York, an oral agreement is as good as a written one, and the request of an owner of one whom he knows to be a broker, or who is apparently acting as a broker, to sell property would be construed as a contract of employment and therefore an agreement to pay a commission if a transaction be brought about. While a contract with the principal, either written or oral, expressed in words giving authority to sell and agreeing to pay a commission creates an express contract, the contract of employment may also be implied by the past acts of the parties. One who has been in the habit of dealing with the broker and paying commissions to him would be estopped from denying that he knew the broker was acting as such expecting to receive a commission on a new transaction. Employment may also be construed from other acts or past relations of the parties.

BROKER'S LICENSE.—In many states a license is required before a person or corporation may act as broker. Under the law in New York, it is unlawful to pay or accept compensation for bringing about real estate transactions unless the one receiving the compensation is a duly licensed broker. Application for a license is made to the Bureau of Licenses at Albany, N. Y., and a fee of $25 paid. While the applicant is supposed to be qualified to act as a broker,

apparently no attempt at an examination is made at the present time. Salesmen employed by brokers must have a salesman's license, the charge for which is $5. Some other states besides New York require real estate brokers to be licensed.

DUTIES OF BROKER.—A broker must be loyal to his employer. He must render him faithful service. If material facts come to his notice affecting the principal's interests, he should communicate them to the principal unless they had been told to him in confidence. If the broker is vested with the slightest discretion, his work is that of an agent and the moral principle, "No man can serve two masters," is applied to agencies. This principle precludes the broker from acting as the agent of both parties to a transaction unless both parties understand it and agree upon it. Unauthorized acceptance of a commission from the opposite side is not consistent with faithfulness, and forfeits the broker's right to collect a commission from his employer. Furthermore, a broker cannot pose as a broker and at the same time be the purchaser. He should not, therefore, sell property to himself and claim a commission for doing so unless such act is with the knowledge and consent of the seller. A secret interest in a transaction, or a secret agreement as to profits on a resale is treated as a violation of an agent's duties.

RIGHTS OF BROKER.—A broker, acting in good faith, and having been employed, is entitled to a fair opportunity to carry out the object of his employment. An owner cannot arbitrarily terminate an employment in order to avoid payment of a commission. However, an employment of a real estate broker is usually not for a definite time, and if the owner acts in good faith he can terminate it at will. A broker being given a fair chance to bring about a transaction, and failing to do so may have his agency terminated and thereafter the transaction in connection with the property may be brought about between the principals; and if they have acted in good faith, the broker, having been discharged, will have no claim for commission. All of the circumstances of the case would be taken into consideration in determining whether the broker had had a fair opportunity and that the principal had acted in good faith in discharging him.

The broker is entitled to rely on statements made by his employer and represent them as facts to a prospective purchaser. If a contract is induced by these statements and they afterwards prove to be untrue, the broker is still entitled to his commission. He acted in good faith relying on his employer's statements and accomplished that for which he was employed.

EARNING COMMISSIONS.—The general rules as to earning a commission are stated by "Gross on Real Estate Brokers" and are as follows: (1) show that he was employed; (2) be the procuring cause of the sale; (3) bring about the deal on the terms of his employer; (4) act in good faith; (5) produce an available purchaser who, under the general rule, is ready and willing to purchase and also legally able to do so; (6) bring about a completed transaction. Under some circumstances a broker can recover a commission by showing that he was the procuring cause of a sale. In every case, employment must be shown. That being a fact, if it can be demonstrated that efforts of the broker, such as advertising the property or offering it to the buyer, resulted in a sale, the broker's commission has been earned, even though he did not actually bring the parties together at the time the transaction was made.

WHEN COMMISSIONS ARE PAYABLE.—A commission becomes due and payable to a broker as soon as he accomplishes the object of his employment. If he is acting for a seller, his act of bringing to the seller a purchaser ready,

illing and able to buy the property on the terms stated by the seller would ntitle the agent to claim a commission. If the terms offered by such a purhaser were not those originally stated by the seller, but were such terms as he as willing to accept, the broker's commission would be earned. It is not necesary that a contract between the principals be drawn and signed, although written contract is the best evidence that a broker can produce to show that he transaction had been brought about. The broker's claim for commission loes not depend upon a signed contract. A contract may never arise, for there nay be circumstances under which the seller would refuse to sell, even after mploying the broker. In such cases if the broker's party answers the description of a ready, willing and able purchaser, the commission can be claimed.

It is not necessary that a broker defer the claim for his commission until the losing of title under a sales contract, and it is usually not considered good usiness for a broker to so defer his claim. There may be cases, however, that would be exceptions to this rule, such as contracts containing conditions that might prevent a final closing of the sale, and contracts under which the seller ccepts a lower price or a smaller deposit of earnest money, or more generous erms. As a condition to his acceptance of the altered conditions the owner may ave asked that the agent defer his commission. Such an agreement, if made y the broker, would be legal and binding on him, for it would be made for a onsideration, that is, to induce the owner to enter into a contract at a different rice or terms than originally contemplated. However, if the broker has done hat for which he is employed and without any consideration such as altering he terms, his agreement to defer payment of his commission would not be inding upon him. A statement made by a broker in which he ostensibly agreed o take a smaller commission, would not make an agreement binding upon im. Because of lack of consideration such agreement could not be enforced.

TERMINATION OF AGENCY.—The agency can be terminated at will y either party, or after the lapse of a reasonable period of time the agency may e deemed to have ceased. It is terminated by death or insanity of either party, lso by bankruptcy or by the destruction of the property. It is usually understood, except in the case of an exclusive agency, that an authorization to sell s subject to prior sale and a sales transaction, therefore, terminates the agency.

COMMISSIONS ON EXCHANGES.—In an exchange each principal is a urchaser and a seller at the same time. A broker may represent one or the other ide, and very often represents both sides. However, under the rule previously tated, he has no right to represent both sides unless it is understood by all f the parties. As there is often a large variation in the values of the respective arties, two or more brokers, in an exchange transaction often pool commissions nd divide them. The principals may pay agreed amounts of commission rather han a percentage of the arbitrary values stated in the contract.

COMMISSIONS ON LOANS.—The broker's commission in a mortgage oan transaction is **paid by the borrower.** His employment is to procure a loan f a definite amount and on specified terms on a piece of property. He becomes ntitled to a commission upon accomplishing the object of his employment by btaining an acceptance of the loan by a lender. If the borrower fails to take he money when it is made available for him by the broker he is nevertheless able for the broker's commission.

MANAGEMENT OF PROPERTY BY AGENT.—Management is a **branch f the broker's business.** In managing real property the broker acts as an gent of the owner for the purpose of securing tenants, collecting rents, making epairs and otherwise taking the place of the owner in the active management

of the property for the purpose of procuring an income from the property. The broker's skill and experience in making rentals, in managing all of the various details and the operation of the building, in keeping the building in sound condition, at the same time having the financial returns adequate, comprise his duties and he is paid for doing this. His compensation for management is a **percentage of the gross rents collected.** He may also, if he secures tenants and makes leases, obtain a commission on the gross rent called for by the lease.

RATES OF COMMISSIONS.—The amount of commission to which a broker is entitled is frequently based on a specific agreement between the broker and the principal. Real estate boards in various parts of the country have established the proper amount to be charged by brokers on various transactions, and it is usual that the agreed amount be at the established rates. In the absence of any agreement the amount that may be claimed by the agent is the one that is customary in the community for similar services, and the best indication of the customary amount is that computed at the rate fixed by the local real estate board.

Financing Real Estate

BORROWERS ON REAL ESTATE.—The ownership of real estate (land, buildings, and interest in them) is desirable and advantageous to many people. Owners of it, however, find that they must frequently borrow money on it, that is to say, they use it as security for mortgage loans. **Mortgage loans** are desired by a variety of owners, and for various purposes. The **ordinary home owner** is a borrower. Probably a majority of these would not own their own homes had they to pay for them in full in cash. Frequently, only a small proportion of the purchase price of a home is paid in cash, the balance being represented by one or more mortgages. The **first mortgage** is likely to be more or less permanent, especially if held by an institution of some kind. **Second or subordinate mortgages** are usually payable in installments over a period of years. The great value of the mortgage loan to the home owner is the opportunity given him to become an owner as soon as he has secured the initial payment. The investor finds that mortgages of this type may be classed among his very best investments.

Builders are large mortgage borrowers. By builders reference is made especially to what are known as speculative builders. These are the people who improve communities with new homes, apartment houses, and business buildings. The builder's operation must be financed for him; he seldom builds entirely with his own funds. He borrows money in the form of first mortgage loans on his buildings from private parties seeking investments, or from some of the great lending institutions. If the lender advances him the money as the building goes along to completion, the mortgage is called a **building loan mortgage.** In some cases the builder secures a second as well as a first mortgage. The second mortgage may represent cash invested by some one, or it may represent part or all of the purchase price of the land on which the building is being erected. The latter case is an example of **selling with "subordination."** Sales of lots with an agreement to furnish building loans and to subordinate all or part of the purchase price of the land, is called **selling with "terms."**

ADVANTAGES OF BORROWING.—Operators and investors find it advantageous to obtain mortgage loans. The **operator**—one who deals in land as stock in trade—can handle more property with his own capital investment

by borrowing a large proportion of the value of each parcel. His percentage of profit on his turnover will increase by reason of his borrowing, as the profit will be made on a comparatively small investment. The **investor**—one who intends to hold real estate for income—can often increase his income by mortgage borrowing. For **example,** suppose he owns a building costing $100,000 free from all mortgage debt. The gross rental is $15,000, the expenses—taxes, repairs, etc.—$7,000, leaving net income $8,000, or 8% on his investment of $100,000. Assume that he borrows from a savings bank on a first mortgage loan on the property $50,000 at 5½%. The annual interest charge of $2,750 will reduce net income to $5,250, but the investment of the owner in the property is now only $50,000, so that the rate of return has increased to 10½%.

In many parts of the country **farmers** are large borrowers. They may borrow to buy the farm, or to improve it with buildings, or to purchase live-stock, machinery, fertilizer, or seed. Banks formed under the Federal Farm Loan Act have assisted greatly in loans to farmers, and there are many other agencies for making farm loans.

BUILDING LOANS.—A building or construction loan, as it is sometimes called, is a loan made to finance the improvement of real property. It is usually secured by a **building loan bond and mortgage.** These instruments are in much the same form as other bonds and mortgages. They may, however, contain a reference to the building loan agreement which has been made between the parties. Such agreement is required under the provisions of the Mechanic's Lien Law of New York, which states that an agreement for a building loan must be in writing and must be filed in the office of the clerk of the county in which the property is located within ten days of execution. The purpose of the law is to protect those who may furnish material or perform labor in connection with the contemplated building, and it is desirable that they should know the amount of the building loan, its terms and provisions, and the manner in which the principal of the loan is to be advanced to the owner of the land. The **building loan agreement** contains the names of the parties, the amount, rate of interest and due date of the loan, the description of the property, a statement of the kind of building to be erected, a schedule of payments, and various other agreements and conditions.

The schedule of payments sets forth at what times and in what amounts portions of the loan shall be paid by the lender to the borrower. The **time of payment** is described as the various stages of construction, as "enclosure," "brown mortar," "white mortar," "standing trim" and "completion." The amounts to be paid may be stated as definite sums, or in the form of percentages of the total loans. Often no definite schedule is agreed upon, the statement being that the loan shall be advanced at such times and in such amounts as the lender may approve.

Other conditions of the building loan agreement are to the effect that the building shall be erected in accordance with the plans and specifications agreed upon, that construction shall be of good and workmanlike character, that it shall proceed continuously (sometimes limiting time of completion); provisions with regard to the title to the property, removing prior liens, inspections by representatives of the lender, notice required before payments can be demanded, and many others.

BUILDING LOAN PRACTICE IN NEW YORK.—A great many new buildings, especially in the large cities, are financed by building loan mortgages. Cities have been built up to a great extent by speculative builders, and financing the builders is an important and necessary part of the mortgage business. A

lender making building loans has submitted to him applications containing, among other things, a description of the property to be mortgaged. The application is accompanied by a specification and a set of plans of the proposed building. The lender appraises the land; he also figures the plans to ascertain as near as possible how much the building will cost. To the value of the land and the cost of the building, he may add an additional amount as builder's profit, the total being the estimated market value of the property on completion of the building. On these figures he will base the amount of the loan he will offer the builder.

Figuring the **plans to determine estimated cost** consists of computing the cubic contents of the building, or the number of feet of floor surface, from the dimensions shown on the plans, and applying to the result a certain factor. This factor is based on what is known to be the cost of similar buildings under existing market conditions. To **illustrate,** suppose the plans for a building show dimensions of 50′ x 70′ on the surface and a height of 52′. The cubic contents are 50′ x 70′ x 52′ or 182, 000 cubic feet. An examination of the specification will show the quality of construction required of the contractor. Say that from experience it is believed that the building will be one similar to those costing 35 cents a cubic foot to construct. The factor then is 35 cents, and the resultant cost, estimated, is $63,700. Putting the land at $20,000, the total cost of land and building would be $83,700. To this total might be added a figure to cover carrying charges during construction, and also a figure to represent the builder's profit. The final figure may be considered the estimated sales price.

The proper **proportion of value** that may with safety be **loaned** on a building loan mortgage is a matter of individual judgment. The legal limit for savings banks in New York State is 60%, but when costs are above normal the loan will probably be only 50% or less of sales price. Other institutions lend a greater proportion of value than do savings banks, and apparently with much success.

Payments are advanced on building loan mortgages as the building progresses towards completion. Practice differs as to the percentage of the total loan to be given the builder at the various stages of construction, but taking an average, it will be found that about 50% of the loan is made at "enclosure," or on a large building in various amounts which will aggregate 50% at enclosure; further payments are made at "brown mortar," "white mortar," "standing trim" and "completion." There are frequent exceptions to a schedule like the one indicated, either for the purpose of giving more payments at intermediate stages, or for limiting the total number of payments to two or three in all.

Searches of the title are made at or prior to time of first advance on a building loan mortgage, and are continued to the date of each advance at the time such advances are made. The object of the title search is that the lender may know that the mortgage is being made by the proper parties and that defects and prior encumbrances are disposed of to his satisfaction. Continuations of the search at the time of making future payments are for the purpose of seeing that no other claims, liens or interests have intervened.

Prudent lenders find it advisable to have a system of **inspection of the buildings** upon which they are advancing money. It is always important to the lender that the plans and specifications are being faithfully followed, and that all work is being done in a good and workmanlike manner. Advances are made when the builder is entitled to them, that is, when the building is up to the required stage, and all work usual at such stage has been done.

GUARANTEED MORTGAGES.—A guaranteed mortgage, as the term is usually used, is one made by an owner to a lender, and sold by the lender to an investor with the guaranty of the lender added. The guaranty is to the effect that the principal and interest shall be fully and promptly paid in accordance with the terms of the mortgage. The **agreement of guaranty** may take one of several forms as follows:

1. An endorsement of guaranty on the bond.
2. A covenant of guaranty contained in the assignment from lender to investor.
3. A separate instrument containing an agreement of guaranty. This is often called a mortgage guaranty policy.

The third of the foregoing methods is the one in use by the large title and mortgage companies in New York. The policy used by these companies contains certain covenants and provisions which govern their agreement of guaranty. Briefly, the guarantor is the agent of the investor for the collection of both the principal and interest on the mortgage, payment of interest to the investor being at the rate guaranteed, the difference, usually ½%, between the interest collected and that paid over being the premium or fee for the guaranty. At maturity the guarantor is allowed 18 months in which to collect the principal. This is a wise and necessary provision for the guarantor, although not often availed of. The guarantor sees that the premises are insured against loss by fire, usually keeping the fire insurance policies in its own possession. He also sees that taxes, assessments and water rates are fully and promptly paid. Legal actions to enforce the terms of the mortgage may be brought in the name of the investor, but at the expense of the guarantor.

MORTGAGE CERTIFICATES.—A mortgage may be split up among a number of investors by means of mortgage certificates, or as they are in reality, participation certificates. A lender may hold a bond and a mortgage which it will sell, it may be with or without its guaranty of payment. Instead of selling the loan to one investor, it issues a number of certificates, which may be of equal amounts or of varying amounts. An investor of $100, $500, or $1,000 will purchase a mortgage certificate of the desired amount. The certificate is in reality an evidence of the ownership by the investor of a participating share in the bond and mortgage against which it is issued. Frequently, the bond and mortgage is **assigned to a trustee** to hold for the benefit of all the certificate holders. The certificates are in such event authenticated by the trustee, who certifies that they are each part of all the certificates issued against the bond and mortgage it holds.

Mortgage participations may take other forms than that of the certificates just described. The certificates are usually co-ordinated in rank. By agreement participating interests in a mortgage may be assigned different ranks, as, for example, in the case where one investor takes a share in a mortgage with the agreement that his share is a prior one, that is, it shall have a first claim on the property. The holder of the balance of the mortgage debt is then in the relative position of a second mortgagee. He is paid his share only after the holder of the prior participation has been paid in full.

MORTGAGE BONDS.—An owner of real property in borrowing money may give a bond secured by a mortgage, both of which are to be held by the lender. A mortgage may, however, be made to secure a number of bonds or a series of bonds, and the separate bonds may be sold to different investors. Such bonds are called "mortgage bonds," or suiting the case, "First mortgage bonds" or "second mortgage bonds." They may be all of the same amount,

as, for instance, an issue of 1,000 bonds of $1,000 each, secured by a mortgage of $1,000,000 covering certain real estate. It is not necessary that each bond be of the same amount. Some may be $100 bonds, some $500 bonds, and others $1,000 bonds, but in the aggregate they will be for not more than the amount of the mortgage which secures the issue. A mortgage given to secure a bond issue is called a **trust mortgage,** and is held by a trustee who acts in the interests of all the of bondholders. The mortgage sets forth the provisions for the payment of principal and interest on the bonds, as well as other terms and conditions, including the rights and duties of the trustee, the bondholders, and the owner of the property.

Mortgage bonds may be in registered or coupon form. Each bond should be executed by the borrower, and should bear the trustee's endorsement showing that it is authentic and one of the total issue described. Sometimes there is a further endorsement of guaranty by some other person or corporation. It should be recognized that a reputable trustee does not make a bond a safe investment. The bond is good, that is, safe, if the property covered by the mortgage securing the bond is of sufficient value to afford full protection. Prudent investors will see that there is ample equity in the property over and above the total amount of the mortgage bonds. The guaranty of a reputable mortgage company adds to a bond's attractiveness. Mortgage bonds often become due serially. Every bond paid and redeemed makes the remainder of the issue better by the reduction of the total mortgage debt.

COLLATERAL TRUST BONDS.—A number of bonds and mortgages covering various parcels of real estate may be deposited with a trustee. Against such mortgages there will be issued a series of bonds, the total being not more and often less than the total amount of mortgages deposited. These bonds are not strictly mortgage bonds, in that they are not directly secured by a specific mortgage, but are called collateral trust bonds. They are authenticated, and sometimes guaranteed in much the same way as is the mortgage bond.

DEBENTURE BONDS.—A debenture bond is nothing more or less than an unsecured promise to pay. The fact that it is issued by a real estate concern does not make it a mortgage bond. There is a wide difference between a mortgage bond, secured by a mortgage on a definite piece of property, or a collateral trust bond secured by a number of mortgages, and a debenture bond. The value of the last mentioned depends entirely on the strength and solvency of the maker.

FEDERAL FARM LOAN BONDS.—The Federal Farm Loan Act divides the United States into twelve districts, in each of which is located a Federal Land Bank. Corporations known as **National Farm Loan Associations** may be formed in any community by ten or more citizens. The members shall be those who wish to borrow sums aggregating not less than $20,000. They subscribe to stock of the Association in the amount of 5% of the loan applied for. Applications for the loans are made by the Association to the Federal Land Bank of the district.

Under the provisions of the Act, the loans must be secured by first mortgages, and shall be for not more than one-half of the value of the land, and 20% of the value of the improvements. The proceeds of the loan must be for certain definite purposes, either to pay existing indebtedness or for productive purposes. The mortgages must be paid in installments over a period of years, and the installments shall be large enough to fully pay the loan in 40 years, but not greater than to pay it in 5 years. There are certain other requirements specified by the Act.

Federal Land Banks commence business by issuing capital stock, the United States government being at the start the principal stockholder. The government, however, is paid off as other capital comes into the bank. When a Land Bank has accumulated a sufficient number of farm mortgages, made through local associations as has been described, it has the right to issue **Federal Land Bank bonds.** There is a procedure for doing this which includes the pledge of the mortgages with a Registrar and the approval of the bonds by the Farm Loan Board at Washington. The bonds are sold to the public, thus placing the Land Bank in funds and enabling it to make additional loans. By the method contemplated by the Act, funds flow from investors all over the country into mortgages on farms by means of the Federal Land Bank bonds.

Under the provisions of the same law, **Joint Stock Land Banks** may be formed. The capital of these banks is entirely private capital, the banks being formed by groups of bankers or other business men. There is federal supervision of the loans made, and a provision for the **issuance of bonds** which have much the same features as the bonds of the Federal Land Bank. By some they are considered to be better bonds because of the feeling that the bankers operating a Joint Stock Land Bank exercise greater care and discretion in making loans than employees of Federal Land Banks.

BUILDING AND LOAN ASSOCIATIONS.—A building and loan association is a mutual or co-operative association formed to develop thrift and to assist in the building of homes. Deposits are made by members of the association in the form of **payments for stock.** A member subscribes for a certain number of shares and agrees to make monthly payments on these shares. The money received by the association is invested in mortgages, and the earnings are used to pay the necessary expenses of operation and a portion put aside for surplus account, the balance being paid over to the members in the form of dividends. Monthly payments on the shares, plus the dividends credited, go toward maturing the shares, so that when the shares mature, that is, when the total credits of payments and dividends equal the principal amount, the member is entitled to draw the face amount of the shares in full.

The shares of a building association are of several different kinds. Some are purely **investment shares,** the money being paid in for the purpose of receiving dividends. Some shares are purchased with the idea of borrowing money on a house. In the latter kind, the member purchases shares of a par value in amount equal to the loan he gets from the association. The borrowing member is charged with interest on his loan, and is credited with his payments and dividends on his shares. At the time the shares mature they will be used to offset the amount of the loan, and the loan will thus be paid in full.

Appraisals and Values of Real Estate

LAND VALUES IN GENERAL.—Land outside of communities is used for agricultural, grazing, mining and timbering purposes. Land in which mines are located and land having a growth of standing timber need not be discussed in connection with land values, as it is the mineral or the timber that has the value, not the land itself. **Agricultural land,** that is, land used for farming purposes, has a valuation based very largely upon the value of the crop. However, it is difficult to lay down rules for valuing agricultural land, inasmuch as there are so many factors affecting it. The most fertile or productive land can be said to have the greatest value, and fertile or productive land nearer to transportation has a larger value than that more remote. The value of farm

land at any given time is perhaps best measured by the price farmers are willing to pay for it. In the South planters will pay so much per acre for land on which to raise cotton, and in the West they may pay so much per acre for land on which to raise wheat. If the price of the product is high, farmers may be expanding and land will be salable at a fair price; if farmers are not making money on their crop, they will not be taking up more land, and farms will not be readily sold, nor will they produce a good price.

URBAN LAND VALUES.—Land in cities and other communities has value chiefly because of the fact that buildings can be erected on it. If improved with a suitable building, a rental may be obtained that pays a return, not only on the cost of the building but on the value of the land. The value will be measured by the amount of rent. If from the net rental of a piece of improved property is deducted an amount representing a fair return on the cost of the building, the balance of income may be considered to be **ground rent.** This is sometimes called "economic rent."

Location is the important factor in determining rent, and is therefore the thing that makes value. A choice plot in a retail store section has a large value because a large rent can be obtained from tenants of a building located in it. To illustrate this, assume a small store building erected at a cost of $10,000, and producing a net rental of $1,000 a year. If $700 is taken as representing a return at 7% on the cost of the building, the balance of $300 would represent ground rent. This capitalized at 6% gives a valuation of $5,000 for the land. Now assume the same building costing $10,000 is erected in a better location and producing a net rental of $2,500 per annum. Taking the same figure of $700 as the return from the building, the balance of $1,800 being ground rent, would represent 6% on a land valuation of $30,000. The point to be emphasized is that the buildings being exactly alike, the difference in rent is due entirely to location, and that the ground rent capitalized gives an approximate land valuation.

It will easily be seen that locations producing the largest ground rent will be the most valuable. In cities, land in the financial section is the most valuable because of the fact that the most profitable business is conducted at such location in spaces of small dimensions. Possibly the next most valuable land is that used for high grade retail stores, then comes high class residential property, land used for hotels, residential apartments, land used for wholesale business, then that used for the ordinary tenement houses, private dwellings, factories, etc.

VALUES IN EXCHANGE.—The price being paid for land in communities is often taken to be the measure of its value. In the long run, this value, which is called "value in exchange," will be equivalent to the value based on the rent capitalized. The **ground rent capitalized** is, however, more or less theoretical, and an expert in giving an opinion of value will endeavor to base his valuation upon actual sales of similar land. Sometimes in new communities, or in sections of the city in the course of development, prices will be paid for land that would not be warranted by present rentals, but the price is paid in anticipation of future rentals, discounting the future to some extent.

UNIT OF VALUE.—Farm land is valued by the **acre.** In some communities land values are measured by the **square** or by the **front foot.** In many places, however, the unit of value is a **lot of standard size.** This is called the "standard" or "typical" lot of the community. In reaching a valuation of a given plot of land in a community, the appraiser seeks to ascertain as the first step, the unit

f value and then the actual value of a standard lot. He can then compare nd appraise his lot accordingly.

NUISANCES AFFECTING VALUES.—A standard lot is valued as being n grade and having no unfavorable soil conditions. Land much above grade, r much below grade, rock requiring expensive excavation, soft or muddy soil, ll detract from value. Nuisances in the neighborhood will adversely affect alues. These nuisances may be noisy or offensive manufacturing plants. f the land is suitable for residential purposes, a quiet and well-kept block n which a good quality of residence has been erected, will have a greater value han a lot on another block where living conditions are not so favorable. **Transit acilities,** both existing and proposed, should under ordinary conditions have a favorable effect on values.

Lots of Irregular Shape.—The **value of a standard lot** is based on lots of the usual or ordinary depth and rectangular in shape. An adjustment of value may be made for **lots of less or greater depth or of irregular shape.** There can

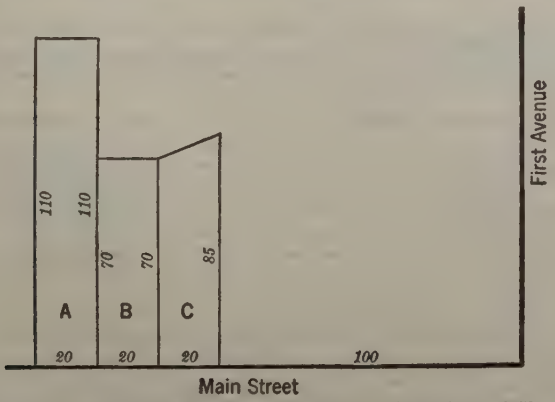

FIG. 3 Diagram Showing Lots of Different Lengths and Shapes

e no arbitrary rule by which to fix with exactness the value of these lots which vary from the standard lot, but **tables** have been constructed which give us a fairly accurate working basis. These tables are **based on experience** with numerous real estate transactions. The oldest one is known as the **Hoffman rule;** the one used by the Tax Department of the City of New York, s known as the **Hoffman-Neal rule,** and another, which is perhaps the best known, is the **Davies rule.** These rules, however, have merely to do with the valuation of lots of less or more than the standard depth. In computing the value of a lot shaped like a triangle, or whose sides run parallel, or whose rear ine is not parallel with the front line, the average depth or the average width s computed. The diagram in Fig. 3 will serve as an illustration. Assume that standard lot is 20′ in width by 100′ in depth, and has a value of $2,500. Using he Davies rule, Lot "A," which is 110′ in depth on both sides, has a value quivalent to 1.05698, or $2,642.45. Lot "B" has a depth of 70′ on both sides, nd using the Davies rule, is worth .80649 of the standard lot, or $2,016.22. ot "C" is 70′ deep on one side and 85′ deep on the other side, an average

depth of 77′ 6″. The Davies rule for a lot of 77′ 6″ in depth gives a ratio of .85117, and the lot should, therefore, be worth $2,127.92.

CORNER LOTS.—A lot located on a corner has the advantages of both streets on which it fronts. It is considered more valuable and there are a number of reasons for giving an extra value to it. A larger building can usually be erected on a corner lot than on an inside lot. If it is a location suitable for stores, larger rent can be obtained for a corner store than for an inside store. Corners are often the intersection of a very important street with an ordinary side street. The relative value of the corner depends on the importance of the intersecting street or avenue. A **usual rule** is to add to the value of a standard lot facing on a particular street an additional 50% to determine the value of a corner lot. In some cases corners are not worth 150% of an inside lot, and in some locations, they are worth much more than 150% of the inside lot.

The lot next to the corner is supposed to have a benefit because of its proximity to the corner. This proximity is known as "corner influence." Ten per cent is often assigned as added value to such lots.

PLOTTAGE.—Where two or more lots are together in one ownership and form a plot, there is an **added value** because of the plottage. This is by reason of the fact that the larger plots can be improved to better advantage than single lots. The **usual rule** for plottage is to take the total of each lot valued separately and add to it 10% for plottage.

VALUATION OF BUILDINGS.—A building is worth its **cost to reproduce** if it is the proper improvement for the location. The first thing to determine the value of a building is whether or not it is an **adequate improvement for the land.** If it is an adequate improvement, that is to say, an improvement which will produce the greatest amount of rent for the location, it is safe to add to land value the estimated cost of reproducing the building.

Many buildings are of value and yet are not the adequate improvement for the land. As to these buildings, the amount that the building adds to the land value is assumed. In other words, the land by itself will have a value and the land and building taken together will have a value, the difference between the land value and the total value being the amount the building adds to the land. Buildings do not improve with age, and it is often necessary to figure something for **depreciation,** even when the type of building is suitable for the location. There are many instances in which the building value entirely disappears; that is, the land becomes so valuable that nothing can be done with the building but tear it down to make room for a better structure. This is so even when the building is a substantial one and is rentable. In these cases the building value is said to have merged in the land value.

FIGURING BUILDING COSTS.—The cost of a building is estimated by computing the number of **cubic feet of space** within the walls of the building, and applying **a factor** of cost to the result obtained. Reference to this method has already been explained in the discussion of building loans. Oftentimes a building will be valued on the basis of the **number of square feet of floor surface** of the particular building. That is to say, a building having dimensions of approximately 50′ in width by 80′ in depth would have 4,000 square feet of surface for each floor. If it is a four story and cellar building there would be five times the number of feet per floor, giving 20,000 as the total number of square feet of floor surface in the building. A unit of cost is applied to this total.

Naturally the cost of producing a building changes with conditions in the building trades. Buildings in 1925 are costing about twice as much to produce

as they did in 1914. A higher unit of cost must, therefore, be used today than formerly. What the cost will be in the future it is impossible to foretell. A person dealing in real estate must be familiar with these conditions in order to accurately determine building values.

A table showing the relative cost follows:

Cost per unit of Cubic Feet

	Pre-war	1925
Frame dwellings	$.14–$.18	$.28–$.35
Brick dwellings	.15– .19	.26– .40
Cold water flats—brick	.12– .15	.28– .32
Steam heated non-fireproof apartments	.19– .22	.30– .40
Fireproof elevator apartments	.30– .35	.45– .65
Non-fireproof loft buildings	.10– .15	.20– .25
Fireproof loft buildings	.25– .30	.28– .35
Hotels	.35– .50	.65–1.00
Office buildings	.45–1.00	.50–1.50

Values Determined by Rents Capitalized.—The value of an improved piece of land can often be roughly estimated by taking the gross rents, using the rents of the building fully rented at current rental prices. The following table will show about the gross rent that should be obtained from buildings of different types:

Dwellings	12%
Cold water flats	12% – 15%
Steam heated flats	15% – 20%
Elevator apartments	16% – 20%
Loft buildings	15% – 20%
Office buildings	15% – 20%

SECTION 20

TRAFFIC MANAGEMENT*

The Traffic Department

NECESSITY FOR A TRAFFIC DEPARTMENT.—In recent years a new line of endeavor known as **commercial traffic management** has developed. The underlying cause of this development is the growing complexity of modern transportation due to the size of the United States as well as the differences in topography, climate, density of population and production of the various sections. The products of one section, either in their raw or manufactured state, must be transported to other sections for fabrication, distribution and consumption. In order to transport these products the nation is traversed with **railroads** over which pass train loads of merchandise. **Steamships** ply between seaports in coastwise and intercoastal trade. A large fleet of vessels operates on the Great Lakes. The highways are thronged with motor trucks and other vehicles of many shapes and descriptions, busily engaged in transporting freight. In addition, there is the **express service,** available for quick transportation, and the **parcel post service** which reaches more places than any other transporting agency. The **aeroplane** has entered into traffic. It is successfully transporting mail and express matter as well as passengers. The experiment of using it as a freight carrier is in process and in all probability it will become a growing factor in freight transportation.

The transportation companies are continually making **rate adjustments.** They have created classification committees and rate bureaus for the purpose of making exhaustive studies in order to determine and valuate the factors affecting rates on an almost countless variety of commodities to enable them to issue tariffs containing reasonable and equitable rates.

Transportation has also been affected by continuous **state and federal legislation.** From time to time laws regulating commerce have been placed on the statute books. The railroads have been required to formulate and publish a great many rules and a vast number of tariffs. The situation has grown into a labyrinth of technicalities which has become so complex that as a result, every shipper, small or large, should know something of transportation or have a traffic department under the management of a competent traffic man to handle his traffic affairs.

An efficient traffic department is a large factor in **effecting economies.** It may have its accounts kept separately. It may be debited with all expenses incurred for its maintenance, such as salaries, portion of overhead charges and losses sustained in transportation; and it may be credited with its so-called

* Through the courtesy of the International Committee of the Young Men's Christian Association, the author was given permission to use considerable material contained in his volumes on Traffic Management, written for the United Y. M. C. A. Schools, published by the Association Press and copyrighted by the International Committee.

earnings, such as rate and classification adjustments obtained, claims collected, etc. It may show a considerable credit each year. It may earn also a large but invisible profit by intelligent shipping, by making use of proper packing and suitable containers, as well as routing shipments correctly, thereby avoiding the need of making many claims for shipping errors, to say nothing of the customers who are kept pleased and satisfied with deliveries.

SIZE OF TRAFFIC DEPARTMENT.—An industrial traffic department is usually developed from a small beginning solving its problems in its own way as the business grows. It must be built to fit the business. There are no two traffic departments organized exactly alike, possibly for the reason that industrial traffic leads into realms that have not been fully organized or coordinated, and also because industries are so varied, and are concerned with the transportation of so many different kinds of commodities.

The **size of a traffic department** and the completeness of organization required depend principally upon the character and volume of business, the variety of commodities handled, the quantities in which shipped, and the extent of territory in which they are distributed. If a business is extensive and diversified, a systematized traffic department is necessary. Where, however, the business is large in volume, but with little detail, a small organization suffices. For instance, a concern may ship monthly many thousands of tons of a certain commodity in carload lots, in which case a very small traffic force could handle all the traffic work. One competent traffic man may constitute an effective traffic department. On the other hand, a concern which ships only a hundred tons a month of different commodities in various small quantities might require quite an extensive traffic force to handle the many details.

PURPOSES OF TRAFFIC DEPARTMENT.—The department should accomplish the following:

1. It should protect the company from loss by complying with rate and classification requirements so as to obtain proper rates; by paying only the tariff rates; eliminating waste transportation in distribution; by reducing the number of mistakes; by guarding against delays that may result in closing down plants, or great loss due to penalty contracts or fall in market prices; by obtaining adjustments of unreasonable or unjust classification ratings and rates; by collecting just claims.

2. It should bring about economies by reducing the cost of shipping, loading and drayage.

3. It should obtain better service by proper packing, intelligent shipping, loading and routing.

4. It should establish cordial relations with carriers by manifesting a spirit of co-operation and maintaining a reputation for fair dealing.

THE TRAFFIC MANAGER.—In the past decade the position of traffic manager has become one of considerable importance and responsibility. A competent traffic man is actually **a transportation engineer** who must also possess a high degree of diplomatic and executive ability. He is the transportation representative of the shipper in all dealings with the carriers and has full control of the shipping policy of his concern. He is consulted in selecting places where plants are to be located, where branch houses are to be established, and in the division of territory for the purchasing department. He is also called on to furnish traffic information for the salesmen.

The population of the country is still increasing and expanding, and production centers and sales routes are continually changing. In the location of

additional manufacturing or distributing plants the territory to be served and the sources of raw material must be given most careful consideration. A traffic man who possesses a broad knowledge of all the elements that enter into transportation can solve such problems satisfactorily and prevent waste in transportation.

A traffic manager should possess the following **qualifications:**

1. He should know the country in general and have a clear concept of the **geography** of the United States. He should be so familiar with the **railroad map** of the country that he can trace the main lines of the important roads and know the most direct routes.

2. He should know the **individual merits of the various railroad systems,** their workings with each other, their connections and junctions, as well as the locations of the larger railroad centers.

3. He must have full **knowledge of rates,** their construction and application, the classification affecting the commodities he handles or ships, and the general **traffic rules** relating to switching and demurrage.

4. He should be familiar with the important parts of the **Interstate Commerce Act,** including the decisions of the Interstate Commerce Commission and the courts.

5. He should understand the rules of practice before the Interstate Commerce Commission, and be capable of appearing before it to present in the proper manner his petitions for reparations.

6. He should be familiar with such instruments as bill of lading contracts, bonds of indemnity, assignments, and should know the freight claim rules.

7. He should be a man who has traveled sufficiently to know the location of the lines he uses, as well as the railroad officials with whom he does business, and should know the proper channels through which to handle the different traffic matters.

8. He should possess a high degree of diplomatic ability, breadth of understanding and honesty of purpose.

Bills of Lading

CARRIER'S LIABILITY.—All shippers should be thoroughly familiar with the uses of the bill of lading and with the conditions printed thereon. It is a **contract** made between shipper and carrier in which the latter agrees to transport goods for the former under certain specified conditions limiting the carrier's liability. But the shipper has the option of refusing to ship property under the bill of lading conditions by paying a rate 10% higher (subject to a minimum increase of one cent per one hundred pounds) than the rate charged for like kind of property shipped subject to the bill of lading conditions. Under this arrangement a shipper may ship property at the carrier's risk limited only as provided by common law. In allowing this option to shippers the carriers are permitted to limit their liability, which they could not do otherwise. However, it is not usual for shippers to ship property at carrier's risk.

There are **three kinds of bills of lading** used in domestic transportation of freight, each serving a special purpose, and they are described as follows:

THE "STRAIGHT" BILL OF LADING.—In this document it is stated that the goods are consigned to a specified party. It is **not negotiable,** and the words "non-negotiable" are printed thereon. On delivery of property to the

carrier for transportation, this bill of lading is signed by the receiving clerk whereby it becomes the shipper's receipt for the goods. The bill of lading should be forwarded by shipper to consignee. It is not required that the consignee should surrender the bill of lading covering a "straight" consignment to obtain delivery, but the presentation of this document enables the consignee to identify himself and greatly facilitates securing prompt delivery. The straight bill of lading is used when shipping goods to consignees who have paid for them, or whose credit has been established. Most shipments are made on straight bills of lading.

THE "ORDER" BILL OF LADING.—In this document the property is consigned to the order of the party named therein, and the name and post office address of the party to notify on arrival of the consignment at destination must always be written on it. The order bill of lading is **a negotiable document** which must be endorsed, either in blank or to a specified party, by the party to whose order the goods named therein are consigned before delivery can be obtained. Through failure on the part of shippers to endorse the bill of lading annoying delays, unnecessary trouble, and sometimes extra expense are incurred. The carrier will not deliver an "order" consignment without surrender of the original bill of lading properly endorsed. Where the bill of lading is not endorsed, or has been delayed or lost, arrangements may be made with the proper official of the carrier, usually the general freight agent or division freight agent, to deliver the property by executing an **indemnity agreement,** secured by a certified check for an amount equal to 125% of the invoice value of the property, or by a bond of indemnity acceptable to the carrier for twice the amount of the invoice value. When "order" shipments are frequently received by concerns who wish to avoid delay in obtaining delivery because of lost or delayed bills of lading, arrangements may be made with carriers to file **blanket bonds** which are satisfactory to the carriers as to surety, amount, and form.

The order bill of lading is most frequently used when shippers desire to collect the invoice value of the property covered thereby prior to delivery. When this method of consignment is employed, shippers usually consign the goods to their own order, and after the bill of lading is signed by the carrier, it is endorsed and forwarded, with invoice and draft attached, through the bank in which the shipper deposits, to be delivered to the purchaser of the goods against his acceptance of the draft. This method of consignment also enables shippers at distant points to collect from the home bank, the invoice value of the property as soon as the bill of lading is signed by carrier's agent when the shipper's credit and bank standing warrants the accommodation. Many shippers would not be able to finance their business without this **method of quick collection.** The use of an order bill of lading does not reflect on the financial standing of the party who negotiates the document as "order" shipments are frequently made to concerns of the highest financial standing. For instance, a shipper of flour in the West, or a shipper of fruit on the Pacific Coast, may forward large quantities of commodities to the East. On obtaining a signed bill of lading from the carrier's agent he sends it to the bank with which he transacts business and attaches thereto the invoice for the value of the property, together with a draft for the amount of invoice, and this amount less discount is immediately credited to his account.

NEGOTIATION BY ENDORSEMENT.—An order bill of lading may be **negotiated by the endorsement** of the person to whose order the goods are deliverable. Such endorsement may be in blank or to a specified person. If endorsed to a specified person, it may be negotiated again by endorsement of

such person in blank or to another specified person. Subsequent negotiation may be made in like manner.

For Example: A shipment is consigned to order of Merchant & Co. Notify Forwarder & Co., 42 Broadway, New York, N. Y.

To endorse the bill of lading in blank, the endorsement should simply read "Merchant & Co.," but if endorsed to a specified person it should read—"Deliver to Forwarder & Co.," or "Deliver to Order of Forwarder & Co." Forwarder & Co. could then endorse the bill of lading either in blank or to the order of Smith & Co., and subsequent endorsements could be made in like manner. The carrier will require the endorsement of the person who surrenders the bill of lading and takes delivery.

THE LIVE STOCK CONTRACTS.—For transporting shipments of live stock, instead of uniform bills of lading, uniform live stock contracts are provided by carriers. The conditions differ somewhat from those contained in uniform bills of lading and contain separate contracts with the men in charge of shipments. These documents are not negotiable.

BILLS OF LADING ACT.—The law governing bills of lading, enacted by Congress, became effective January 1, 1917, and is known as the Bills of Lading Act. Section 22 of this Act is very important because it defines very explicitly the **liability of the carrier,** whose authorized agent has issued a bill of lading for goods to be transported in interstate commerce. In this section it is stated that the carrier is liable to the lawful holder of an order bill of lading who has given value in good faith, relying on the description of the goods in the bill of lading, for damages caused by the non-receipt by the carrier of all or of any part of the goods or their failure to correspond with the description thereof in the bill of lading at the time of its issue. The uniform order bill of lading reads:

> "Received, subject to classifications and tariffs, etc.
> at.....
> from.....
> the property described below, in apparent good order, except as noted (**contents and condition of contents of packages unknown**)," etc.

The law thus requires the carrier to know that the goods described in an order bill of lading are as described. Notwithstanding the clause above quoted and emphasized the carrier is not only responsible for the quantity shown in the bill of lading but also for damages if the goods are not as described in the bill of lading.

Freight Classifications

PRINCIPLES OF FREIGHT CLASSIFICATION.—Railroad companies divide all known commodities into groups or classes and publish rates applicable to the different classes. The **principles which govern freight classification** are primarily the cost of transportation, the risk involved in carrying an article, and the value of the freight. Articles having the same weight and bulk, the same value, and similar characteristics in other respects, are usually assigned to the same class. It is customary, though not uniformly so, to give a lower class rating to articles when shipped in carload quantities than when shipped in less than carload quantities, because the cost per hundred pounds of transporting carload shipments is less than that of transporting less than carload shipments. Classification of freight, to a large extent, has been ascertained by

experience as to operating cost and value of service. The object sought has, in the main, been to establish ratings which will move the largest amount of business at profitable rates.

CLASSIFICATION PROCEDURE.—The present procedure of **classification committees,** when reviewing ratings or establishing new ratings, is to make an exhaustive study to determine with accuracy the elements which affect ratings. These committees are appointed by the carriers. Their duty is to fix the rating which is to be assigned to the several articles embraced in the respective classifications and to determine general rules and regulations. The classifications, however, are always subject to whatever exceptions any railroad or group of railroads may choose independently to put in force. These exceptions are, in many cases, published in the freight tariffs to which they apply and sometimes in separate publications. The same commodity is often placed in two or three or even more classes, according to the manner in which goods are packed, the kind of containers used, and the quantity in which forwarded.

At the present time freight classification is performed principally by **three committees,** known as the Official, Southern and the Western Classification Committees, located at New York, Atlanta, Ga., and Chicago, respectively. These committees combine their classifications in one publication, called the **Consolidated Freight Classification,** issued by the Consolidated Classification Committee at Chicago. This classification contains rules and ratings for the Official, Southern and Western Classification Territories; the rules are nearly uniform, and the commodity descriptions and minimum carload weights are similar; also, in many instances the ratings are identical. The consolidation of the classifications is a progressive step and its merits are quite apparent when it is desired to determine rates applying on shipments moving through different classification territories, as it is necessary to consult only one publication instead of two or three as was formerly required.

CLASSIFICATION TERRITORIES.—A rough definition of the location of the territories is as follows:

Official Classification Territory.—The region north of the Ohio and the Potomac Rivers, east of the Mississippi River, except Minnesota, Wisconsin, and the northern peninsula of Michigan, and that part of Illinois north of a line from Chicago to East St. Louis.

Southern Classification Territory.—The region south of the Official Classification Territory and east of the Mississippi River.

Western Classification Territory.—The region west of the other two territories, the northern peninsular of Michigan and the states of Wisconsin and Minnesota.

CLASSIFICATION RATINGS.—The Official Classification contains six numbered classes and two rule classes: viz., 1, 2, 3, 4, 5, 6, Rule 25 and Rule 26. The Southern Classification contains six numbered classes and four lettered classes: viz., 1, 2, 3, 4, 5, 6, A, B, C, D. The Western Classification contains five numbered classes and five lettered classes: viz., 1, 2, 3, 4, 5, A, B, C, D, E. Each classification, in addition, contains multiples of first class progressing from one and one-quarter times first class to four times the first class.

OTHER CLASSIFICATIONS.—There are a **few minor freight classifications** in the United States, applicable to intrastate traffic in certain states. For the most part even intrastate traffic is governed by one or the other of the three major classifications. The railroads of Canada employ the **Canadian Freight Classification.** Formerly the three major freight classifications were published

separately, but since 1918 they have been published in a single volume, known as the **Consolidated Classification,** which contains—

1. A list of the carriers for which it is published.
2. An index of the rules of the classification.
3. An alphabetical index of the articles classified.
4. The rules of the classification.
5. The classification itself.

EXCEPTIONS TO CLASSIFICATION.—Exceptions to classification, often called **"The Exception Sheet,"** are either published in a separate tariff or are shown in the tariff to which they apply. Exceptions are ratings and rules different from those contained in the consolidated classification. When both the classification and exception sheet are referred to in a tariff as governing the rates published therein, the ratings, rules and regulations in the exception sheet **take precedence** over any contained in the classification, except as may be otherwise specifically stated.

In some of the large agency tariffs it is usually stated in the governing rules that the rates named are governed by the exceptions to the classification of the individual carriers as listed. Therefore, in obtaining rates from a tariff containing a rule of this kind, it is necessary to consult the Exceptions to classification of the individual carrier over whose line shipment is to be forwarded provided it is listed in the tariff as having published an exception sheet. The exception sheet may provide for a different style of package; or perhaps it may authorize exceptions on shipments of estimated weight for a package rather than actual weight; or it may arrange for a different class, generally one lower than that authorized in the classification; or it may prescribe a minimum carload weight different from that named in the classification. But whatever is specified, is a part of the rate and must be used. However, the rules and regulations published in a tariff take precedence over any conflicting rules and regulations contained in either the classification or exception sheet unless otherwise specifically stated.

CLASSIFICATION OF SHIPMENTS FROM ONE TERRITORY TO ANOTHER.—Each of the three major classifications applies generally within its particular territory. On shipments moving from one territory to another there is **no general rule** with regard to which classification shall govern in the making of class rates. If a shipment going from a point in one classification territory to a point in another is subject to a single joint class rate, it must necessarily be subject to but one classification, but it may be either one or the other. The joint-class rates on rail traffic between the Atlantic and the Pacific seaboards are governed by the Western Classification; the joint-class rates on shipments between Official Territory and Southern are governed in some cases by the Official Classification and in some cases by the Southern. In case a shipment moves from one territory to another under a **combination rate,** the rate usually "breaks" at the territorial boundary, and the separate rate factors of the combination are governed by the classifications of their respective territories. Traffic moving from Ohio and Indiana to the southern states, for example, usually takes combination rates, which break at the Ohio River. North of the river the class rates applicable are governed by the Official Classification, and South of the river the factors of the combination are governed by the Southern Classification. The same situation prevails with regard to much of the traffic passing between points lying east and west of the Mississippi River, that boundary likewise being an important rate-breaking line.

RULES OF CLASSIFICATION IMPORTANT TO SHIPPERS.—The rules of classification contain a large amount of information with which all shippers by rail must be familiar. These rules include regulations for packing and marking shipments of freight; rules for mixed carload shipments (carload shipments of articles belonging to different classes); rules with respect to minimum charges for carload and less than carload shipments; rules concerning the use of fibre-board containers of all kinds; rules concerning exceedingly large or exceedingly bulky shipments; rules providing for certain deviations from ordinary carload minimum weights for light and bulky articles when loaded in cars longer than 36 feet, 6 inches, and many other regulations.

CLASSIFICATION ADJUSTMENTS.—An important function of a traffic department is to obtain classification adjustments. If in the opinion of the shipper the classification rating of any commodity handled by him is unjust or unreasonable, or if he has devised a new method of packing a commodity whereby the cubic measurement of the package is reduced and he is consequently of the opinion that the article is entitled to a lower rating than that assigned to the article in the classification based on the former method of packing, application for adjustment should be made to the proper classification committee. Forms of application for a change in rating, or for a new rating on a commodity not indexed by name in the Classification, may be obtained from the respective classification committees. The form should be filled out correctly and sent to the proper committee. An opportunity for a hearing is usually afforded the petitioner, when he can make oral argument in support of his application.

One of the best ways to prove unjust or unreasonable classification is by comparison. For instance, a certain article may be assigned a rating of first class, and another certain article of greater value, of less weight, of more bulk, and in the handling of which there is no less risk incurred, is assigned a rating of second class. Under these circumstances a good cause is apparently shown why the rating of the first article should not at least be made equal with that of the second article, if not lower. A frequent cause for application for change in classification ratings is the **knocking down of articles;** that is, taking the articles apart and packing them more compactly, thus reducing the cubic measurement of packages.

In order to illustrate the saving that would be effected by obtaining adjustments of this nature, above described, suppose in the first instance a shipper forwarded from New York City to Pacific Coast cities consignments the weight of which in one year aggregated 300 tons. The first and second class rates applying from New York City to Pacific Coast cities are $5.55 and $4.80 per 100 lbs., respectively. The change in rating from first class to second class would amount to a reduction of 75 cents per 100 lbs., or $15 per ton, a total of $4,500 for one year. Suppose in the second instance a classification adjustment was obtained changing a rating from second class to third class, and that the shipper forwarded from New York City to St. Paul and Minneapolis, Minn., consignments of the article on which the change in rating was obtained, which aggregated one thousand tons in one year. The second and third class rates applying from New York to these cities are $1.69½ and $1.29 per 100 lbs., respectively. This reduction amounts to 40½ cents per 100 lbs., or $8.10 per ton, a total saving of $8,100. This reduction would be effective for each 100 lbs. shipped thereafter so long as the rating remained in force.

The instances cited do not represent the total saving that would be effected by obtaining these adjustments. The first adjustment would be made in the Western Classification, and the second adjustment would be made in the

Official Classification. Therefore, in shipping to any point named in tariffs governed by these classifications, the changed ratings would apply. Hence it will be observed that the saving effected might aggregate a very large amount.

Shipping Instructions

FALSE DESCRIPTION OF SHIPMENTS.—In order to ship property intelligently it is essential that shippers should be thoroughly familiar with the **Rules of the Consolidated Classification,** particularly those rules which apply to the commodities they handle. The importance of this knowledge cannot be too strongly emphasized; for by having a correct understanding of these rules, many errors and consequent claims will be avoided. Also, by utilizing this knowledge and thereby complying with the rules and specifications, the lowest classification rating will always be obtained.

Should a shipper willfully describe a shipment falsely in order to secure a lower rating, he violates the Interstate Commerce Act, and for an attempt of this nature to defraud a carrier the **maximum penalty** upon conviction is a fine of $5,000 and 2 years' imprisonment. Property tendered for transportation is frequently improperly packed or described through carelessness or lack of knowledge of the classification specifications. This action does not constitute a violation of the Act. The intent to defraud must be willful. But shippers may incur a penalty by being assessed a higher rate than they would have been assessed if the property was correctly described. The carriers have **inspectors** at the various freight stations whose duties are to examine shipments to ascertain if they are correctly described, to correct the description if error is found, and to call shippers' attention to the matter. It is practically impossible for these inspectors to examine all shipments, and many consignments are rated in accordance with the description shown by shippers in the bill of lading, but without doubt numerous shipments are rated higher than they would have been if they had complied with the classification specifications.

PACKING.—Package and packing specification are based upon extensive tests as well as upon experience. The classification specifies the kind of containers in which articles should be packed, and if containers other than those specified are used, or if articles are shipped loose when the classification specifies they should be in barrels or boxes, the ratings on the articles are increased from one to three classes higher. **Articles taking different ratings** should not be placed in the same package. If they are, the rating of the higher class will apply to the entire contents thus incurring a severe penalty. The proper packing of goods for shipment is an obligation which the company owes not only to itself, but to its customers. Goods should be packed in such a manner as will protect them from the wear and tear of transportation. Proper packing is a form of insurance to which the consignee is entitled. It is the traffic department's duty to devise the very best form of packing suitable for the goods handled.

Among the things which must be taken into consideration in selecting containers are strength, weight of material and bulk. The lightest possible containers consistent with the specifications of the classification should be selected in order to keep down the freight and cartage charges, but containers must be of sufficient strength to afford proper protection to the property enclosed therein. The cause for a large number of damage claims is insufficient strength of the containers. Therefore, while reduction of weight in containers is desirable in order to reduce transportation charges, it is far more essential that all articles

should be packed for shipment in such a manner as to render transportation thereof reasonably safe and practicable.

Fibre containers are now used by many shippers instead of wooden boxes. They cost about 50% less than wooden boxes, and owing to their lightness freight charges are reduced. They thus effect a saving to both shipper and buyer. Thus, the traffic manager of a large, nationally known corporation decided to change from wood to fibre containers for several articles. The saving thereby in freight cost alone amounted to over $26,000 in one calendar year. In addition, a large saving was effected in the cost of containers.

MARKING.—Less than carload freight must be marked exactly as consigned in bill of lading. While transportation companies require their agents to compare the shipping receipts with the marks on packages and to call upon shippers for correction when a discrepancy between the two is found, this does not relieve the shippers of the responsibility of marking packages in accordance with the shipping receipts. If the carrier's agent signs a bill of lading which does not agree with the marks on packages and the shipment is sent to a point other than the correct destination, the extra expense incurred in getting the property to the correct destination has to be borne by the shipper.

The name of consignee, address, street and number, city or town, county (if there are two or more places of the same name in the state) must be plainly marked or stenciled on each package of less than carload freight. The name and address of shipper, preceded by the word "From," should also be marked or stenciled thereon. This is of great assistance to carriers in handling shipments that have gone astray, or are refused or unclaimed. Most mercantile houses, on receiving an order from a customer, give it a number known as the **"order number."** Therefore, in addition, the order number should be marked on packages, it being the only absolutely reliable means of identifying "astray" and "over" packages. It is also permissible to show such special marks as "Glass," "Keep Dry," "This Side Up," "Handle With Care," etc.

Railroad companies do not require marks on packages shipped in **carload lots,** but each package of a carload shipment which is transported by a boat line for part of its journey should bear distinguishing marks so that it may be identified in case of separation from the remainder of the shipment. These special marks should also be shown on bills of lading. When a less than carload shipment is **consigned "To Order,"** it must be so marked, and it must be further marked with an identifying symbol or number, which must be shown on the shipping order and on the bill of lading. The order number is a desirable identifying number to use.

MIXED CARLOADS.—The Consolidated Classification authorizes the shipment of mixed carloads of merchandise composed of different articles for which carload ratings or rates are provided when shipped at one time by one consignor to one consignee and destination. The rule governing mixed carloads is complex and quite difficult. However, any competent traffic man can readily interpret this rule and secure for his employer reduced transportation costs when occasions arise where this method of shipment could be employed. To illustrate how an understanding of the provisions of this rule may result in reduced transportation cost to a shipper who could ship mixed carloads, the following example is given. This case involves the application of one of the several provisions which provides that when different articles are shipped in a carload, they will be charged at the carload rate applicable to the highest classed article, and the carload minimum weight will be the highest provided for any of the articles in the carload.

A wholesale grocery house in New York City receives an order from a customer in Omaha, Nebr., for

500	boxes	canned tomatoes, total weight	28,000 lbs.
160	"	baking powder, in cans, total weight	8,000 "
80	"	ground spices, total weight	4,000 "
		Total weight of shipment	40,000 "

There are no through rates applying from New York to Omaha, so that rates must be constructed by combination, the lowest combination being the correct rate. The lowest through combination rates on the articles named break on the East Mississippi Crossings. The rates to the East Mississippi Crossings (East St. Louis, East Dubuque, Quincy, Rock Island, etc.) are governed by the Official Classification, and the rates beyond are governed by the Western Classification. Canned tomatoes, in boxes, are assigned carload ratings of 5th class in both classifications, minimum weight 36,000 lbs. Baking powder, in cans, in boxes, is assigned a less than carload rating of 3rd class in both classifications and carload ratings of 4th class in the Official and 5th class in the Western, minimum weight 30,000 lbs. Ground spices, in boxes, are assigned a less than carload rating of 2nd class, and a carload rating of 4th class, minimum weight 30,000 lbs., in both classifications. The highest carload minimum weight is 36,000 lbs., and the highest carload rating is 4th class. But as the total weight exceeds the highest minimum weight, freight charges would be assessed on the actual weight. Therefore, if shipper loaded these goods in one car and made out one bill of lading for the shipment, freight charges would be as follows:

40,000 lbs. at 115 cents per 100 lbs	$460.00

If the different commodities were forwarded as three shipments, that is, if a separate bill of lading were made out for each lot, freight charges would be as follows:

28,000 lbs. as 36,000 lbs. at 96⅓ cents per 100 lbs	$347.40
8,000 lbs. at 163 cents per 100 lbs	130.40
4,000 lbs. at 209 cents per 100 lbs	83.60
Total	$561.40
Transportation charges per correct forwarding	460.00
Saving effected	$101.40

LOADING AT PUBLIC OR PRIVATE SIDINGS.—If shippers load their cars either on a private siding or on a public team track when ordering cars, they should consult the **Railway Equipment Register,** a publication issued by the railroads of the United States, Canada and Mexico, through an authorized agent. It is published monthly and shows by car numbers, the marked weight, capacity, length, dimensions and cubical capacity of freight cars used to transport freight. It shows also the various kinds of cars used by the different railroads and gives the inside measurements, width of doors, both side and end, for all box cars.

ORDERING SPECIAL TYPES OF CARS.—Certain commodities require protection from heat or cold, and are forwarded in special cars built for that purpose. Other commodities, for the purpose of protection, are loaded in box cars rendered rain and snow proof, and under lock or seal. Some commodities are light and bulky and require large cars; some are loaded in bulk; some are loaded on open cars, because they are not affected by weather conditions, or

the danger of pilferage, or because they are too heavy or are of too great dimensions to be loaded in box cars.

When articles subject to **Rule 34** of the Consolidated Freight Classification are loaded in or on cars 36½ feet or less in length, they are subject to established carload minimum weights. These weights vary for different commodities. The minimum weight for articles subject to this rule is increased in proportion as car lengths exceed 36½ feet. The carrier is not always in a position to supply at short notice cars not over 36½ feet in length. Therefore, when cars are ordered not to exceed this dimension and for its own convenience the carrier supplies cars of greater length, the minimum weights for the cars ordered shall govern, except that when the loading capacity of the cars is used the minimum weight shall be that fixed for the cars ordered. If a car longer than ordered is furnished, a notation to that effect must be made on the bill of lading by carrier's agent.

TIME AND MANNER OF SHIPMENTS.—When deliveries are made to freight stations by truck, they should be made in sufficient time to enable freight agents to forward goods on the same day. Care should be exercised to avoid forwarding two or more shipments, covered by separate bills of lading, to one consignee on the same day. Whenever possible, consignments should be consolidated to conserve freight and cartage charges. Truckmen should be instructed not to accept receipts with the notation "Wet" or "Received in the Rain," covering property liable to become damaged by water, for if any damage by water is incurred in transportation, no claim will be allowed. The goods should be brought back to the store, and after having been placed in good condition, they may be shipped and clean receipts obtained. Shippers should not accept receipts bearing the notation "Shipper's Load and Count," except in cases of carload shipments which, on account of their nature, cannot be counted by the carrier's agents. If freight is loaded on a private siding and it is necessary to accept bills of lading with the notation "Shipper's Load and Count," especial care should be taken in the matter of **car seal records.** Shippers should be in a position to furnish affidavits as to contents of car in case of loss. In the absence of such records a claim for shortage may be uncollectible.

Under a strict interpretation of most switching and ferry car tariffs, carriers are not responsible for contents of cars loaded on private or assigned sidings until after they have been removed from sidings. Therefore, after cars are loaded and until cars are switched, they should be protected by a watchman even though goods have been receipted for. Prior to loading a carload shipment, the car should be thoroughly examined. Cars with leaky roofs and those which have been recently loaded with some offensive material, should not be accepted from railroad companies except under written protest.

WEIGHING OF CARS.—Carload freight is usually weighed at point of shipment but if scales are not available there, the weighing is performed on the nearest scales. The scales on which cars are weighed are frequently tested, and weighing is done in accordance with the rules of carriers. Carload freight is almost invariably re-weighed in transit, and also when the carrier believes that it is necessary to test the accuracy of previous weights. It may be re-weighed also by request of consignee or consignor when doubt exists as to the accuracy of the billed weight, subject to charges provided in tariffs. But no charge will be assessed by the carrier if the ascertained weight shows a discrepancy greater than the tolerance. When carload freight is re-weighed and there is found to be a difference in weights, an allowance of 1% of the lading, with a minimum of 500 lbs., is made, due to variation in scales or weighing,

known as **"Tolerance."** If the difference in weight does not exceed the tolerance, the billed weight is not corrected. For some commodities like ashes, clay brick, ore, and similar bulk freight, the tolerance is 1% of the lading with a minimum of 1,000 lbs.

AGREED WEIGHT.—When shipments are forwarded in **packages of uniform size and weight,** arrangements may be made with carriers to ascertain the weight of such packages and the weight thus determined will be subsequently accepted and applied by the carriers under **weight agreements.** Such weights however, must be designated on bills of lading or weight certificates and the property will not be re-weighed. Under an arrangement of this nature freight is received by carriers and billed at what is termed the "agreed weight." A copy of each weight agreement must be filed with the Interstate Commerce Commission. The carriers, however, frequently check the records of shippers for the purpose of verifying the weights and descriptions furnished, and if the freight is forwarded in carloads, a sufficient number of cars will be weighed for verification.

An agreement of this kind is a great aid to shippers who forward their freight in containers of uniform size, as it facilitates the movement of freight and renders it unnecessary for the carriers to weigh such shipments. Under this agreement the shipper must report and certify correct gross weights and give correct description of commodities in bills of lading. He must also allow the authorized representative of the carrier to inspect the original weight sheets and records necessary to verify the weights and descriptions of the commodities certified in the bills of lading. Either party to a weight agreement may cancel it on 10 days' notice in writing.

PACKAGE CARS.—The "package car" service in vogue with many railroads is a desirable method of forwarding **small shipments to distant points.** It is a service afforded by railroad companies whereby on a certain day or days of a week they load at designated stations, cars with less than carload shipments destined to certain distant points; for example from New York to St. Louis. The western railroads provide "package car" service also from many of the western gateways to Denver, and other western cities, and sometimes "package car" service is given from New York to Denver. The **advantage gained by this service** is that freight goes through to destination without transfer; time of movement is thus greatly reduced; liability for loss and damage is reduced to a minimum; and the transportation charge is no greater than the regular, lawful, less than carload rate. Frequently the carriers furnish a **refrigerator package car service** which many shippers use advantageously.

FORWARDING COMPANIES.—Valuable facilities are offered by forwarding companies, which consolidate carloads of analogous commodities, or articles taking the same carload class rates, and forward them to distant points, consigned to their representatives or themselves, at which points the goods are distributed to the respective consignees. The rates charged are lower than the regular less than carload rates, and the forwarding company takes for its service the difference between the rate charged shipper or consignee and the carload rate. Large shippers, having branch houses in various parts of the country, frequently use the **consolidated car method of shipment** and forward carloads of various less than carload consignments to a distant destination for distribution at that point, or for forwarding from that point to their final destinations, thereby effecting a large reduction in the transportation charges, the saving being the entire difference between the less than carload and carload rates.

DELIVERY OF FREIGHT.—Carload freight is delivered to consignees at freight stations, on public team tracks, private tracks or assigned sidings or by lighters. If **station delivery** is made, consignees are allowed 48 hours (not including day of arrival, Sundays and holidays) to remove property. After that period has elapsed storage charges are assessed. If **track delivery** is made, consignees are allowed 48 hours after the first 7 A. M. after placement (not including Sundays and holidays) to unload cars. After that period has elapsed demurrage is charged. If **delivery is made by lighter,** consignees are allowed 48 hours after lighter reports at its destination (not including Sundays and holidays) to unload lighter. After that period has elapsed demurrage is charged. **Less than carload freight** is usually delivered at a freight station from platform or pier, and consignees are allowed 48 hours (not including day of arrival, Sundays and holidays) to remove goods. After that period has elapsed storage charges are assessed.

PRECAUTIONS IN SIGNING RECEIPTS FOR FREIGHT.—Great care should be exercised in signing receipts for freight, because unless exception is taken as to the condition of freight and the exception noted on receipts, shipments are receipted for in "good order." **A "good order" receipt** does not entirely release carriers from liability, but it is difficult to collect claims when a "good order" receipt has been signed. Every consignment should be carefully counted and examined. It frequently occurs, through carelessness, that clean receipts are given for freight that is not received or is in a damaged condition. If packages show evidence of having been tampered with, they should be opened and only actual contents signed for. If packages appear to be light in weight, because of either leakage or sifting, carriers should be requested to weigh them, and only the actual weight signed for. Before beginning to take delivery of cars covered by bills of lading bearing the notation "Shipper's Load and Count," car seals should be examined to ascertain if they are intact. If they show evidence of having been tampered with, the contents of cars should be carefully tallied and examined.

THE CREDIT LIST.—Shippers or consignees may arrange to be placed on the credit list of carriers by application and compliance with their individual rules. In accordance with the provisions of the Interstate Commerce Act, credit cannot be extended for a longer period than 96 hours. This accommodation is a great convenience to shippers and quite an economical factor, for it aids greatly in prompt shipment of goods on which freight charges are to be prepaid. It is also a convenience to both consignees and carriers.

AUDITING FREIGHT BILLS.—The auditing of **freight bills for incoming goods** is a very important duty of the traffic department. While a competent traffic department is an assurance that outgoing shipments are correctly classified, routed and rated, yet incoming goods are forwarded by different shippers, many of whom do not have skilled traffic men handling their shipping. Hence, incoming freight is often misrouted, incorrectly classified, and, therefore, excessive rates are charged. Records show that over $5,000,000,000 are paid annually into the treasuries of the various railroad companies by shippers and receivers of freight, and comparatively little attention is paid to checking and verifying the correctness of the freight bills aggregating this vast amount. In every well organized business disbursements are audited by competent accountants, few of whom, however, possess the knowledge necessary to audit freight bills correctly.

To audit properly bills for transportation charges requires an extensive knowledge of classification, rate construction, routes, switching, lighterage,

the rules governing weights and weighing, demurrage and storage. Skillful traffic men have obtained refunds aggregating a very large amount through claims for overcharge caused by incorrect routing and other errors. In auditing freight bills honesty of purpose should be demonstrated, and if undercharges are discovered, payment should be made to the interested carrier. If this method is employed, a traffic department will experience no difficulty in collecting just claims and cordial relations will be maintained with the carriers.

Drayage

MORE ECONOMICAL FREIGHT HANDLING.—The motor truck is an economical factor in transportation, but motor trucking is not organized on a systematic basis. Stability of service and rates and regulation thereof by the Interstate Commerce Commission would add greatly to the value of this agency of transportation. Under the usual method of handling less than carload shipments by rail, at least six handlings are necessary:

1. Loaded on the shipper's truck and hauled to the freight station.
2. Unloaded at the railroad station platform.
3. Loaded into a freight car.
4. Unloaded at railroad station at destination.
5. Loaded on the consignee's truck.
6. Unloaded at the store door or warehouse of consignee.

If shipments are transferred en route, two or more handlings are required. If the shipments are transported entirely by motor trucks, only two handlings are required; viz., loaded on the truck at shipper's store and unloaded from truck at the store door or warehouse of consignee. When consideration is given to the fact that labor is becoming an increasing factor in transportation costs, the possible economies by handling short-haul shipments by motor truck are readily observed.

Long Distance Trucking.—Highways and volume of freight permitting, it is usually practicable to truck within a radius of 50 miles, and under certain conditions for longer distances. Aside from expediting the movement of freight between points of origin and delivery by the use of motor trucks the following elements are to be considered in comparing the cost of motor truck transportation with that by rail.

Packing.—If goods are moved between point of origin and consignee in the same vehicle, a considerable saving may be accomplished in packing and cost of containers over the need for packing to withstand the necessary rehandlings when goods are forwarded by rail.

Trucking to and from Freight Stations.—Lacking a railroad siding, goods would have to be trucked to railroad station at point of shipment and on arrival at destination goods would again have to be trucked to consignee's store.

Freight Charges.—When shipping by rail or water it is required that many articles be packed in boxes or crates, and freight charges on the articles are increased by the weight of these containers. But when shipping direct by motor trucks, it is frequently possible to eliminate cases or crates in the packing of goods and thereby the transportation charges are reduced, in addition to the saving of cost of containers. To the above may be added the consideration of deterioration of goods through successive handlings, the liability of damage, pilferage or loss, if goods are shipped by rail or water.

STORE DOOR DELIVERY.—Store door delivery is simply the continuation the rail or water transportation of freight to the address of consignees by ucks. A complete system of store door delivery would provide for the conuous movement of freight by one agency from the address of shippers to e address of consignees.

The present method of handling freight is wasteful from every point of view, nd is continued only because of the lack of coordination between shippers, arriers and truck operators. The expense of sending trucks of many congnees to freight terminals is costly and the need for sorting freight at terminals permit consignees to select their goods increases terminal charges. Consignees ay higher trucking charges due to partly loaded trucks, delays at terminals, igh loading charges and street congestion. The spread of waste is reflected a higher cost for transporting freight than is justified.

Routing of Freight

SHIPPER'S RIGHT TO ROUTE FREIGHT.—Shippers have the legal ight to route their freight, except in cases of emergency occasioned by conestion of traffic, when the Interstate Commerce Commission has the power o control the movement of traffic and divert it from one route to another. nder ordinary circumstances, however, the **shippers' right is absolute,** and arriers are obliged to follow the shippers' routing instructions.

According to transportation law the **lawful rate** on any shipment is the ariff rate via the route over which the shipment moves.

UNROUTED SHIPMENTS.—Shippers may direct routing of shipments nd their instructions must be observed by carriers, but in the absence of pecific through routing, it is the duty of carriers to route shipments via **the heapest reasonable routes,** of the class designated by shippers; that is, all-rail r rail-and-water, and via which they have rates that they can lawfully use; iz., rates contained in tariffs on file with the Interstate Commerce Commission. However, if shippers do not know the cheapest route, the shipments may be orwarded via more expensive routes and the overcharges thus incurred become osses because, owing to the shippers' lack of knowledge, the errors are not liscovered and therefore no claims made.

MISROUTING.—If only all-rail routes are available and carriers forward n unrouted shipment via any routes but the cheapest, they are guilty of "misrouting." The liability for errors in routing by the carriers is shown by he following instance: The general freight agent of one of the large trunk ines recently stated that his office was "behind twenty thousand rate quoations." When it is considered that many of these requests were for rates which had to be constructed by combination, and that such combination rates ould break on a number of different base points, it would not be surprising hat the rate clerks in their haste to furnish the desired information should nake errors. For example, rates from trunk line territory to points in the state f Texas are constructed by combination. There are at least six different base oints on which rates may break, and owing to the different classification atings of various articles, it is possible for the lowest combination rate to break n any one of these six base points. When it is considered that thousands of nrouted shipments are handled by carriers, it is reasonable to assume that nany errors are made. Hence the necessity for a traffic department, versed n transportation law, routing and in the application of tariffs for correct routing

of outbound shipments and checking of inbound routing of freight received whereby a large amount in transportation expenses may be saved.

REFUND OF CHARGES ON MISROUTED FREIGHT.—The charges applicable via the route of movement are collected, but the payer of the freight, shipper or consignee, as the case may be, is entitled to a refund of the difference between the amount paid and the charge applicable via the cheapest route. The refund must be paid by the carrier or carriers that were guilty of the misrouting. Carriers participating in the haul which were not parties to the giving of improper routing instructions, receive their full legal revenues.

ADVANTAGES OF GIVING OR NOT GIVING ROUTING INSTRUCTIONS.—A shipper may insure his right to the lowest legal rate on a shipment, therefore, by giving no routing instructions at all to the carrier. Many shippers, however, prefer to route their freight. If two or more routes are available for a shipment, even though the rates are the same, it may be advisable for a shipper to indicate the routing, in order that delivery may be made at destination by the carrier having freight-house, team, track, or other delivery facilities most convenient for the consignee. Shippers route their freight often because of a desire, either upon their own part or upon the part of their customers, to give business to particular carriers. Where rates are different via different routes, a shipper may direct his freight to be sent via the more expensive route because of a possible saving of time, or because of the existence of certain reconsignment or transit privileges which the cheaper route does not afford.

CONFLICTS BETWEEN ROUTES AND RATES.—Ordinarily a shipper who specifies in a bill of lading the routing for a shipment will also insert the rate applicable via that route. It sometimes occurs that a shipper specifies a certain route and inserts a rate not applicable by the specified route, but applicable via some other. In such a case it is the duty of the carrier to call the shipper's attention to the conflict of rate and route before the shipment moves, and obtain proper routing instructions. Should the carrier not endeavor to inform the shipper of his error, and should it forward the shipment via the route given, it would be guilty of misrouting, and if the charges collected were higher then those which would have been collected on another route, the payer of the freight could secure a refund.

DETERMINATION OF ROUTE.—The first thing to determine in making a shipment by freight is the name of the railroad station or boat landing at which the consignee will receive the goods, and this determination must be based on fact and not on conjecture. This information may be obtained from the current issue of a standard **Shipper's Guide,** which should be consulted when shipping to an unfamiliar point, unless complete routing directions are given on the purchaser's order for the goods. The **destination and terminal delivery** should be stated so definitely that there will be no question as to its location. When the terminal delivery desired is shown in the bill of lading and delivery is offered at a terminal other than that designated, the consignee can demand that delivery be made at the terminal shown in the bill of lading; or if he elects to accept shipment at the terminal where delivery is erroneously offered, he is entitled to recover the difference in the expense of drayage incurred and the expense which would have been incurred if proper delivery had been effected by carrier.

ROUTING SHEET.—In order to facilitate the handling of shipments, a routing sheet should be compiled for the guidance of the shipping department. If the volume of traffic and the territory in which it is distributed should so warrant, a separate routing sheet should be compiled for each state to which

goods are shipped, showing the points to which shipments are made and the names of all the railroads operating in the state. When shipment is made to a point not specified, refer to a standard guide and ascertain the name of the railroad on which the town is located and use route designated in the routing sheet for points on that railroad. A **key designating the various routes** by numbers, letters and numbered letters, should be prepared. One key properly made serves for all the routing sheets. For example, take the state of Kansas, with New York City as the shipping point, and assume shipper's store is located near the freight station of the Lehigh Valley Railroad. Routing sheet and key should be prepared in the following manner:

Route Order to Kansas		Routing Key	
FROM NEW YORK TO	ROUTE SYMBOL	ROUTE SYMBOL	FREIGHT ROUTING
Atchison	S	S	L. V. °/o N. Y. C. & St. L. °/o A. T. & S. F. at Chicago
* * * *	*	*	* * * * * * * * * * * * * * *

The route symbol for all points on the A. T. & S. F. Ry. would also be the letter "S", and other points and railroads would be designated in a similar manner.

CUSTOM VERSUS KNOWLEDGE.—Many shippers patronize a particular line simply because of custom, or because it is well known and liked. They do not know that by forwarding some of their shipments via other lines they might save cartage expense to their customers, and that occasionally differential lines may be used advantageously. Inbound shipments are frequently received at terminals quite distant from the consignees' places of business, and as a matter of custom they send for the freight without complaint, not realizing that if their purchasing department was enabled to furnish proper directions for terminal routing, a large unnecessary expense would be saved. In order to avoid extra expense, delays and claims, shippers should endeavor to get purchasers to specify in their orders the terminal delivery desired, and consignees should endeavor to have shippers write the terminal routing in the bill of lading.

Demurrage and Shipping Services and Privileges

DEMURRAGE.—Demurrage is a charge made by carriers in accordance with a **special service tariff** for delay in loading or unloading cars or lighters. Forty-eight hours after cars are placed, or after lighters report at destination, are allowed for loading or unloading. The demurrage charge on cars held beyond the free time is $2 per day, or fraction of a day (Sundays and holidays not included) for the first 4 days. After that period the charge is $5 per day or fraction of a day. The demurrage charge on ordinary lighters held beyond the free time is $20 per day, or fraction of a day, Sundays and holidays included. On lighters handling heavy commodities, the charge is considerably higher. Demurrage rules and charges in force on American railroads are **virtually uniform** throughout the country. The rules which are in general use are contained in an agency tariff known as the **"National Code of Demurrage Rules and Charges."** This tariff shows what cars are subject to demurrage and the conditions under which the penalty becomes operative.

BUNCHING.—When by reason of delay of carriers in filling orders, cars are placed for loading in numbers in excess of daily car orders, the shippers are allowed such free time for loading as they would be entitled to had the cars been placed as ordered. When, due to the fault of carriers, cars are accumulated

and delivered by railroads in numbers in excess of daily shipments, the consignees are allowed such free time for unloading as they would have been entitled to had the cars been delivered in accordance with the daily rate of shipment. An illustration of the latter is as follows: A shipper at point A forwards to a consignee at point B 5 cars per day, and after placement the consignee can usually unload 5 cars per day. Owing to delay en route the railroad does not place any cars for a period of 4 days, but on the 5th day 25 cars are accumulated to be placed. No demurrage charge could be assessed against the consignee if he unloads his daily allotment of 5 cars within the free time, because the accumulation of the 25 cars would be what is termed "bunching."

AVERAGE AGREEMENT.—Shippers and receivers frequently make agreements with the carriers whereby the charge for detention of cars for loading or unloading shall be computed on the basis of the **average time of detention during each calendar month. One credit** is allowed for each car released within the first 24 hours of free time. After 48 hours' free time, **one debit** of $2 per car per day, or fraction of a day, will be charged for the first 4 days, Sundays and holidays not included. When a car has accrued **four debits,** a charge of $5 per day, or fraction of a day, will be made for all subsequent detention including Sundays and holidays. Credits earned on cars held for loading cannot be used as an offset for debits accruing on cars held for unloading, or vice versa.

Such agreements are often quite advantageous to receivers of frequent carload shipments, especially when deliveries are made on private sidings. However, before entering into agreements of this nature, the service rendered by railroads and the season of the year should be carefully considered, because demurrage charges will not be cancelled or refunded on account of weather interference, nor because of bunching of cars. On written notice either party may **terminate such agreements,** which notice becomes effective on the first day of the month succeeding that in which it is given.

STORAGE.—Storage is the charge assessed by carriers in accordance with the **tariff governing storage rules and charges,** and applies to freight, either carload or less than carload, unloaded at terminals and held after the expiration of the free time limit. Ordinary merchandise held at terminals in excess of free time allowed will be subject to the following **charges per day,** or fraction of a day, or at the option of the carrier may be sent to public warehouses:

For each of the first 5 days, 1½ cents per 100 lbs.; for the 6th and each succeeding day, 3 cents per 100 lbs.; minimum storage charge per shipment on freight held beyond free time, 5 days or part thereof, 25 cents; 6 days or more 50 cents.

Carriers do not usually hold freight at terminals after the free time has expired but place goods in public warehouse at expense and risk of owner. However, as storage charges are assessed for each day, or fraction of a day, one day's terminal storage is always added to the warehouse storage charge.

LIGHTERAGE.—In the large ports of the United States, such as New York, Boston, etc., freight is delivered to vessels or other points by boats called lighters, floats, and barges. Within certain limits all commodities (other than prohibited articles which are specified in the governing tariff) in carloads are entitled to **lighterage free delivery.** This term "lighterage free," means that the rates to or from the harbor city include transportation by lighters, barges, or car floats, to or from any dock or vessel within the free lighterage limits. Any **wharfage charge** or charge for berthing of lighters must be paid by shippers or consignees,

who must also provide **berthing.** When lighters are given a berth at public bulkheads or piers, no wharfage charge is assessed.

SWITCHING.—Switching is the service performed in moving cars from one track to another in what is termed **"switching limits,"** which is the area of a terminal within which switching service is performed under switching rules and regulations. **Switching charges** are assessed on the basis of a certain rate per car, as specified in a tariff, and are added to the freight charges, unless the rate includes the switching service. The act of carriers in including in their rate, from starting point to point of delivery at destination, charges that may have been assessed against the freight for switching service during its transportation, is termed **"absorption of switching charges."** Railroads operating between competitive points are always competing for desirable traffic, and in order to obtain this traffic they must offer equal rates and service. A line desiring to handle the traffic of an industry located on the tracks of a competitor, at a competitive point, must pay the competing line's switching charge in order to equalize the rates so as to obtain at least a portion of the traffic.

At terminals served by two or more railroads, cars are often loaded at private sidings on the tracks of one railroad and switched to another carrier to be forwarded to destination. At destination the industry to which freight is consigned may be located on a private siding connected with the track of a competitor to the one performing the transportation service, and in order to accomplish delivery it would be necessary to have the car containing the freight switched to the competing line. In both of the cases mentioned the railroad having the line haul generally absorbs the switching charge in its transportation rate, but the rule authorizing these absorptions must be contained in a legally published tariff.

DIVERSION AND RECONSIGNMENT.—The privilege of diversion and reconsignment afforded by carriers is essential to many shippers, particularly those who ship **perishable freight,** such as fruit and vegetables. These commodities are loaded into cars on the Pacific Coast, in the South, or from steamers at the Atlantic seaports, and started for some city where there is supposed to be a good market before sales have been made. Prior to cars reaching their destination it may develop that some other city would offer a better market, or the articles may be sold to purchasers located elsewhere. The shippers then resort to the privilege of diversion and the cars are sent as they direct.

How Requests for Diversion Are Made.—A request for diversion or reconsignment should be filed with the agent at the point from which the shipment was forwarded, or with a traffic executive of the transportation line having the shipment in its possession. If the shipment has reached its destination, the request should be filed with the agent there. The request should contain complete information and specific instructions as to the action desired.

Prompt Action Necessary.—The shipper should be thoroughly familiar with the carriers' tariffs containing **regulations governing diversion and reconsignment.** In order that the service may be performed by carriers without unnecessary expense to the shipper, prompt action on his part is essential, especially in cases of change of destination to one nearer the point from which the shipment was forwarded, so as to avoid a back haul. If an order has been cancelled after shipment, or for some reason the shipper desires to stop shipment, the agent at point of origin should be requested to stop the car at the nearest **hold point.** After notice is received by the shipper that the car has been stopped at a certain point, he has twenty-four hours to furnish instructions for dis-

position without extra expense other than the **diversion charge.** Transportation charges may often be considerably reduced by prompt action through the proper channels.

Freight Rate Applicable in Diversion.—Diversion rules and charges usually apply where shipments are handled at local rates, joint rates, or combination of intermediate rates. The through rate from the point of origin via the diversion point to final destination, in effect on date of shipment, is the rate that must be applied. If the rate from original point of shipment to final destination is not applicable through the point at which the car is diverted, the tariff rates in effect to and from the diversion point will apply, plus diversion charges. The application of the through rate is one of the important privileges conferred on shippers because otherwise the rate to the diversion point and the rate from that point to final destination would be applied, which would make a much higher charge.

RECONSIGNMENT RULES AND CHARGES.—The charges for reconsignment and the rules governing reconsignment privileges are published in tariffs issued either by individual lines or by agents acting for a number of lines. The charges vary according to the conditions under which reconsignment is made. For a **single diversion,** if the order is received at the initial billing point before the departure of the car from the freight-yard, or for a **change in the name of the consignor or consignee** which requires no additional movement of car, some railroads make no charge at all. In general, if the request for reconsignment is received before the arrival of a car at the original billed destination, the charge is less than if the request is received after the car reaches the reconsignment point.

TRANSIT PRIVILEGES.—Another important privilege which many American railroads accord to shippers is the "transit" privilege. Goods may be shipped to designated "transit" points, unloaded and perhaps passed through a manufacturing or other process, and then **re-shipped to a final destination,** at a charge considerably less than the combination of rates on the transit point. The rate may be the through rate from original point of shipment to final destination, plus a small charge for transit, or it may be made up of a combination of rates somewhat lower than the ordinary rates to and from the transit point. Grain may be moved to a milling center, made into flour and other grain products, and the manufactured articles shipped to final destination, at a through rate from the initial point of the grain shipment—either the grain rate or the grain products rate—plus a small charge for the stop-off privilege. Transit privileges permit the manufacture of logs into lumber, the compression of cotton, the fabrication of iron and steel, the feeding of live stock, the refining of oils, or merely storage, at intermediate points. **Transit tariffs** show the charges for the transit privilege, and the rules under which the privilege can be exercised. The privilege, when given, permits the shipper to effect a saving in transportation charges, and it quite frequently tends to neutralize any disadvantage which otherwise a producer of raw materials, located far from a milling or manufacturing center, might have.

Tariff Interpretation

SELECTING TARIFFS.—The first important duty of a shipper, when handling tonnage to or from territory tributary to water and rail routes, is to become familiar with the **differences in service and the rates** by the several agencies of transportation, in order to select intelligently the service best

suited to his particular traffic. It is necessary, first, to determine, either through knowledge or a standard guide, the route or routes available (that is, the initial line or lines, junctions, and delivering line or lines), then to locate the tariff or tariffs applicable between the points of movement.

Every shipper should establish and maintain **a tariff file,** and place therein only the tariffs necessary to determine the rates on the commodities he handles, a standard Shipper's Guide, and the Consolidated Classification. By doing this he will be able to determine rates promptly and accurately as occasion demands, both for the purpose of applying correct rates on outbound shipments and of verifying the rates assessed on inbound goods. Shippers will experience no difficulty in obtaining the requisite individual railroad tariffs, as carriers will furnish them upon application and will place the name of the applicant on its mailing-list, when so requested, for supplements and re-issues, without charge. The **large agency tariffs** may have to be purchased, although many shippers, on request of a railroad traffic official, are placed on the mailing-lists of the different **rate bureaus,** and the tariffs and supplements as issued are mailed to them without charge. If purchased, they may be obtained from the agents of the respective tariff bureaus, who will place the purchaser's name on file and supply him with all supplements and re-issues, if requested to do so.

DETERMINATION OF RATES APPLICABLE.—Upon application to carriers, quotations of rates may be obtained for shipments to be forwarded via their lines. When a request is made by a shipper in writing for a rate, the carrier must furnish the rate applicable in writing. If the carrier should quote an incorrect rate, or should refuse to give a written quotation, and the shipper should suffer damage in consequence thereof, the only remedy is a complaint to the Interstate Commerce Commission and the carrier would be liable to a penalty of $250, which would accrue to the United States, but the shipper receives no reparation for the damages suffered. It can be readily understood why this is the law, for if the rate quoted by carrier is lower than the lawful rate and the carrier is compelled to protect its quotation, the shipper would be practically receiving a rebate and it would tend to discriminate against some other shipper who had paid the lawful rate.

SERIOUS LOSS CAUSED BY INCORRECT RATE QUOTATIONS.—A shipper may suffer serious loss through incorrect quotation of rates by carriers. If a higher rate than the lawful rate is quoted, **contracts may be lost** by computing in the bid incorrect transportation cost. An illustration of serious loss incurred through the incorrect quotation of a lower rate than the lawful rate is shown in the following instance:

A shipper requested in writing the rate on a named commodity from a certain city in the United States to a point in Canada. The carrier furnished the rate in writing as 6th class. Because of the low transportation rate quoted the shipper was able to name a price which won the contract. The shipment consisted of quite a number of cars of heavy tonnage. Subsequently a difference bill was presented by the carrier for undercharges amounting to a large sum, considerably more than the profit, which the shipper was compelled to pay under bitter protest. The error made by carrier's rate clerk was of the kind liable to be made by any busy rate clerk. An exception to the classification applicable to this commodity was shown in the tariff naming sixth class rate, the classification rating being fifth class, but the clerk did not read the exception through carefully: The last line read "Does not apply on shipments to Canada."

DETERMINING RATE.—When the route is selected via which it is the intention to have shipment move, the tariff or tariffs containing rates applying

over that route should be consulted. On the title page of each tariff there is shown the name of the classification, and usually the exceptions to classification, governing the rates published therein. Frequently the exceptions are contained in the tariff itself, but sometimes they are so numerous that a separate publication is issued, and the tariff then gives the I. C. C. numbers of the tariffs containing the exceptions. If the exceptions of the initial carrier are contained in a separate publication, that tariff must be consulted for the purpose of ascertaining if there is an exception to the classification covering the commodity to be shipped.

In order to determine expeditiously the rate applicable to any commodity, the **order of procedure** is as follows:

Consult the table of contents and then find the pages on which are shown the points **from and to which rates apply,** in order to ascertain the rate bases. If the class rates and commodity rates are contained in separate publications, the **commodity tariff** should be consulted; or if the tariff or tariffs applicable contain both class and commodity rates, consult the **index of commodities,** in order to ascertain if there is a specific commodity rate applicable to the article. If there is, it is the rate that should be used, unless the alternative application of class or commodity rates is authorized; then be sure to use the lower rate. Read carefully the **rules of the tariff** in order to ascertain if there is any provision affecting the application of the rate. Ascertain if there are any exceptions to the classification affecting the rate. In reading a tariff it must be borne in mind that each **reference mark, symbol or character** means something. Whenever a character appears opposite a name, a rate, or any other item, ascertain what that character means. For instance, the figure 1 in a circle opposite the name of a station may indicate a reference which would state that the rates named do not apply via certain routes. A number in a circle in the rate basis column might indicate that certain arbitraries must be added to the rates applying from a named base point. Wherever a **note** is referred to, it should be carefully read, because the rate is only applicable in accordance with the provisions of that note. If no specific commodity rate or exception to the classification is applicable, ascertain the ratings assigned the article in the classification, both C. L. and L. C. L.; also the minimum weight required to constitute a carload. Then the **table of class rates published in the tariff** should be consulted to ascertain the rate as per the rating given in the classification.

COMBINATION RATES.—Combination rates are made by adding two or more rates together. They are lawful only when the different factors are on file with the Interstate Commerce Commission and when there is no through rate in effect between the point of shipment and destination. In constructing a combination rate it is necessary to consult two or more tariffs. These tariffs are usually governed by different classifications; and frequently a class rate will be applicable in one tariff and a specific commodity rate in another. When a commodity rate is applicable to a shipment, the minimum carload weight necessary for the application of that rate is often different from that shown in the classification, or the tariff applicable to one of the factors may contain an exception to the classification. As the **lowest lawful combination rate** is the correct rate applicable, it is necessary to ascertain the rates from the point of shipment to the various **gateways or base points,** and the rates beyond via the connecting lines; then add them together so as to determine which combination makes the lowest rate.

Rate Adjustments and Freight Claims

HOW RATE ADJUSTMENTS ARE OBTAINED.—Broadly speaking, the rate-making machinery is the **freight traffic department** of the individual carrier which functions either alone or jointly with "rate bureaus" or "rate committees," representing the carriers interested or affected. The "regulator" of the machinery provided by our laws is the Interstate Commerce Commission, or the state commissions, who are empowered to see that all transportation rates are proper and reasonable for both the carrier and the shipper. The **jurisdiction of the Interstate Commerce Commission** is over all freight, passenger and express traffic between or through two or more states, and to and from foreign countries, but only in so far as such transportation takes place within the United States. The **jurisdiction of a state commission** is restricted to freight, passenger and express traffic having origin, destination and entire transportation within the boundaries of the state. The **duties of rate bureaus or rate committees** are to consider all applications affecting rates and practices presented by shippers or receivers, and to recommend the disposition to be made of these applications.

When applying for adjustments of rates or practices considered to be unfair or unreasonable, in order to expedite the disposition of applications the correct form of procedure for the shipper or receiver of the commodity affected would be to make application to the proper rate bureau or rate committee. Applicants should be sure the conditions justify the adjustment asked for and should show complete information as to:

1. Commodity involved.
2. Present classification.
3. From what point or points.
4. To what point or points.
5. Present rate, rule, or minimum weight.
6. Proposed change desired.
7. Argument in support of application.

Oral hearings will be afforded if desired, but it is preferable to present the matter by written argument where that can be done satisfactorily. After receipt of argument, oral or written, the rate bureau or rate committee conducts an investigation and makes recommendation to the carriers interested, which recommendation is usually acted upon within 15 days from the date of submission. When a change is agreed to, the agent publishing the tariff provides therefor either by supplement to or reissue of the tariff, subject to the approval of the Interstate Commerce Commission.

Some of the reasons for seeking rate adjustments are as follows. It sometimes happens that the rate from a certain point to another point is higher than the rate to a more distant point over the same route. In such cases it is usually proper for shipper or receiver to present an application for a lower rate, or a rate no higher than the rate to the next point beyond. When the rates to a certain city are higher than the rates to a nearby city located on the same system, it is often contended that the higher rates are discriminatory and prejudicial to the interests of that city, and application is made to have the rates equalized. When a shipper forwards or contemplates forwarding a large tonnage of a certain commodity, he usually makes application to have a specific commodity rate established applicable to this commodity; that is, a special rate lower than the class rate, applying only to the commodity specifically named. When a specific commodity rate (lower than the class rate) is estab-

lished, applicable to a certain article, shippers of analogous articles usually make applications to the rate bureau or rate committee having jurisdiction over the territory from which shipments are made, for the establishment of a similar rate applicable to their articles. When shippers desire to place their goods in certain **markets in competition with other shippers** located in different sections of the country, applications are made for rate adjustments which will enable them to accomplish their purpose.

WHEN APPLICATION IS DENIED.—When application for adjustment of a rate or a classification rating is made to a rate committee or classification committee which is denied and the applicant believes that his request is just and reasonable, the proper procedure is to file a **formal complaint with the Interstate Commerce Commission,** which results in the Commission holding a hearing, giving the complainant an opportunity to present his side of the case. After hearing the other side, the Commission determines whether or not the complaint is justified. If the decision is in favor of the claimant, the Commission prescribes what in their opinion is a just and reasonable rate or classification rating.

REQUEST FOR SUSPENSION OF NEW RATE.—Whenever a new rate or a new classification rating is published, which in the judgment of a shipper or group of shippers is unreasonable or prejudicial to his or their interests, a request should be filed with the Commission, asking for a suspension of such rate or classification rating. In such cases it is usual for the Commission to set a date for a hearing, and pending such hearing the use of the new rate or new classification rating may be suspended, but not for a longer period than 190 days. If the hearing is not completed at the end of this period, the new rate or the new classification rating goes into effect, but the Commission may require the carriers to keep accurate account in detail of all amounts received by reason of the increase, specifying by whom and in whose behalf such amounts are paid, and upon completion of the hearing and decision, may order the interested carriers to refund, with interest, to the persons in whose behalf such amounts were paid, such portion of such increased rates as by its decision shall be found not justified. A complaint of this nature should be filed with the Commission at least 10 days before the effective date of the schedule and the complaint should show the I. C. C. number of the schedule, specifically referring to the parts thereof as to which suspension is asked, together with reasonably detailed explanation as to the probable effect of the proposed new rate or new classification rating.

FREIGHT CLAIMS.—A common carrier by land is an **insurer of the freight** which it carries. Under both the common law and statutory law, when a railroad accepts property for transportation, it contracts to deliver it in the condition in which received, and in the event of loss or damage, to the property, it is liable to the owner, except the loss or damage be due to an act of God, the public enemy, authority of law, act or default of the shipper or owner, inherent vice or defect of the property, or natural shrinkage, such as is common to grain and other articles of freight. It is inevitable that in the transportation of the enormous tonnage of freight which American railroads receive, some freight should be lost or damaged. While the amount of loss is not large in proportion to the total value of the goods carried, it is nevertheless large enough to cost the railroads several million dollars each year.

CONTRACTS LIMITING LIABILITY FOR FREIGHT CLAIMS.—Formerly it was possible for carriers to enter into contracts for the limitation of the amount of their liability for loss or damage to freight. The Interstate Com-

merce Act now provides that such contracts are illegal and void, except in cases where the Interstate Commerce Commission expressly permits carriers to establish rates based upon the declared value of articles transported. When such rates are permitted, the declared value of the freight subject to such rates is the **maximum amount** which the owner may recover if the freight is lost or damaged. The Commission may not, however, permit rates based upon declared value to be made for the transportation of **ordinary live stock.** For this particular variety of freight the liability of the railroad is full and complete. There are not many articles of freight upon which rates based upon declared value have been permitted. The measure of the liability of a railroad for lost or damaged freight is the "full actual loss," which is the market value of the goods, in the quantity shipped, at the time at which the shipment ordinarily would have arrived at destination.

CLAIM ADJUSTMENTS—CAUSES OF FRICTION.—The adjustment of claims has always been a cause of controversy and antagonism between carriers and shippers or receivers of freight. The **principle governing many claim agents** has been to endeavor to adjust a claim **on the basis of compromise,** no matter how just and reasonable the claim might be and regardless of the fact that the carrier was solely responsible for the loss. Skill on the part of this class of claim agents in effecting settlements by compromise was deemed an indication of exceptional ability, and claimants almost invariably accepted a compromise offer of adjustment rather than incur the expense incident to legal proceedings in order to collect a claim. Shippers, on the other hand, have sometimes endeavored to collect unjust claims and have resorted to many reprehensible practices in order to "get the better" of carriers. Any shipper or receiver, who for the sake of collecting a few dollars, will stand on the strictest technicalities without considering the equities of the case or the general principles involved, will very quickly place his concern before the carriers in a most unfavorable light.

During the past few years there has been a growing **spirit of cooperation** between carriers and the shipping public. There are many reasons for this change in attitude. Carriers have become conscious of the effect of their past methods and the adverse sentiment caused thereby. They have also suffered severely from overzealous regulation, and it has become necessary for them to win the good opinion of the public. Competition in securing business, so far as offering lower rates, is concerned, has been eliminated, so that the only inducements which a carrier may now offer for patronage are good service and prompt adjustment of claims. The policy of the present day is promptly to establish the validity of claims and not to endeavor to compromise or avoid liability. A stimulant to this spirit of cooperation has been the establishment of laws and regulations which have brought the interests of shippers and carriers closer together.

The following are the **principal causes of claims** for loss and damage for which **shippers are responsible:** Use of containers of insufficient strength to withstand the necessary handling in transit; use of containers which do not comply with classification rules and specifications; improper packing of containers; contents of cars loaded by shippers improperly stowed, braced, or skidded; careless inspection of cars prior to loading. The various **kinds of claims presented to carriers** may be designated as follows:

Overcharge in rate or weight	Damage
Loss or shortage	Concealed damage
Concealed loss	Unreasonable service

FILING OF CLAIMS.—Claims for overcharge should be filed with the agent who collected the charges; that is, if charges are "prepaid," by shipper with the billing agent at point of shipment; if charges are "to collect," by consignee with the delivery agent at destination. Claims for overcharge in rate should be made out on the **standard form** used for this purpose. The authority for rate claimed, tariff reference, I. C. C. number, effective date and page, should be shown. Claim papers should be arranged in the order given below and be fastened together with a suitable fastener:

Letter of transmission
Standard form (if for O/C in rate)
Claim base (if for O/C in weight)
Certificate of weight (if for O/C in weight)
Original paid freight bill
Original bill of lading

Claims for loss, shortage and damage should be filed by consignee with the agent who delivered the goods, because his office is the proper channel, and it insures prompt action and expedites adjustment. Claim papers should be arranged in the following order:

Letter of transmission
Claim base
Certificate of weight
Certified copy of invoice
Bill for cost of repairs (if for damage)
Trace papers (if for shortage)
Paid freight bill
Original bill of lading

Claims for concealed loss or damage should be filed by consignee with the agent who delivered the property for the reasons cited in the preceding paragraph. Concealed loss or damage means a loss or damage which is not readily discernible at time of delivery by carrier but is detected upon opening or unpacking containers. As soon as a concealed loss or damage is discovered, report should be made to the delivery agent, who should be requested to promptly send a representative to inspect the goods. Claim papers should be arranged in the following order:

Letter of transmission
Claim base
Certified copy of invoice
Bill for cost of repairs (if for damage)
Affidavit of consignee (if required)
Affidavit of consignor (if required)
Relevant correspondence
Original paid freight bill
Original bill of lading

In support of claims for concealed loss or damage, carriers frequently demand **affidavits** of the person who packed the goods and of the person who unpacked them at destination. It is very difficult for large shippers and receivers to furnish affidavits of this nature, and the certification of any reputable firm as to the correctness of claims should be sufficient.

Unreasonable service is excessive delay in transportation of property by carriers in consequence whereof loss or damage is sustained attributable to one of the following causes:

1. A decrease in price or value during the period of delay.
2. Expenses or penalties incurred by shippers or consignees because of the delay.
3. Loss of sale of seasonable goods.
4. Damage to perishable freight because of deterioration during the period of the delay.

If the time consumed by the carriers in transporting property is excessive, that is, considerably more than the usual or average time needed to move property of like kind, it is fair to infer that the delay is unreasonable in and the burden of proof to the contrary will rest upon the carrier. In determining what is a reasonable time of transit for any particular shipment, it is necessary to consider the character of the goods, conditions of weather en route, and other circumstances beyond the control of the carrier. Claims of this nature are very **difficult to collect** unless they are supported by indisputable evidence. Consignees should accept delivery of all delayed shipments unless worthless, and file claims consistent with any damage or depreciation chargeable to the delay. When **perishable or seasonable merchandise** is delayed in transit, thereby causing loss, arrangements should be made with the delivering agent as to the best method of disposing of it. Claim should be made for the actual loss sustained because of the delay, and if the goods are sold the amount realized should be deducted. The acceptance of damaged or delayed shipments does not in any way jeopardize any just claim which the owner may have against the carrier. Claim papers should be arranged in the following order:

Letter of transmission
Claim base
Certified copy of invoice
Original account of sales (if goods are sold)
Trace papers
Original paid freight bill
Original bill of lading

PROMPT FILING OF CLAIMS ESSENTIAL.—Claims should be filed with carriers as soon as practicable. **Claims for shortages** should be filed as soon as discovered. **Claims for non-delivery** should be filed within 60 days of the date of bill of lading. **Loss or damage claims** must be filed with the carrier within 6 months of the date of delivery, or, in case of inability to make delivery owing to absolute loss, within 6 months after a reasonable time for delivery has elapsed.

Export Traffic

HANDLING MORE INTRICATE.—The problems encountered in handling export traffic are entirely different from those which arise in the handling of domestic traffic. The problems are intricate because export traffic is handled in many different ways; in fact, there are rarely two shipments entirely alike—each one stands on its own merits and has to be handled accordingly. There are no two countries in the world to which the same regulations apply. In many countries the laws are constantly changing and the consular regulations are very strict. Consequently, it requires constant vigilance to keep out of trouble, because heavy fines are imposed by the officials of those countries on shipments which have been handled incorrectly.

PACKING LIST.—Before export goods are packed, they should be carefully laid out where no possible danger of confusion exists and checked with the

invoice. A packing list should be made **in triplicate** showing the exact contents of each package, and one copy of this list should be placed inside the package, one copy should be sent to consignee, and the third copy should be retained by the shipper. The packer must be absolutely certain that exactly the goods ordered and invoiced are actually packed and shipped. Each packing list should be signed by the man who packed the goods listed thereon.

WEIGHING GOODS BEFORE PACKING.—The contents of each case should be carefully weighed before packing for the reason that the net weight of goods is always necessary in export trade, and in exporting to some countries it is necessary to give the legal weight. On some shipments the legal weight is required in Mexico, the Argentine, and some other countries. **Duties** in these countries are sometimes imposed on the gross weight, sometimes on the net weight, and sometimes on the legal weight. These terms are thus defined in Mexico:

"**Net weight** is the intrinsic weight of the merchandise alone without any packing; **legal weight** includes the interior wrappings containing the articles which are packed with the articles in the outside container; **gross weight** is the weight of the entire package as shipped. Legal weight in all countries making this distinction is much the same; viz., the net weight of the naked goods plus the weight of cartons and other immediate packing."

An exceptionally good handbook for exporters is the Exporter's Encyclopaedia which gives explicit instructions for proper packing of export shipments, together with a lot of other valuable information about exporting.

MARKING PACKAGES.—The marking of packages is a very important part in export shipping. All packages must be distinctly marked to the port of final destination and with the name of the consignee. It is preferable, however, to mark the packages with a **symbol or private sign** which will identify the packages and their consignee, for, as a general rule, the consignee's name in full is not shown on cases; symbols are used instead. The reasons for this practice are quick identification of the goods when loading, unloading, and in the shipping manifest. Abbreviation, or the use of a symbol, also facilitates the preparation of shipping papers and conceals the actual name of consignee which often may be desirable. Marks should be stenciled on packages whenever possible. The use of a shellac coating over stencil marks may be used, as it has proved effective in protecting the marks from rubbing, blotting or chafing.

NECESSARY MARKS.—The essential marks are: the symbol of the consignee; the name of the port, usually placed underneath the symbol; the serial number of the case, the gross and net weights (legal weight when required) in pounds or kilos, or in both, as may be required; the measurement of length, breadth, and thickness of the package in feet and inches.

OCEAN FREIGHT RATES.—Most of the steamship companies name rates **on the basis either of weight or measurement,** ship's option; that is, they will charge rates on the basis that will yield the greatest revenue. There are some commodities, however, that the steamship companies take on a weight basis, regardless of measurement. As a rule, shipments weighing 56 lbs. or more to the cubic foot will be charged for on the basis of weight. But there are few commodities that weigh as much as 56 lbs. to the cubic foot. Hence it follows that most of ocean freight rates are assessed on a measurement basis.

Railway Express and Parcel Post

RAILWAY EXPRESS SERVICE.—The express service is a very desirable agency for transporting shipments when **quick delivery** is essential; also for

transporting less than carload shipments of **perishable property.** Express service should always be used for transporting highly **valuable articles,** valuable papers, money, etc., because it is reliable, responsible, and in case of loss or damage the company is liable for the full value. Any shipment of ordinary merchandise, weighing **40 lbs. or less,** should be shipped by express or parcel post, whichever makes the lower charge. There are **two railway express companies** in the United States, the Southeastern, which operates on the lines of the Southern Railway and a few connecting roads, and the American Railway Express Co., which operates on the other railroads of the country. The latter company was formed in 1918 by the unification of the railway express services of the Adams, the American, the Southern and the Wells Fargo companies.

In order to save transportation charges and avoid dissatisfaction, the **packing requirements** specified in the Official Express Classification should be read and strictly observed. A copy of the current classification may be obtained at any express office on application. Shipments should be marked in the same manner as less than carload shipments forwarded as freight, but in addition the value must be marked on each shipment and the name and address of shippers should be placed inside of packages.

How Knowledge of Rules May Effect Economy.—If a shipper has several shipments for the same consignee taking the same class rate, say 1st class (most all shipments of ordinary merchandise take 1st class rates), only one shipping receipt should be made out for the lot, and the weights should be aggregated. **Example:** Suppose a customer bought four separate articles in different departments of a large store in New York City and requested that they be sent by express to Titusville, Pa. When packed, they weigh 15 lbs., 20 lbs., 25 lbs. and 30 lbs., respectively.

If the packages were shipped on separate receipts, charges would be:	
15 lbs.—Scale No. 47	$ .72
20 " " " 47	.84
25 " " " 47	.96
30 " " " 47	1.08
	$3.60
If shipped on one receipt with weights aggregated, charges would be:	
90 lbs.—Scale No. 47	$2.55
Saving effected	$1.05

The 3rd class rate is 1 cent for each 2 ounces, or fraction thereof, or 8 cents per pound to any point in the United States. Printed matter is practically the only commodity to which this rate is applicable. Printed books, when properly packed, are entitled to the application of this rate. If the invoice value of a shipment of books, to be forwarded from New York City to San Francisco, amounts to $150, and it is shipped in one case weighing 220 lbs., it would be charged at 1st class rate—$28.27 plus valuation charge of 10 cents, or a total of $28.37. If shipped in 15 bundles, wrapped with paper according to classification specifications, each package being marked "Value Not Exceeding $10.00," the same notation entered on receipt and a separate receipt made out for each bundle, the weight would probably be reduced to 210 lbs., and the charge would be at 3rd class rate, which would amount to $16.80, effecting a saving of $11.57.

Claims for Loss or Damage.—Claims for loss or damage may be filed with the local express agent or direct with the claim agent. But in all cases claims must be entered at the place at which claimant desires payment made. On receipt of a claim at the claim bureau of the express company, a number is

assigned to it and prompt acknowledgment sent to the claimant showing the number assigned—also claimant's number, if any, and within six months of the date of claim the express company must notify the claimant in writing of the disposition made thereof. When occasion arises to correspond with the express company regarding a pending claim, the claim agent or other official handling the claim should be addressed and his file reference quoted. Otherwise there may be delay in matching up the correspondence.

Any loss or damage found to exist after delivery should be reported to the company's agent immediately upon discovery by consignee. When such loss or damage is not discovered until after shipment has been opened, container and contents should be kept together, particular care being taken to preserve all portions of the wrapping bearing names, addresses, marks, numbers, labels, etc., until the express company's representative can make an inspection. In case of shortage in contents, weigh the shipment.

Acceptance of Damaged Goods.—Pending the settlement of any dispute or disagreement between the consignee and a delivery-man or other representative of the express company, as to questions of damage in connection with property transported, the consignee should avoid further loss or damage by promptly accepting the property, because it is the duty of consignee to salvage such shipments. Such action on his part in no way affects any valid claim which may exist against the company. It is not necessary for a shipper or consignee to prepare and file formal **claim for overcharges** with the express company. Upon verification of an overcharge an express agent is authorized to immediately make refund and to take receipt therefor.

Time for Filing Claims.—Claims for loss or damage must be entered within 6 months after delivery of the property, or, in case of failure to make delivery, then within 6 months and 15 days after date of shipment; and suits for loss or damage must be instituted within 2 years and 1 day after the date when notice in writing is given by the express company to the claimant that the company has disallowed the claim. All claims should be presented with as little delay as possible, and it is particularly important that claims for concealed loss or damage be entered promptly. The express company provides a "Blank for Presentation of Loss and Damage Claims," which when properly prepared by claimants, gives the information necessary for proper investigation. Claim papers should be arranged in the following order:

Letter of transmission
Claim base (express company's form)
Certified copy of invoice
Other particulars obtainable in proof of loss or damage
Certified copy of the original receipt, if available

FOREIGN EXPRESS.—When foreign express service is compared with the express service accorded in this country there is not much similarity, because foreign express matter cannot travel any faster than ordinary cargo, since it is transported on the same steamer. The American Express Co. is the principal company transporting express matter in ocean traffic, and from a traffic standpoint, this company is interested only in the handling of shipments destined to non-adjacent foreign countries or originating in non-adjacent foreign countries. The express company, in behalf of its clients, negotiates for cargo space, arranges for forwarding shipments from seaboard, issues through bills of lading, prepares the necessary consular documents and arranges for marine insurance when required.

In addition to its traffic activities, the **financial department** of the company affords facilities for collection of drafts; the establishment of credits, under which payments are made against presentation of proper shipping documents; the sale and purchase of foreign exchange; and for supplying travelers' checks cashed throughout the civilized world.

PARCEL POST SERVICE.—Domestic parcel post service offers a convenient and efficient means of transporting small parcels to any point in the United States or its possessions. The chief advantage offered is the low rates on short distance traffic, and for forwarding packages to places not reached by railroads or steamboats. The **weight of packages** forwarded by parcel post is limited to 70 lbs. for the first three zones, and to 50 lbs. for all other zones. Parcel post packages **must not exceed 84 inches in length and girth combined.** The most convenient way of measuring a package is by means of a tape line 7 feet long; so much of the tape as is not used in measuring the length is the measure of the maximum girth permissible. For parcel post purposes the United States is divided into **eight zones,** each zone being subdivided into a number of units. The number of each unit is shown after the name of the office in the state list of the **Official Postal Guide.** The Guide shows a **table of rates** applicable to the different zones, but a separate zone key, which is furnished by the Post Office Department to each purchaser of a Guide, is required for each unit. An **additional charge** of 2 cents per parcel is made, designated as a "service charge." A new feature is the institution of a **"special handling service,"** under which a parcel post shipment at an additional postage expense of 25 cents will be accorded the same expeditious handling that is given first class mail matter.

The **charge for insurance** is as follows:

5	cents	For	indemnity	not	exceeding	.....	$ 5.00
8	"	"	"	"	"	.....	25.00
10	"	"	"	"	"	.....	50.00
25	"	"	"	"	"	.....	100.00

The fees for insurance are in addition to the postage. All fees, service charges, and postage must be prepaid with stamps affixed. Therefore, when figuring the total charge on any shipment by parcel post, it is necessary to consider the regular zone rate, plus insurance, plus a service charge of 2 cents, and if special handling is desired, plus 25 cents postage in addition.

FOREIGN PARCEL POST SERVICE.—**Small orders** may frequently be sent to foreign customers by foreign parcel post at **much less expense** than by other agencies, and usually the transportation is much quicker. There is a **weight limit** on each package, which varies in different countries. To overcome this regulation when a shipment exceeds the weight limit, it may be divided into several packages, if possible, and thereby comply with the weight requirements. Some foreign importers prefer to have small shipments sent by parcel post even though the cost is higher than by other agencies, because in many countries the **custom house regulations on parcel post matter** are not so strict as when goods are forwarded as steamship cargo. Another advantage is that it is rarely necessary to employ a custom house broker to get the goods forwarded by parcel post; while, on the other hand, a broker is essential when a cargo has to be cleared through the Custom House in the usual way, regardless of whether the shipment consists of a single package or a thousand cases.

Small **packages of samples,** not exceeding 12 ounces, gross weight, may be sent to most of the foreign countries at a very low rate of postage. The regulations do not permit sending samples of all articles, but samples of many articles may be sent by this service. This is a valuable service and affords a

quick way of putting samples in the hands of foreign importers at small expense. When a **heavy lot of documents of no special value** have to be sent abroad, considerable postage can often be saved by mailing them in an unsealed package, labeled "Commercial Papers." Bills of lading, invoices or copies, etc., come under this classification.

Each package must be securely packed, but in such a way that it can be opened without damaging its cover, in order that its contents may be easily examined by postmasters and customs officials. It should be plainly marked with ink, in English characters, giving the name and full address of the person for whom the package is intended. The name and address of the sender preceded by the word "From" should be written on the package. It must also be marked "Parcel Post." The **greatest length permitted** for packages forwarded by parcel post to foreign countries is 3 feet, 6 inches, and the greatest length and girth combined must not exceed 6 feet, but some exceptions are shown in the Postal Guide. Packages should be measured with a tape line 6 feet long in the same manner as described for measuring domestic parcel post packages.

Customs Declaration.—A customs declaration must be correctly filled out and attached to each package in such a manner that it does not seal or close the package and so that it may be easily opened without damaging the cover. The customs declaration should be tied to the package by means of a cord passed through the eyelet and should be bound to the parcel so that it lies flat thereon and cannot be used as a handle to lift the package while in transit.

SECTION 21

TRANSPORTATION RATES

All common carriers, and particularly the railroads, the most important common carriers by land, occupy, because of the peculiar nature of their function, a legal and an economic position in the business fabric which is quite different from the position occupied by the ordinary private business establishment. The prices which carriers may charge, the liability of carriers for the goods entrusted to them for transportation, and the relations of the carriers to the shippers whom they serve, are subject to many and diverse legal restrictions and regulations.

No attempt is made in this section to deal with all the problems involved in the relations between shippers and carriers, which subject is more completely covered in the section on Traffic Management. The purpose of this section is to set forth the fundamental facts with respect to transportation rates, and the methods by which they are established and the leading principles of their regulation.

Railroad Rates and Charges

PUBLICATION OF RAILROAD RATES.—The law requires that railroad rates be published and kept on file for public inspection. State laws require the publication of rates applicable only to intrastate traffic, while federal law requires the publication of the rates applicable to interstate shipments. Rates on all interstate traffic must be filed, too, with the Interstate Commerce Commission at Washington. Most of the rates applicable primarily to intrastate freight shipments are filed with the Interstate Commerce Commission, since it is customary for rail carriers to use these rates, in combination with others, to make rates on many interstate shipments. The publication and filing of nearly all freight rates, therefore, comes under the supervision and control of the Interstate Commerce Commission, and it is seldom necessary to consider the regulations of individual states with respect to the mere technical formalities involved in the publication and filing of the charges imposed for railway transportation service.

PUBLISHED RATES ARE THE LEGAL RATES.—The published railroad rate is the **legal rate,** the only rate which the carrier may lawfully collect from the shipper, the only rate which the shipper is by law obliged to pay. Since all rates must be published, and since the law requires the schedules of charges to be made available for public inspection, the **shipper is presumed to know the correct rate** applicable to any shipment which he desires to make. While it is customary for shippers to secure information concerning railroad rates from the agents of the railroads, any error on the part of an agent in the quotation of a rate does not render the carrier liable for payment of damages to the

ipper. A shipper has the right to demand from the agent of a railroad a ritten statement of any rate to which the railroad is a party. But even if ie agent makes an error, thereby causing the shipper to suffer damages, the rrier is liable only to a penalty of $250, which accrues to the federal govern- ent. The shipper must pay the legal rate, regardless of the incorrect informa- on obtained from the carrier's agent, and he cannot recover damages, however reat his loss may have been.

ADVANTAGES OF PUBLICATION OF RAILROAD RATES.—The publi- tion of railroad rates has many practical advantages. It insures **equality of eatment** between shippers at the same points. It enables shippers to know advance the transportation charges applicable to their freight. From every ilroad station in the United States there is in effect—published and filed ith governmental agencies, and also filed for public inspection—a rate or a mbination of rates to every other railroad station in the country, for any ticle of freight which may be offered for rail transportation.

KINDS OF RATES.—There are many railroads in the United States. The merous freight stations are located on lines belonging to many different ilroad companies. To have rates between all stations, there must be rates plying not only between stations situated on the same railroad, but applying so between stations situated on different lines.

Local Rates.—The rates between stations located on the same line are own as "local rates." They are single rates applying from point of origin point of destination.

Joint Rates.—When a shipment moves from a station on one railroad to a ation on another road, passing perhaps over one or more intermediate lines the course of its journey, the rate applicable may be a single rate for the tire movement, made by agreement among the connecting lines. Such a gle rate, applying between stations on different railroads, is known as a oint rate."

Combination Rates.—If no single joint rate is in effect between two stations cated on different lines, a shipment moving between those stations will be arged a "combination rate," made up of the sum of the rates in effect between nction points of the connecting lines.

PRECEDENCE OF JOINT RATES OVER COMBINATION RATES.—All nt rates must be made by agreement among the interested roads. Where **joint rate** exists between two points, it is the **legal rate** and the rate which ust be collected, even though at the time there may be a lower combination te over the route of movement. If no joint rate is in effect between points cated on different roads, the legal rate is the lowest combination available er the route of movement. It will be seen that a combination rate may be e sum of two or more local rates, the sum of two or more joint rates, or the m of both local and joint rates, depending upon the kinds of rates in effect er the route which a shipment follows.

PROPORTIONAL RATES.—Frequently railroads publish what are known "proportional" rates. These rates are to be used only in connection with ner rates, **to form combination rates.** An **illustration** will indicate the nature proportional rates. On railroad X the local rate for a certain shipment from to B is 30 cents per 100 lb. The local rate for this shipment between B and on railroad Y is 60 cents per 100 lb. In the absence of a joint rate from A C, made by agreement between X and Y, the through rate from A to C on s shipment would ordinarily be the sum of the two local rates, or 90 cents.

But railroad Y may publish proportional rates between B and C, applicable on traffic originating at A, lower than the regular local rates from B to C. Assume that Y publishes a proportional rate of 50 cents per 100 lb., applicable to this shipment from A. In this case the through rate on the shipment from A to C would be the sum of the local rate from A to B and the proportional rate from B to C, or 80 cents. The proportional rate would not be used, however, except as a factor in the combination rate from A to C. The local rate on a shipment of the same kind, originating at B and destined to C, would still be 60 cents.

ADVANTAGES OF JOINT RATES.—Joint rates are a great convenience to shippers, and a source of economy to carriers. The ascertainment of charges applicable to freight moving between two widely separate points located on different railroads is manifestly more simple where single rates are in effect for the entire movement, rather than a combination rate made up of several factors. The railroads of the United States have many joint rates, and the number of such rates is increasing steadily. The Interstate Commerce Commission has the power to order connecting carriers to establish through routes and joint rates, when the Commission deems it to be in the interest of the public to do so.

"BREAKING" FREIGHT MOVEMENT TO EVADE THROUGH RATE UNLAWFUL.—A shipper may not legally "break" the movement of a freight shipment for the purpose of evading the payment of a rate which is higher than an available combination. It seldom occurs that a joint interstate rate exceeds the aggregate of intermediate rates, because such a rate is prohibited, unless expressly authorized by the Interstate Commerce Commission. However, a shipper in the interior of a state might find, applicable to a point near the state boundary, a low intrastate rate, which, in combination with an interstate rate beyond, would make a lower total charge than an interstate rate from point of origin to point of final destination. He might ship to the point near the boundary, accept delivery, and immediately reship. Such a practice would be **unlawful,** and if it could be shown that the transportation was interrupted merely for the purpose of defeating the higher but legally applicable rate, the interested carriers could recover from the shipper the amount due on the basis of the higher rate.

CLASSIFICATION OF FREIGHT.—There are thousands of articles of freight for which railroad rates must be published, and there are also thousands of stations to and from all of which these rates must apply. The carriers must thus adopt methods of simplifying the process of rate publication—methods which will reduce the complexity involved in establishing rates on thousands of articles between thousands of stations.

The first step in the simplification process is the "classification" of freight. Classification consists merely of dividing the articles transported into a limited number of groups or "classes," with the understanding that all articles in the same class will be charged for alike. Classification has the effect of reducing the number of articles carried as freight from several thousand to a dozen or so, depending upon the number of classes decided upon. The classification accomplished, rates are made, not upon the individual articles, but upon the classes. When an article is charged for according to the class in which it falls, it is said to be governed by a **class rate.**

Classification does not determine the actual rate which an article will take, but it does determine the **relationships of the rates** upon different articles. One cannot determine from a freight classification, the rate applicable to an

ticle, but one can discern whether a certain article will be subjected to the ne rate that some other article bears, or to a lower or higher rate.

COMMODITY RATES.—Not all articles are subject to class rates. Virtu- y all railroads quote rates specifically applicable to certain kinds of freight. ch rates are known as "commodity rates." These rates are usually, though t always, somewhat lower than class rates. Coal, ore, lumber, and other v-grade articles of freight are usually governed by commodity rates instead class rates. Commodity rates are, as a rule, applicable only to carload pments, though occasionally one may find commodity rates applicable to s than carload shipments. Whenever a commodity rate is established upon y article, it **supersedes the class rate** on that article, and becomes the legally plicable rate, whether higher or lower than the class rate, unless it is pub- ned in the same tariff with the class rate, and the tariff specifically authorizes e alternative use of the two rates.

Carload commodity rates and carload class ratings invariably provide for **arload minimum weights"** to be used in connection with the rates or the ings. The rate or the rating will not apply for a weight less than that in- ated in the carload minimum. Both class rates and commodity rates may joint or local. A combination rate may consist of the sum of both class and mmodity rates. Proportional rates, used as factors in combination rates, y likewise be either class or commodity.

EXPORT AND IMPORT RATES.—Railroads frequently publish rates plicable only to goods which have been imported or to goods destined for port. Such rates are in reality a **special type of proportional rates.** They not applicable to shipments wholly domestic. Export rates and import es may be either class or commodity rates, that is, applicable to classes of ght, or to specific commodities. In nearly all cases the export and import es are lower than the domestic rates. The Merchant Marine Act of 1920, encourage the shipping industry of the United States, provided that the rail port and import rates of this country should be applied only in the case of ds carried in American ships. It stipulated, however, that this rule could suspended by the Shipping Board, and as a result of the action of that body rule has not yet become effective.

CLASSIFICATION OF NEW ARTICLES.—When a new article is offered rail transportation, an article not already listed in the classification, an plication is made for a rating, either directly to the classification committees, through an agent of a carrier. Until a definite rating is assigned, the article classified in accordance with the so-called **"analogous rule,"** that is, it is into the same class with articles, already listed, which it most nearly re- ables.

REVISION OF THE CONSOLIDATED CLASSIFICATION.—The Con- dated Classification is revised and republished about every 18 months, ugh there is no definite rule as to the periodicity of issues. The changes de during the time between issues are published in "supplements" to the ctive issue. Each successive issue of the classification cancels the previous e and its effective supplements.

FREIGHT TARIFFS.—The rates applicable to freight traffic are published freight tariffs." The tariff takes its name from the kind of rates it contains. containing only local rates is a "local tariff"; one containing only joint s is a "joint tariff." Some tariffs may contain all kinds of rates—local joint class and commodity rates, proportional class and commodity rates, export and import class and commodity rates. All freight tariffs containing

rates applicable to interstate shipments of freight must be published strictly in accordance with rules promulgated by the Interstate Commerce Commission. These rules are carried in a publication issued by the Commission, known as Tariff Circular 18-A.

Tariffs are uniform in size, eleven inches long and eight inches wide. They are published either by the carriers themselves, or by agents appointed by the carriers and duly authorized to act for them. The tariffs published by agents are called **"agency tariffs,"** while those published by the carriers directly are called **"individual tariffs."** In the publication of tariffs containing rates applicable over a large number of routes and throughout a wide territory, much duplication of effort is avoided by using the agency method. In addition to being a source of economy, agency tariffs simplify greatly the work of ascertaining the rates applicable by different routes.

Each freight tariff contains an **"I. C. C. number"** for filing and for reference. The I. C. C. number of an individual tariff is that of the carrier by which it is published, while in the case of an agency tariff it is that of the agent. In addition to the I. C. C. number a tariff usually bears the file number or identification number of the carrier or of the agent by which it is published.

UNIFORM TARIFF CONSTRUCTION.—Since the publication of freight tariffs is governed by uniform rules established by the Interstate Commerce Commission, they are all constructed upon the same general plan, differences arising only from the nature of the rates which they contain or from the number of places to which their rates apply. Joint tariffs will differ from local tariffs, for instance, in that they must indicate all the carriers which are parties to the joint rates. Commodity tariffs differ from class tariffs, in that they necessarily must contain the names of the articles upon which specific rates are given. All tariffs contain rules and directions necessary for their interpretation and application.

BLANKET RATES.—It is usually found that in a tariff containing rates applicable over a very wide area of country, a large number of points are given the same, or almost the same rates. When the same rates are made **applicable to all stations in a large territory,** the rates are sometimes referred to as "blanket" rates. There are some commodity rates from Eastern points which are the same to virtually every point west of the Missouri River, the "blanket" in this case being very extensive.

NEW TARIFFS AND SUPPLEMENTS.—Changes in freight tariffs—especially the larger ones—must be made with considerable frequency, because of the additions of new stations and the modification of rates to particular points. No change in rates may be made, however, except on thirty days' notice to the Interstate Commerce Commission and to the public, unless the Commission gives consent to shorter notice.

When many rate changes are to be made in a tariff, it is customary to re-issue the tariff in its entirety. When only a few changes are to be made, they are published as **supplements to the tariff.** Since the existence of a large number of supplements to a single tariff would cause confusion and perhaps entail considerable work in the ascertainment of the correct rates, the Interstate Commerce Commission fixes a **limit to the number of supplements** which may be in effect at one time. The number permissible varies with the size of the tariffs. The largest tariff may not have more than three ordinary supplements, a tariff of 17 to 111 pages not more than two, a tariff of 5 to 16 pages not more than 1, and a tariff of less than five pages no supplements at all. Under certain circumstances the Commission permits a deviation from the rule with respect

he number of supplements, additional ones being authorized for the purpose iving notice of orders of the Commission suspending the operation of rates, l orders vacating such suspensions.

Supplements to a tariff are numbered consecutively. Each supplement st indicate on the title page which supplement or supplements it cancels, l each must show on the title page what supplements contain all changes n the original tariff that are in effect. Sometimes 50 or 60 supplements to ariff are published before the tariff is re-issued. This means that the matter ried in the earlier supplements must be re-issued in the later ones, in order t the rule with respect to the number which may be in effect at one time will be violated. While there is no limit upon the number of supplements that y be published before a tariff is re-issued, there is a limit upon the size of supplements. For example, a supplement to a tariff of 33 or more pages y not have more than one-fourth the number of pages contained in the tariff lf. When the changes in the original tariff become extremely numerous, tariff must be republished—and the work of supplementing started all r again.

LASS TARIFFS.—Class tariffs contain only class rates. A class tariff does name rates on particular articles of freight, but upon "classes" of freight. h a tariff can be used only in connection with the freight classification, ch shows what articles belong to the classes for which rates are given in the ff. A class tariff is always "governed," therefore, by one particular clas- ation or by a classification and indicated exceptions to that classification. governing classification and the governing exceptions, if any, are invariably ied upon the title page of a class tariff.

OMMODITY TARIFFS.—Commodity tariffs contain only commodity s, on specifically named articles. It is not necessary to use a classification onnection with a commodity tariff for the purpose of ascertaining freight s, but usually a commodity tariff is made subject to the rules of a classifica- , and where this is the case, the classification may be said to govern, to rtain extent, the commodity tariff. Some commodity tariffs contain rates veen certain points on only one article, such as lumber, sand, coal. Some neral" commodity tariffs have rates upon a number of articles, which are d alphabetically in the first part of the tariff. If a tariff giving commodity s between certain points does not give all the commodity rates effective veen those points, it must give reference to the tariff or tariffs in which the r commodity rates may be found.

LASS AND COMMODITY TARIFFS.—A class and commodity tariff ains both class and commodity rates, each kind being published in different ions of the tariff. The tariff may provide for the alternative use of these ions, stipulating that a shipper may use either the class or the commodity , whichever makes the lower charge.

HE RATE TO APPLY.—When a commodity rate is established it super- s the class rate, except in the case where alternative choice is permitted, ust indicated. Ordinarily, therefore, if a commodity rate applies to an le offered for shipment between two points, it is the rate legally applicable ie shipment. If no commodity rate exists, the article will take a class rate, e secured from the class tariff applicable between the two points. Before rate can be determined from the class tariff, it is necessary to ascertain the to which the article belongs. If the class tariff is subject to "exceptions" s governing classification, the exceptions must be consulted, to see if the le is designated therein. If it is, it will take the class indicated by the

exception. If not, the governing classification will apply, and the rate for that class, given in the class tariff, is the properly applicable rate.

TARIFF INDEXES.—All railroads are required to publish and keep up to date indexes of all the tariffs, local and joint, class and commodity, to which they are parties. Brief consultation with the tariff index of a railroad enables a traffic man to know what commodity tariffs are in effect between local points on that railroad, and likewise enables him to know whether joint tariffs—class or commodity—are in effect to points on other railroads. He knows, without seeking, that class rates are published between all local points. If a local commodity tariff, containing rates on the freight which he desires to ship, is not listed, he will at once make use of the proper class tariff. If he contemplates a shipment to a point on another railroad, and the tariff index of the initial line reveals no joint rates in effect to that point, he must work out a combination rate, by consultation with the indexes and the tariffs of connecting lines.

FACTORS DETERMINING FREIGHT RATES.—There are many factors which enter into the determination of freight rates. First, railroad companies are private corporations, engaged in the business of transportation primarily for the sake of profit, and their officers and directors want to keep rates as high as they can be kept, consistent with the development of traffic. They would not deliberately impose rates the effect of which would be to injure their own business. To shippers, on the other hand, the freight rates are a part of the expenses of production. They are interested in keeping down all their production expenses, and they want freight rates to be as low as they can possibly be, consistent with the maintenance of adequate transportation service. There may be many rates higher than the railroads could accept and still earn a profit; there may be rates lower than a shipper would be willing to pay rather than do without railroad service. The opposing interests of shipper and carrier—the forces of supply and demand—have considerable influence upon the level of rates.

COMPETITIVE CONDITIONS IN FREIGHT RATES AND SERVICES.—Various competitive conditions have much to do with the determination of freight rates. In times past there has been intense rivalry among **parallel railroads,** and the competition among them has on many occasions driven rates so low as to be unremunerative. In more recent years this "cutthroat" competition has been eliminated, and the only competition between parallel railroads today, which is of any significance, is **competition in service.** Competition in rates is virtually unknown. The carriers in different traffic regions are all members of "traffic associations," and through these associations they reach agreements on rate matters and maintain a substantial equality of competitive rates.

COMPETITIVE INFLUENCE OF WATER AND OTHER FORMS OF TRANSPORTATION.—While direct competition among railroads has been subjected to effective control, there are other competitive influences which strongly affect the amount which railroad companies may charge for their services. Some parts of the country have the advantage of water transportation in addition to railroad facilities, and where water routes are available, railroad rates are invariably affected by the charges of the water lines. The railroad rates between the Atlantic and the Pacific coasts are influenced by the rates by water through the Panama Canal. The Great Lakes and the Erie Canal have exerted a profound influence upon the railroad rates of the East. The Mississippi and the Ohio rivers, as well as many of the smaller navigable streams of the South, while no longer serving as important carriers of the domestic

nmerce of the United States, nevertheless exert a strong influence upon nsportation rates by rail.

Other competing forms of transportation serve to keep rates on steam rail-ds lower than they might otherwise be. The **electric roads,** local and inter-ban, have had a distinct effect upon both the passenger fares and the freight es of steam rail lines; and the use of **motor buses and motor trucks** for short ul passenger and freight services has likewise led to a reduction in the local es of many railroads.

INDUSTRIAL AND MARKET COMPETITION.—More effective perhaps an the competition of rival transportation agencies are those forms of com-tition known as industrial and market competition. Industrial establish-nts located in widely separated localities endeavor frequently to sell their oducts in the same market. These industrial concerns may be served by ferent railroads, which are entirely non-competitive with respect to the affic actually hauled by either. But the ability of both establishments to ter a competitive market depends upon the relation between the rates charged their respective transportation lines. If one railroad keeps its rates so high to exclude the industrial concern on its line from the competitive market, at railroad misses an opportunity to secure traffic and revenue, which with ver rates it could obtain. This industrial competition brings about a **"balanc-g" of rates** in different parts of the country. The rates on salt from New ork and Michigan to the great meat-packing cities of the Central States are fluenced by the rates on salt shipped to these cities from Kansas and Louisiana, d vice versa. The rates on citrus fruits from California to eastern markets e largely determined by rates on the citrus fruits of Florida. The rates on ined sugar from New York and Baltimore must be balanced against rates refined sugar from New Orleans and San Francisco.

COMPETITION OF SEAPORTS.—The rates on commodities destined for port are influenced by the competition of various seaports for the export ade of the nation. The ports along the Atlantic and Gulf coasts are all ysically in a position to handle much of the export traffic which passes from e interior of the United States to foreign countries the world over. The osperity of the foreign trade of these ports depends in large measure upon e rates accorded by their respective railroads, and to get a share of the export ight the rail carriers serving any one port must see that their rates have a oper relation to the rates charged by the carriers serving other ports. The mpetition among seaports and among the railroads serving the seaports has en a factor of prime importance in the determination of the rates upon export ight.

GOVERNMENT REGULATION OF RAILROAD RATES.—The **most portant factor** affecting the amount which railroads may charge for their rvices today is government regulation. It has been the experience of all untries where railroads are privately owned and operated, that if railroad es are left solely to the determination of competitive influences, various uses arise, resulting in unreasonably high and unjustly discriminatory rates many shippers. The rise of these abuses long ago created a demand for blic regulation of railroad rates, and there is no country in which rates are t subjected to a certain degree of governmental control.

Railroad charges in the United States are subject to regulation both by the deral government and by the governments of the individual states. The deral government has the exclusive right to regulate rates on interstate traffic, d it also has the right to regulate rates on intrastate traffic to the extent

necessary to prevent any discrimination against interstate commerce. Federal regulation is much more important than state regulation, not only because of the greater scope of federal authority, but also because the major portion of the rail traffic of the United States is interstate in character.

INTERSTATE COMMERCE ACT.—The chief federal law for the regulation of rail carriers is the Interstate Commerce Act. This law, known before 1920 as the "Act to Regulate Commerce," was passed originally in 1887. It has been amended many times, the most important changes having been made in 1903, 1906, 1910 and 1920. The Transportation Act of 1920 consisted largely of amendments to the act originally passed in 1887. The Act is based upon **two fundamental principles** laid down in the act itself. These are that the charges for railroad service shall be reasonable, and that they shall not be unduly or unjustly discriminatory, as between places, persons and commodities.

DUTIES AND POWERS OF THE INTERSTATE COMMERCE COMMISSION.—The law establishes an administrative body, known as the Interstate Commerce Commission, whose function and duty it is to see that the principles upon which the law is based are properly enforced. To carry out this duty the Commission is entrusted with a number of important powers, the chief of which are:

1. To declare a rate unreasonable or unduly discriminatory, either upon its own initiative, or upon complaint.
2. To establish the rates on interstate traffic, which a carrier must charge, in place of rates found to be unreasonable or unduly discriminatory.
3. To suspend proposed changes in rates, pending an investigation of their reasonableness.
4. To establish rates on intrastate traffic, when deemed necessary, for the purpose of removing a discrimination against interstate commerce.

The powers of the Commission over the rates and charges of the railroads are limited only by the constitutional provision that property can not be taken without due process of law. In other words, the Commission can not make rates so low as to be **"confiscatory,"** but above the point of confiscation, it has virtually unlimited control of railroad charges.

"FAIR RETURN" RULE IN MAKING RAILROAD RATES.—In exercising its duty to see that rates are reasonable, the Commission must bear in mind reasonableness from the standpoint of the carrier as well as from the standpoint of the shipper. Since 1920 the Interstate Commerce Act has contained a "rule" of rate making for the guidance of the Commission. This rule declares that the carriers as a whole are entitled to a "fair return" upon the value of the property devoted to the transportation service. It is the duty of the Commission to establish the value of the carriers' property, and it is also its duty to decide what is a "fair rate of return" upon this value. For several years the Commission has been engaged in a **valuation of the railroads,** but the work is still far from complete. In 1920, however, it assigned a **tentative value of $18,900,000,000** to all the railroads of the country, in order to reach a decision as to what level of rates should be established to enable the carriers to earn a fair return.

Since the railroads are bound by law to charge only rates that are reasonable and not unduly discriminatory, and since the Interstate Commerce Commission is invested with a large measure of discretionary power in the enforcement of this law, it is manifest that regulation has a telling influence upon the amount which the carriers charge for transportation service.

What is a reasonable rate? When may a rate be said to be unreasonable?

ince the law requires that railroad rates shall be reasonable, the carriers, the ippers, and the Interstate Commerce Commission must give much thought o these questions. It is the endeavor to answer these questions that has given se to much discussion of the **"theory of railroad rates."**

"COST OF SERVICE" AS A FACTOR IN MAKING RATES.—There are **any aspects to the theory** of railroad rates. With respect to the general level rates, it is now an accepted principle that the **governing consideration** should e the "cost of service." Railroads are entitled to a fair return upon the value the property devoted to transportation service, which means merely that he level of rates should be sufficiently high to pay for the cost of railroad service nd leave a fair profit upon the value of the property employed in the production transportation.

COST OF SERVICE THEORY AND INDIVIDUAL RATES.—The cost of rvice theory is likewise of great importance in testing the reasonableness of dividual rates, though it is impossible to apply the principle with any large egree of exactitude. Many of the costs of railroad transportation are **joint osts,** and it is, therefore, quite out of the question to determine exactly the ost of carrying any particular article of traffic. Moreover, a very large pro- portion of the costs of transportation are **fixed or constant.** Some authorities timate that at least 60% of the cost of operating a railroad is not affected by rdinary variations in the volume of traffic. Even if it were possible to separate e costs for each article shipped, and if it were possible to work out an exact rmula for the distribution of the constant costs against the different kinds of eight, it would not necessarily follow that it should be done, in order to tablish reasonable rates. Sound considerations of business policy and of ublic policy may well justify an unequal distribution of the constant costs. many lines of business activity it is found advisable, both from a business d from a social standpoint, to exact a higher charge for a certain service than r another service which it obviously costs less to perform.

The cost element is nevertheless an important factor in the determination the reasonableness of individual rates, though its application represents mparison and approximation rather than definite measurement. It is not cessary to know how much it costs to haul a carload of freight 100 miles in der to know that it costs more to haul it 200 miles. It is not necessary to ow how much it costs to haul a ton of a certain commodity in order to know at it costs more to haul two tons. It is not necessary to know how much costs to haul a carload of an article to know that it costs less per 100 lb. an to haul less than a carload of the same article. It costs more proportion- ely to haul freight in a refrigerator car than in an ordinary box car, more ually to haul in a box car than in an open top car. Without having an exact easure of cost it is possible to test the reasonableness of rates on an individual mmodity by a process of comparison, comparing its transportation in one rritory with the transportation of a similar article in the same territory or th the transportation of the same article in a similar territory. It is the cost transportation which is the **basis of the test of reasonableness** in such com- risons, and it is by such comparisons primarily that decisions as to the asonableness of individual rates are finally reached. Other things being ual, where costs are obviously approximately the same there is no justifi- tion for difference in rates.

DISCRIMINATORY RATES.—The test of discrimination is likewise often matter of comparison. The problem of discrimination is different, however, om the problem of reasonableness, for discrimination may be and often is

permitted. The problem centers upon the question of when a discrimination in rates is undue or unjust. A common example of discrimination arises when a railroad, because of the existence of water competition, charges more for a **shorter than for a longer distance over the same line or route in the same direction,** the shorter being included within the longer distance. Specific mention of this particular form of discrimination was made in the fourth section of the Interstate Commerce Act, as it was originally passed, and the right to exact a greater charge for the shorter distance has long been contingent upon the express consent of the Interstate Commerce Commission. Not infrequently the Commission has permitted departures from the fourth section, despite the objections of shippers and consignees at short-haul points. For many years various interests who have strongly objected to this type of discrimination have tried to get Congress to enact a law depriving the Commission of its discretionary power relating to the fourth section of the act.

Considering the cost of service alone as the determining factor in rate making, group rates or blanket rates involve discrimination—the nearer point being subjected, not to a higher rate, but to the same rate as the more distant point. But such discrimination—even when discrimination may be admitted—is not necessarily undue, and group rates are a very common occurrence in the rate structures of the country.

MEASURE OF THE RATE.—The important position which cost of service occupies in rate making is indicated by the fact that the bases most commonly employed in establishing rates are **weight and distance.** Virtually all freight rates are quoted as so much per 100 lb. or per ton. In the classification of freight, weight in proportion to bulk is the chief factor, though **risk** and the **value** of the article—the **ability to "stand" a high rate**—are also important considerations. The **importance of distance** in the determination of rate relationship has been emphasized more and more in recent years, and in several parts of the United States a scheme has been adopted for the construction of rates purely upon a mileage basis.

MILEAGE SCALES.—The application of the distance principle to class rates has been accomplished by working out mileage scales to be employed in establishing the rates from station to station. In 1917 the Interstate Commerce Commission brought about the adoption of a **scale of class rates** in Central Freight Association Territory (that part of Official Classification Territory west of Buffalo and Pittsburgh) which will serve to illustrate this method of rate making. The territory was divided into six lettered "zones" and a mileage scale established for each zone. In the largest zone, Zone A, the first-class rate for distances up to 5 miles was made 16 cents per 100 lb. For each 5-mile increase in distance, up to 50 miles, this rate increased by 1 cent. From 50 to 100 miles there was an increase of ½ cent for each 5-mile increase in distance. From 100 to 200 miles there was an increase of 1 cent for each 10-mile "block," and from 200 to 300 miles an increase of ½ cent for each 10-mile block. Beyond 300 miles the first-class rate increased 1 cent for each 20 miles. The rates on the other five numbered classes of Official Classification bore a fixed percentage relationship to the first-class rates. This relationship was as follows:

1st Class	2nd Class	3rd Class	4th Class	5th Class	6th Class
100%	85%	67%	50%	35%	28%

A similar scale was established for the other zones, and the same relationship observed between the different classes. Various increases in rates, and one general decrease, since 1917, have modified the rates originally established

er this scale, and there has been some slight deviation from the original
rcatage relationships of the 6 classes, but the mileage scale system of making
s rates has been preserved. Commodity rates in this territory are likewise
d primarily upon mileage.

1 1918 a mileage scale of rates was adopted in New England, similar to the
e established the previous year in Central Freight Association Territory.
several parts of the South and Southwest mileage scales have been put into
t, and just now the Commission has under consideration a mileage scale of
s rates to be made applicable throughout the entire Southern Classification
ritory. A mileage scale has also been proposed for Trunk Line Territory
t part of Official Classification Territory between New England and Central
ight Association Territory) and this scale is also being considered by the
erstate Commerce Commission.

ERCENTAGE SYSTEM.—Though the exact application of the distance
ciple is not so general in the making of rates for long distances as in the
king of rates for short hauls, distance is often the **factor of chief importance**
n in long distance rates. A good example of the application of the distance
ciple occurs in the rate structure which has long been in effect with respect
raffic passing between New England and Trunk Line Territories on one
, and Central Freight Association Territory on the other. This rate structure
sually called **the percentage system.**

The rate between New York and Chicago is the yardstick by which all other
es in this structure are measured. The rate from New York to any point in
tral Freight Association Territory is a certain percentage of the rate from
v York to Chicago. Formerly this percentage was roughly the ratio which
distance from New York to the point in question bore to the distance from
v York to Chicago. Central Freight Association Territory is now divided
"percentage groups," all points in a group taking the same rates from
v York. The first-class rate from New York to Chicago is now $1.42 per
lb. Indianapolis, located in the 93% group, takes 93% of the New York-
cago rate, or $1.32 per 100 lb. Pittsburgh takes 60% of the New York-
cago rate, St. Louis 117%, Cleveland 71%, and Cincinnati 87%. Distance
ne element which determines the percentages.

The rates from Eastern stations other than New York to Chicago and other
nts in Central Freight Association Territory bear a definite relation to the
s from New York. Inland stations, such as Albany, Syracuse, Rochester,
nton and Williamsport—each the center of a group—as a rule take rates
ch are percentages of the New York rates, but the **North Atlantic ports**
ton, Philadelphia and Baltimore, take rates which differ from those of New
k by fixed amounts. The class rates from Philadelphia to Chicago, for
mple, are 6 cents less per 100 lb. on each of the first two classes, and 2 cents
on each of the other four. Baltimore has a differential slightly greater than
enjoyed by Philadelphia, while Boston's class rates westbound are to
t points the same as New York's. For many years the first-class rate from
v York to Chicago was 75 cents per 100 lb., and the rate from Philadelphia
consequently 69 cents. Several percentage increases, and one decrease,
ates, between 1913 and 1923 brought the New York-Chicago first-class rate
$1.42. Had the percentage relation between New York and Philadelphia
s been preserved, the first-class rate from the latter city to Chicago would
be about $1.31. But the maintenance of the fixed differential has made the
adelphia-Chicago first-class rate $1.36.

"BASING-POINT" SYSTEM.—In other parts of the United States distance has not exercised the controlling influence upon rates that it has long exercised in Official Classification Territory. In the South the **prevalence of water competition** during the early years of railroad development brought about innumerable instances of charging higher rates for shorter distances. Commercial centers located on rivers and on the seacoast, and even important railroad centers not located on waterways, were designated as "basing-points," and given low rates, while nearby points, whether closer to or farther away from the source of traffic, received rates which were made by **adding the local rate from the basing-point to the basing-point rate.** Violation of the "long and short haul" principle of rate making was for many years the characteristic feature of the rate structure of the South. Most of the discrimination has now been eliminated by the Interstate Commerce Commission, and **only a few authorized "basing-points"** remain. If the mileage scale for Southern territory, now under the consideration of the Commission, should eventually be adopted, it will mean the virtual end of the "Southern basing-point system."

EFFECT OF WATER TRANSPORTATION ON TRANSCONTINENTAL RAILROAD RATES.—Until quite recently **westbound transcontinental rates** also showed the effect of water competition, the rail carriers being permitted to exact higher rates to intermediate points than to points situated on the Pacific Coast. When intercoastal water transportation was virtually suspended during the World War, the railroads were required to bring this discrimination to an end, and the rates to the coast were raised to an amount not less—sometimes greater—than the rates to intermountain destinations. Since the resumption of intercoastal steamship service by way of the Panama Canal the transcontinental railroads have been endeavoring to secure permission to reduce the coast rates, but so far the Commission has refused to permit any general restoration of the discriminatory charges. The commercial interests of the western intermountain territory, who have long objected to the lower rates to the coast, are the chief interests behind the movement to have Congress take away from the Interstate Commerce Commission its discretionary authority with respect to fourth section violations.

COMPLEX INFLUENCES IN RATE MAKING.—The freight rates now in existence have gone through a **long process of gradual development.** Many considerations, which were important factors in the determination of rates in the past, are now possibly of little significance, but they may still leave a distinct impress upon the various rate structures of the country. Various competitive influences, topographical conditions, and peculiarities of economic development as well as local prejudices and interests, have created different systems of rate making in different regions of the United States. That no common plan has been followed the country over is indicated by the wide differences in freight classification, in the varying commodity rates, and in the outstanding features of various territorial rate structures.

FREIGHT RATES CHANGE TO MEET CONDITIONS.—Freight rates are constantly changing. Individual rates move up and down in accordance with the conditions of industrial development, the competition of transportation agencies and of other business interests, and the attitude of regulating authorities on the questions of reasonableness and undue discrimination. Moreover, the general level of rates must vary according to changes in the general business situation, the changes in price levels, and the expenses of producing transportation service. Since 1913 there has been a substantial increase in railroad rates, just as there has been a substantial increase in the prices of commodities

e rate structure must shift and change to meet conditions, and there will ver be a time when it can be moulded by mere rule of thumb. On the other nd, experience with regulation has shown the possibility of the adoption of ew general principles of rate making. As time goes on we may expect to see development of new principles and a wider application of those already nd to be practicable.

Express Rates

SYSTEM OF EXPRESS RATES.—Express rates, like freight rates, are both ss and commodity. There are **three classes** of express traffic. The first ss includes all merchandise except food and drink and articles classified nerwise in the express classification. Second class includes articles of food d drink, while third class consists primarily of miscellaneous printed matter h as advertisements, books, printed cards and circulars. Currency, bullion d securities are covered in the "money classification."

The express class rates in effect are the outgrowth of a complete schedule of es which the Interstate Commerce Commission established in 1913. With rates prescribed at that time the Commission introduced a new and simple thod of rate publication, which is still followed. The United States is divided o numbered **"blocks"** formed by the intersecting parallels of latitude and ridians of longitude. Each block is divided into 16 lettered **"sub-blocks."** **"directory of stations"** gives the block and sub-block location of all stations. e class tariff of any station gives the class rates to all other stations. All nts in each non-adjacent block have the same rates. Rates from a station other stations in the same block and to stations in adjacent blocks are sub-ck rates. The express companies publish commodity tariffs applying to pments of foodstuffs, such as vegetables, fish, fruit, milk and cream, in tricts where the traffic in these articles is heavy.

BASIS OF EXPRESS RATES.—By permission of the Interstate Commerce mmission, the express companies make nearly all rates dependent upon the **clared value of articles transported.** Except in the case of ordinary live ck and a few other articles, the published class rates apply only when the ue of the shipment does not exceed $50, or if the shipment weighs more n 100 lbs. when the value does not exceed 50 cents a pound. If greater ues are declared by the shipper, an extra charge of 10 cents is made for each 0 or fraction thereof in excess of the values indicated.

The express companies provide a **C. O. D. service,** transporting and deliver- packages, collecting the amount due from the consignee, and remitting to shipper.

Ocean Rates and Charges [1]

TYPES OF SERVICE.—There is little similarity between ocean transporta- n services employed in foreign trade and the railroad service upon which nestic commerce depends. The ocean is a free highway to all the world. A o may start from any port and its range of movement is bounded by the ent of the sea. The business of ocean carriage is open to individuals and porations of all lands; the service is the **most flexible of all transportation vices;** and competition can never be subjected to complete control.

There are three fairly distinct types of ocean carriers—the private carrier, tramp, and the liner.

[1] See also sections on Export and Import Procedure and Traffic Management.

The Private Carrier.—The private carrier is used to transport the freight o its owner; it is the world delivery wagon of the larger producer. A few America corporations engaged in the production of steel, oil and a few other commodities have their own ships, and transport a large portion of their own export an import freight. Some of the private carriers, while used primarily to transpor the freight of their owners, also offer a common carrier service to others.

The Tramp.—The tramp is the wanderer, the peddler, ranging from port t port as opportunities for business are presented. There are thousands of tram vessels in ocean commerce. They are used chiefly for the transportation o heavy bulk cargo. Arrangements for their employment are made ordinaril through ship-brokers, middlemen found in every port of the world, whos function it is to bring together ship and shipper.

The Liner.—The liner is more nearly comparable to the railroad train. I moves over definite routes, between designated ports, on regular schedule Some liners carry freight exclusively, but there are many combination liners which transport both freight and passengers, and we have also the great expres passenger liners, which seldom carry freight at all.

OCEAN TRANSPORTATION CHARGES—CHARTER RATES.—Th rates for carriage of freight on tramp vessels are made by contract betwee shipper and carrier, the arrangements being effected directly or through broker. The contract for carriage is ordinarily termed a "charter." There ar **two general types of charters,** the trip and the time, the former being the mor numerous. **Trip charter rates** are expressed as so much per ton, or bushel, o other unit of the commodity carried, while **the time charter** usually provide for payment for the stipulated time according to the net or the dead-weigh tonnage of the vessel. Charter rates move up and down according to th volume of overseas trade and the available supply of shipping. The charge are established in the open market, and are subject to the highest degree o competition. In those ports which have a large volume of trade, charters ar an object of competitive dealing on maritime exchanges or produce exchange just as corn or wheat on grain exchanges, or securities on stock exchanges.

LINER RATES.—The rates charged by liners are usually **less competitiv than charter rates.** The steamship lines on most of the trade routes of th world organize associations or **"conferences,"** the purpose of which is to brin ocean rates under control. These conferences establish rates, allot sailing among competing lines, and occasionally arrange for the pooling of traffi The rates are flexible, however, and respond readily to commercial condition but if the conference includes all the lines operating between particular port and if it is thoroughly organized, there is no indiscriminate cutting of rates b individual lines. Rates may not be uniform over all lines, but whatever diffe entials may exist on certain lines, are permitted and sanctioned by the co ference.

Kinds of Liner Rates.—Liner rates are quoted on particular commoditi and upon "general cargo." In addition to the ordinary rates, a liner ma frequently offer **"berth" rates** for grain or other bulk cargo. Such berth rat are offered on a vessel when there is a prospect of not having a full loading f a particular sailing, and additional freight is wanted to fill up space which othe wise would be unused.

Basis of Liner Rates.—The rates for transportation on line vessels are base upon the **weight or upon the cubical content** of the cargo offered—so much p 100 lb., per cubic foot, or per ton, long, short, or measurement. A ton h

measurement is 40 cubic feet, a long ton 2,240 lb., and a short ton 2,000 lb. Very often liner rates are quoted as so much "per ton, weight or measurement, ship's option," which means that the freight subject to such a quotation will be charged for on the basis of weight in long or short tons, as indicated, or on the basis of measurement tonnage, whichever method will yield the higher revenue to the vessel.

OCEAN RATES SELDOM PUBLISHED IN TARIFFS.—Rates for ocean transportation are subject to frequent variation, and it is seldom that steamship lines publish their rates in tariffs, as railroad companies do. Even in the few cases where tariffs are issued, the rates are ordinarily made subject to change without notice.

Bibliographical Note

The best available handbook of information for shippers, dealing with transportation rates, rules, practices, and laws, affecting carriers by rail and by water, is the **Freight Traffic Red Book,** published annually by the Traffic Publishing Company, New York. **The Exporter's Encyclopaedia,** published annually by the Exporters' Encyclopaedia Company, New York, contains information relative to the technical requirements for exporting to all countries of the world.

Railroad freight tariffs and special service tariffs are secured by application to railroad freight agents or to railroad traffic departments. Subscriptions for the **Consolidated Classification** may be sent to the Consolidated Classification Committee, Chicago. For information with regard to routing of railroad shipments, the most widely used guides are the **Shipper's Guide,** published by the Shipper's Guide Company, New York, Chicago, and St. Louis, and **Bullinger's Postal and Shipper's Guide,** published by Edwin W. Bullinger, New York. Both these guides give the railroad location and shipping directions for all points in the United States, and they are regularly revised and republished. The Shipper's Guide Company also publishes a comparative table of express and parcel post rates in effect in the United States. The familiar **Official Guide of Railways and Steam Navigation Lines of the United States, Canada, etc.,** published by the National Railway Publication Company, New York, is also used extensively by shippers, though it is designed primarily for use in connection with passenger travel. Another important publication for use in connection with routing shipments of freight is the **Official Railway Equipment Register,** published monthly by the Railway Equipment and Publication Company, New York. This publication shows the junction points of all railroads in the United States and the dimensions of the cars owned by the various railroad companies.

The most recent books dealing with the economics of transportation, rate theories, principles of regulation, and transportation practices are:

Johnson and Van Metre, **Principles of Railroad Transportation;** D. Appleton & Co., New York.

Lewis H. Haney, **The Business of Railway Transportation;** The Ronald Press Co., New York.

Eliot Jones, **Principles of Railway Transportation;** The Macmillan Co., New York.

Sidney L. Miller, **Railway Transportation;** A. W. Shaw Co., Chicago.

Vanderblue and Burgess, **Railroads: Rates, Service, Management;** The Macmillan Co., New York.

Morris S. Rosenthal, **Technical Procedure in Exporting and Importing;** The McGraw-Hill Book Co., Inc., New York.

A convenient text on the law of carriers is Edgar Watkins, **Shippers and Carriers of Interstate and Intrastate Freight,** published by the Harrison Company, Atlanta. Rogers MacVeagh's **Transportation Act, 1920,** published by Henry Holt and Company, New York, is an exhaustive analysis of the Interstate Commerce Act, as revised in 1920; and Karl Knox Gartner's **Interstate Commerce Act,** published by the LaSalle Extension University, Chicago, is a convenient and exceedingly practical discussion of the present system of federal railroad regulation.

The standard reference work dealing with the financial structure and the earnings of all American railroads is **Poor's Manual of Railroads,** published annually by Poor's Publishing Company, New York.

SECTION 22

TREASURER—COMPTROLLER—SECRETARY: FUNCTIONS, ETC.

A corporation, in the words of Chief Justice Marshall, being the mere creature of law, is subject to regulations prescribed by statute. Because of this a corporation's problems of finance, and its accounting and reporting of the results of its activities, are specialized. Executives should understand the rudiments at least of the statutory requirements and should see that they are properly observed in the accounts and records. **Treasurers, comptrollers** and **secretaries** of corporations are most directly concerned with the fulfillment of the **statutory requirements imposed on corporations.** This section deals with the duties of those officers.

The Treasurer

POWERS AND DUTIES.—The treasurer is the **financial officer** of the corporation. His functions include control of corporate funds and attending to the financial details of the enterprise. The treasurer is ordinarily appointed by the board of directors[1] and is subject to their direction and that of the president. Usually the by-laws of a corporation define the powers and duties of the treasurer; if not, they may be defined by the directors. In some states the statutes require compliance with certain provisions, such as giving a bond.

The by-laws defining the treasurer's duties and powers often follow the general line indicated by the following:

> The treasurer shall have custody of and be responsible for all moneys and securities of the company; shall keep full and accurate records and accounts in books belonging to the company, showing the transactions of the company, its accounts, liabilities and financial condition, and shall see that all expenditures are duly authorized and are evidenced by proper receipt and vouchers. He shall deposit, in the name of the company, in such depository or depositories as are approved by the directors, all moneys that may come into his hands for the company's account. His books and accounts shall be open at all times during business hours to the inspection of any director of the company.
>
> The treasurer shall also endorse for collection or deposit all bills, notes, checks and other negotiable instruments of the company; shall pay out money as may be necessary in the transactions of the company, either by special or general direction of the board of directors, and on checks signed by the president and himself, and shall generally, together with the president, have supervision of the finances of the company.
>
> He shall also make full report of the financial condition of the company for the annual meeting of the stockholders, and shall make such other reports and statements as may be required of him by the board of directors or by the laws of the state.
>
> He shall give bond in the sum of $5,000 with sureties satisfactory to the board of

[1] In Massachusetts the statute provides that the treasurer shall be elected by the stockholders.

directors, for the faithful performance of his duties and for the restoration to the company in event of his death, resignation or removal from office of all books, papers, vouchers, money and other property belonging to the company that may have come into his custody. He shall receive such compensation, not exceeding $5,000 per annum, as may be fixed by the board of directors.

The above provisions make the treasurer responsible for **keeping the books** and making the **annual report of financial condition.** In corporations, except the larger it is common for the treasurer to be responsible for the accounts and the financial reports. In the **larger corporations,** however, the comptroller of accounts is not a subordinate of the treasurer and the treasurer keeps no accounts except those for cash receipts and payments. The following provision from the by-laws of the United States Steel Corporation defines the powers and duties of the treasurer:

The treasurer shall have custody of all the funds and securities of the company which may have come into his hands; when necessary or proper he shall endorse on behalf of the company, for collection, checks, notes and other belongings, and shall deposit the same to the credit of the company in such bank or banks or depository as the board of directors or the finance committee may designate; he shall sign all receipts and vouchers for payments made by the company; jointly with such other officer as may be designated by the finance committee, he shall sign all checks made by the committee and shall dispose of the same under direction of the board of directors or of the finance committee; he shall sign with the president or such other person or persons as may be designated by the board of directors or the finance committee, all bills of exchange and promissory notes of the company; he may sign, with the president or vice-president, all certificates of shares in the capital stock whenever required by the board of directors or the finance committee; he shall render a statement of his cash account; he shall enter regularly in books of the company, to be kept by him for the purpose, full and accurate account of all money received and paid by him on account of the company; he shall, at all reasonable times, exhibit his books and accounts to any directors of the company upon application at the office of the company during business hours; and he shall perform all acts incident to the position of the treasurer subject to the control of the board of directors or of the finance committee. He shall give a bond for the faithful discharge of his duties in such sum as the board of directors or the finance committee may require.

In the same by-laws provision is made for **assistant treasurers** as follows:

The board of directors or the finance committee may appoint an assistant treasurer or more than one assistant treasurer. Each assistant treasurer shall have such duties and shall perform such duties as may be assigned to him by the board of directors or by the finance committee.

The **treasurer's principal records** consist of check books or registers, cash books, bank reconciliations, security registers and note registers. All the other books of account would also be records of the treasurer when he is responsible for the duties of comptroller.

FORMALITIES IN ASSUMING OFFICE.—There are certain formalities to be followed upon the assumption of the office of treasurer. In assuming office, he is usually required to **give bond,** and this must be done in accordance with the requirements of the particular corporation before he may enter upon the duties of his office. As soon, however, as he has qualified for his position by giving a satisfactory bond and complying with any other requirements of the corporation, he is ready and entitled to take possession of his office and begin the discharge of his official duties.

The **retiring treasurer,** on the other hand, retains his position as treasurer of the corporation and has authority to perform all its usual duties until the treasurer-elect has qualified and assumed the duties of his office. Then, however, the authority of the retiring treasurer immediately terminates, he is no longer

competent to exercise any of the functions of the office, and, unless otherwise instructed by the board, must at once turn over to the new official all corporate property in his custody, including the books of account. The retiring treasurer in preparation for the surrender of his office, usually closes his books and prepares a balance sheet, giving a more or less complete statement of the general financial condition of the corporation. Also an audit of his accounts is desirable, particularly when the corporate assets are material. The audit of the retiring treasurer's books relieves the incoming treasurer from any responsibility as to their condition. He takes them as they are, but must assure himself that the corporate funds and other property turned over to him by the retiring treasurer accord with the books. If he does not, his negligence in the matter may render him liable for any resulting loss to the corporation.

The **incoming treasurer** should at once notify the depositories in which the corporate funds are held of his election and assumption of office. If the corporate funds have been **deposited in the name of the treasurer** of the corporation, it will be necessary for them to be transferred to the treasurer-elect by check of the retiring official. If, however, the funds are **deposited in the corporate name,** no such transfer is necessary. There is then no change in their ownership but merely a change in the officer by whom checks are drawn, and proper certification to the bank of this change is all that is required. Should the outgoing treasurer refuse to turn over to the treasurer-elect any property which belongs to the corporation, the directors, or even the treasurer himself, may bring suit for its recovery. As a matter of course, the treasurer should give his predecessor a receipt for the corporate property turned over.

When the treasurer relinquishes, or is ousted from, his position, all properties of the company in his possession, including the books of account, should be surrendered to his successor or to such other party as may be designated by the board of directors. The incoming treasurer is the usual and proper party to whom such property is delivered. The retiring treasurer should be given **receipts for all properties** turned over.

The corporate accounts are always the property of the corporation. Sometimes in the smaller corporations the books in which these accounts are kept have been purchased by the treasurer personally and the question as to their ownership then arises. As a matter of law the treasurer must surrender the books in which the accounts are kept, even though these books have been purchased with his personal funds. He is entitled in such case to payment for the books, but he cannot withhold them as a means of enforcing this payment or on the plea that they are his. In order to prevent any complications on this score, it is sometimes provided in the by-laws that the accounts of the company shall be kept only in books that are the property of the corporation.

RELATION TO STOCKHOLDERS, DIRECTORS, ETC.—The treasurer must obey the instructions of the stockholders, but this is the limit of their usual authority over him as an agent of the corporation. In actual practice the treasurer has **no direct relation with stockholders** other than to pay dividends to them on authorization from the board of directors.

While the **board of directors** usually elects the treasurer to his office and has authority over him, the board may hold the president responsible for the proper and successful administration of all departments, including the financial.

The treasurer reports to **the finance committee,** if there be one. The finance committee has general and special charge and control of all financial affairs of the company and has and exercises all of the powers of the board of directors in such financial matters when the latter is not in session. The committee fixes all salaries and compensation paid to officers of the company except as

otherwise provided in the by-laws or when fixed by resolution of the board of directors.

The relation between the treasurer and **comptroller** varies in different corporations. Theoretically, the best form of organization is had when they are independent of any authority, of the one over the other, as then the accounts are a check on the funds.

The comptroller audits and approves the vouchers which the treasurer pays, and keeps controlling accounts of all moneys which the treasurer receives. These functions are naturally united in one office in organizations save the largest.

The treasurer's relation to the president is that of a subordinate to a superior officer. The **president** is primarily responsible for the execution of the policies of the board of directors. In financial matters the treasurer takes the direction of the president or the finance committee, subject only to the by-laws.

Treasurer's Duties as to Dividends

DECLARATION OF DIVIDENDS.—The **power to declare dividends** rests solely with the board of directors. In exercising this power directors are subject to personal liability if the rights of creditors are infringed or if the provisions of bond indentures or preferred stock provisions are violated. Dividends are declared at duly called meetings of the board of directors. A formal resolution is voted upon to fix the amount of dividend and the date payable. The amount may be expressed as a percentage upon the par value of the stock or stated as a fixed amount on each share. It is usually payable to stockholders of record as of a future date, at a still later date. Dividends must not be declared payable to stockholders of record as of a past date.

RESOLUTIONS DECLARING DIVIDENDS.—The following are **typical resolutions** for declaring dividends on various kinds of stock:

Directors' Resolution Declaring Dividend—Common Stock

Resolved, that the sum of ten thousand dollars ($10,000.00) be and hereby is appropriated and set aside from the surplus profits of this company for the payment of the regular two per cent (2%) quarterly dividend upon its outstanding stock, said dividend to be due and payable on the 20th day of May 1925 to stockholders of record as shown by the books of the company at the close of business on the 15th day of May 1925.

Resolved Further, that the treasurer of this company be hereby authorized or instructed to give notice of such dividend and to pay the same when due.

Directors' Resolution Declaring Dividend—Preferred Stock

Resolved, that the semi-annual dividend of three per cent (3%) upon the outstanding preferred stock of the company be and hereby is declared from surplus profits, said dividend to be paid on the 10th day of March 1925 and to be payable to stockholders who appear of record on the first day of March 1925 at 3 P. M., and that the treasurer of this company be hereby instructed and fully authorized to give due notice of such dividend and to pay the same on the date set forth.

Directors' Resolution Declaring Dividend—Preferred and Common Stock

Whereas, the surplus profits of this company now exceed the sum of ten thousand dollars ($10,000.00) required by the by-laws of this company to be in reserve before dividends may be paid upon either the preferred or common stock of this company, and such excess is now available for payment of dividends:

Therefore, Be It Resolved, that a dividend of five per cent (5%) be and hereby is declared upon the outstanding preferred stock of this company, and a dividend of three per cent (3%) on the outstanding common stock of this company, said divi-

dends to be payable from said excess surplus profits of the company on the 5th day of March 1925 to stockholders appearing of record at 3 P. M., on this 15th day of February 1925 and that the treasurer of this company be hereby fully authorized and instructed to give proper notice of said dividends and pay the same when due, and to take all other necessary steps to carry out the intent of the present resolution.

REGULATIONS GOVERNING PAYMENT OF DIVIDENDS.—Cook on "Corporations" states:

> It is the well determined doctrine of the courts of this country that the capital stock is a fund to be preserved for the benefit of the corporate creditors. Hence the rule has been firmly established that where dividends are paid in whole or in part out of the capital stock, corporate creditors being such when the dividend was declared or becoming such at a subsequent time, may to the extent of their claim, if such claims are not otherwise paid, compel the shareholders to whom the dividend has been paid to refund whatever portion of the dividend was taken out of the capital stock.

The declaration of an **illegal dividend** or the payment of an illegal dividend already declared may be enjoined and stopped by proper action of the stockholders. Illegal dividends may be:

1. Those declared in disregard of the rights of some of the stockholders.
2. Those declared in violation of charter or by-law provisions of the particular corporation.
3. Those which either impair the capital stock or threaten the solvency of the corporation.

1. Dividends which are **unequal among stockholders** of the same class are absolutely in disregard of the rights of the stockholders discriminated against—so much so that cases directly involving the principle but seldom arise. When any inequalities are attempted it is usually by means of diversion of the profits, such as payments of excessive salaries or unnecessary expenditures. Another instance of dividends in disregard of the rights of stockholders is sometimes found when the directors declare dividends on common stock while cumulative dividends due on preferred stock have not been paid. In such a case the court will compel a readjustment of the dividends.

2. Dividends declared **in violation of charter or by-law provisions** may be perfectly proper in themselves but illegal merely because of their prohibition. Thus, the charter or by-laws may provide that no dividends shall be declared until after surplus funds have been accumulated to some specified amount. If dividends are declared before this surplus has been received, they are illegal and payment may be enjoined by proper action of the stockholders.

3. The **most common form of illegal dividends** is that which **impairs the capital stock** or which **endangers the solvency of the corporation.** In a case of this kind it is to some extent a matter of bookkeeping and judgment as to whether a dividend is such as to impair the capital stock or render the company insolvent. If the directors declare a dividend in good faith after a proper investigation of the financial condition of the company, the courts are not likely to interfere.

A case of illegal dividends comes within the **jurisdiction of courts of equity,** and any stockholder may bring suit therein to enjoin the declaration of a dividend believed by him to be illegal. An illegal dividend may be rescinded by the directors at any time before its payment.

The treasurer or comptroller through the president furnishes the directors with statements of the corporation's financial position and earnings, upon which the directors base their decisions in declaring dividends. These statements should be accurate and in no respect misleading; otherwise the directors

may declare an improper dividend. The treasurer is responsible for making the **proper distribution of dividends** in accordance with the vote of the directors.

As a rule, however, the treasurer is not personally liable in any way for the payment of dividends ordered by the directors unless he knows such dividends to be absolutely fraudulent. In a few states, however, liability for dividends prohibited by statute has been extended by express enactment to the executive officers of the corporation if they consent or concur therein. In such states, if the treasurer, knowing the dividends to be in violation of the statutory provisions, nevertheless obeys the instructions of the directors and either pays such dividends or permits them to be paid, he is liable with the directors.

A dividend illegally declared and paid by the corporation cannot be recovered from stockholders who have received it in good faith unless the deficit thereby created is greater than the outstanding stock. In this case the corporation is insolvent in that its actual liabilities exceed its assets and the rights of its creditors are affected.[2]

DIVIDEND NOTICES.—It is the duty of the treasurer to notify stockholders when dividends have been declared by the board of directors. In the **smaller corporation** he usually sends the notices by mail to each stockholder. The following is a **typical form** of the notice for mailing:

NEW YORK MILLING COMPANY
NEW YORK

December 1, 1924

DEAR SIR:

You are hereby notified that the directors of the New York Milling Company have this day declared the regular semi-annual dividend of three per cent (3%) on the capital stock of the company, payable January 15, 1925, to stockholders who appear of record at the close of business January 10, 1925.

JOHN DOE,
Treasurer

In the **larger companies** where there are many stockholders, the task of mailing a notice to each individual stockholder may be saved by a **notice in the newspapers.** The typical form of such notice is as follows:

X. Y. Z. COMPANY, INC.
42 BROADWAY, N. Y. C.

September 15, 1925

A quarterly dividend of one and three-quarters (1¾%) per cent has been declared upon the preferred stock of the X. Y. Z. Company, Inc., payable October 1, 1925 to stockholders of record at the close of business September 20, 1925.

JOHN DOE,
Treasurer

If the **transfer books** are closed preparatory to payment of dividends, the **dates of closing and re-opening** should appear as in the following notice which may be either for publication or for mailing:

WILLIAMS FOUNDRIES COMPANY

NEW YORK, February 1, 1925

DIVIDEND NO. 25

The directors of the Williams Foundries Company have this day declared a quarterly dividend of one and one-half (1½%) per cent on the capital stock of the company, payable March 1, 1925 to stockholders of record at the close of business February 10, 1925.

---

[2] The rule given is the ruling of the United States Supreme Court (*McDonald* v. *Williams*, 174 U. S. 397; see also *Hayden* v. *Williams* 96 Fed. 279) and of some of the states (*Cottrell* v. *Albany, etc., Co.*, 142 N. Y. App. Div. 148).

Transfer books will close February 10, 1925 and re-open February 20, 1925. Checks will e mailed.

RICHARD ROE,
Treasurer

The following is a rather **informal notice** but is sufficient to meet all requirements:

THE CONSOLIDATED EXCHANGE BANK
NEW YORK

At a regular meeting of the board of directors of The Consolidated Exchange Bank eld January 11, 1925 a quarterly dividend of $5.00 per share was declared, payable February 1, 1925, to stockholders of record at the close of business January 31, 1925.

EDWARD S. ROE,
Cashier

This notice is signed by the cashier, because in a bank he performs the treasrer's functions.

The following is another **typical dividend notice of the common stock** of a orporation:

OFFICE OF
ANGLO-AMERICAN DREDGING COMPANY
No. 42 Broadway, NEW YORK CITY
April 4, 1925

QUARTERLY COMMON STOCK DIVIDEND
No. 23

The directors of the Anglo-American Dredging Company have this day declared a dividend of two per cent (2%) on the common capital stock of the company, payable May 15, 925 to stockholders of record April 28, 1925. The books of the company for the transfer common stock will be closed at 3 P. M. April 28, 1925 and will be re-opened May 2, 1925.

JOHN DOE,
Treasurer

The following publication notice covers the **dividend on both common and referred stock.** This inclusion is not in any way objectionable, but at times, r the sake of greater emphasis and publicity, a separate notice for each vidend is preferred.

AMERICAN RADIO COMPANY

PREFERRED DIVIDEND

COMMON DIVIDEND

A dividend of one and three-quarters (1¾%) per cent, being the 92nd consecutive quarrly dividend, has been declared on the preferred stock, payable February 15, 1925, to ockholders of record at close of business February 1, 1925.

A dividend of $1.00 per share, being the 3rd consecutive quarterly dividend, has been clared on the common stock, payable March 31, 1925, to stockholders of record at close of siness March 15, 1925.

The transfer books will not close.

JOHN DOE,
Treasurer

When notice of dividends is by publication alone, an **explanatory statement** usually enclosed with the dividend check by the treasurer. Announcement this nature used by some of the larger corporations is given in the following rm:

WILLIAMS FOUNDRIES COMPANY

NEW YORK, March 1, 1925

On February 1, 1925 the directors declared quarterly dividend No. 25 of one and one-half (1½%) per cent upon the preferred stock of the company, payable this day to stockholders of record of February 10, 1925.

In accordance with permanent order on file, enclosed find check for above dividend of the preferred stock standing in your name. No acknowledgment is necessary.

Kindly advise John J. Jones, assistant secretary, No. 42 Broadway, New York, of any change in your address, giving your old address as well as the new.

RICHARD ROE,
Treasurer

(Dividend check enclosed which please cash immediately)

KINDS OF DIVIDENDS.—Dividends are usually paid in cash. When paid in any other form, the form should be specifically stated in the vote of the directors. In whatever form the dividend is to be paid, it is the treasurer's duty to pay the dividend exactly as specified by the board of directors. Forms of distributing dividends other than in cash are issue of the corporation's own stock as stock dividends so-called, issue of corporate bonds, issue of scrip (notes of the corporation to pay at a future date), or distribution of securities in the treasury or other property.

Cash Dividends.—It is the treasurer's responsibility before mailing the dividend checks to be sure that the dividend has been legally declared. When he has assured himself of this fact, he will obtain a list of the stockholders of record on the date specified by the vote of the board of directors and prepare and mail checks according to the holdings of each stockholder. In the **larger corporations** the services of a trust company or bank as a **transfer agent** may be availed of, in which case the treasurer of the company will mail a check for the full amount of the dividend to the transfer agent who will be responsible for distribution of correct checks to individual stockholders.

Stock Dividends.—In conjunction with the secretary of the company, it is the duty of the treasurer to see that the increased amount of stock which will be outstanding after the distribution of a stock dividend is fully authorized and that the stock is distributed to the stockholders in accordance with the vote of the directors.

Scrip Dividends.—Scrip dividends avoid the immediate distribution of the current working capital of the corporation. Scrip is a note of the corporation promising to pay a certain sum of money at a future date. The effect of issuing scrip dividends is to increase the indebtedness of the corporation by the amount of the dividend. The **date of payment** on scrip dividends may be stated, or it may be made contingent, as for instance, "when a company accumulates sufficient funds for the purpose," or "when property against which the scrip is issued shall be sold." It also may be paid "at the pleasure of the company."

Scrip is issued in **many different forms.** Sometimes the certificates are convertible, being exchangeable at a certain time for stocks or bonds of the company on demand of the holder. At times scrip certificates entitle the holder to dividends. The scrip then partakes much of the nature of stock save that it has no voting power. Scrip certificates, though issued as a dividend and in lieu of certain property in possession of the corporation, do not fix the ownership of that property in the holdership of certificates. They do give the holder a claim against the corporation—not the absolute claim which the ordi-

narily declared dividend gives, but a conditional claim dependent upon the terms of the scrip certificate.

It is usually the treasurer's duty in connection with the distribution of scrip dividends to prepare a form of note on the face of which are the terms of the dividend as voted by the board and submit it to the board for its approval. Upon obtaining such approval it is his responsibility to see that each stockholder obtains his proper portion of the scrip dividend as declared.

Property Dividends.—Securities of other corporations acquired by purchase or received from the sale of property are sometimes distributed to stockholders as dividends Such dividends may purport to be distributions of profits, or they may be liquidating dividends. The former are limited to the amount of surplus. In voting the dividend the board of directors will specify the securities or property to be distributed and it is the treasurer's duty to make the distribution exactly in accordance with the vote.

DIVIDENDS ON PREFERRED STOCK.—Dividends on preferred stock, like dividends on common stock, are not payable unless declared. Notwithstanding that the quarterly or semi-annual dates for payment of dividends may be specified in the preferred stock provisions, the treasurer should make no distribution to stockholders until the dividend shall have been formally declared by the directors.

PREPARATION OF DIVIDEND CHECKS.—The transfer books of a corporation are usually closed a number of days before a dividend is paid in order to leave ample time for preparation of the statement of amounts to be paid to individual stockholders. When the transfer books are closed, the secretary of the company, if no transfer agent is employed, will furnish the treasurer with a **list of stockholders of record** as they appear on the date of closing. From this list the treasurer will make out the dividend checks. The checks are customarily mailed to stockholders. The larger corporations usually send out **special checks** in payment of dividends with some identifying words printed thereon, as "Dividend Check" or "Dividend No. . . . . " The checks are often accompanied by notices to the effect that they are in payment of specified dividends. Where checks are mailed, no formal receipt is required, as the endorsement on the check is sufficient acknowledgment.

DIVIDEND MAIL ORDER.—Some companies require that an order be filed by the stockholder before the dividend check will be mailed. Otherwise the money will be held to the stockholder's order at some stated location. The following is a dividend notice of that kind:

AMERICAN NAVIGATION COMPANY

DIVIDEND No. 95

A quarterly dividend of one dollar and fifty cents ($1.50) per share on the capital stock of this company has been declared payable at the treasurer's office, No. 65 Broadway, New York, N. Y., on July 2, 1925, to the stockholders of record at 3 P. M., on Thursday, May 31, 1925. The stock transfer books will not be closed for the payment of this dividend. Checks will be mailed only to stockholders who have filed permanent dividend orders.

A. K. JONES,
Treasurer

May 10, 1925

The **mailing order** referred to in the foregoing dividend notice is shown below:

NO CHECK MAILED WITHOUT AN ORDER

To the TREASURER OF AMERICAN NAVIGATION COMPANY,
65 Broadway, New York, N. Y.

Until this order shall be revoked in writing, please send by mail in check payable to the order of

Fig. 2 gives a typical record of the dividend payment to stockholders as kept by the treasurer when payment is made by **check sent by mail.**

SPECIAL BANK ACCOUNT AND PAYMENT THROUGH FISCAL AGENT.—When a dividend is authorized, the usual entry on the books of account is a debit to surplus and credit to dividend payable account. This records the liability to stockholders. A good practice is to draw a single check for the total amount of the dividend for deposit to the credit of a **special bank account,** such as "Blank Company Dividend Account." The checks to the individual stockholders are then drawn on that account.

Many corporations employ banks or trust companies to act as their **fiscal agents** in the payment of dividends. The fiscal agent maintains the stock ledgers and transfer records. After a dividend is declared, the fiscal agent

Treasurer's Duties as to Bond Issues and Interest Payments

FORMALITIES OF BOND ISSUES.—The treasurer has duties in connection with issues of bonds, the payment of interest thereon and the provision for sinking fund instalments. The **formalities of a bond issue** are usually regulated by the statutes of the particular state in which the corporation is organized. Thus in New York an issue of bonds requires (1) a stockholders' resolution or written consent; (2) a certificate of the corporate officials that the stockholders' consent has been given; and (3) a directors' resolution reciting the facts, authorizing the officers to proceed in the matter and providing for the details of the transaction. The matter is one to be undertaken only by a skilled lawyer. In some states the mere **resolution of the board of directors** is sufficient to authorize a bond issue. In a large number of states the assent of a large majority of the stockholders is a requisite. As a matter of prudence and good business, **a proper stockholders' authorization** is always desirable regardless of the statutory requirements existing in the particular state.

The more important instruments involved in an issue of corporate bonds are the bond itself, which is comparatively simple in form, and the mortgage or deed of trust, which is lengthy and complex. The **corporate bond** in its usual form is a promissory note, differing from the ordinary corporate note only in its formality, its more complete statement of the conditions under which it is issued, its formal execution, and in its being one of a series of like obligations equally secured by the same collateral or, if unsecured, of the same rate. There is practically no difference as to form between a bond and the short-term note so frequently issued by corporations of the present day, save as to length of time for which the obligation runs. A short-term note, as its name indicates, is usually given for a short period—1 to 5 years—while the bond usually extends over a much longer period, ranging from 5 to 100 years or more.

INTEREST ON BONDS.—The interest is usually represented and provided for by means of coupons, which are in effect also promissory notes, payable to bearer, which call for the payment of one instalment of interest on the bonds. This interest when due is payable only on surrender of the proper coupon, and in the absence of some good reason otherwise, such as notice that the particular coupon has been stolen, is payable to anyone who presents the coupon. The interest is usually payable semi-annually and each of the coupons of a coupon bond calls for the exact amount of one of the semi-annual interest payments on that bond. Thus, a bond running ten years with interest payable semi-annually, will have attached to it twenty coupons. Each coupon bears the same number as its bond for purposes of general identification, but also has a serial number and date, or some other specific statement indicating the order in which it becomes due and the particular interest payment for which it calls.

FORMS OF BONDS.—**Coupon bonds** are usually made payable to bearer, and ownership passes by delivery. When it is desired that bonds shall not pass by mere delivery, they are **registered,** i.e., issued in the name of some particular person as is a certificate of stock, the bond thereafter transferable only on the books of the company. Coupon bonds are sometimes registered as to principal, but the coupons are still made payable to bearer. The interest then is paid to anyone who presents the coupon, but the principal when due is paid only to the person in whose name the bond stands on the books of the company. **Bonds without coupons** are always registered, and are transferred only by assignment; interest is payable to the registered owner alone, and is usually paid by check sent out to these registered owners. Coupon bonds payable to bearer and registered bonds without coupons are often issued under the same deed of trust. Usually when this is done, the two classes of bonds are made interchangeable, i.e., the holder of a coupon bond may at any time exchange it for a registered bond, or vice versa. The advantage of the unregistered bond is found in the readiness with which it may be transferred. The advantage of a registered bond lies in the difficulty of its negotiation in case the bond is lost or stolen.

The following **form** is that **of a coupon bond,** the ownership passing by mere delivery. It may, however, be registered at the option of the owner, though this registration does not affect the coupon. These pass by delivery alone and are payable to bearer regardless of whether the bond be registered or transferable by delivery.

UNITED STATES OF AMERICA
STATE OF NEW YORK

No. 375 $500.00

MAXWELL COMPRESSOR COMPANY

FIRST MORTGAGE SEVEN PER CENT GOLD BONDS

KNOW ALL MEN BY THESE PRESENTS, That the Maxwell Compressor Company, a corporation organized under the laws of the State of New York, for value received, hereby promises to pay to the bearer hereof, or if this bond is registered, to the registered holder thereof, at the office of the Securities Trust Company of the City of New York, on the first day of December, nineteen hundred and fifty-one, in gold coin of the United States of America, of the present standard of weight and fineness, or its equivalent, the sum of Five Hundred Dollars, without deduction from either such principal or interest for or on account of any United States, State, municipal, or other tax or taxes which the Maxwell Compressor Company, its successors or assigns, may be required to pay or deduct therefrom, and the Maxwell Compressor Company hereby covenants and agrees to pay all such tax or taxes, and in the meantime to pay interest upon the said sum of Five Hundred Dollars from and after the first day of December, nineteen hundred and twenty-

one, at the rate of Seven Per Cent per annum, payable in like gold coin, or its equivalent, at the same place, semiannually, on the first days of June and December in each year, beginning with the first day of June, 1922, on presentation and surrender of the coupons hereto attached as each of them becomes due.

This bond is one of a series of One Thousand (1,000) bonds of the same tenor and date, aggregating Five Hundred Thousand Dollars ($500,000), numbered consecutively from one to one thousand, both inclusive, for the sum of Five Hundred Dollars ($500) each, all of which bonds are secured equally by a deed of trust, which is a first mortgage upon the properties of the Maxwell Compressor Company, executed and delivered by the said Maxwell Compressor Company to the said Securities Trust Company, as Trustee, granting and conveying in trust and mortgaging as security for the payment of the principal of said bonds at maturity, at par, and the interest on said bonds, payable semi-annually at the rate aforesaid, all the real estate and other property of the said Maxwell Compressor Company mentioned and described in said deed of trust, with full power to use and sell the same in the event of default in payment of the bonds or coupons, or any of them, and apply the proceeds to the payment of same as in said deed of trust provided. This bond is issued, received, and held subject to all and singular the terms and conditions contained in the deed of trust aforesaid.

This bond is further secured by a sinking fund, which shall consist of and be maintained by the payment to the said Securities Trust Company by the Maxwell Compressor Company on the first day of December, 1926, and on each succeeding first day of December thereafter, until the redemption of all the bonds issued under said deed of trust, of Twenty-Five Dollars for each Thousand Dollars of bonds then issued and outstanding, such moneys so paid to be used in the purchase of outstanding bonds at the lowest price at which they may be had, not exceeding, however, One Hundred and Ten Per Centum of the face of said bonds plus accrued interest, and if bonds cannot be so purchased, such moneys shall be used in the redemption of the bonds outstanding, as hereinafter provided.

This bond shall not become obligatory until the certificate indorsed hereon shall be signed by the Trustee, and when so authenticated by the signature of the trustee, the title to said bond shall pass by delivery, unless said bond is registered, and, if registered, the title thereto shall pass only by transfer on the books of said Trust Company, and no transfer except upon said books shall be valid unless the last transfer shall have been to bearer, which shall restore transferability by delivery.

This bond is redeemable, at the option of the Maxwell Compressor Company, on any interest day at any time after the first day of December, 1926, at One Hundred and Ten Per Cent of its face value, plus accrued interest, provided that thirty days' notice of such redemption shall be given the holder thereof by notice published once a week for four consecutive weeks prior to such redemption, in a newspaper published in New York City.

In Witness Whereof, the said Maxwell Compressor Company hath caused these presents to be signed by its President, and its corporate seal, duly attested by its Secretary, to be hereunto affixed, and hath hereunto affixed coupons with the name of its Treasurer engraved thereon, and hath caused this bond to be dated the first day of December, A. D., one thousand, nine hundred and twenty-one.

{CORPORATE SEAL}

MAXWELL COMPRESSOR COMPANY,
By Howard M. Maxwell,
President

FIG. 3. (*Right-hand page*)

The following is a **trustee's certificate** as it appears upon a bond.

The Securities Trust Company of the City of New York hereby certifies that the within Bond is one of the series of Bonds described in the Deed of Trust therein mentioned.

SECURITIES TRUST COMPANY OF THE CITY OF NEW YORK,
Trustee
By MALCOLM MCDONALD,
President

New York City,
January 5, 1922

The **debenture bond** is merely an unsecured promise of a corporation to pay. The following is a very simple form of such bond. The bond calls for payment in gold and is also redeemable on any interest date before maturity at the option of the company.

NUMBER 20 $500

ENGEL CHEMICAL CORPORATION

EIGHT PER CENT GOLD BOND

The Engel Chemical Corporation, a corporation duly incorporated and existing under and by virtue of the laws of the State of New York, doing business in the City of New York, doth hereby promise and agree to pay to the bearer the sum of Five Hundred Dollars ($500) in gold coin of the United States of America of the present standard of weight and fineness, at the office of the Company on the sixth day of October, 1924, with interest thereon from the sixth day of October, 1921, at the rate of eight per cent (8%) per annum, without any deduction from principal or interest for any tax or taxes which the Company may be required to pay or to retain therefrom by reason of any present or future laws of the United States or of the State of New York, as well as the normal income tax which the Company may be required to pay under any present or future law of the United States or the State of New York, the said Company hereby promising and agreeing to assume and to pay all such taxes.

This bond is one of a series of twenty bonds each in the sum of Five Hundred Dollars numbered from (1) to (20) both inclusive and (200) bonds each in the sum of $100 numbered from (21) to (221) both inclusive and all of like date, tenor and effect, and is subject and subordinate to payment of the Company's business creditors and is issued subject to the conditions set forth in a resolution of the Board of Directors of the Company, authorizing the issuance hereof.

This bond is redeemable on the sixth day of October in any year before maturity at the option of the said Company at par for each $100 of the face value of each bond, and all the accrued interest thereon in accordance with the conditions mentioned in said resolution.

This bond shall pass by delivery or by transfer on the books of the Company.

IN WITNESS WHEREOF, said Engel Chemical Corporation has caused these presents to be signed by its President, and sealed with its common or corporate seal duly attested by its Secretary pursuant to a resolution of its duly authorized Board of Directors, this sixth day of October, 1921.

ENGEL CHEMICAL CORPORATION,
By HENRY W. ENGEL,
President

{CORPORATE SEAL}

Attest:
FRANK W. HENDERSON,
Secretary

BOND REGISTER.—The treasurer may be the one to **negotiate the sale of the bonds** or this may be done by the president, or the finance committee. The public offering of securities is stringently regulated by so-called "blue sky laws."

It is a function of the treasurer to keep a bond register for registered bonds. The register shows the number of each bond, date issued, name of each bondholder, due dates and amounts of interest payments for each bond. A typical form of bond register is shown in Fig. 3 above. In the case of coupon bonds, the

treasurer keeps a **coupon register** to show for each bond the coupons paid at successive interest dates. The treasurer should keep a **card index of holders of registered bonds.** A typical form of index is shown in Fig. 4. The treasurer is responsible for the prompt **payment of interest on bonds.** One check for the total, payable to the bank that honors the coupons deposited for collection, will suffice for coupon bonds. Registered bonds require the treasurer to draw individual checks unless a fiscal agent is employed for that purpose.

METHODS OF BOND REDEMPTION.—Redemption means the act of a corporation in exchanging cash or other value for its own securities. The redemption of bonds may take place, (1) when the bonds mature in accordance with the contract covering the issue; (2) at the option of the obligor corporation at some time before maturity when such action is permitted by the contract; (3) prior to maturity and not under the terms of the contract but as a result of a subsequent agreement effected with the bondholders. A **sinking fund,** as it is

BOND NO. E455	AMOUNT $1000 00/100 NAME Hayden, John R.	CLASS Reg. Deb. Co. 1926

Transferred From William Scott		

Fig. 4. Index to Bondholders

ordinarily understood, is a fund created from earnings for the purpose of reducing or retiring bonded indebtedness. The sinking fund payments must be set aside at periodic intervals and invested in accordance with the terms of the deed of trust. Most sinking funds are invested in the bonds of the issue which they protect, and this plan is to be commended, because fixed interest charges are thereby reduced. Furthermore, there is no risk of loss as with outside securities. To be redeemed before maturity the bonds are obtained either by **purchase** in the market, by **drawing certain bond numbers** by lot at the then current redemption price, or by **advertising for the desired number of bonds** at a stated price.

Treasurer's Receipt Forms

TREASURER'S RECEIPT FOR SUBSCRIPTION.—The treasurer's receipt for subscription to stock is sufficient if in the form shown in Fig. 5.

Stock scrip is sometimes employed when subscription payments are made in instalments. The face of the scrip (see Fig. 6) evidences the first instalment, and subsequent instalments are either endorsed on the back of the scrip, or

The Comptroller

PLACE IN ORGANIZATION.—The comptroller should have a close and intimate knowledge of the business and its operations. He may be a member of the executive committee. His **position in the corporate organization** should be as follows:

1. He should be **responsible to the president.**

2. He should be a **member of the operating committee** or group consisting of the president, treasurer and heads of operating departments, and as such should advise and recommend as to costs, expenses, possible economies and probable financial outcome of contemplated projects of all kinds.

3. He should have full and sole **authority to prescribe accounting methods** of the company and its subsidiaries, subject to orders of the president or directors in major matters.

4. He should be held **responsible for the accuracy of the accounts and of financial and statistical statements and reports** compiled for executive guidance

and other purposes. In so far as discretionary entries (such as depreciation) are dictated by the president or directors, he must execute faithfully their orders, whatever his own recommendations or thoughts may be.

5. His **administrative authority,** other than to prescribe methods, should not extend beyond the accounting department at the home office of the corporation. The chiefs of the operating divisions should be fully responsible for the bookkeepers and clerks under their jurisdiction subject to internal audits by employees acting for the comptroller. Accounting methods prescribed by the comptroller for departments not within his administrative jurisdiction should be put into force by order of the president. All accounting methods and procedures for departments other than his own should be in writing and have the signed approval of the president of the company shown thereon. These written and approved systems and procedures should be filed as a permanent record for reference in case of dispute or misinterpretation.

6. He should advise and co-operate with the officials of the company and heads of the various departments in all matters in which the accounts may be a source of information or may be affected.

RELATIONS WITH PRESIDENT.—The comptroller should advise the president on such matters as these:

1. Margin between selling prices or rates, and costs of products or services both past and prospective.
2. Budget of revenues, costs and expenses; regulation of overhead expenses, subject to control as volume of business recedes and expands.
3. Budget of financial requirements and policies pertaining thereto.
4. Depreciation rates and the policy of the company in distinguishing between charges for additions, betterments, replacements and repairs.
5. Reserves to be provided in the discretion of the directors for liabilities of uncertain amounts and for contingencies.
6. Contracts and leases in so far as they are related to accounts or finance.
7. Substance and form of reports for stockholders and financial publications.
8. Form of votes to be passed by executive committee and by directors in so far as they may affect accounts.
9. Corporate reorganizations.

DUTIES OF THE COMPTROLLER.—Of the **specific duties** of the comptroller, these are important and typical:

1. Supervision of all the **corporate accounts** of the company and custody of the ledgers and other books of account at the general office of the corporation. The comptroller should rely upon a chief accountant to be the administrative head of the accounting department.
2. Approval of **financial statements,** periodic or special, prepared by the accounting department for the president or other officers, such as balance sheets, income statements, operating statements of the various divisions of the company, budgets, schedule of commitments, etc.
3. Approval of all **financial data** embodied in text of statements to be given out for publication.
4. Approval of all **financial returns** required to be filed by a statute or regulation, except that returns to be filed abroad may, by special arrangement, be filed without being referred to the comptroller.
5. Prescribing all the **accounting methods** of the company, not only for the home office but for all divisions, branches, etc., and for subsidiary companies, including payrolls, petty cash funds, inventories, plant

and equipment, costs, branch accounts, transit items, foreign exchange, etc.

6. Direction of **internal audits** of cash funds, securities, inventories of materials and supplies, accounts receivable and other accounts as may be made from time to time during the year.
7. Preparation of **special journal entries** to put into effect votes of the executive committee and directors in as far as they may pertain to the accounts.

RELATION TO COUNSEL AND TREASURER.—The comptroller should advise the **company's counsel** on such matters as these:

1. National, state and local taxes, including returns, assessments, bills, claims and adjustments.
2. Clauses in contracts in as far as they may have a bearing on accounts or finance.

The comptroller should co-operate with the **treasurer** in such matters as these:

1. Adjustment of coverage for all insurable risks as changes occur in location, valuation and volume of properties or hazards to be insured (assuming that the treasurer is responsible for insurance).
2. Budget of financial requirements.
3. Overdue accounts receivable to be followed up by credit department under the treasurer.

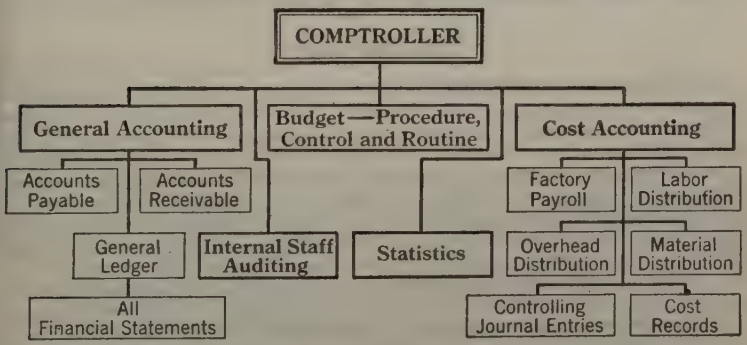

Fig. 8. Chart Illustrating Organization of Comptroller's Office

COMPTROLLER'S OFFICE ORGANIZATION.—The chart in Fig. 8 illustrates in a general way the organization of the comptroller's department. Although the duties may vary in different corporations, the functions described in the chart represent those which the comptroller should direct. The **general accounting** division keeps the general ledger, accounts payable ledger, accounts receivable ledger and related books and records at the home office of the corporation, and attends to the **preparation of financial statements.** The comptroller should train a **chief accountant** capable of assuming full responsibility for this division, a man on whom he can rely for the preparation of periodic statements of earnings and expenses and periodic statements of financial condition. Equally competent should be the head of the **cost account-**

ing division. On him devolves the responsibility of analyzing inordinate costs, and needless expense and avoidable waste. His statistical reports should be replete with constructive suggestions.

The **financial budget** should always be placed under the direct control of the chief executive of the company. A **budget committee** may be provided for in the organization. The committee may consist of the sales manager, production manager, treasurer and comptroller who may meet and advise in the preparation of the budget for the chief executive. The actual **carrying out of the budget** should not be left to the committee but should be under the comptroller who should have general supervision over the preparation and execution of the budget program. The comptroller is usually also made responsible for the **collection of all statistical data.** The vital statistics of an enterprise are prepared from the financial statements, both general and cost, from various production department reports, sales reports, etc. The comptroller should provide the statistics desired and used by the management and he should also gather facts which he believes have a vital bearing on the proper management of the business. The collection of statistical information for any enterprise is usually inaugurated by the comptroller, primarily to aid him to obtain suggestions for the improvement of the business as a whole.

The comptroller has authority over the **internal "staff auditing."** This means the checking of records and procedures such as payrolls, cash funds, securities owned, branch office accounts, employees' time records, continuous inventories of materials, allowances to customers, salvage and by-product revenues, records of non-durable tools, removals of equipment and the like.

The Secretary

SECRETARIAL FUNCTIONS.—The secretarial function is a **ministerial function** of the corporation. The secretary is the ministerial officer. By that is meant that his duties leave little to his discretion, as contrasted with the duties of the executive officers. To a larger extent than is the case with the other officers, the secretary's **duties are prescribed by law** both as to their nature and the manner of their performance. The secretary's office is one of more limited authority than those of the executives, and the expression of its functions is more circumscribed. The secretary discharges those specified official duties that arise from the designated facts of the existence and form of the corporate entity and its relations to the law and to its owners or stockholders, and in some measure its relation with those with whom it does business. These duties are common factors of all corporations, regardless of the nature of their objects and purposes. The secretary, his office and the proper exercise of the function of his office, are necessary to the continuation of that condition which is expressed by the statement as to any corporation that it is "duly organized and existing under the laws of" the state of its domicile.

THE SECRETARY'S OFFICE.—The office of the corporation secretary is, like that of the president or chief executive, a **statutory office.** The laws of practically every state mention the secretary in specific terms or designate certain acts to be performed by him. Expressly and impliedly, the general corporation laws of all of the states provide for the office of secretary. He is **elected** by the act of the owners of the corporation, the stockholders, or by the agents of the owners, the board of directors. Elections, however, are not often conducted by the stockholders themselves, even where the statute points out the way to their retention of the choosing of the officers as a matter for their

own meetings. The practical method is to establish **by-laws providing for elections of officers by the board of directors.** Several states require this to be done; the provision in this respect of one state being that "the directors shall elect officers." The board is better situated to select the individual for the office than the larger body of stockholders, especially when there is a vacancy to be filled as the result of resignation, death or disability. The secretary is one of the officers **elected for a specified term.** This is usually limited by the by-laws to one year, with a provision for remaining in office "thereafter until other successors are duly elected and qualified."

OATH OF OFFICE.—The general corporation acts of a number of the states have the requirement that "the secretary shall be sworn to the faithful discharge of his duty." The oath is usually administered by a director, or the president, or a notary public, in the presence, whenever possible, of the board of directors at a meeting. It is then subscribed in writing, in similar words, and acknowledged by the notary. The **written oath** is referred to in the minutes as being "in the form presented at this meeting," which usually is typewritten on a minute book page. A sufficient form of oath is shown as follows:

SECRETARY'S OATH

CITY OF..... }
COUNTY OF..... } ss.:

....., the secretary of the.....
.....being duly sworn, upon his oath deposes and says that he will faithfully discharge the duties of secretary of the aforesaid corporation.

.....
Secretary

Subscribed and sworn to before me
this.....day of.....19..

.....
Notary Public

My commission expires.....

The fact that the oath was taken by the secretary may be shown by the signature of the officer administering it, subscribed to a form similar to the foregoing. The wording of the oath, to be subscribed by the secretary in writing may be in the first person as follows:

I, ... do solemnly promise and swear that I will faithfully, impartially and justly perform the duties of secretary of the ...., a corporation of the state of....., according to the best of my abilities and understanding. So help me God.

The phrase "according to the best of my skill and ability" is sometimes used. The minutes of the meeting at which the secretary's oath is administered recite the fact that it was duly taken and subscribed: "This was accordingly done, and the secretary entered upon the discharge of his duties."

THE SECRETARY'S DUTIES—GENERAL.—The by-laws usually attempt to specify the duties of the secretary. They cover specifically in most instances his important duties, sometimes repeating the words of the statute as to those mentioned therein. The **principal duty** of the secretary is undoubtedly that he shall record the proceedings of all meetings of the stockholders and directors. This is variously expressed in state laws. They all mean that it is the duty of the secretary to make a record of all the proceedings of the meetings of the stockholders and the board of directors whereby either the body of stockholders or the board of directors performed any act binding upon the corporation,

and to set up this record in such form as to make it available for future reference. The **other duties** of his office are in general to issue notices of directors' and stockholders' meetings; to keep stock certificate books and transfer record books; to attest with his signature and impress with the corporate seal all stock certificates and certain contracts of the corporation; to have the custody and charge of the corporate seal and all such corporate books, records and papers as may belong to his office; and to prepare such lists of stockholders as the statutes may require. Following the statement of these duties, as they are arranged for the usual codes of by-laws, there often appears a general provision as to others not designated in detail, this by way of the concluding phrase, "and such other duties as may be incident to his office."

Secretary's Duties in Relation to Law

All of the secretary's duties are identified with the corporate entity and its relations to the law, to the stockholders and to third persons. These relations overlap, but a classification of the secretary's duties under the general headings of

1. Relations to the law
2. Relations to stockholders
3. Relations to third persons

will afford a better basis of analysis and description than any of the arrangements in the ordinary by-law form.

REPORTS, STATEMENTS, ETC. REQUIRED.—The duties in relation to the law embrace those wherein the secretary must attend to specific requirements of the law. These requirements include reports, statements and certificates which must be filed in the office of the Secretary of State, and in some instances must be recorded, in the same manner as the articles of incorporation, in the county in which the corporation has its principal place of business or is transacting business. Such documents relate to many features and details of the corporate existence and business; and as between the different states, are varied in their respective designations as well as their forms and requirements. Thus they are known as reports, statements, affidavits, certificates, schedules, returns and exhibits. The significance of all of them lies in the fact that they furnish the various governmental agencies, which usually supply blanks for the purpose, the particular information desired. This is sometimes elicited by a form which requires the corporation to answer interrogatories.

All such documents may be considered presentations of information. Some of them are required periodically as, for example, **annual and quarterly reports,** these being intended to reflect in most instances the general condition of the corporation, with occasional special reference to a particular subject such as the production of natural resources. Schedules, reports, or returns must be prepared and filed concerning such matters as gross income, income from manufacturing, income from exports, gross earnings and receipts, invested capital, capital stock authorized or outstanding, real and personal property and tangible and intangible property.

The condition disclosed by these may be the basis of one or more kinds of tax, such as personal property, real property, franchise privilege, license, production, income, profits, or excise tax. Or the information presented may have to do with such of the corporate characteristics and details as supplemental issues of stock, changes in the by-laws or the charter or the articles of incorporation, changes in the number of directors or the officers, the proportion of capital employed within the state, the appointment of agents for service of

process and other purposes, powers of attorney, elections of directors, votes at meetings, combinations in restraint of trade, occupational licenses, registrations, mortgages, reductions and equalizations of assessments and taxes, dividends paid, tax refund claims, or the oaths of office of various officials such as inspectors of election. It may even have to do with campaign contributions. These and all other matters of detail concerning which information must be given, are within the purview of the secretarial function to the extent that the secretary is relied upon to assemble and prepare most of the information presented, to attend to the execution of the documents by means of which the requirements of the law are met, and to see to its proper filing.

This is true also of the preparation and filing of various kinds of **applications,** such as applications to other states for admission to parity with corporations organized and existing under the local laws, and for permission to sell securities under the so-called "blue sky" laws. It is likewise true with relation to **certificates of authority** to resident and other agents, and with reference to lists, such as lists of transfers of stock of non-residents of the state, and lists of resident stockholders and bondholders, which are required for specific purposes of the law, in addition to the lists which must be perpared in connection with elections at stockholders' meetings.

The relations of the secretarial function to the law keep the secretary in contact with various ministerial officers of the state such as the Secretary of State, with various state bodies, such as corporation commissions and railroad commissions, and with numerous other governmental officers and agencies, such as industrial boards, tax assessing bodies, state treasurers, auditors and factory inspectors, and with bureaus, boards and departments, such as those concerned with statistics, labor, tax equalization and industrial relations.

Some states require **duplicate records,** as when the corporation maintains only the statutory office in the state of its domicile and transacts its business in another state in which it is qualified as a foreign corporation licensed therein. These records generally include the details of stock transfers as reflected by the stockholders' ledger. The particular reports which are necessary in any state are, of course, governed by the laws of that state. Those which require to be taken into account by a particular corporation are the ones required by the state of its domicile and the ones necessary in other states in which it is licensed as a foreign corporation to transact business.

SECRETARY'S ATTESTATION AND SIGNATURE.—The secretary's legal duty is to attest, or sign, and affix the **corporate seal** whenever the law requires this to be done. Each such document expresses a feature of the corporation's contract with the state, and the maintenance of the relations based upon that contract is part of the secretarial function. The making of any such report, statement or certificate may be an act of the owners or the executives, i.e., the stockholders or the officers; but the secretary by his attestation or certification of such an act completes the contact with the law and enables the state to accept and file the evidence of the act, with the assurance that the thing said to have been done was in reality accomplished. The state has this assurance in respect of things done, and conditions disclosed, and the legal right to rely upon it because of the attestation or certification of the proper legal officer, the secretary. In so far as the statute may be concerned, some of these documents could be prepared and filed without any attention by the secretary. But the scope of his duties, embracing as it does these relations of the corporate entity to the law, does not stop short of complete responsibility for all such reports, statements and certificates required by law, even when an

executive officer is the agent of the corporation whose signature and oath are necessary to make the document complete.

SUMMARY OF SECRETARY'S DUTIES AS TO REPORTS, STATEMENTS AND CERTIFICATES.—The secretary, therefore, makes it his business—

1. To know what reports, statements and certificates are required;
2. To know when as to time, and under what conditions as to corporate events, they must be filed;
3. To see to it that they are properly prepared, executed and duly filed;
4. To record such of them as may have to be recorded; and
5. To keep a record of all such things done.

RECORD OF REPORTS REQUIRED.—The **proper way** to make the record of these things is for the secretary, at the next meeting of the board of directors, to report to the effect that a statement, certificate or report, as the case may be, was prepared, executed and filed—and placed on record with a county officer, if necessary—in the form of the copy thereof then and there presented. The **copy of the document** is then placed in the secretary's files, and the fact that it was duly submitted as provided by law receives mention in the minutes by way of the secretary's report. This attention to these matters of law will avoid the penalties for failure to file reports imposed by the laws of many of the states.

LISTS OF STOCKHOLDERS.—There is the specific requirement in the general corporation acts of some states that the secretary shall make, at least 10 days before each election, a complete alphabetical list of all of the stockholders entitled to vote at such election, with the residence address of each stockholder and the number of shares held by each, which list shall, during the usual hours for business, be kept at the principal office of the corporation or at the place where the election is to be held, and during those hours, and also during the time of the election be open to the examination of any stockholder. The statutory instructions are very specific. The list is expected to be in the custody and charge of the secretary during the time it is open for inspection, and is dependent upon the stockholders' ledger or stock books of the corporation for its correctness.

SPECIAL TAXES ON STOCK ISSUES AND TRANSFERS.—The federal revenue acts, and the laws of various states, provide special taxes upon the issue and transfer of stock as evidenced by certificates for the shares of the same. The tax is paid by affixing stamps at certain rates per unit of value. The **affixing and cancellation of these stamps** are duties of the secretary. They are generally affixed to the stub of the certificate, and cancelled thereon.

The United States government under the Revenue Act of 1924 imposes on the original issue of stock of a corporation whether newly organized or a reorganization, a stamp tax of 5 cents on each $100 of par value or fraction thereof. Where stock is issued without par value the tax shall be 5 cents per share unless the actual value is in excess of $100 per share in which case the tax shall be 5 cents on each $100 of actual value or fraction thereof. Where the actual value is less than $100 per share the tax shall be 1 cent on each $20 of actual value or fraction thereof. The stamp should always be affixed to the stub in the stock certificate book and not to the certificates issued. These stamps may be purchased in various denominations at all post offices and at the office of any collector of internal revenue. When stamps are affixed by the secretary, he should write or stamp thereon his initials and the date upon which the same

is attached or used, so that the stamps may not be used again. Failure to comply with this law makes the corporation liable for penalty.

CUSTODY OF CORPORATE DOCUMENTS.—It is sometimes the case that the secretary not only is given the usual custody and charge of the corporate seal, the minute book and the certificate books, but also is held responsible for the safe-keeping of numerous books, papers, records, documents and memoranda. It is part of the secretary's duty to be responsible for all papers brought before the board for action or ordered on file, and of all written contracts, deeds, insurance policies, leases, records and evidence of title to real estate and other property, (except moneyed securities) owned, held or controlled by the company. These are matters too closely identified to the corporate entity and corporate acts to be dependent for their safe-guarding upon any other than the ministerial officer. Thus a provision to this effect in the by-laws is a legitimate basis; and the secretary is not only the custodian of all such things as to their safe-keeping, but also sees to it that they are properly and conveniently filed for quick reference.

CONTACT WITH COUNSEL.—The secretary should be permitted to maintain at all times **personal contact with counsel,** so that all of his acts in relation to the laws under which the corporation exists and conducts its business in one state or several, will be performed with safety and certainty, and without apparent inconsistency in so far as other corporate relations to the state may be concerned. Advice of counsel is the factor of safety in all such matters as determinations of the proportion of capital or capital stock employed in the various states, the details of the recording of instruments of title to property (in some jurisdictions these will be found to relate to stock transfers), the preparation of statements and reports in connection with the sale of securities, the formalities and details of bond issues, amendment of the articles of incorporation, the preparation of directors' or stockholders' resolutions covering the acquisition or disposal of property or the exchange of shares of the capital stock for any equivalent of money allowed by the statute, the drawing of resolutions concerning valuations and appraisals, and the preparation of all reports, certificates, exhibits, returns, affidavits, statements, certifications, deeds, instruments of title—or other documents evidencing the condition or the act of the corporation—which are out of the ordinary, or for which there is any precedent in the secretary's previous experience.

Duties of Secretary in Relation to Stockholders

RIGHTS OF STOCKHOLDERS.—The secretary's relation to the owners or stockholders is concerned with the **contract between them and the corporation.** This contract embraces the division of the capital stock into the units or shares, and the ownership of these shares by the stockholders under the privileges and restrictions of the law. The rights of the stockholders with which the secretary has to do are:

1. To possess and hold certificates representing the number of shares owned.
2. To sell and deliver these shares by proper delivery of the certificates representing them.
3. To receive notices of stockholders' meetings.
4. To attend such meetings in person, or be represented thereat by proxy.
5. To participate in the proceedings of and vote at such meetings.
6. To share in all dividends declared by the board of directors.

7. To share pro rata, upon dissolution of the corporation, in the distribution of such of its assets as remain after creditors are paid.
8. To examine the corporate books under certain conditions.
9. To invoke the aid of the courts for protection against mismanagement, likewise under certain conditions.
10. To subscribe in proportion to the number of shares owned, for any increased capital stock.

CERTIFICATE OF STOCK.—Stock in a corporation is ownership. Shares are units of ownership and the evidence of such ownership is the stock certificate. Under **the common law** stock certificates are not negotiable, but, as a result of **commercial custom,** they have been largely treated as negotiable instruments and in some states, including New York, are held to be negotiable instruments under a statute known as the **"Uniform Stock Transfer Act."** In other words, if the stockholder endorses them in blank and after loss or theft they come into the hands of an innocent person for value, the innocent person has good title. On this account if a stock certificate is lost the transfer agent should be notified at once. If the certificate is not found, the former owner may obtain a new one by putting up a bond to protect the company against the claims of a possible subsequent innocent purchaser. In case of any doubt or dispute as to the ownership of a stock certificate, the corporation should not transfer it until the question of title has been definitely settled.

The **elements of the stock certificate** which fall within the secretary's continuing duties are the stockholder's name, the number of shares, the date and number of the certificate, the signatures of the officers (the president or vice-president and the secretary; or, occasionally, the treasurer) and the impression of the corporate seal. A person may be a stockholder without possessing a certificate. A certificate of the number of shares subscribed for is not necessary to constitute the subscriber a stockholder. The certificate is merely **evidence of ownership of stock,** convenient alike to the owners in simplifying the process of assigning and transferring it, and to the corporation in maintaining proper contact with the owners; but it is desirable from every standpoint, both as to law and practice, to issue certificates as quickly as possible to all shareholders. Delivery of the certificate is necessary to the completion of the issue of shares represented by it. The date of the certificate is usually regarded as the date of issue of the shares. The name of the stockholder, the number of shares represented by the certificate, and the date and number of the certificate itself, are matters for the secretary's record.

RIGHTS OF STOCKHOLDERS OF RECORD.—Stock **assigned by endorsement of a certificate,** whether in blank or complete, still stands on the books of the corporation in the original owner's name until the certificate is surrendered and proper entries are made on the stock books of the corporation. Until this is done the original owner is still the stockholder of record, and while subject to any stockholder's liabilities accruing meanwhile, has, on the other hand, a legal right to vote and to receive payment of any dividend declared even though the actual sale of his stock was consummated months before. His **right to vote** is absolute and after its exercise cannot in any way be overturned or questioned. His **right to dividends** is qualified, as the dividends belong to the actual owner of the stock, namely, the person possessing the duly signed stock certificate, to whom the holder of record must account. His responsibility as to any stockholders' liability is, as to the corporation, absolute, but for any such payments he has recourse to his assignee.

STOCK CERTIFICATE BOOK.—The basis of the secretary's record of stock and stockholders is the stub of the **stock certificate book** numbered to correspond with the certificates which are made out, signed, sealed and delivered to the stockholders. The stub should bear the name and address of the stockholder, the number of shares, the date and number of the certificate, and sufficient data concerning the source of the shares issued to show whether the title to them is passing in the present transaction from the corporation to the first owner by way of original issue of the stock, or from a former owner to the present owner by way of a transfer of the shares represented by a certificate previously outstanding. If the title to the shares is passing by transfer, the number and date of the certificate surrendered or canceled for the purpose of such transfer should also be entered on the stub of the new certificate issued in its stead. In addition to the foregoing, the stub should also carry the **receipt of the stockholder** for the certificate. This receipt should be by way of the personal signature of the individual whose name appears on the face of the certificate. If it is not convenient to obtain this upon the stub, it may be secured by delivering with the certificate a receipt which can be returned and pasted to the stub. A convenient form for such receipt is as follows:

SHARES..... DATE.....

Received from the ..... Corporation
Certificate Number ..... for ..... shares
of the capital stock thereof.

.....

CARE IN PREPARING STOCK CERTIFICATES.—There is no duty of the secretary more productive of satisfactory results, when properly attended to, and more prolific of trouble, when carelessly performed, than the duty of preparing and issuing stock certificates. The high degree of care and attention to detail in handling the **stock certificate book**—the certificates and the corresponding stubs—will not only simplify the work of preparing and keeping in order all subsequent stock books and records, but will also sustain the use of the certificate book as the only record of outstanding stock, a practice which is common to many small corporations in states where stock books are not required by law. This is possible because the stock certificate book is the **book of original entry** as evidence of ownership of the shares. In handling stock certificate books, particularly those in which the certificates and their corresponding stubs bear printed numbers, no certificate is permitted to be destroyed. If one is spoiled in the making, it is nevertheless pasted to its stub and protected against any possible further use by mutilation, the same as a surrendered canceled certificate, and a note made on the stub to the effect that the certificate is void and its number withdrawn from circulation.

Great care should be exercised by the secretary in preparing and issuing stock certificates in order to avoid mistakes. If error is discovered on the certificate before it is sent out, such as a misspelling of the shareholder's name or an incorrect number of shares, the certificate should be properly canceled and gummed back to the stub from which it was originally taken. **Erasures** should never be made on such certificates and under no circumstances should the certificates be destroyed, as all the certificates should be satisfactorily accounted for either as being in the stock certificate book or in the hands of the stockholders. A corporation is responsible for any fraud or error permitted by its officers for the issuance of stock. If a secretary **erroneously issues** a certificate for 100 shares instead of 10, and such certificate finds its way into the hand of an innocent person for value, the corporation would be held liable and the innocent stockholder would be protected from loss.

STOCKHOLDERS' LEDGER.—The stock certificate book is a record in chronological order of certificates issued without reference to the aggregate number of shares held by one owner. Its guiding feature is the number of the certificate. The stockholders' ledger—alphabetically indexed—is also a record of the certificates issued, with the ledger characteristic, however, that all stock transactions are grouped with reference to the individual stockholder. There is a **ledger account for each owner** with entries for shares issued and transferred. The stockholder is credited with the shares issued and is debited with the shares transferred. In some states the stockholders' ledger is required to be kept; in a few it is held to be the book from which the right of the stockholder to cast votes for the number of shares owned by him shall be determined as to the number of such votes.

When the corporation has more than a few stockholders, this ledger is of practical importance in keeping account of the outstanding stock. Printed forms are available for this kind of stock ledger, some of them in ledger binding and others so adapted that they can be included by insertion as sheets between the covers of the minute book. The list of stockholders, hereinbefore mentioned as required by the statutes of a number of states in connection with meetings for election purposes, furnishes a means of arranging the stockholders alphabetically and setting down the aggregate number of shares owned by each. Lists of this kind made up with due regard for the number of certificates represent an aggregate of the shares held by each stockholder and furnish a convenient working basis for setting up the stockholders' ledger accounts.

The stockholders' ledger speaks in terms of shares. The stock certificate or the transfer book may be used as a journal from which to post to the stockholders' ledger the debits and credits to each individual account as certificates are issued or surrendered. The balances are brought down on each stockholder's account after a transfer is made. Fig. 9 shows a typical form of stockholders' ledger.

FIG. 9. Form of Stockholders' Ledger

STOCK TRANSFERS.—When stock is transferred, one of the following courses is ordinarily used:

1. The certificate is **assigned in blank** and delivered to the transferee, in which case the assignment is absolute and the certificate may then

be passed from hand to hand and the ownership of the stock it represents be thereby transferred any desired number of times without change of or addition to the assignment.

2. The assignment on the back of the certificate is completed by the **insertion of the name of the transferee** and the delivery of the certificate to the transferee, in which case the certificate must be surrendered and a new certificate taken out by the transferee before it can be again transferred.
3. The assignor completes the assignment form on the back of the certificate, **surrenders the certificate to the secretary of the company,** and secures and makes delivery of a new certificate in the name of the transferee.
4. The certificate is delivered to the transferee **without indorsement,** but accompanied by an **instrument of assignment or power of attorney** having the same effect as the indorsement upon the back of the certificate.

When transfer is made by delivery of the certificate with the name of the transferee inserted in the assignment, the transfer is not made on the books of the corporation until the assigned certificate is surrendered. In the meantime the original owner is still the owner of record and will therefore be held should any stockholders' liabilities arise, although as between the immediate parties the transfer is complete, and the transferrer could recover from the transferee any assessment or other moneys which he might be compelled to pay as a stockholder of record. This objection, when the stock transferred is full-paid, is not in most states material in the case of ordinary business corporations; but when stock of banks, trust companies, or other financial corporations is transferred, or when stock is not full-paid, it may be material and even vital.

TRANSFER BOOKS.—While the duly assigned stock certificate is good evidence of the ownership of stock, such ownership is not effective for corporate purposes until the transfer has been recorded upon the stock books of the corporation. The holder of such a certificate may force the proper entries upon the corporate books but he cannot exercise the rights of the stockholder until such record has been made. Hence the importance of a carefully kept stock book. Books of this kind are a matter of standardized stationery, and like the stock certificate books and stockholders' ledger sheets, are available for purchase in a variety of forms. The operation of transferring stock consists of transferring shares from one ownership to another **on the books of the corporation.** The term "books" includes those herein mentioned, together with such additional means of recording transactions relating to stock as may be employed; but the significance of "books" is usually completely met by the stock certificate book. The substitution of a present owner of stock for a previous owner is accomplished on the books of the corporation by the surrender and cancellation of the certificate representing the shares held by the previous owner and the substitution therefore by issue of the certificate representing the shares in their new ownership. . . . .

The transfer book is found in **two general forms.** As usually kept by the **smaller corporations** it consists of a series of blank transfers or assignments bound in book form. These are filled out and signed by the owner of the stock or his duly authorized attorney when the actual transfer of stock disposed of by him is made upon the books of the company. They are primarily designed to be formal evidence of the transfer of stock. They are also the secretary's authority for the issuance of new certificates of stock to the assignee

in place of the old certificates surrendered. A different form of transfer book is used by the **larger corporations** where the number of transfers is too great to permit of the convenient use of the form already described. In this only one line is required for each transfer of stock, the transferee or his duly authorized attorney signing in the right-hand column.

It is but seldom that the transferrer makes the transfer on the books of the corporation in person. In perhaps 99 cases out of 100 he merely signs in blank the assignment on the back of the certificate and turns it over to the transferee. The name of the attorney to make the transfer is then inserted at the time the certificate is presented for transfer either by the party by whom the certificate is surrendered or by the secretary who usually inserts his own name or makes the transfer.

ESSENTIALS OF STOCK TRANSFER.—The essentials of a transfer are (1) a change of ownership in fact, (2) satisfactory evidence of this by proper endorsement, (3) the surrender and cancellation of the certificate so endorsed, and (4) the preparation and delivery, or, in other words, the issue of a new certificate for the number of shares transferred. Shares of stock are personal property. Title to them passes by delivery of the certificate representing them, the certificate being endorsed in blank or accompanied by a writing equivalent of such endorsement. **Endorsement in blank** means that the signature of the vendor appears as having been subscribed to the form as shown below, which usually is on the back of the certificate.

For value ..... hereby sell, assign and transfer unto .....
..... shares
of the capital stock represented by the within certificate and do hereby irrevocably constitute and appoint .....
attorney to transfer the said stock on the books of the within-named corporation, with full power of substitution in the premises.
Dated ..... 19..
In presence of .....
.....

This form is an assignment accompanied by a **power of attorney.** By his signature the vendor completes a **bill of sale** of the shares represented by the certificate, and authorizes the transfer to be made on the books of the corporation. As between vendor and vendee no entry on the books is necessary to pass title to the shares; but as between the vendee and the corporation the transfer on the books is necessary to enable the new owner to exercise any of the rights of ownership, except the one he holds by virtue of his possession of the certificate properly endorsed; for the holder of such a certificate has only the right to have a new certificate issued in his name and delivered to him, namely, the right to have himself recorded on the books of the corporation as a stockholder. Until he is so recorded and regardless of the time he may have possessed the endorsed certificate representing the shares acquired by him, he is not entitled to be treated by the corporation as one of its stockholders. The corporation has no duty to any owner of shares other than those whose names appear as such upon its books, except the duty to make the transfer under proper conditions. Stockholders in whose name certificates are recorded upon the "books" of the corporation as outstanding are **"stockholders of record."**

The assignment and power of attorney has blanks for the signature of the transferrer (vendor), and for the transferee's name, the number of shares, the name of the attorney-in-fact, the date and witnesses to the signature of the transferrer. Sometimes, as in the case of **floating or "street" certificates** in

the hands of brokers, an acknowledgment or guaranty of the genuineness of the transferrer's signature is necessary to good delivery, and when that is the case it also appears as an element of proper endorsement. The **steps in the process of transfer** are (1) endorsement, (2) delivery, (3) surrender of the certificate by the owner, (4) entry of the proper information on the books of the corporation, and (5) issue and delivery of the new certificate by the secretary of the corporation.

CARE REQUIRED IN TRANSFERS OF STOCK.—It is necessary for the secretary to exercise extreme caution in the matter of transfers of stock. This part of his duties is beset with a large number of legal and practical complications. The **acknowledgment or guaranty of the transferrer's signature** may be considered as part of the proper endorsement for transfer required on the certificate. If the acknowledgment or guaranty is so considered, this part of the entry on the back of the certificate, with the other necessary items which may be filled in, makes possible more than fifty varying combinations of the different items on the back of the certificate which might result through variations or irregularities in execution of the endorsement. Most of such variations would be merely minor differences with no effect on the validity of the endorsement. Some of the combinations, however, might produce the serious question as to the sufficiency of the endorsement. Hence, it is necessary for the secretary to be extremely careful in seeing that the whole endorsement is in such form as properly to permit the transfer requested. Usually the signature of the owner of record and the date, with some verification of the signature by witness or a guaranty or a notarial acknowledgment, will constitute proper endorsement. If the name of the attorney-in-fact must be inserted, the secretary or an assistant secretary or the transfer agent is designated to act in that capacity.

DELIVERY OF STOCK.—Delivery must also be carefully considered, i.e., delivery by way of vendor to vendee. In so far as it involves the possession of the endorsed certificate, it may not have been properly made. Thus the person surrendering such certificate for transfer to himself, may have acquired possession of it in an irregular or unlawful manner, as by finding it or by fraud. An endorsed certificate remaining in possession of the owner of record until death, and thereafter surrendered for cancellation and transfer, raises problems of **probate proceedings and inheritance taxes.** In the absence of personal acquaintance the secretary may be faced with uncertainty as to whether the individual requesting the transfer is the owner of record or his agent, or the transferee or his agent, or a person named as attorney-in-fact, or some one who is not entitled to have the transfer made.

It is, therefore, necessary for the complete protection of the corporation—

1. That the secretary assure himself as to the endorsement—by such a verification of the signature as he may secure by means of a broker's guaranty, a notarial acknowledgment, or a comparison with the signature appearing on the receipt obtained for the certificate when it was issued, or by other means such as an identification by personal contact.
2. That he know the status of the owner of record as to whether he was living or dead at the date of request for transfer, and if living, as to his age and legal competency at the date of endorsement, and if surrender is made after some time has elapsed from the date as it appears, his age and legal competency at the date of delivery of the certificate to the individual requesting the transfer.

3. That he know who is requesting the transfer—as to whether it is by a corporation under proper authority or by a fiduciary, such as a guardian, trustee or pledgee or by a court officer such as a receiver or administrator.
4. That he know the status of the legal relation to the owner of record of the individual requesting the transfer, as for illustration, in connection with any fiduciary relation which might not extend to the point of authority to have the transfer made.

The relations of agent, trustee, guardian, pledgee, and executor or administrator are sometimes matters of record on the corporation books, as, for example, when a certificate is outstanding in the name of a person as a trustee. Conditions affecting stock transfers which in the nature of things do not appear on the corporation's books include the minority of the owner of record, or his adjudgment as insane or legally incompetent, or the fact that he may have become a resident in a locality where community property laws prevail.

STOCKHOLDER'S RIGHT TO TRANSFER STOCK.—The right of a stockholder of a corporation to transfer the whole or a part of his interest therein is one of the convenient and valued features of the corporate form of commercial enterprise. Any competent person may transfer stock standing in his name. Attorneys, trustees, guardians, executors and administrators may transfer stock belonging to others upon giving satisfactory evidence of their authority to do so. Stock owned by minors and others incompetent may be transferred only by their legally appointed and authorized representatives. Few restrictions exist as to the transferees of stock. Corporate officials may at their discretion refuse to transfer stock to persons not competent to perform the duties of a stockholder, such as a minor or a person of unsound mind.

DUTIES OF OFFICERS TO TRANSFER STOCK.—The secretary or officers of the corporation must refuse to transfer or re-issue stock until the old certificate has been surrendered, or until any other proper requirements have been complied with. When, however, all proper requirements have been made they must make the desired transfer or re-issue. The **authenticity of the signature** to an assignment of a stock certificate must be satisfactorily established when necessary. In the smaller corporations the secretary is usually familiar with the signatures of the stockholders. The larger corporations sometimes require the signatures to be **witnessed or guaranteed** by some person known to the transfer agent, or otherwise that they shall be **formally acknowledged before a notary public.** If there is any doubt as to the authenticity or correctness of the assignment, or as to the title of the party presenting the certificate, or as to any other material matter, the secretary has the right to delay the transfer for a reasonable time in order to communicate with the former holder or take such other steps as he may deem expedient. If, after due investigation, there still remains doubt as to the propriety of the transfer or the ownership of the certificate, or if there be complicating claims, the secretary may properly decline to act until instructed by the board of directors, and the board, if in doubt, may decline to take action in the matter until ordered thereto by some court of competent jurisdiction.

RESTRICTIONS ON TRANSFERS.—Every stockholder whose stock is paid for in full is entitled to transfer his stock freely. Even where the stockholders have entered into a contract to restrain the alienation of stock or have enacted by-laws for the same purpose, the courts have usually set the restraining provisions aside as being contrary to public policy. Charter provisions restricting the transfer of stocks have, however, been held valid. In some states the

statutes prescribe specifically that **stock subscribed but not fully paid for** in accordance with the subscription agreement is not transferable save with the consent of the corporation. Elsewhere charter or by-law provisions may give the corporation the right to refuse to register transfers of unpaid stock. In the absence of such provision, the right of transfer is absolute and may be enforced against the corporation. At times the restriction of stock transfers becomes desirable and various plans have been attempted to effect this end. The courts, however, defend this right so strictly that its **legal waiver** is difficult. Perhaps the most successful method, when all the parties are in agreement, as to the advisability of such restraint is to form a **voting trust** for a certain number of years. All the stock—or all the stock entering into the agreement—is placed in the hands of voting trustees appointed under the terms of the voting trust agreement and is held by them, withdrawn from sale, for the period of the trust. Such arrangements are effectual and are upheld by the courts in most states if they do not extend for an unreasonable period. In some states they are expressly permitted by the statutes under restrictions as to the term of their duration.

SALE OF PART OF HOLDINGS.—Frequently the owner of stock wishes to sell or transfer only a portion of the stock represented by a certificate, and in such case the assignment on the back of the certificate, may be filled out according to the facts. For instance, if Howard Fielding owned 100 shares of stock, all included in a single certificate, and wished to sell 20 shares to James Wilton, he might fill out the assignment as follows: "unto James Wilton twenty shares and Howard Fielding eighty shares," or if the secretary will accept the somewhat informal assignment, it might be merely filled out "unto James Wilton twenty shares," it following as a matter of course that if only 20 shares are assigned, the balance of the stock remains with the assignor. The owner of the 100 shares then brings or sends in his certificate to the secretary and instructs him to make out two new certificates—one for 20 shares in the name of the new owner, the other for 80 shares in his own name. The secretary makes the proper entries on the stock book, cancels the old certificates, issues the two new certificates in accordance with his instructions, and delivers both—unless he has express instructions from the original owner to the contrary—to this original owner, who then makes delivery of the 20-share certificate at his convenience. The secretary must be governed entirely by the **instructions of the assignor in delivering new certificates,** no matter in whose name these certificates may be issued, as they are still in fact the property of the original owner.

Another and usually preferable method when but a portion of the stock represented by a certificate is to be transferred, is for the original owner to have the new certificates issued to himself. When this is to be done, he fills in his own name as assignee, instructing the secretary to issue new certificates for the proper number of shares. In the case instanced he would have two certificates issued—one for 20 shares and the other for 80 shares—in his own name. He would then assign the 20-share certificate in blank, or in the name of the new owner, and deliver it if the transaction is concluded. The new owner may then bring in and surrender this assigned certificate and take out a new certificate in his own name at his convenience. When this plan is followed, even should the sale fail after new certificates were issued, the original owner still has the stock standing on the books of the corporation in his own name and both certificates made out to him; whereas if the first plan had been followed, one of the certificates being made out to the proposed purchaser, part of his stock would stand on the books in the transferee's name, and the real owner must

either secure the assignment of this other party as a matter of courtesy, or otherwise be put to much trouble to get the certificate back into his own name.

When a certificate is surrendered for re-issue in one or more certificates in the original owner's name, the transfer may be entered on the transfer book as a matter of record, but as the owner's stock account is not affected one way or the other by the transaction, it should not be posted therefrom to the stock book. A memorandum of the facts should be made in the transfer book and on the stubs of the certificates involved in the re-issue, and the certificate numbers in the stock book must be corrected.

TREASURY STOCK TRANSFERS.—When treasury stock is donated to or otherwise acquired by a corporation, the assignment may run to the corporation direct, as "John Marshall Company"; to its treasurer, as "Treasurer of John Marshall Company"; or to a trustee, as "John H. McGowan, Trustee for John Marshall Company." The certificates so assigned are canceled when received and the proper entries are made on the transfer book and stock ledger. When such stock is held in the name of the company or even by the treasurer of the company, no new certificates need be issued until the stock is sold, the fact that certificates are not issued being noted on the stock books. When a sale of such stock is made, the new certificates are made out direct to the purchaser. Certificates might properly be issued meanwhile in the name of the company or to the treasurer if desired, but such issue is unnecessary as the data of the transfer book, the entry on the stock ledger, and the canceled certificates are quite sufficient to evidence the transaction. It is obvious that the reasons that make the certificate desirable when stock is held by an individual do not apply when a corporation holds its own stock. When treasury stock is sold, the secretary is authorized by due resolution of the board of directors to issue the proper certificates. Such transfers are entered on the stock books of the corporation as in case of any other transfer of stock. If certificates are not issued for the stock while held by the corporation, this fact should be noted on the stock books. It is not necessary to issue certificates until the stock is sold.

STATE LAWS IN RELATION TO TRANSFER OF STOCK.—The laws of the corporation's own state or the state in which the transfer is to be made may require a **transfer tax** by stamps or otherwise; or if the owner is decedent, one of these states or the state in which he lived may require **an inheritance tax** with a penalty upon the corporation for a transfer made in avoidance, even unknowingly, of its payment. The statutes in many states are very peremptory in regard to the **keeping of stock books,** providing severe penalties for failure. Thus, in New York the statutes not only prescribe heavy penalties for failure to keep stock books, but provide that no transfer of stock shall be valid as against the corporation, its stockholders, and creditors—save to render the transferee subject to a liability as a stockholder—until the record thereof has been duly entered in the stock book.

In most of the states the stock book must be kept open for inspection of stockholders or creditors of the corporation, and the provisions relating to the stock books apply both to domestic corporations and also to foreign corporations doing business in the particular state. Under a recent statute in New York this right of inspection has been somewhat curtailed, and the right is limited to judgment creditors of the corporation, stockholders who have been stockholders of record for at least six months immediately preceding the demand, and to persons holding or authorized by persons holding stock to an amount equal to 5% of all its outstanding shares. There had undoubtedly been abuse

of the right of inspection for improper purposes, or for purposes entirely foreign to the corporation, but the statute in question has received much criticism. The stock ledger is usually posted from the transfer book, though it may be posted from the stubs of the stock certificate book; and its balances may be checked from time to time by comparison with the number of shares outstanding as shown by the open stubs of the stock certificate book.

ADVANTAGE OF TRANSFER AGENTS.—Many corporations eliminate both danger and detail by appointing as transfer agents one of the several concerns that make it their business and have the facilities to anticipate and prevent the incurring of any penalty or liability in connection with stock transfers. This, however, is a delegation of a portion of the secretary's duties, the handling of such transfers being part of the secretarial function whether actually done by him or by a transfer registrar or other agent or by assistant or by another officer such as the treasurer.

A transfer agent, in the modern acceptation of the term, is one who **supervises and certifies transfers** of corporate stock. The extent of his supervision depends upon custom or upon the particular agreement. He usually keeps the stock certificate book in his custody. When a transfer is to be made, the certificate of stock duly assigned is surrendered to the transfer agent, who thereupon cancels the surrendered certificate, attaches it to its proper stub, and issues a new certificate in the name of the transferee. This certificate is then sent to the proper corporate officials who affix their signatures and the corporate seal—unless the seal is also entrusted to the transfer agent—make the proper records in the transfer and stock books, and return the signed, or signed and sealed, certificate to the transfer agent. The transfer agent thereupon seals the certificate if not already sealed, certifies it in evidence of its due issue, delivers it to the transferee, and the transaction is closed.

Occasionally when a transfer agent is employed, the **stock certificate book** is retained in the custody of the corporation. In such case, when a certificate is presented for transfer, it is canceled by the transfer agent and turned over to the corporation in exchange for a new certificate issued in the name of the transferee. This certificate is certified by the transfer agent and delivered to its owner. When the stock certificate book is kept by the corporation, the transfer agent keeps an independent record of stock certificates issued and surrendered, in order that the regularity of any particular transfer or issue may be readily and definitely ascertained.

A **registrar** is a corporate appointee who also supervises the transfer of corporate stock but does not usually carry his supervision to the same extent as does the transfer agent, his function being merely to register stock as issued. He maintains a record of all stock certificates issued and of the surrender and reissue of any new certificates with the names of the parties to the transfer. If an issue or transfer is to be made, the registrar passes upon the certificates and countersigns them if they are correctly issued. His signature is evidence of due issuance. The duties of the transfer agent and registrar are distinct, and should not be performed by a single person or institution. The function of the transfer agent is to insure the proper issue of stock. The function of the registrar is to insure the regularity of issue and to prevent overissues. The functions of the two somewhat overlap, as the transfer agent would not permit an overissue of stock nor would the registrar sign stock improperly issued.

The work of a transfer agent and registrar to be effective must be discharged by persons or institutions of the highest character and unquestioned standing. For this reason trust companies or banks are usually appointed. Speaking generally, the employment of transfer agents and registrars is advisable when-

ever transfers of stock are likely to be numerous. The procedure involved is simple in theory but in practice involves much detailed work. Also it is usually desirable that transfers be effected rapidly and accurately. The employment of the proper transfer agent and registrar, or transfer agent alone, relieves the corporate officials from the detailed work and responsibility involved, reduces the possibility of fraud or error in the issuance of stock to a minimum and affords a general safety and convenience not otherwise secured. Stock exchanges require that the securities listed by them shall be issued through suitable transfer agents and registrars.

CLOSING THE TRANSFER BOOKS.—The closing of the transfer books for a period in advance of a meeting or a dividend means that no stock transfer will be made during that period. The books used by a transfer agent or registrar are part of those meant by the expression "books of the company." In all the **larger corporations** it is customary to close the stock books to transfers prior to both elections of directors and the payment of dividends for a period of from 2 to 40 days. This is done to enable the corporate officers to make an accurate list of those entitled to receive notice of meetings and to vote thereat or to receive dividends.

In a number of states the statutes expressly authorize the stock books to be so closed to transfers. Where this is not the case, it may be provided for in the charter or by-laws. The precise number of days for which the transfer books are closed is usually fixed by the by-laws. The resolution declaring dividends usually fixes the number of days for which the books shall be closed before the dividend day, if this is not prescribed by the by-laws. In some cases the statutes or by-laws merely provide that stock shall be voted by the owner of record, as shown by the books of the company, 10, 20, 30, or 40 days before an election. This wording does not justify closing the stock books and refusing to make transfers. In such case transfers are made without interruption, but the secretary, in making up his lists of stockholders for the election, ignores transfers made after the fixed date.

No formality attends the closing of the stock books, and usually no entry thereof is made upon the books, the secretary merely refusing to transfer certificates presented to him for that purpose during the prescribed period. The notice of the annual meeting or of dividends usually sets forth the days for the closing and reopening of the transfer books. It is no part of the secretary's duty to take anything for granted, particularly in relation to stock certificates. It is, instead, incumbent upon him to proceed with an excess of caution as against the lack of it. Any matter which gives rise to doubt or suspicion in connection with a stock transfer—and this extends to and includes the issue of a duplicate certificate for one alleged to have been stolen or lost—is a matter concerning which the secretary is to consult counsel.

DELIVERY OF NEW CERTIFICATE.—Before delivering the new certificate the secretary should, when possible, require the party who presented the old certificate for transfer—who may or may not be the assignee—to sign a receipt therefor on the stub. If the new certificate is delivered by mail, it may be registered, in which case the stub in the stock certificate book, the office copy of the letter accompanying the certificate, and the returned registry receipt, which should be attached to the stub, make a sufficient record of the transaction. Blank receipts are sometimes sent with the certificates in such cases, to be signed by the recipient and returned, and these receipts when received by the secretary are pasted on the proper certificate stubs.

LOST OR STOLEN CERTIFICATES.—A stockholder, so shown by the books of his company, is entitled to every right and privilege of a stockholder without regard to the whereabouts of his certificate. When certificates are lost, the owner usually desires to have new certificates issued, not in order to secure any corporate rights, but merely to have his interest in such shape that he may readily sell, pledge, or otherwise use his stock. Stockholders have a general right to certificates and, if their certificates are lost, to have them replaced; but before it reissues any such certificates, the corporation on its part has the right to require reasonable safeguards for its own protection. The by-laws should outline the proper procedure, which must conform to any statutory requirements. A **bond of indemnity** is usually and properly required before a lost certificate is replaced, as it is always possible that the missing certificate may turn up in the hands of an innocent purchaser for value, who might have cause for damages against the corporation if it refused to recognize his rights. It is but seldom wise to re-issue lost certificates unless such bond is given. Only the absolute and irrecoverable loss of a certificate, as in case of its unquestioned destruction by fire, would justify an unprotected re-issue.

When the value of missing certificates is considerable and the circumstances are doubtful, it is sometimes best for the directors to refuse absolutely to replace the certificates until the owner secures an **order from some court** of competent jurisdiction. When this is done the directors are relieved from all responsibility in the matter. The officers of the company should never take the responsibility of re-issuing a lost or stolen certificate of stock without express authorization from the board of directors. Should they do so and the missing certificate turn up in such a way that loss is involved, they would be responsible to the corporation. In case certificates are lost or stolen, the secretary of the company or its transfer agent should be immediately notified, and such other steps be taken as may be necessary to prevent the negotiation of the missing certificates. When lost certificates are **endorsed in blank** and are presented to the transfer officers of the corporation before these officials have been notified of the loss, they may make the transfer, and the corporation will not be liable to the owner if the circumstances were such as to justify the belief that such transfer was regular and in good faith. If, however, the proper officials have been warned of the loss, or the circumstances were such as to put them on notice, they could not safely make such transfer.

INDEMNITY BOND FOR LOST STOCK CERTIFICATE.—A bond of indemnity is usually required before corporate authorities will replace lost, destroyed or stolen stock certificates. The usual form of such indemnity bond is as follows:

INDEMNITY BOND

KNOW ALL MEN BY THESE PRESENTS: That we, John R. McAllister of Yonkers, New York, as principal, and Charles Foster and Henry H. Clark, both also of Yonkers, New York, as sureties, are held and firmly bound unto the Sterling Transportation Company, a corporation duly organized under the laws of the State of New York, in the sum of Five Thousand Dollars ($5,000), to the payment of which to the said corporation, its successors or assigns, we do by these presents jointly and severally bind ourselves, our heirs, executors and administrators.

Signed and sealed this 18th day of May, 1925.

The condition of the foregoing obligation is that:

WHEREAS, The said John R. McAllister is the owner of record, as shown by the stock book of the corporation, of Forty (40) Shares of the Common Capital Stock of the said Sterling Transportation Company, each of the par value of One Hundred Dollars ($100), the ownership of said stock being further evidenced by Certificate No. 375 issued in the name of the said John R. McAllister on the 15th day of August, 1924; and

WHEREAS, The said John R. McAllister has made application to the Board of Directors of the Sterling Transportation Company for the issue in his name of a new certificate for the said Forty (40) Shares of stock of the said Company, alleging that original Certificate No. 375 is lost, stolen, or destroyed and that its present whereabouts and condition are unknown to him; and

WHEREAS, By due and formal resolution of the said Board of Directors, said application has been granted and a new certificate for said Forty (40) Shares of the stock of the said Sterling Transportation Company has this day been issued to the said John R. McAllister:

NOW, THEREFORE, If the said John R. McAllister, his heirs, executors, and administrators, or any of them, do and shall at all times hereafter, save, defend, and indemnify the said Sterling Transportation Company, its legal successors or assigns, of, from and against all demands, claims, or causes of action arising from or on account of the loss of said Certificate No. 375 for Forty (40) Shares of the Common Capital Stock of said Company and the issue of said new certificate in place thereof, and of, and from, all costs, damages, and expenses that shall or may arise because of said reissue, and shall also deliver or cause to be delivered up to the said Sterling Transportation Company for cancellation the said missing Certificate No. 375 whenever and so soon as the same shall be found or recovered, or come into his possession, then this obligation shall be void; otherwise to remain in full force and effect.

JOHN R. MCALLISTER [L. S.]
CHARLES FOSTER [L. S.]
HENRY H. CLARK [L. S.]

Signed, sealed and delivered
in the presence of:
DANIEL T. BAIRD
JOHN K. STONE

STOCKHOLDERS' MEETINGS — NOTICES OF MEETINGS.—All persons whose names appear on the books of the corporation as the **owners of record** of shares of stock are entitled to notices of meetings of the stockholders, except where the articles of incorporation provide that the holders of preferred stock having no vote shall not be entitled to receive such notices. It is the secretary's duty to serve these notices, and to see to their publication whenever necessary. **Service of notice** is had upon each stockholder by mailing to him a copy of the notice, directed to his last address as the same appears upon the books of the corporation. It is the stockholder's fault, not the corporation's, if this last address so appearing is not the correct one. The obligation of the corporation to give notice to the stockholder is discharged when the secretary so mails notice, provided the notice itself is in proper form and is mailed in due time. The by-laws usually provide for the number of days that must elapse between the mailing of the notice and the date of the meeting. This is generally 10 days **for regular or annual meetings.** Longer periods are required by some states for certain **special meetings.**

A By-law Provision Covering Notices.—A by-law provision covering notices of meetings frequently used is as follows:

> Notices of all meetings of the stockholders, both annual and special, shall be given in writing to each stockholder entitled to receive the same, by depositing, at least ten (10) days before the date of such meeting, in a regularly designated depository for United States mail, a duplicate or copy thereof sealed in a postage-prepaid envelope properly addressed to each stockholder at his or her address as shown on the books of the corporation; and any notice of any meeting so sealed and deposited in an envelope addressed to a stockholder at his or her address as the same shall appear on the books of the corporation at the date of such sealing and depositing shall be "properly addressed" for all purposes; and any failure to give, or any defect or irregularity in

giving, the notice of the regular annual meeting of the stockholders shall not affect or invalidate the proceedings of such meeting.

FORM OF MEETING NOTICE.—The notice need not be in any particular form, nor must it follow a particular style. It is sufficient if the notice of an annual meeting contains the statement that the meeting will be held at a certain hour and date, and at a designated place. The basis of a form for such a notice is as follows:

THE BLANK CORPORATION

NOTICE OF ANNUAL MEETING OF STOCKHOLDERS

Notice is hereby given that the annual meeting of the stockholders of The Blank Corporation, will be held at the principal office of the company at 298 South LaSalle Street, Chicago, Illinois, on Friday, the 25th day of November, 1925, at one o'clock P. M.

.....

Secretary

Inasmuch as the day of the annual meeting is usually designated in the by-laws, the notice sometimes contains the statement that the meeting will be "held pursuant to the by-laws." If the laws of the state, or the by-laws, provide for the closing of the transfer books in advance of the meeting, the notice may include a statement to the effect "that the transfer books will close" at the close of business on a day named, and will reopen on a subsequent date, usually the day following the meeting. The most important business of the annual meeting is the **election of directors,** and so to notice in the foregoing form, the following words are frequently added: "for the election of directors, and the transaction of such other business as may come before the meeting."

Special matters of business coming before the annual meeting are not usually required to be mentioned in the notice. But when these can be foreseen, they are stated, as a measure of precaution, and by way of preparation for their thoughtful consideration by the stockholders. These are matters of extraordinary business, and include such things as approvals of contracts, proposals to amend the articles of incorporation, amendments of the by-laws, approvals of actions of the board of directors, and votes or consents as to bond authorizations, the disposal of assets, or authorizations of term securities. Notices sometimes specify the hours during which the polls will be open for ballots cast upon the election of directors; and sometimes mention stockholders' tickets of admission, when these are necessary. The secretary does not always need the specific authorization of the board of directors to mail notices of the annual meeting. He may do this under a by-law provision, and thus in effect call the meeting by himself.

NOTICE FOR SPECIAL MEETINGS.—Special meetings usually require to be called by the president, or upon the order of the board of directors, or upon the request (generally in writing) of a certain percentage of the stockholders. To serve notice of a special meeting the secretary thus requires the specific authority of the president when the call is made by him, or of the board of directors when the call is made by the board, or by the stockholders, the request on the part of the latter that such a meeting be held being made to, and acted upon by, the board. The **business transacted** at a special meeting is practically everywhere required to be specifically set forth in the notice; and the by-laws often provide that no business that is not so specifically set forth can be transacted at any special meeting.

A **form of notice** of this kind of meeting is as shown below:

THE BLANK CORPORATION

NOTICE OF SPECIAL MEETING OF THE STOCKHOLDERS

Notice is hereby given that a special meeting of the stockholders of The Blank Corporation will be held at the principal office of the company at 298 South La Salle Street, Chicago, Illinois, on Friday, the 25th day of November, 1925, at one o'clock P. M., for the purposes of:

(a) Considering and voting upon certain proposed amendments of the articles of incorporation;
(b) Considering and voting upon certain proposed amendments of the by-laws;
(c) Considering and voting upon a proposed issue of One Million Dollars ($1,000,000.00) of Ten-Year First Mortgage Bonds of the corporation to be secured by an Indenture of Trust, to certain individuals as Trustees, covering the property of the corporation now owned and hereafter acquired to the extent described in the said Indenture;
(d) Executing, if consent to the mortgage shall be voted, such consents in writing and duplicates thereof, and in such form, as are required by law; and
(e) Transacting any and all such other business as may come before the said meeting.

Being a majority of the Board of Directors of The Blank Corporation.
{ .....
.....
.....
.....
..... }

This notice may include the basis of the call thus: "Please take notice that, pursuant to the call of the board of directors, in accordance with the by-laws, a special meeting, etc." The essential point of difference between notices of annual meetings and notices of special meetings of the stockholders is that the former need not, while the latter must, mention specifically the business to be transacted.

MAILING OF NOTICES.—The matter of mailing notices is covered in codes of by-laws that are carefully drawn. A **frequent provision** is as follows:

Whenever under the provisions of the certificate of incorporation, and/or these by-laws, and/or the statutes of the State of ....., notice is required to be given to any stockholder, director, or officer, it shall not be construed to mean personal notice unless expressly so stated, and any notice so required (except notic by publication) may be given in writing by depositing the same in any regularly designated depository for United States mail in a postpaid sealed wrapper addressed to such stockholder, director, or officer, at his or her address as the same appears on the books of the corporation, or in default of such address, to such stockholder, director, or officer at the general post office in the City of ....., County of ....., State of ..... (usually the state in which the corporation has its domicile); and such notices shall be deemed to have been given at the time when the same shall be thus mailed, and any notice given by telegraph shall be deemed to have been given at the time of delivery of the message containing the same to the telegraph company; but any stockholder, director or officer, may waive any notice required to be given under these by-laws.

It is not usually necessary to send notices of stockholders' meetings by registered mail; it is often advisable to send notices of directors' meetings in that manner. After the notices are mailed—and the mailing as well as a great many details of the secretary's work may be actually performed by someone else as well as by himself—the secretary prepares and executes an **affidavit of mailing of notice**, the necessary elements of which appear in the following:

AFFIDAVIT OF MAILING OF NOTICE

STATE OF .....
COUNTY OF ..... } ss.:

....., having been duly sworn upon his oath according to law, deposes and says that he is the secretary of The ..... Corporation, a corporation organized and existing under the laws of the State of .....; that on the ..... day of ....., 19.. (pursuant to the by-laws, or, pursuant to authority of the officer calling the meeting, or the Board of Directors) he mailed (or, caused to be mailed) a notice of the annual (or special) meeting of the stockholders of the said corporation, a copy of which said notice is hereto attached, enclosed properly in a sealed wrapper, postage prepaid, addressed to each stockholder of record at his or her postoffice address as the same on the said day and date appeared on the books of the said corporation.

Subscribed and sworn to

.....
Notary Public

Publication of notice is accomplished, wherever required, by causing a copy of the notice to be inserted in a "newspaper of general circulation." Sometimes in the published notice the word "public" is prefixed, so that the notice reads, "Public notice is hereby given, etc." The period and dates of publication are arranged for an **affidavit of publication** to be available before the meeting, so that it can also be presented and read to the stockholders. This affidavit is made and executed by the publisher and given to the secretary. It specifies the dates upon which the notice was published the requisite number of times to comply with the statute.

WAIVERS OF NOTICE.—By-law and statutory notices may be waived. The secretary, for his own protection, procures **waivers in writing** rather than in any other manner. Corporations in which there are only a few stockholders often find it convenient to hold meetings of the stockholders upon waivers of notice; and directors' meetings are very frequently held in the same way. The following form contains the **essentials of a waiver of notice:**

WAIVER OF NOTICE
OF SPECIAL MEETING OF STOCKHOLDERS OF
THE BLANK CORPORATION

WE, THE UNDERSIGNED, being all of the stockholders of The ..... Corporation, and all of the individuals whose names appear upon the books of the said corporation as the owners of the capital stock thereof, do hereby waive all notices required for the calling and holding of a special meeting of the stockholders of the said corporation to be held at one o'clock P. M. on Saturday, January 24, 1925, at the general offices of the said corporation at 298 South LaSalle Street, Chicago, Illinois, for the purposes of:

(a) Considering and voting upon a proposal to amend the articles of incorporation by increasing the number of shares of authorized common stock from one thousand shares of no par value each to five thousand shares of no par value each, and increasing the par value of the shares of the preferred stock from fifty dollars to one hundred dollars; and

(b) Transacting all such other business as may come before the said meeting;

and we do hereby consent and agree that such meeting be held at the time and place, and for the purposes aforesaid.

IN WITNESS WHEREOF, we have hereunto set our signatures at Chicago, Illinois, on the 23rd day of January, 1925, before the hour of the said meeting.

Being all of the Stockholders of The Blank Corporation { ....

PROXIES OF STOCKHOLDERS.—Many corporations send out proxy forms with notices of stockholders' meetings. The proxy is an appointment in writing. It **may be revoked** at any time by the giver, and when not so revoked is usually limited by law to a definite period, eleven months being the maximum in one state and 3 years in another. Proxies that are intended to be irrevocable or coupled with an interest so as to survive the death of the giver, are matters for the consideration of counsel. Stockholders' meetings are made up of shares of stock represented by their owners then and there present in person or by proxy. The person to whom a proxy is given need not be a stockholder. An ordinary proxy may be revoked at any time by the giver, and does not survive his death; and there is a limitation upon the time for which such a proxy remains valid. The stockholders' meeting is competent to transact business when a proper majority of the voting shares is represented by whatever number of persons may be present—as distinguished from the directors' meeting which is competent to transact business when the required number of persons is present. A proxy form is as follows:

PROXY FOR SPECIAL MEETING
OF THE STOCKHOLDERS OF
THE BLANK CORPORATION

I, THE UNDERSIGNED, a stockholder of the Blank Corporation, hereby make, constitute and appoint .....
and .....,
or either of them, my true and lawful attorney and proxy with full power of substitution and revocation, for me and in my name, place and stead, to attend, and represent me at the special meeting of the stockholders of The Blank Corporation to be held on the ..... day of ..... 19.., and all adjournments thereof, and thereat to vote upon all stock held or owned by me in all matters, and for the transaction of any and all business, that may come before the said meeting as fully and with like effect as I could if personally present and voting, hereby ratifying and confirming all that my said attorneys, or either of them, may do or cause to be done in the premises.

Dated ..... 19..

.....
Signed in the presence of: Stockholder

.....

PLACE OF STOCKHOLDERS' AND DIRECTORS' MEETINGS.—Stockholders' meetings usually cannot be held outside of the state of incorporation, except as the articles of incorporation provide for holding them outside of that state. Directors' meetings are not ordinarily so restricted.

PREPARATION FOR MEETING.—Following the call of the meeting, preparation of the list of stockholders when required, the closing of the transfer books, the mailing of notices and the execution of the affidavit of mailing (or the complete signing of a waiver of notice), the secretary concerns himself with preparations for the coming meeting. Familiarity with the by-laws, when they specify an order of business, and with general rules of procedure in meetings when they do not, aid in the orderly arrangement of documents and information relating to the business to be transacted. The **order of business of the annual meeting** may be outlined as follows:

1. Roll call of stockholders (to determine whether or not a proper majority of the voting shares are represented, in person or by proxy, by the individuals then and there present).
2. Reading of minutes of preceding meeting (approval of the same as read, or with such corrections as may be necessary, being the subject of a motion duly made, seconded and voted upon).
3. Reports of officers.
4. Reports of committees.
5. Election of directors.
6. Unfinished business.
7. New business.
8. Adjournment.

The **business of the special meeting** is generally confined to the determination of the presence of a proper quorum (the required majority of votes being greater for certain purposes of special meetings than for ordinary purposes of the annual meeting), and the transaction of the business for which the meeting was called.

It is a part of the secretarial function to make every preparation which can be thought of, by way of completing the minutes of previous meetings, and assembling documents and arranging information and reports (and sometimes circumstances) so that the meeting may proceed with dispatch. Among the details to which he attends is the checking of proxies received in advance of the meeting with the stockholders' list or the stockholders' ledger as to the number of votes represented by each proxy. For such matters as require action by resolution, i.e., matters which are of consequence or too lengthy to be handled verbally, resolutions are prepared in writing. Most of such matters can be anticipated to the extent of this preparation. It is usual thus to prepare in advance for:

1. Amendments to the articles of incorporation, or the by-laws.
2. Appointments of committees.
3. Approvals of reports.
4. Authorizations of acts to be performed in future.
5. Definitions of the duties of committees.
6. Dispositions of assets outside of sales in the regular course of business.
7. Dissolution of the corporation.
8. Ratifications of acts performed (including approval of the acts of the board of directors since the last annual meeting).

DUTIES AT MEETINGS.—The secretary is not a presiding officer. He is the **recording officer** of all of the proceedings had at meetings. Such proceedings include:

1. Organization of the meeting (by call to order, and roll call of stockholders to determine competency of meeting to transact business).
2. Reading of the minutes of the preceding meeting (and approval of the minutes as read or as ordered corrected).
3. Votes upon motions made and seconded (with special note of those carried by unanimous favorable vote).
4. Resolutions proposed (with the name of the proponent).
5. Votes upon motions made and seconded to the effect that resolutions be adopted (with special note of those carried by unanimous favorable vote).
6. Presentation of reports of officers and committees (and action taken thereon by votes upon motion or resolutions).

7. Elections of directors (including nominations made, motions that nominations be closed, motions that the unanimous ballot be cast for a single nominee, appointment of inspectors and tellers of election, inspectors' oaths, the casting of ballots, the canvass of ballots cast, inspectors' reports and announcements of elections).
8. Adjournment—(a) under by-law provision, by less than a quorum; (b) by the meeting to a day certain, for the completion of unfinished business; or (c) final adjournment, or adjournment *sine die*.

The secretary, therefore, calls the roll of the stockholders noting who (as to the number of voting shares) is present in person or represented by proxy; presents and reads the waiver of notice, or if notice was given, reads the notice of the meeting and his affidavit of mailing (and the publisher's affidavit of publication) of the same; aids the proxy committee in preparing its report upon the identity and form of the proxies; assists the presiding officer, by arrangement of the matters to come before the meeting, and the presentation of documents and information concerning matters of unfinished business; and makes a record (1) concurrently with the acts themselves, of all acts of the meeting by way of votes taken upon motions and resolution, (2) of all ballots cast, and reports and other formalities necessary, in connection with elections, and business of such importance (for example, a proposal to dissolve the corporation) as requires the vote of the stockholders by ballot.

MINUTES OF MEETINGS.—Written records of the proceedings of meetings are known as "minutes." These are written after the meeting. They are the history of what took place. They follow the general order of business in their arrangement, and include a statement of the circumstances of the calling and holding of the meeting, and an account of all of the formal proceedings whereby the meeting determined its own qualifications to transact business (as by roll call of the stockholders to ascertain whether or not a sufficient majority of the voting stock was represented by the owners of record present in person or by proxy), the presentation and reading of the notice and affidavit of mailing (and of publication, if that was necessary) or the waiver of notice if the meeting was held pursuant to waiver. The minutes are written, or dictated, in narrative form, and copied on minute book sheets.

Motions made at meetings should be seconded, and the minutes should so indicate. Nominations do not need to be seconded.

The following are, in form, representative minutes of an annual meeting:

MINUTES OF THE
ANNUAL MEETING OF THE STOCKHOLDERS OF
THE BLANK CORPORATION

November 25, 1925

The annual meeting of the stockholders of The Blank Corporation was held at the general offices of the company at 298 South LaSalle Street, Chicago, Illinois, on the 25th day of November, 1925, at one o'clock P. M., pursuant to the by-law provision for the annual meeting to be held on the last Wednesday in November of each year, and pursuant to notice of the said meeting regularly given.

The meeting was called to order by ....., president of the corporation, who presided as chairman in accordance with the provisions of the by-laws; and ....., secretary of the corporation, being present, acted as secretary of the meeting. At the order of the president, the secretary called the roll of the stockholders entitled to vote at the meeting. They were found to be present in person or by proxy, and representing shares of the voting stock, as follows:

PRESENT IN PERSON

Name	Number of Shares
.....	.....
.....	.....
.....	.....
.....	.....

REPRESENTED BY PROXY .....

Name	Name of Proxy	Number of Shares
.....	.....	.....
.....	.....	.....
.....	.....	.....

The president ordered all proxies deposited with the secretary; and appointed ..... and ..... as a proxy committee to canvass the same and report as to their regularity.

The secretary presented and read a copy of the notice of the meeting, together with his affidavit of the mailing of the same [and the publisher's affidavit of publication, where this is required by law]. These, upon a motion duly made, seconded and unanimously carried to that effect, were ordered to be included in the minutes, the notice by a copy thereof, and the affidavit of mailing of notice, by a duplicate herein executed and acknowledged in the same manner as the original as follows:

> [The copy of the notice and the duplicate original of the affidavit of mailing of notice—showing its execution, acknowledgment and notarial seal duplicated in the minutes—are omitted here.]

The proxy committee reported that all proxies were in order and that the aggregate of voting shares so represented was 1,368, which, together with the number of voting shares represented by the owners thereof present in person, constituted a majority in interest of the stockholders of the corporation. The president thereupon discharged the proxy committee, and declared the meeting competent to transact business.

The secretary then read from the minute book the minutes of the preceding annual meeting held on November 26, 1924, and the minutes of the special meeting of the stockholders held on December 8, 1924; whereupon ..... proposed the following resolution and moved its adoption:

> "BE IT RESOLVED, that the minutes of the annual meeting of the stockholders of The Blank Corporation held on November 26, 1924, and the minutes of the special meeting of the said stockholders held on December 8, 1924, as the same appear, respectively, on pages .... to ...., inclusive, and .... to ...., inclusive, of the minute book of the said corporation, together with the acts of the said meetings and all of them evidenced thereby, be, and the same hereby are, ratified, confirmed, accepted and approved."

The motion that the foregoing resolution be adopted was then seconded, and upon being put to vote, was unanimously carried.

The report of the president was then presented and read; and after some discussion of the suggestions and recommendation included therein, the following resolution was offered by .....:

> "BE IT RESOLVED, that the report of ....., the president of The Blank Corporation, this day presented and read to the stockholders of the said corporation in meeting assembled, be, and the same hereby is, accepted and approved; and
>
> "BE IT FURTHER RESOLVED, that the suggestions and recommendations contained in the said report be, and they hereby are ordered to be, referred to the Board of Directors for such action as the said Board may consider advisable."

Upon a motion duly made, seconded and unanimously carried to that effect, the foregoing resolution was adopted.

A motion was duly made by ....., and seconded and unanimously carried that the meeting then proceed to the election of

five directors in accordance with the by-laws. The president appointed .....
..... and .....
inspectors [or tellers] of election, and they thereupon subscribed and swore to the following oath:

INSPECTORS' OATH

STATE OF.....
COUNTY OF..... } ss.:

..... and ..... being duly sworn upon their respective oaths do severally promise and swear that they will faithfully, honestly and impartially perform the duties of inspectors of election at the election of directors of The Blank Corporation to be held this day, and will to the best of their ability and skill conduct the said election and a true report make of the same.

.....
.....

Subscribed and sworn to before
me this 25th day of November, A. D. 1925.

.....
Notary Public

The president announced that nominations were in order; seven persons were nominated; and the motion was duly made, seconded and carried that the nominations be closed. The stockholders prepared their ballots and delivered them to the inspectors, who received the same, canvassed the votes cast, and certified in writing that the following persons received the highest number of votes cast at the election then and there held, and thus had been duly elected as directors of the corporation for the ensuing year: ....., ..., ..., ..., and .....

The president thereupon declared the above-named persons duly elected directors of the corporation to serve until the next annual meeting, or until their successors were duly elected and qualified.

Following a motion to that effect duly made, seconded and unanimously carried, the secretary was instructed to include the report of the president in the minutes of the meeting by a copy thereof [as follows, or, as herein inserted following the last page of these minutes].

A motion was then made by....., and seconded by ..... that the secretary be instructed to include in these minutes the form of the proxy mailed to the stockholders and used at the meeting, and the report of the inspectors [or tellers] of election, each by a true and correct copy thereof. This motion was put to vote and unanimously carried; and the secretary was so instructed, and has inserted copies of the said proxy form and the report of the inspectors [or tellers] of election following page .. of this minute book.

A motion was then duly made, seconded and unanimously carried that the meeting adjourn; and adjournment was taken forthwith.

.....
Chairman

.....
Secretary

The minutes may be authenticated by the certification of the presiding officer and the secretary, as shown below:

We, the undersigned, being respectively the president and the secretary of The Blank Corporation, hereby certify, upon our respective oaths, that we were and acted as respectively, the presiding officer and the secretary of the annual meeting of the stockholders of The Blank Corporation held at Chicago, Illinois, on the 25th day of November, 1925, and that the foregoing minutes of the said meeting as herein recorded (on pages .... to....

inclusive of this minute book) are and constitute a true and correct record of all of the proceedings had, all of the acts done, and all of the business transacted, at the said meeting.

President

.....
Secretary

Subscribed and sworn to before me
this 28th day of November, A. D. 1925.

.....
Notary Public

The **oath of the inspectors or tellers of election** may be included in the minutes by a copy, the executed original "subscribed and sworn to" being preserved in the secretary's files where he keeps the many documents, instruments and papers entrusted to his care. The same is true of the report of the inspectors which may be in the form shown below:

INSPECTORS' CERTIFICATE

The undersigned, inspectors of election, appointed to act at the annual meeting of the stockholders of The Blank Corporation held at Chicago, Illinois, on November 25, 1925, do report that, having first taken and subscribed the oath prescribed by law in such cases impartially to conduct the election for directors at the said meeting, we did receive and canvass the votes cast at the said election, and by these presents do certify the result of the said election to have been as follows, to wit:

Name	Votes Received
.....	1938
.....	1938
.....	1930
.....	1901
.....	1880
.....	1878
.....	1400

In Testimony Whereof, we have hereunto set our hands this 25th day of November. A. D. 1925.

.....

Inspectors

MINUTE BOOKS.—A true copy of the articles of incorporation, the original code of by-laws, and the minutes of all stockholders' and directors' meetings in the order of their dates—and with the originals or copies of notices, oaths, reports, etc.—are the **contents** of the minute book. The pages are numbered; and in a proper minute book both sides of the sheet are used. The different kinds of minutes, i.e., stockholders' or directors' may be easily identified with their page numbers by an alphabetical index, by suggestion as follows:

INDEX

	Page Nos.
Articles of Incorporation	5–22
Authentication of Record	1
Authentication of By-Laws	40
By-Laws	23–39
Directors' Meetings; Minutes:	
November 5, 1924	51–55
December 3, 1924	56–58

January 21, 1925 59–66
February 18, 1925 67–69
Stockholders' Meetings:
Annual, 1925, November 25 44–50
Special, 1924, December 8 41–43

The index may be set up, if desired, on a chronological basis so that the page numbers will be in sequence from top to bottom of the index column.

The first page of the minute book may carry an **identification,** as shown below:

THE UNDERSIGNED, being all of the original subscribers to the capital stock of The Blank Corporation, for the purpose of the adoption and identification of these records (or, the records contained in the following pages, or, this book and the records contained therein) as the original records of the said corporation, have hereunto subscribed our respective names and caused the corporate seal of the said corporation to be affixed this ..... day of ....., A. D. 19..

{ CORPORATE SEAL }

.....
.....
.....
.....
.....

Articles of Incorporation Copied In.—The articles of incorporation are copied on the minute book pages immediately upon their return from the office of the Secretary of State bearing evidence of their proper filing therein, or upon receipt of the "certificate of incorporation" or other evidence that they have been so filed. Such evidences of recording are also shown, by copy or notation, in the minute book. This is true also of the evidence—such as by document number, book and page—that the articles were also filed for record in the office of the proper officer, usually the recorder, of the county in which the corporation has its principal place of business.

By-Laws.—The by-laws may be **authenticated by a certificate** as shown below:

KNOW ALL MEN BY THESE PRESENTS: That we, the undersigned, being all of the members of the Board of Directors of The Blank Corporation, and the secretary thereof, do hereby certify that the foregoing (or following) by-laws, as the same appear upon pages 23 to 39, inclusive, of this Minute Book, were duly adopted as the by-laws of the said corporation on the ....., day of ....., A. D. 19.., and that the same do now constitute the by-laws of the said corporation.

Being All of the Directors of
The Blank Corporation

{

{ CORPORATE SEAL }

.....
Secretary of The Blank Corporation

DIRECTORS' MEETINGS.—The secretary's duties in connection with directors' meetings are the same as sketched with reference to stockholders' meetings. As to each meeting, they begin with the giving of notice. This, however, is not always necessary for directors' meetings. The by-laws may provide for the first meeting of the **newly elected (or re-elected) board of directors** to convene without notice immediately following the adjournment of the stockholders' meeting at which they were elected (or re-elected). Or there may be the by-law provision that the members of the board of directors whenever they are literally "then and there present" as to their entire number, may hold a meeting without notice or waiver of notice, the fact of their presence removing the necessity for either. Waivers of notice of directors' meetings involve less

ormality than those necessary for stockholders' meetings. Notices given ersonally or by telephone are frequently provided for and commonly employed.

Meetings of the board of directors, upon notice, or waiver of notice, or without otice, are held at such times or after such intervals as circumstances and onditions require. Such meetings, except that of a newly elected board, re almost automatically organized when they convene; and the order of usiness usually covers the reading, and action upon by approval or correction, f the minutes of the preceding meeting, the consideration of and action upon nfinished business, new business, and adjournment. Directors' meetings may e continued from day to day, upon motions of adjournment to a stated hour nd place; or adjournment may be taken to a day and hour several weeks or a nonth hence. When the **election of officers** is one of the matters of business o be transacted there is usually less formality than in elections at stockholders' neetings. Action is taken upon **motions** duly made, seconded and voted upon; nd by way of **resolutions** presented and read and thereafter adopted upon notions duly made, seconded and carried to the effect that they be adopted. Among the principal matters which it is usual to handle by way of resolutions re the following:

1. All matters of more than ordinary significance, such as marked changes of business policy, extensions of facilities, etc.
2. Appointments of committees, special officers and agents, including designation of their duties.
3. Approvals of reports.
4. Authorization of special acts to be performed in future.
5. Bank accounts, and the handling of the same.
6. Calls of meetings (of the stockholders for all purposes requiring a vote by more than an ordinary majority of the voting shares).
7. Employment of counsel and auditors.
8. Expenditures for purposes outside of the regular course of business.
9. Issues of stock, particularly when any equivalent of money allowed by the statute is accepted in payment thereof.
10. Lost certificates, including the issuing of duplicates and the terms and conditions of such bonds as may be required upon the same.
11. Ratifications of acts performed by committees, officers or others acting under instructions—including the making and filing of reports, affidavits, returns, schedules, etc., as hereinbefore referred to.

MINUTES OF DIRECTORS' MEETINGS.—The essentials of minutes f directors' meetings are the statements in successive order of:

(A) The fact of the meeting, i.e., that it "was held."
(B) The place, hour, day and date.
(C) The notice or its equivalent, i.e., that it was held:
  (1) Without notice, pursuant to a by-law provision, (a) when immediately following the adjournment of the annual meeting, or (b) when all the members of the board were "then and there present in person"; or
  (2) Without further notice (notice or its equivalent previously existing), (a) when resumed pursuant to, and at the place, hour and day stated in, a resolution of adjournment adopted at a previous meeting; or
  (3) Pursuant to waiver of notice: (a) when notice was waived by all of the members of the board, or (b) when notice was waived (in writing signed before the hour of the meeting) by those

members of the board (necessarily a minority of the whole number) not present; or

(4) Pursuant to notice given: (a) personally, or (b) by telegraph, or (c) in writing (by mail or delivery in hand);

(D) The competency of the meeting to transact business, i.e.:

(1) How many (and who) were present in person, and

(2) How many (and who) were absent.

(E) The business transacted:

(1) By votes upon motions made and seconded upon the matter to be acted upon; and/or

(2) By votes upon motions made and seconded upon the adoption (or rejection) of a resolution proposed concerning the matter to be acted upon; and/or

(3) By order or decision of the presiding officer made or given "in the absence of objection."

(F) Adjournment:

(1) Upon a motion to adjourn **sine die; or**

(2) Upon the adoption of a resolution to adjourn to a stated hour and day and a designated place.

MINUTES OF A MEETING
OF THE BOARD OF DIRECTORS OF
THE BLANK CORPORATION

NOVEMBER 25, 1925

The Board of Directors of The Blank Corporation held a meeting on Wednesday, November 25, 1925, at four o'clock P. M., pursuant to the by-law provision (Sec. 7 of Art. III) for meetings of the Board of Directors immediately following adjournment of the annual meeting of the stockholders (or, pursuant to waiver of notice—in which case the original signed waiver should appear in the minutes—or, pursuant to adjournment of the meeting of October 18, 1925, or pursuant to notice given as provided by the by-laws). Four of the directors were present; ..... was absent.

The meeting was called to order by ....., who upon a motion duly made, seconded and carried, was elected chairman. He appointed ...., secretary of the meeting, which then proceeded to the election of officers. ....., ..., and ..... were nominated, respectively, for the offices of president, secretary and treasurer. A motion was then duly made and seconded that the nominations be closed, and that the secretary of the meeting be instructed to cast the unanimous ballot of the directors present for the nominees. This motion was put to vote and unanimously carried, whereupon the chairman declared the persons above named duly elected.

The following resolution was then proposed by ..... and its adoption moved by .....:

"BE IT RESOLVED, that the meeting adjourn to be resumed at the same place at ten o'clock A. M. on Thursday, November 26, 1925."

The motion of ..... that this resolution be adopted was duly seconded and unanimously carried, and the meeting thereupon adjourned.

The foregoing minutes and all of the acts of the Board of Directors as therein set forth are hereby approved.

.....
.....
.....
.....
.....

All of the members of the Board of Directors of The Blank Corporation.

AUTHENTICATION OF DIRECTORS' MINUTES.—The secretary secures, whenever possible, the signatures of all of the directors to the minutes of the meetings as they appear, approved or corrected, in the minute book. Sometimes the by-laws provide that a director who was not present at a meeting of the board of directors at which a proper quorum was present, may sign the minutes of that meeting and by so signing give them, and the acts of which they are the record, the same force and effect in so far as he, the absent director thus signing his name, may be concerned as if he had been present. In other words, an estoppel may be created in this manner; and under the particular circumstances of a sensitive situation it may be the secretary's duty to secure such an estoppel. When the meeting of the board of directors was properly called—as by notice given or otherwise as hereinbefore outlined—and when it was properly held, i.e., with a quorum present, the minutes of the meeting as they subsequently appear in the minute book are sufficiently authenticated by the signatures of those who were present. Thus the minutes may be signed by the secretary and a formal authentication, signed by all who were present, subjoined, as follows:

We, the undersigned, being all of the directors of The Blank Corporation, having read the foregoing minutes of the meeting of the Board of Directors of the said corporation (as they appear on pages .... to .... of the Minute Book) do hereby ratify, confirm and approve all that occurred at the said meeting as in the said minutes set forth.

Witness our signatures and seals this ..... day of November, A. D. 1925.

All of the directors of The Blank Corporation.

.....[SEAL]
.....[SEAL]
.....[SEAL]
.....[SEAL]
.....[SEAL]

The foregoing outlines procedure which cannot subsequently be questioned by any director. But for ordinary purposes minutes need be signed only by the chairman and attested by the secretary.

INSPECTION OF BOOKS.—The statutes of many states provide for the inspection and examination by stockholders of certain books of the corporation. The **stockholders' rights** in this respect are variously limited as to the number and kind of books that may be inspected, the purposes for which and the hours during which the examination may be made, and the identity of the persons exercising the privilege. The secretary, since he is the corporate officer who is in closest contact with the persons having such right of inspection and has the custody of the principal books and record which are subjected thereto, familiarizes himself with the relevant statutory requirements in this connection.

BY-LAWS—SECRETARY'S KNOWLEDGE OF.—The corporate by-laws enter into the secretarial function by way of the fact that the secretary is not only their custodian in the physical sense, but is also supposed to know what they contain and how their various provisions—and all amendments of the same —are or may be applicable to the different situations arising from time to time. A number of states have special provisions for the **posting of by-laws** or for keeping them in a book which shall be available for inspection by stockholders.

Duties of Secretary to Third Persons

The secretary's duty regarding reports, statements, schedules, certificates, affidavits, etc., required to be filed is to affix the corporate seal, sometimes accompanied by the attestation of his signature as secretary—this being in order that the official bodies may rely upon the document as evidence of the

fact that the corporation complied with the law. In the same sense, the secretary has the duty of attesting and affixing the corporate seal to certain **contracts of the corporation,** thus conveying to the contracting parties of the other part the knowledge that the execution of the agreement was in fact the act of the corporation as the party of the one part, and enabling them to rely upon it as such.

With the same effect and for the same purpose, he certifies to resolutions adopted by either the board of directors or the stockholders. An example is the **bank resolution,** which, unless the bank prefers its own form, may be as follows:

I, ..., hereby certify that I am the secretary of The Blank Corporation, a corporation organized and existing under the laws of the State of .....; and that at a duly convened meeting of the board of directors of the said corporation held on the 26th day of November, 1925, the following resolution was adopted:

"Be It Resolved, that the treasurer of The Blank Corporation be, and he hereby is, authorized and instructed to establish and maintain in and with the ..... Bank, of Chicago, Illinois, a bank account for, on behalf and in the name of the said corporation, and to deposit therein all or any of the funds thereof coming into his possession; and

"Be It Further Resolved, that, until further or otherwise ordered, the said ..... Bank be, and it hereby is, authorized, empowered and instructed to pay out such funds so deposited, upon and according to the check of The Blank Corporation signed by ....., the treasurer and countersigned by ....., the president thereof."

I further certify that the said resolution is still in full force and effect and has never been repealed; and that ..... and ..... are, respectively, the president and the treasurer of the said corporation.

In Witness Whereof, I have hereunto set my hand and seal and the seal of the said corporation this 26th day of November, 1925.

.....[SEAL]
Secretary of The Blank Corporation

{ CORPORATE SEAL }

The foregoing is representative and illustrative of both the secretary's duty of certification, which is accomplished by his own act as an expression of the function of his office, and his duty of attestation, which is the thing done by the impression of the corporate seal in association with his signature as secretary. Contracts often require a certification to support the attestation, by way of the statement upon oath that the secretary was authorized by the board of directors to affix the seal to the instrument in question, and that the president (or other officer, when such is the case) was the duly authorized officer or representative of the corporation to execute the contract by signing the corporate name thereto, by himself in that capacity.

Other Corporate Matters

THE CORPORATION CALENDAR.—As a reminder of those formal matters of corporate concern that must be attended to on certain dates, the secretary prepares and carries forward a book, or card, or card index of memoranda, chronologically arranged, relating to the filing of reports and returns to governmental bodies, notices of stockholders' and directors' meetings, and those other matters of relations to the law, the stockholders, and the business wherein time is of the essence of the performance. This is known as the "corporation calendar." In general form it is as follows:

CORPORATION CALENDAR

FISCAL AND CALENDAR YEAR 1925

JANUARY:
6th – Annual report due (for state of incorporation) first Tuesday.
21st – Directors' meeting—adjourned from December 3, 1924, (without further notice).

FEBRUARY:
12th – Notice of Directors' meeting, 18th.
18th – Directors' meeting.
21st – Prepare and mail annual report (for state where licensed as a foreign corporation) due before March 1st under penalty for failure to file.
28th – Last day to mail annual report.

MARCH:
4th – Close transfer books.
5th – Arrange extension (if necessary) for income tax return for 1924.
14th – Mail notices of annual meeting of stockholders. Prepare statutory list of stockholders.
16th – Last day to file United States return of income for 1924 (unless extension granted). First instalment of tax due.
Last day to file ..... state income tax for 1924.
25th – Annual meeting of stockholders.
Meeting of board of directors (election of officers).

APRIL:
1st – File schedule of property with assessors.
10th – Mail call ordered by directors for last instalment of subscriptions of increased common stock voted October 8th, 1924.
20th – Check assessment of franchise tax (in state where licensed as foreign corporation) on the basis of proportion of capital (or capital stock) employed.
24th – Notice of directors' meeting, 28th.
28th – Directors' meeting.

MAY:
20th – Notice of directors' meeting, 26th.
26th – Directors' meeting.

JUNE:
1st – File capital stock report with Tax Commission.
15th – Second instalment of United States income tax due.
17th – Notice of directors' meeting, 23rd.
23rd – Directors' meeting.

JULY:
1st – Prepare and file United States capital stock tax return during July.
Pay state franchise taxes during July.
22nd – Notice of directors' meeting, 28th.
28th – Directors' meeting.
31st – Last day to file United States capital stock tax return.
Last day to pay state franchise taxes without penalty.

The corporation calendar may include memoranda concerning matters of business as well as the performance of specific acts required by law. Careful preparation of this calendar will assist in translating the secretarial function into that degree of tangibility that it deserves.

THE SECRETARY'S FILES.—All **corporate documents and instruments** that require to be filed for record and thereafter are returned bearing the indicia of recording, are filed by the secretary so as to be available for quick reference. This class of corporate documents and instruments includes the articles of incorporation, the certificate of incorporation, or such other evidences of the filing of the articles in the office of the Secretary of State as may be

provided, certificates of admission or license to transact business in other states, certificates of amendments of the articles of incorporation, deeds, mortgage indentures, etc.

Likewise, the secretary preserves all those **originals of oaths of office,** such as inspectors' oaths, that are subscribed in writing, all **resignations** of directors and officers, all **reports** submitted at meetings, his own affidavit of mailing of notices, certificates of publication of notices, signed **waivers,** and other documents of original significance, sometimes including even paid notes and bond interest coupons. The secretary also preserves copies of all notices, copies of all contracts whereby the corporation is bound (particularly those which by his attestation he certifies to be corporate acts), copies of all resolutions of the board of directors or stockholders which he certifies to be true and correct, and copies of all reports, schedules, statements, certificates, affidavits, returns, applications, answers to interrogatories, and other formal documents filed or submitted in compliance with the statutes.

DIRECTORS—THEIR POWERS AND FUNCTIONS.—On the border line of the secretary's contacts with custom and usage, with the other officers, and with counsel, there are many matters which, under certain circumstances, become identified with the secretarial function. The secretary's appreciation of this adaptability of his duties leads him to become familiar with the following.

Neither stockholders nor directors have any individual power as such; they express their acts in meetings, and cannot act in any other way than by meetings. Directors' meetings are made up of persons, i.e., the required number of directors must be present in person or there is no meeting. Directors cannot be present at meetings of the board of directors in any other way than in person; they cannot be represented at such meetings by proxy. It is possible for a minority of the board of directors to act on numerous matters, as, for example, when a bare quorum of the members of the board—such as four out of a board of seven—are present at a meeting, and a motion is carried or a resolution adopted by a favorable vote of three of the four present. The directors, acting as a board, have complete authority to manage and conduct the business. It is within the duty of the secretary to satisfy himself that every contract and instrument which he is to attest, or impress with the corporate seal, has the definite and certain authorization of the board of directors.

WHEN RESIGNATIONS BECOME EFFECTIVE.—Resignations of directors or officers usually do not need to be formally accepted in order to relieve the resigning director or officer from responsibility. When the annual meeting is not held on the day designated in the by-laws, the directors hold over until their successors are duly elected and qualified—usually at the next stockholders' meeting.

SECTION 23

BANKS AND THEIR USES

This section relates to the various uses financial executives of business concerns may make of the different types of financial institutions. Foremost among them are the commercial banks. Detailed description is given of the facilities they offer for receiving, transferring and paying out funds, as well as the various forms of loans, discounts and other services such institutions place at the disposal of their customers. Next in importance comes the open-market borrowing through commercial paper houses and discount companies. The facilities offered by the various types of finance companies are then discussed.

Commercial Banks

BENEFITS TO CUSTOMERS.—The most common services of commercial banks are:

1. Collecting checks, drafts, notes, coupons, etc.
2. Paying checks drawn by customers.
3. Safekeeping current funds.
4. Lending money and extending credit.
5. Transferring funds, domestic and foreign.
6. Dispensing credit information.
7. Safekeeping securities.
8. Acting as custodian of trust funds and escrows.
9. Acting as trustee, executor, administrator, guardian, etc.

BANKS' INTEREST IN SUCCESS OF CUSTOMERS.—The customers of banks should cultivate close relations with their bankers and consult them freely on financial phases of their business. Bankers are interested in the success of their customers and for reasons of self-interest are ready **to extend advice and proper assistance** wherever possible. The growth and success of enterprises, primarily of interest to their owners, are also of interest to the bankers because they bring increased banking business. In many cases financial mistakes and difficulties could have been avoided by business men if in the early stages these troubles had been discussed with their bankers.

The officers of some banks go to extraordinary lengths to serve their customers. Customers who never call upon their bankers for advice and service, even though it appears to be remote from banking functions, fail to make use of a valuable asset.

The **compensation of banks** for the services they render their customers in providing a cheap and convenient means of transacting financial business is obtained largely through the use of part of the money the customers have on deposit. Loans are made from these funds and the interest received constitutes the principal source of the bank's revenue.

Usually the **relation of the bank and customer** is that of **debtor and creditor**, but when the customer borrows, the position is reversed. At times the relation of **principal and agent** prevails, particularly when the bank undertakes to collect negotiable instruments for its clients.

BENEFITS IN GENERAL.—Banks serve the community in general as media for a more efficient **distribution of its surplus funds.** They receive the funds of persons who cannot use them, keep them in safe places, and pay interest for them. They lend these funds at higher rates of interest to those who can employ them profitably. The borrowers gain by having funds available at the market rate of interest and the banks make a profit on these loans. The community in general gains by having idle funds placed in the hands of those who can use them in commercial transactions.

The Depositor and the Bank

DEPOSITOR'S OBLIGATION TO THE BANK.—**A depositor's first obligation** to his bank is to maintain a balance sufficiently large to enable the bank to lend part of it and make some profit over the cost of handling the account. **Active accounts** should have larger balances than inactive accounts. An active account is one on which many checks are drawn and for which numerous items are deposited for collection.

Some banks make a small **monthly service charge** for carrying accounts of depositors with small balances. Where a depositor cannot maintain the minimum balance required by the bank, which is governed generally by the size of the bank, he cannot reasonably object to a small charge for bank services.

DEPOSITS.—Generally, the **first step in establishing banking relations** is the making of a deposit, which serves as the basis for other operations. In the performance of this function the bank receives cash or its generally accepted equivalent, and extends the right of withdrawal at sight or on notice, depending on the nature of the account.

To attract funds, banks encourage opening accounts and making deposits. The bank takes the signature of the new customer for its signature file. Subsequently signatures on checks are compared with these to determine the genuineness. References are sometimes required of new depositors. Banks are jealous of their reputation since they are **judged by their customers.** A depositor of poor business character harms the bank's good name, and by depositing uncollectible items or overdrawing his account, causes loss and expense. City banks often require a **minimum initial deposit** to eliminate small, unprofitable accounts. Competition reduces the severity of these requirements and causes many exceptions to be made.

Banks furnish **passbooks,** in which tellers receipt for deposits, and blank check books. At intervals, generally each month, a **statement of deposits received and checks paid,** together with canceled checks, is mailed to the customers. In many banks in place of such periodic statements, customers may leave passbooks for balancing and return of canceled checks. In **savings accounts** each deposit and each withdrawal is entered in customer's passbook as made and their balances are extended. No statement is required.

COLLECTIONS.—One of the most important functions of commercial banks is to make collections for depositors on checks, drafts, promissory notes, coupons, etc., which are payable through other banks, and other agencies. The term **collection item,** carefully used, means an item which will not be credited to the **owner's** account until the actual funds are in the possession of the bank

ncluded in this class are drafts requiring acceptance and other papers on which he bank considers final payment a matter of uncertainty. The term is also ıed for items on which immediate credit has been given the depositor, or which elong to the bank and require special attention in securing payment; notice ıust be sent or a messenger call on the payer. Checks drawn on non-clearing ıouse banks may be so classified.

City collections is a term used to describe instruments drawn on other banks r agencies in the same city which are collected by the bank by messengers or hrough the local clearing house. **Out-of-town collections** is a term usually used o describe instruments drawn on banks or other agencies outside the drawer's ity. Funds are obtained on out-of-town collections by depositing the items vith a local Federal Reserve bank for collection, or by sending the items to one of the bank's own agents, or a correspondent bank for credit or for remittance.

"Foreign collections" is a term applied to items payable abroad or those eceived from abroad but payable in this country for the account of customers of the bank.

Commercial banks also collect **notes, acceptances, coupons,** etc. The banks ıold such notes until they are due. If they are payable outside the city they ıre collected through the banks' representatives, generally correspondent banks n the debtors' city. Notes payable within the city are collected by special nessengers, or through the clearing house. After collection has been made the wners' accounts are credited, unless other arrangements have been made.

PAYMENTS.—A bank pays the checks drawn on it by its depositors, and or their convenience will also pay checks drawn on other banks. An adequate upply of currency is required to pay checks so presented, to settle clearing ıouse balances and maintain the reserve required by law. At times it is neces- ary to make shipments of cash to settle balances with banks in other cities.

INTEREST ON DEPOSITS.—On savings accounts banks pay interest, usu- lly from 3 to 4% per annum. In cities where competition is keen, interest is aid by commercial banks on balances in checking accounts. The practice f paying such interest varies widely. Some pay interest on an average daily alance of over $500; others on $5,000, or over. The rate of interest is gov- rned by financial conditions, and is generally about 2%.

Financial managers should inform themselves regarding the practice of banks n their localities. Frequently banks which pay interest are as strong or stronger han banks which pay no interest or pay interest at lower rates. As a rule no nterest is paid to customers who are also borrowers, but in such cases interest s paid as soon as borrowing stops if balances are above the minimum require- nents.

The rate paid depositors who have checking accounts is determined by several actors, such as local competition, the condition of the money market, the urrent rate of interest, the desirability of the account, the influence the depositor as with the bank, the activity of the account and the amount of balances arried. **In New York** and in some other cities the rate of interest paid on bal- nces of checking accounts is largely determined by the clearing house, which ets a maximum rate of interest the member banks may pay on such accounts.

TIME DEPOSITS.—Time deposits are those which remain on deposit with he bank for a specified time, as agreed between the bank and depositor. There re **two methods** of handling such deposits. The bank may issue to the depositor **certificate of deposit** which is payable on a certain date, or the depositor may gree **to give the bank certain notice,** generally 30 days, before he withdraws is funds. Banks allow a higher rate of interest on time deposits because such

deposits enable them to fix maturity dates on loans, and because the **legal reserve required** on such deposits is less than on demand deposits.

RECONCILIATION OF BANK ACCOUNTS.—Most banks send to depositors monthly statements of the condition of their accounts. Depositors should reconcile these statements or balances, by carefully checking for errors or improper charges. This important duty they owe to themselves as well as to the banks. If a depositor fails to make such reconciliation after a bank has repeatedly sent him statements of his account, and if subsequently irregularities are disclosed, which could have been discovered and avoided by prompt reconciliations, it is probable that the courts would find that the **negligence of the depositor was a primary, or at least a contributory, cause of the irregularity,** and that therefore he must suffer the loss occasioned by the irregularity. If there be no negligence on the part of the depositor, the bank, as a general rule, must bear the loss caused by irregularities.

There are **two methods of reconciling the monthly statements** with the balances shown by the depositor's cash book or check book. The one starts with the bank statement as a basis, and the other starts with the depositor's cash or check book balance as a basis. Both methods are similar, differing only in the basis taken. They are illustrated as follows:

First Method

American Trust Co., December 31, 19—			
Balance per statement			$68,317.92
Add—Note of Albany Manufacturing Co. protested, now returned, including $2.55 fees			252.55
Deposit of December 31 not credited by trust company			1,892.00
Collection charges for December not entered in cash book			6.20
			$70,468.67
Less—Interest credited by bank not entered in cash book		$ 93.10	
Checks outstanding:			
6319	$ 50.00		
6682	125.00		
6714	73.10		
6716	139.45		
6717	68.25		
6718	1,000.00	1,455.80	1,548.90
Balance per cash book			$68,919.77

Second Method

Balance as per cash book			$68,919.77
Add—Checks outstanding:			
6319	$ 50.00		
6682	125.00		
6714	73.10		
6716	139.45		
6717	68.25		
6718	1,000.00	$1,455.80	
Interest credited by bank not entered in cash book		93.10	1,548.90
			$70,468.67

Less—Note of Albany Manufacturing Co. protested, now returned, including $2.55 fees	$ 252.55	
Deposit of December 31, not credited by trust company	1,892.00	
Collection charges for December	6.20	2,150.75
Balance as per bank statement of December 31		$68,317.92

Borrowing from Banks

BANKS' DESIRE TO LEND MONEY.—The **principal source of income** of banks is derived from the lending of money and credit. Where they can do so safely and at a fair rate, the banks are just as anxious to lend money as customers are to borrow it. When a customer's business needs additional funds for limited periods, he naturally and properly seeks loans from his bank, to the mutual profit of both.

Modern business is largely financed for current requirements by the aid of credit facilities of banks because of their economy and adaptability. The primary feature of borrowed funds is their **economy.** A loan is negotiated for the period for which it is required, at rates of interest prevailing at the time, and its use, under ordinary circumstances, should net the borrower a profit above the cost of the loan. Bank loans can be negotiated in such amounts as may be required from time to time, and the maturity dates can be adjusted so that they will fall at times when funds are likely to be available for repayment.

NEED OF BORROWING.—In practically every business there are certain times, usually certain seasons, when more money is required than the average well-managed concern has available. At such times the necessary **additional funds** can usually be obtained from banks in the form of loans.

The two principal reasons for **borrowing on short-term** rather than on long-term credit are, first, that commercial banks make the majority of their loans on short-term obligations, since this type of loan insures the **liquidity of their assets;** second, that **seasonal fluctuations and variations** in the need for funds often necessitate borrowing to carry a business over peak expenditures. Funds so borrowed may be repaid as soon as the peak has been passed.

USES OF BANK LOANS.—The most common uses to which borrowed funds are put are the following:

1. **To take cash discounts on purchases.** The cost of bank loans is generally less than the cost of trade credit. It is a good financial policy to pay 6% to the commercial banker in order to obtain a discount of a higher rate on purchases. The subjoined tables show the commonly used discount rates and their equivalent interest rates.

½%	10	days—net	30	days	=	9%	per	annum

6%	10 "	" 60 days	=	43%	"	"
7%	10 "	" 4 mos.	=	23%	"	"
8%	10 "	" 4 "	=	26%	"	"

2. **To add to inventories.** When goods are unusually cheap and there is no danger of their physical deterioration, it is often desirable **to lay in large stocks at low figures.** Furthermore, it is usually necessary to carry larger inventories during periods of peak operation than during periods of normal operation. The use of bank loans to carry inventories over the busy periods is perfectly proper as they are normally self-liquidating. Borrowed money, however, should not be tied up in inventories indefinitely.

3. **To facilitate extension of short-term credits to customers.** It is good business policy, as well as a necessary one, to extend to customers credit on goods purchased. The capital necessary, when accounts receivable are above normal, may be borrowed from the bank and the cost thereof included in the selling price of the goods.

4. **To furnish permanent working capital.** Loans made by commercial banks to businesses are supposed to be **self-liquidating and temporary.** In practice, however, short-term loans are often continually renewed so that banks in reality are furnishing **permanent working capital.** As long as the current assets are liquid and the bank loans properly safeguarded, this practice may not be a dangerous one. But banks usually expect that loans will be used to **finance seasonal or peak requirements,** and that they will be entirely paid up at least once a year. One of the most frequent causes of mercantile failures is the calling of bank loans which have run over several renewals.

5. **For fixed capital purposes.** While short-term loans are supposed to be for working capital purposes only, bankers will sometimes advance money for use in the **purchase or construction of capital assets.** Such loans must be continually renewed until the business is able to repay them out of profits, or by issues of securities. This procedure may be economical for the borrower when long-time security interest rates are high, but appear to be due for a decline. In such cases it is not wise to mortgage fixed assets at high rates for long terms. This practice, however, is fraught with danger and should not be resorted to except in emergency, and then only if the bankers are fully informed regarding the disposition of the funds and if they specifically consent to future renewals.

THE LINE OF CREDIT.—Financial managers should **arrange in advance** for adequate bank loans. No expansion should be made without knowledge of the amount of money required, its source and availability. Conservative managers also usually arrange for bank credits in excess of minimum requirements. When a show of independence can be made, bankers are much more amenable to requests for loans. Usually the greater the need of the borrower, the more

difficult it becomes to borrow money. Often the promises of bankers are modified for good reasons or for none at all.

A concern the finances and general credit condition of which have been found satisfactory upon examination by the bank, may be granted either a single loan or a "line of credit." The latter term simply means that the concern is permitted to draw upon the bank at any time for sums up to a specified amount upon proper notice being given. Financial managers thus arrange in advance for loan accommodations, using such amounts as their business demands and usually giving notes for each loan as it is taken, until the limit of the "line" has been reached.

Amount of Credit Line.—The credit line of a borrower should be substantially in **excess of the maximum amount** that he expects he will require. The cash balance requirement sometimes keeps borrowers from protecting themselves in this way, but it should be remembered that a deposit which secures a line of credit is in reality insuring the future borrowing power of the business. Credit lines should be established well in advance of the time when they will actually be utilized.

Agreement under the Line of Credit.—Banks make certain stipulations in granting a line of credit. The borrower must keep the bank informed as to his financial condition, any material change in which justifies the bank in making corresponding changes in the extent of the line. Moreover, the condition of the bank's resources or of general business may necessitate changes. Each separate application for a loan within the line is carefully examined by the bank, at times almost as thoroughly as in establishing the line.

Keeping the Line of Credit Open.—In order to keep his line of credit "open" the borrower usually is required to maintain on deposit with the bank a certain percentage of the amount borrowed. In any specific instance the borrower's account would be credited with the full amount of the loan, less the discount charged by the bank. He would have free use, however, of only a part of this amount, the remainder being considered by the bank as a reserve, the use of which augments the bank's profits.

In such cases, therefore, borrowers pay more than the nominal rate of interest, since they pay interest on the full amount of their loans but are allowed to use only a part thereof. The percentage required as a reserve is variable, depending largely upon the negotiations between the bank and the borrower. The **usual requirement** is 20%, but it may range from 10 to 25%, depending upon the condition of the money market and the credit standing of the borrower. Banking practice differs widely in this respect. In a few instances the bank may require no reserve, merely stipulating that the balance be restored as the borrower finds it convenient. Some banks require the full percentage of the entire line to be maintained continually, whether the full line is being utilized or not. Others demand as a deposit a percentage of the sums actually borrowed, regardless of the amount of the line, and thus require no deposit when the line is not being used.

Interest on Balances.—The same diversity of practice characterizes the **payment of interest by banks** upon the deposit balances. Some refuse flatly to do so. With the recent increase in the number of banks and of competition between them, a customer of good standing, even though he is a borrower, can usually secure such interest. Ordinarily, about 2% is paid, though there is no fixed rate.

PERIODICAL CLEAN UP.—Borrowers must make **fairly regular use of their lines of credit** if they would have them remain "open." At the same time the banks look for periodical "clean ups," **at intervals of about a year,** of all of

the borrowers' obligations. Borrowers should be out of debt to the banks for reasonable lengths of time during each year, not only to indicate the financial soundness of their businesses, but to help the banks keep their assets liquid. No definite rule can be applied as to the frequency of the periodic clean-up. It must depend largely upon the **type of business** and the **rapidity of the turnover.** Concerns with a quick turnover should clean up their loans quarterly or semi-annually. An annual repayment probably will be found sufficient where the turnover is slow. In any event, some regular clean-up is necessary, if only as an indication that the borrower is not using the funds of the bank for fixed capital purposes.

E. E. Lincoln in his "Applied Business Finance" says:

"Of course, there are probably exceptional cases when a new and rapidly growing business might find it extremely difficult to pay off all its loans annually. This is due to the fact that as the business expands, working capital is needed more urgently than it can be supplied by the business itself through re-invested earnings. In such cases, however, the borrower should be carefully watched, for it may be that he is attempting to do an unsafe amount of business on too small margin of the owner's capital. The bank may be unwittingly becoming a permanent partner in a concern whose rapid expansion is decreasing the equity of the owners themselves. This is a very dangerous situation. In periods of rapidly rising prices it is also difficult for the borrower to pay off his bank obligations, since he constantly needs more working capital to carry on the same volume of business as before, because of the increased prices. Here again the borrower should be watched, as he is in great danger of recklessly overexpanding.

"The safest rule to follow, therefore, is for the banker to **insist** upon at least an annual 'clean-up' of loans, irrespective of the nature or age of the business. Such a conservative policy will in the long run reduce failures and prevent many serious involvements."

The use of the line of credit, therefore, is usually confined to those concerns whose need for additional working capital is periodic and temporary. A business which is continually in need of more working capital and is not subject to seasonal fluctuations should not make use of the line of credit.

DIVERSIFIED BORROWING.—The restriction placed by law upon national banks that **loans to one borrower** may not exceed 10% of the bank's capital and surplus makes it necessary for financial managers of large concerns to establish **credit lines with several banks.** The business is then assured of adequate protection when it is in need of funds. The small business borrower whose needs can well be taken care of by one bank need not resort to opening accounts with several banks. It is better policy for him to do business entirely with one bank, follow carefully all of its requirements, and keep in good standing with its officers. In return he may generally be assured of ample protection and assistance in times of financial stress.

FORMS OF BORROWING.—In general there are two forms of borrowing, long-term and short-term. **Long-term borrowing** is usually done by means of obligations running from five to twenty years or more. Such loans are generally obtained by issuing bonds. **Short-term borrowing** is usually done by means of notes, acceptances and commercial paper. Short-term notes are divided into three classes:

1. Notes to trade creditors.
2. Notes discounted at banks.
3. Notes sold to the public.

This section deals primarily with the obtaining of loans through the issue of such notes.

A loan is simply an advance of funds, and in banking consists of banking credit for which the borrower agrees to pay interest, either at certain stated intervals or at the time of the maturity of the loan. **Banking loans** are of two kinds, **secured and unsecured**: they are secured if they have **securities pledged** against them; unsecured if there be no such pledging. The term **loan** in almost all instances signifies a secured loan. In American banking practice the term **discount** generally signifies an unsecured loan. In the following discussion, however, the former term includes discounts.

CLASSIFICATION OF LOANS.—A borrower may obtain funds for current transactions in a variety of ways, which may be classified in this manner:

A. As to maturity:
1. Demand or call loans:
   (a) Direct loans on promissory notes
2. Time:
   (a) Discounted paper

B. As to obligation of parties:
1. Single-name paper—promissory notes
2. Double name:
   (a) Accommodation paper
   (b) Discounted notes of a customer (receivables)
   (c) Acceptances:
      (1) Bankers'
      (2) Trade

C. As to security:
1. Unsecured
2. Secured by collateral consisting of:
   (a) Listed securities
   (b) Unlisted securities
   (c) Bills of lading
   (d) Warehouse receipts
   (e) Trust receipts
   (f) Bills receivable
   (g) Accounts receivable
   (h) Chattels
   (i) Mortgages on real estate
   (j) Mortgages on farms
   (k) Other collateral

D. As to agency negotiating loan:
1. Banks
2. Commercial paper brokers or dealers
3. Finance companies, discount companies, etc.
4. Acceptance corporations
5. Other business firms
6. Individuals

E. As to use of proceeds:
1. Financing short-time operations in producing, purchasing, carrying, or marketing goods in one or more steps of the process of production, manufacture or distribution.

2. Carrying or trading in stocks, bonds, or other investment securities, except bonds and notes of the United States government.
3. Carrying or trading in bonds or notes of the United States government.
4. Consumptive purposes.

UNSECURED LOANS.—Unsecured or clean loans constitute a large majority of the loans made by banks to business borrowers. The borrower simply presents his promissory note to the bank to be discounted. There is no deposit of collateral with the bank, the only security being the integrity of the borrower and the financial strength of his business. The bank credits the borrower's account for the amount of the note, less the discount, for the time the note is to run.

From this procedure the term **discount** has come to apply in banking circles to **unsecured loans with a definite maturity date.** Sometimes a new account is opened by the entry of the proceeds of a discounted note, but, as a rule, banks require prospective borrowers to open an account prior to the discounting of a note. A **loan,** on the other hand, usually means a secured loan which runs for a certain length of time. On the "discount" the bank collects its charge in advance, while on the "loan" the charge is collected monthly or is not collected until the date of maturity when the entire obligation is liquidated.

Example: If $100,000 is obtained on "discount" and the note runs for 3 months at a rate of 6%, the bank advances the borrower $100,000 less the discount $1,500 (if 90 days), or $98,500. The exact number of days is computed. A note dated June 1, running 3 months is due September 1. The bank charges for 92 days including the last day but not the first. At the maturity of the note the borrower pays its face value, $100,000.

If the $100,000 is obtained on a "loan" and the note runs for 3 months at 6%, the borrower would receive $100,000 from the bank and return $101,500 at maturity. There are exceptions to both methods. The interest of loans may be collected in advance while the discount charge may be deferred until maturity.

WORKING FUNDS OBTAINED THROUGH UNSECURED LOANS.—Unsecured bank loans are the customary means of obtaining working funds in excess of a concern's minimum requirements, which should always be raised from permanent capital sources or by long-term loans. Businesses with sound credit will invariably choose to discount their own promissory notes, unless custom calls for the deposit of collateral, such as stocks, bonds, warehouse receipts, or similar documents, in any particular business or trade.

Unsecured loans are **used more commonly** than are secured loans for the following reasons:

1. Most businesses do not possess collateral which may be deposited in a bank as security.
2. Unsecured loans may be handled more easily than secured loans, since the clerical routine and expense connected with the caring for collateral is avoided.
3. Many businesses whose credit standing is good may arrange for unsecured loans as cheaply as for secured loans.

The **open-book account method** of conducting business in the United States has given rise to the banking practice of making unsecured loans. As a rule a seller of merchandise offers his goods on credit with a certain discount for cash payment within a few days. If the buyer does not take advantage of this discount he must be financed or carried by the seller until the obligation comes due and is payable. The seller in turn may have to borrow from his bank in

order to finance his accounts receivable. For such transactions the unsecured note is the most frequently used.

SECURED LOANS.—The aim of financial managers in getting working capital is to preserve a **strong credit position** and at the same time secure favorable interest rates. They will, therefore, **normally borrow** on straight, unsecured promissory notes. But if the credit of their companies has become weakened, or if it is necessary to obtain larger sums than the banks will lend without some security, they must frequently resort to **secured loans.**

A loan is secured when some **collateral** is left with the bank as a pledge, which may be sold by the bank if the borrower defaults. If the market value of the collateral declines, the borrower may be called upon to "remargin," that is, supply additional security. If he fails to do so, the loan becomes due and payable, and the bank can sell the security without notice. Any excess over the sum lent and the interest thereon is returned to the borrower. The bank may also apply toward payment of the loan any deposit maintained with it by the borrower.

TRANSFER OF TITLE TO PLEDGED PROPERTY.—When banks receive collateral as security for loans, they must be certain that they may obtain the legal title to the collateral in case the borrower defaults. **In Wall Street transactions,** for instance, the banks require that the securities be a good delivery under the rules of the New York Stock Exchange. If the borrower deposits securities which are drawn in his name, they must be indorsed in blank, or accompanied by power of attorney. Securities drawn to the order of some other person may be pledged if this other person will sign a certificate or agreement giving the borrower the right to pledge the property. This pledging is called **hypothecation.** This does not give the one in whose favor the hypothecation is made the beneficial title to the property, but merely gives him **the right to have it sold by legal process for the satisfaction of his claim in case of default.** Hypothecation is used in connection with stocks or bonds, bills of lading, warehouse receipts, insurance certificates, etc., which are evidences of property pledged to secure a debt or liability. The hypothecation certificate makes legal acknowledgment of the creditor's claim to the collateral. Hypothecation certificates are used to a large extent in financing foreign trade for the purpose of pledging bills of lading, insurance certificates, and similar shipping documents as collateral security for bills of exchange.

The following is a **typical collateral loan agreement** used for secured loans:

..... Dollars ..... 19..

On Demand, for value received, ... promise to pay to THE NATIONAL BANK of ..... or order, at its banking house ..... Dollars with interest at the rate of ..... per centum per annum, ... having deposited with said Bank, as Collateral security for payment of this or any other direct or indirect liability to said Bank, due or to become due, or that may hereafter be contracted .....

.....

In case of depreciation in the market value of the security hereby pledged, or which may hereafter be pledged for this loan ..... agree to furnish, on demand, satisfactory additional security, so that the market value thereof shall always be at least ..... per cent more than the amount of this note. And failing to deposit such additional security, this note shall be deemed to be due and payable forthwith, anything hereinbefore expressed to the contrary notwithstanding and the said Bank, or its assigns, may immediately reimburse itself by the sale of the security, as hereinafter authorized. And authority is hereby given to the said Bank, or to its assigns, to sell, assign and deliver the whole or any part of the said Collateral, also any security substituted therefor or added thereto, without notice or advertisement, either at public or private sale, at the option of the said Bank, or

its assigns, on the non-performance of this promise; any balance of the net proceeds of such sale remaining after paying all sums, whether then or thereafter payable, due from ..... to the said Bank on account of this note or otherwise, to be returned to ..... And it is further agreed that the said Bank, or its assigns, may bid and become purchasers of such sale, and no other purchaser shall be responsible for the application of the purchase money.

[Signature] .....
.....

STOCKS AND BONDS AS COLLATERAL FOR LOANS.—The market value of pledged securities must exceed the amount of the loan by a **margin** varying from 10 to 40%, in order that the banker may be amply protected in the event of market fluctuations. The kinds of stocks or bonds, and the stability of their market values, will determine the amounts which the bank will lend on them. Federal government bonds, for instance, may frequently be borrowed upon up to 90 or 95% of their full value; but larger margins are required for corporate securities, especially if they are of a speculative nature.

Other factors determining margin rates are:

1. **Nearness to maturity of a bond.** The chances of loss on bonds of a solvent company diminish as the maturity date of the bonds approaches.

2. **Marketability of the securities.** Those listed on the New York Stock Exchange are generally assured of a ready market and hence have more stable values than those listed on smaller exchanges or those not listed at all.

3. **Mixed collateral,** consisting of securities in different lines of business, distributes the risk of loss and is generally looked upon as better security than the stocks or bonds of one particular corporation or industry.

COMMODITY PAPER.—Negotiable instruments **secured by bills of lading and warehouse receipts** as collateral are generally known as commodity paper. The bulk of the grain, cotton and other commodity transactions are financed on the basis of such paper. The usual practice consists of issuing drafts or notes to which are attached bills of lading or warehouse receipts, and generally insurance policies covering the goods. In case of default the banks are empowered to take possession and sell the goods covered by the bills of lading or warehouse receipts, and apply the proceeds against the loans or advances made by the banker.

Better interest rates are usually allowed on loans secured by commodity paper than on unsecured loans. Dealers in staple products may be able to obtain better terms from banks by pledging their commodity paper as collateral for loans than dealers in seasonal or perishable commodities.

WAREHOUSE RECEIPTS AS COLLATERAL FOR LOANS.—A warehouse receipt is an acknowledgment of the warehouseman that he has received certain goods for storage which will be delivered in accordance with the terms set forth on the receipt. The Uniform Warehouse Receipt Act provides for negotiable and non-negotiable warehouse receipts. A **negotiable warehouse receipt** states that the goods will be delivered to the bearer, or to a designated person on his order. A **non-negotiable receipt** states that the goods covered by the receipt will be delivered only to the depositor or to a specified person named in the receipt.

The amount which banks will lend on such security depends on the nature of the commodities and the stability of prices of such goods. Bankers require a certain margin of safety, varying from 10% to 25% against the possibility of a drop in prices. Arrangements may be made to withdraw part of the goods covered by a warehouse receipt. Such withdrawals are generally endorsed on

he warehouse receipt. Arrangements may be made for **substitutions of one commodity for another** of equal value, or of one grade of a commodity for another rade of the same commodity, of equal value, as collateral for merchandise oans. In accepting new collateral in place of released items, the former is crutinized as carefully as was the latter when originally submitted.

BILLS OF LADING AS COLLATERAL FOR LOANS.—Bills of lading are ften used as security for temporary loans. The shipper of goods draws a raft on the buyer for the purchase price of the goods and discounts it with his wn bank. The security given is the bill of lading which the buyer must have n order to gain possession of the goods. When the bank sends the draft to the uyer he must either pay or accept it, and sign a trust receipt in order to secure he bill of lading. In such transactions the current financial condition of the arties is not of prime importance. The **real security** is the particular consignment of goods, while the borrowing is done, not as a means of raising more orking capital, but to receive in advance money from a definite short-term bligation.

There are two types of bills of lading, the straight bill of lading and the rder bill of lading. A **straight bill of lading** specifies that the merchandise is nsigned to a certain definite purchaser. It is **non-negotiable** and is not enerally acceptable for use as collateral. An **order bill of lading** states that he goods are consigned to the order of the person mentioned in the bill. It therefore **negotiable.** When banks discount drafts secured by bills of lading, hey always demand order bills of lading. If the draft is accompanied by a traight bill, the bank will receive the item for collection only and will not credit he customer's account until the funds have actually been collected.

The use of the bill of lading to finance transactions involving goods which re being transported to markets has become so general and widespread that ongress passed a Bill of Lading Act, effective January 1, 1917, which is esigned to prevent the use of drafts with bogus bills of lading attached and ther frauds. The Bill has brought about certain uniform practices in connection with bills of lading, has provided fines and punishments for fraudulent se, has made the carrier responsible instead of the bank, when the bank has ot been negligent, and has provided a uniform bill of lading which is safely egotiable.

TRUST RECEIPTS AS COLLATERAL FOR LOANS.—It may happen hat the borrower must **retain physical possession** of the goods on which he as been granted credit by a bank, as in the case of raw material which he ishes to manufacture into some salable article. The bank may, therefore, llow the goods to remain in his possession but will require of him a **trust eceipt** which is evidence that the title to the goods rests with the bank. The erchant, in this case, has the confidence of the bank, but not to the extent f an unsecured loan, for in the event of bankruptcy, the bank has a prior laim on the goods until the loan is paid, while with an unsecured loan the ank must share with other creditors. Goods released under a trust receipt hould be marked so that they can always be identified as the property of he bank.

Under trust receipts banks are empowered to take possession of the goods t any time. As a matter of practice, banks generally allow their customers onsiderable leeway in settling their obligations and do not assert their rights f possession unless such action is necessary by reason of financial embarrassment of the customers whose receipts they hold.

There are **inherent difficulties** connected with trust receipts which limit

their more general use. They are, however, used extensively in financing foreign trade. In order to protect their lien, lenders should be able to **identify at all times the goods** which are trusteed for their protection. When many lots of raw materials are converted in bulk, identification becomes almost impossible. Lenders have sometimes lost the benefits of their liens because of this mingling.

BILLS RECEIVABLE AND ACCOUNTS RECEIVABLE.—The selling of a company's open-book accounts is a common practice but one generally **frowned upon by banks** as an indication of the seller's financial weakness. Accounts may be **assigned** or **hypothecated** to commercial banks in some cases, but loans will seldom be granted for more than 80% of the face value of the accounts. Usually accounts are sold to **discount companies** which make a business of such transactions, rather than to commercial banks. Federal Reserve banks will not rediscount assigned open accounts, holding that they are not negotiable.

Accounts receivable are, therefore, not considered a high type of security. Only the smaller and weaker concerns make a practice of securing their current working funds in this way. The hypothecation of accounts receivable involves a great deal of work in the way of investigations and collections.

REAL AND PERSONAL PROPERTY MORTGAGES.—These are generally not considered the most desirable form of collateral for a commercial bank loan. Real estate mortgages can seldom be quickly liquidated, and national banks, before the passage of the Federal Reserve Law, could not lend on such security. The Federal Reserve Act, however, provides that banks in reserve cities and country banks can lend:

1. On first mortgages only.
2. Up to 50% of the actual value of the land.
3. Up to one-half of the time deposits and one-third of the capital and surplus of the bank.

LOANS AND DISCOUNTS OF NATIONAL BANKS.—A classification of the loans and discounts in the three fiscal years indicated and reported by banks in reserve cities and states is shown on the following page.

DEMAND AND TIME LOANS.—Loans may be classified according to their duration. **Demand loans,** known also as **call loans,** may be terminated at any time by the action of either party. The borrower may pay at any time before payment is demanded, and the lender may likewise demand immediate payment. There is usually an understanding between the bank and the borrower that payment will not be demanded until some time which is convenient to the borrower. The only call loans which are so in fact as well as in name are confined to New York Stock Exchange transactions. Rates of interest for them fluctuate from day to day. The ordinary merchant or manufacturer sometimes finds it convenient to borrow money on so-called demand loans, but a loan of this kind may run for 6 months, a year or even longer.

Time loans are loans which **have a definite maturity date.** The majority of loans made by commercial banks are time loans. There are **two main classes** of time loans:

1. Loans on promissory notes
2. Loans on discounted paper

The 90-day loan is the most common. A Federal Reserve bank may discount for any of its member banks, notes, drafts or bills of exchange that have a maturity date not more than 90 days from the date of discount.

The **rate of interest** on time loans is slightly higher than that on demand or

Classification of Loans and Discounts for the Three Fiscal Years Indicated

(In thousands of dollars)

Class	June 30, 1922		June 30, 1923		June 30, 1924	
	Amount	Per cent	Amount	Per cent	Amount	Per cent
On demand, paper with one or more individual or firm names (not secured by collateral)	$ 657,298	5.84	$ 733,536	6.21	$ 737,559	6.16
On demand, secured by stocks and bonds	1,408,369	12.52	1,463,203	12.38	1,545,625	12.90
On demand, secured by other personal securities, including merchandise, warehouse receipts, etc	270,583	2.41	276,090	2.34	263,618	2.20
On time, paper with one or more individual or firm names (not secured by collateral)	5,818,207	51.73	6,176,743	52.27	6,123,604	51.12
On time, secured by stocks and bonds	1,499,092	13.33	1,519,317	12.86	1,559,698	13.02
On time, secured by other personal securities, including merchandise, warehouse receipts, etc	1,112,434	9.89	1,111,273	9.40	1,087,096	9.08
Secured by improved real estate under authority of Section 24, Federal Reserve Act, as amended:						
1. On farm land	101,795	.90	108,892	.92	116,009	.97
2. On other real estate	87,035	.77	125,070	1.06	188,897	1.58
Secured by real-estate mortgages or other liens on realty not in accordance with Section 24, Federal Reserve Act, as amended:						
1. For debts previously contracted (Section 5137, R. S. U. S.)—						
(a) Farm lands	100,784	.90	127,339	1.08	120,122	1.00
(b) Other real estate	60,351	.54	67,942	.57	74,535	.62
2. All other real-estate loans—						
(a) Farm lands	6,522	.06	10,393	.09	9,031	.08
(b) Other real estate	14,804	.13	23,101	.19	26,543	.22
Acceptances of other banks discounted	75,906	.67	60,874	.51	91,026	.76
Acceptances of reporting banks purchased or discounted	31,911	.28	11,392	.10	33,998	.28
Customers' liability on account of drafts paid under letters of credit	3,123	.03	2,506	.02	1,367	.01
Total	$11,248,214	100.00	$11,817,671	100.00	$11,978,728	100.00

call loans. This is due to the greater risk that banks run in tying up their funds for a definite length of time. Their assets are not as liquid as when their loans must be repaid on demand. The later the maturity date of a loan, the more difficult it becomes for banks to forecast what the condition of the money market will be when the loan is repaid. Banks will, therefore, normally charge a higher rate for a 4 or a 6 months' loan than for one of 30 or 60 days.

CLASSIFICATION OF LOANS ACCORDING TO OBLIGATION OF PARTIES.—

Single-Name Paper.—Single-name paper means those promissory notes, which bear the **name of the maker only,** whether it be an individual, a firm or a corporation. A large majority of the loans made by banks in the United States to business borrowers are those secured only by single-name paper.

Two-Name Paper.—There are three kinds of two-name paper:

1. Accommodation paper
2. Discounted notes receivable
3. Acceptances

Accommodation paper is paper which has been endorsed by one or more parties, without consideration, merely to enable the maker to obtain credit. The accommodating party is generally not identified with the business of the borrower, and his name adds an element of security to the note for the benefit of the holder. If the maker of the note is unable to meet his obligations at maturity, the accommodating endorser becomes liable to the holder.

When the holder of a note **discounts** it with his bank, it becomes two-name paper because he must endorse the note or acceptance to have it discounted. If the maker of a note or acceptance defaults, the bank looks to the endorser for payment.

An **acceptance** is two-name paper because it bears the name of the maker and the acceptor; the latter primarily responsible for its payment.

Obtaining Loans

INFORMATION REQUIRED BY BANKS.—When loans are desired from banks financial managers should be prepared to furnish them with the following information:

1. **Type of business**—whether a sole proprietorship, a partnership, or a corporation.
2. The **names of the owners or officers** and their relation to the business.
3. **Kind of business**—whether trading, manufacturing, mining or professional, and the kind of products in which it deals.
4. The **latest available balance sheet** and balance sheets for the preceding 2 or 3 years in the form desired by the bank.
5. **Income statements** for the past 2 or 3 years.
6. The **average inventories** carried, valued at cost or market, whichever is lower. The condition of the inventories and the manner of valuation are considered.
7. The **amounts of notes and accounts receivable,** classified as overdue, due and not due.
8. A **complete schedule of investments,** showing last dividends or interest payments with dates thereof, present market value of securities and reasons for holding same.
9. A full statement of the amount of **notes receivable, accounts receivable and merchandise pledged** to secure indebtedness.

10. **Unusual balance sheet items**—a full explanation of any unusual items on the balance sheet.
11. A statement showing when the liabilities of the borrower are greatest, that is, when the firm is likely to reach the **peak of its borrowing operations.**
12. The customers' **methods of borrowing**—whether or not they sell their paper in the open market, and if so, the frequency and amount of such borrowing. The line of credit they have at other banks and whether or not it is kept open.
13. A statement of the **insurance** carried on the assets and on the lives of important officials or executives of the company.
14. Whether the borrower has made **adequate provisions for depreciation** of assets, the method of handling it, the rates and the manner of computing it.
15. The policy of the borrower in **disposing of the earnings of the business,** whether or not such earnings are all paid out as dividends or whether a certain proportion is reinvested in the business.
16. An **analysis of surplus** indicating the profits for the current year and the proportion of the profits used for dividends, reserves of various kinds and what disposition is made of the surplus.
17. Whether the business **owns or rents its premises** and whether the earnings of the company have been affected by favorable leases which are about to expire. For instance, low costs of production might be accounted for by a favorable long time lease of the factory.
18. A statement of any **important construction or capital expenditures** planned by the company and the means by which they will be financed.
19. **Other business interests** of the owners or officers of the borrowing company.
20. **Loans of officers**—if **loans** are made to the company by its officers and directors or by the company to them.
21. The amounts **due to or from subsidiary companies** and for what purpose such subsidiaries are financed and whether or not they are self-supporting.
22. **Unfilled orders** on the books of the company and whether they are bona fide, doubtful, or likely to be cancelled.
23. The **nature of the borrower's trade;** whether they are selling largely to one customer, or small group of customers, or to a large trade group; also, the present financial condition of those customers.
24. Whether the **products** are **diversified,** or whether the company is dependent on marketing only one type of goods, and the **geographic distribution of the borrowers' trade.**
25. The **relation of labor to the management** and the attitude of the company and its officers toward labor.
26. The periods of the year during which **peak production** will occur, or large inventories be carried, and the periods when largest sales and collections may reasonably be expected.

Financial managers, in order to supply the information required by banks as indicated in the foregoing paragraphs, must know the real condition of their business. To have always before them means of knowing whether the business is improving or getting worse, they should devise simple methods of testing the conditions from time to time. This can be done by having a balance sheet drawn up on the basis of what may be considered an ideal condition of the business. A number of columns should be left open for insertion of figures

showing the actual condition of the business at the time the **ideal balance sheet** is drawn up and at the end of each period, either weekly, monthly, quarterly or yearly. The differences will indicate whether the conditions are improving or getting worse, as the figures approach or recede from the ideal figures.

FACTORS CONSIDERED BY BANKS.—In granting loans banks usually consider the information required from the borrower, set forth in the previous section, as well as the following factors:

1. **Financial condition of the borrower.** The financial condition of the business must indicate that the borrower will be able to repay the loan at maturity. To do this the loan should be invested in some self-liquidating operation.

2. **Type of security.** If the loan is secured, the collateral pledged should be of a type which can be sold readily in case of default by the borrower. If the loan is unsecured, the bank must be certain that the borrower's assets are sufficient to cover the amount of the loan in the event of a forced liquidation.

3. **Form of security.** The security or paper to be acceptable for loans should be in such form that it can be readily sold or rediscounted.

4. **Character, capacity and capital.** The general credit standing of the business, the moral calibre of its managers and their managerial ability, are all considered in granting credit. These factors have often been summed up in the well known **three "C's" of credit,** namely, character, capacity and capital.

5. **Type of business.** In making loans the banks also consider the kind of business, products dealt in and the terms of purchase and sale prevailing in that business.

6. **Geographical location of business.** Bankers generally consider the geographical location of the borrower's business as the economic, financial, political, climatic and business conditions of various sections of the country have an important bearing on the factors determining bank loans.

Analysis of Borrowers' Statements

Statements presented to bankers for borrowing purposes are subjected to a close and exacting analysis. This analysis is both qualitative and quantitative. **Qualitative analysis** consists of an examination of the character and inherent soundness of each item appearing on borrower's statements. **Quantitative analysis** consists of an examination of the amount of assets and liabilities as well as the ratio they bear to one another.

A system of analyzing financial statement of borrowers is set forth in a pamphlet issued by The Robert Morris Associates (the national organization of bank credit men) under the title "Financial Statements," which is reproduced here:

FINANCIAL STATEMENTS

1. Financial statements are called for by banks in order to get a survey of the financial condition of the risk. Under even the closest and most careful analysis the study of any statement cannot cover the whole risk because there are other elements quite as important as the financial element which in many instances would entirely offset a poor or good financial showing. The **elements in analysing a risk** can be generally divided into three types.

2. One element in a risk is the **financial strength** displayed. This is reflected by the amount of assets and liabilities, their various proportions and qualities. It seems fair to assume that this element directly **affects about 40% of the credit decision.**

3. A second element is the so-called **moral risk.** This has to do not alone

with the ethical side of the risk but with the effectiveness as well as the honesty of the management. It covers both **integrity and all phases of ability.** This element is probably at least equal in importance to the financial risk and probably affects about **40% of the credit decision.**

4. The final element is the **economic risk.** This element has to do with the effect upon any business of **general economic conditions.** The up and down of general or sectional prosperity affects all industries favorably or adversely. Basic discoveries in the raw material field, excess or sudden increase in such raw material or sudden contraction directly affects industries using it. The law of supply and demand is an immutable force that can be stemmed for a while by law or regulation but which in the end will produce its effect. The actions of this element in the risk are only minutely affected by the individual operations of a single name because of its small percentage relation to the whole condition. It is rather an outside force that is cumulative and in many instances all controlling. Normally, however, it is secondary to the financial and moral risk elements and has perhaps about a **20% effect upon the credit decision.**

5. These three elements with relative values of 40%, 40% and 20% cover the whole analysis of the risk making up in their total the 100% of credit decision. It is the principal object of this brochure to discuss the first mentioned element, or the financial risk, as disclosed by the property statement. To make a statement analysis yield the maximum concerning this element, advancing perhaps over the border a little to the point where close statement analysis will throw some light upon the other two elements, is to make one part of our total analysis as complete as possible.

6. Statement analysis as generally carried on today made its first appearance some twenty odd years ago. At that time it was first recognized that statements could be compared more easily over a period of years and changes noted if they were set side by side so that volume fluctuations of individual items would be more readily apparent. This was a decided and much needed betterment in analytical technique.

7. When credit men began to make such actual direct comparisons it was but a short step to **segregate and group certain classes of items.** There are assets which liquidate quickly under pressure and at a fairly high percentage of book listing. There are other items that have a feature of permanency which compels them to liquidate only slowly and often with a marked degree of contraction in value, as compared to book value listing. From this condition it became customary to speak of **quick and slow or fixed assets,** the terms being indicative of the speed and character of liquidation.

8. In a like manner the presence of items, demanding early settlement, became equally noticeable among the liabilities. There were other items the final or actual payment of which had been deferred by agreement. So in a similar manner the phrases **quick or current liabilities and funded or deferred liabilities** began to assume a value and to get a differentiated consideration that was not present before comparative analysis was practiced.

9. Current liabilities demand payment in a fairly immediate future and so it was a perfectly logical step to establish a direct **comparison of the total of the current liabilities with the total of the current assets** from the liquidation of which funds should accrue with which to pay this class of liability. The common factor of supposed ready liquidity quite naturally made their direct comparison desirable. At the same time the desirability of having a factor of safety was recognized. In liquidation there is an ever present shrinkage from the book listed value of the current assets and often an increase in the book figures

of the current liabilities. This safety factor is what has led to the phrase **"two for one"** and is also what has established the desire to have this proportional listed value as between current assets and current liabilities. The margin that has so generally become almost a standard provides for a contingency in which the current assets can depreciate 50% over their listed book value and still be sufficient to equal the presently maturing debts.

10. The tacit acceptance of "two for one" or any other **current ratio,** however, has several serious errors. First of all it does not take into consideration the varying degrees of liquidity of the separate items that go to make up the total of the current assets. If the total of the current assets, to use an extreme case, be made up entirely of cash the actual liquidity is hardly open to question, and a very small factor of safety would suffice. But if primarily made up of merchandise, the salability of that merchandise would be a highly important element in determining the true amount of the liquid current assets. The same thing applies when considering the receivables only that it is their true collectivity that affects the quality of the real current assets and their currency. Secondarily the acceptance of any set current ratio, as a universal measure, overlooks entirely the decided differences in current asset values in different lines of industry. To understand this clearly, only one example need be given. By taking two widely different types of business, such as wholesale millinery and wholesale hardware, we can see at a glance the inequalities that might arise. The hardware business is stable, the millinery business is temperamental. Ladies change their ideas of the proper color of hats almost overnight. A monkey-wrench, however, is pretty nearly always a monkey-wrench and is not as volatile in its value fluctuations. If a two for one current ratio is correct for either, it is not correct or fair at the same time for the other.

11. The value in statement analysis of expressing the relation of one set of items to another has been accepted generally by the adoption of the current ratio, or proportion between current assets and current liabilities. The first reaction from this thought is that, if a study of the ratio of the relative proportions of current assets and liabilities has proven so valuable, there are, in all probability, other ratios or proportions between the other salient factors of the statement that would reflect interesting conditions showing progress or retrogression in a way to amplify the current ratio studies so generally used.

12. This thought led to the examination of many statements to determine at least some of these possibly helpful studies of collateral ratios. So far the ratios under trial have been confined to those that could be developed from the balance sheet itself supplemented by the item of sales alone. There has been some suggestion that certain ratio studies should be made which involved the relation of profits to sales, net worth, etc. So far this has not been experimented with because of a lack of well co-ordinated and exact detailed information covering earnings and net profits. Accounting methods on available statements and possible variation because of profits disbursed through salaries, partnership accounts, etc., have suggested the wisdom of withholding from this further study for the present. At a later date it may be advisable to make experiments in this field and where the information now available is accurate and uniform in method of issue over a period, its use in various relative comparisons would undoubtedly be of great advantage.

13. The **actual ratios** which have so far been under examination and test, as supplementing the well known current ratio, are herewith briefly presented. The method of derivation is explained, the results obtained noted and the general principle involved commented on.

A—MERCHANDISE TO RECEIVABLES

Method of Derivation: To secure this ratio, in the manner used in this system of analysis, divide the total of the merchandise inventory by the total of the accounts and bills receivable, resulting from merchandise sale.

Result: The resulting ratio will indicate the dollars of merchandise there are for every dollar of merchandise sale receivables.

Principle Involved: Merchandise is now generally carried **at cost or market, whichever is lower.** Accounts and bills receivable, however, represent selling price, which is **cost plus gross profit.** The addition to the assets of a profit item not offset by any operating cost or borrowing necessity, tends to raise the proportion as between current assets and liabilities. A comparison of this ratio from year to year will disclose whether there is a greater or less amount, in proportion, of profits figured as part of the current assets. If this be greater, technically we should have a rising current ratio. As the percentage relationship of merchandise to receivables falls, there is a greater cost plus condition and there should be a higher current ratio.

Example: The following two statements are identical, except that $100,000 has been switched from merchandise to accounts receivable, with 40% added to the amount to raise cost of merchandise to selling price with profit. While this percentage varies, the principle is the same, in greater or less degree, as the percentage relation is up or down.

Example of Merchandise-Receivable Ratio Theory

ASSETS	As Mdse.	After Conversion
Cash	$ 60,000	$ 60,000
Receivables	50,000	190,000
Merchandise	200,000	100,000
Current Assets	310,000	350,000
Plant	500,000	500,000
Prepaid Expenses, etc.	20,000	20,000
Total	$830,000	$870,000
LIABILITIES		
Notes Payable	$125,000	$125,000
Accounts Payable	45,000	45,000
Tax Reserve	15,000	15,000
Current Liabilities	185,000	185,000
Mortgages	100,000	100,000
Total Debt	285,000	285,000
Capital	300,000	300,000
Surplus	245,000	285,000
Total	$830,000	$870,000

In the first instance the current ratio is expressed by the following fraction and its equivalent percentage:

$$\frac{310{,}000}{185{,}000} = 167.56\%$$ with the Merchandise to Receivables ratio at 400%.

In the second instance, after the transfer of merchandise to accounts, it is

$$\frac{350{,}000}{185{,}000} = 189.18\%$$ with the Merchandise to Receivables ratio at 52%.

B—WORTH TO FIXED OR NON-CURRENT ASSETS

Method of Derivation: To secure this ratio, divide the net worth by the net non-current assets.

Result: The resulting ratio will indicate the dollars of net worth, or stockholders' investment, for every dollar not currently invested. The margin above 100% indicates the proportion over and above fixed capital investment that the stockholders have provided as active working capital possible of investment in liquid assets.

Principle Involved: Plant and other non-current assets are a capital investment. The stockholders should in general, by their capital contributions, provide for the plant equity and the cost of all other non-current assets. There should be a **substantial stockholders' investment** over and above this amount, to provide working capital, as the phrase goes, for the "going part" of the business.

This ratio is also a means of **measuring plant expansion.** Between two periods a company may show a considerable increase in worth, indicating profitable operations. The disposition of these profits is, however, of considerable importance to the creditor. If all the increase is put in non-current assets, we have the condition of conversion of liquid into fixed capital which may extend to such a point as to indicate that the results of current borrowings have been invested in fixed assets. In our ratio study this would make itself evident by the falling of the ratio of worth to fixed assets.

This development is to be expected more in times of rising prices and stimulation of the hope of future large profits. A comparison of this ratio year by year may help to **check undue plant expansion** that leads later to unproductive capital and increased overhead.

This condition may also become noticeable when much remodelling of old plant becomes necessary through obsolescence. In such a case there may be a temporary extraordinary plant item being the old plant plus the new. If, however, the remodelling has been properly thought out this condition should correct itself with reasonable promptness. This condition should be investigated and allowed for because if it will actually increase efficiency it may be justifiable.

C—SALES TO RECEIVABLES

Method of Derivation: To secure this ratio, divide the net sales for the year by the total of the accounts and bills receivable.

Result: The resulting ratio will indicate the dollars of sales per year for every dollar carried on the books as receivables.

Principle Involved: The higher the amount of sales for every dollar still uncollected, the greater will be the liquidity of the receivables. As this ratio rises, the length of the collection period decreases. As this period decreases, we **shorten the period of risk through bad debts,** possible crisis and panic troubles, and **lessen the expense of carrying accounts.** The higher this ratio, within reasonable bounds, the fresher and more desirable as an asset are the receivables.

A condition of high collectivity and freshness of receivables may in a large measure offset a low current ratio. A low collectivity or stale receivables, as expressed by this ratio, may prompt a demand for a higher current ratio so as to secure a wider margin against possible shrinkage in liquidation.

D—SALES TO MERCHANDISE

Method of Derivation: To secure this ratio, divide the net sales by the total merchandise inventory.

Result: The resulting ratio gives the dollars of sales for every dollar reported as inventory.

Principle Involved: The principle here involved is similar to that involved in the previous section (C). It is a test of the **freshness and salability of the merchandise,** and is particularly important as a means of recognizing an over-inventoried condition or accumulation of stale merchandise and possible danger in a period of probable price recessions.

Both this and the previous ratio (C), when set into comparison year by year, indicate increasing or decreasing liquidity of their respective assets, and support a possible weakening current ratio, or negative an apparently increasing current ratio.

E—SALES TO WORTH

Method of Derivation: To secure this ratio, divide the net sales by the net worth.

Result: The resulting ratio will record the dollars of sales for every dollar of stockholders' invested capital.

Principle Involved: To be productively and sanely employed business principles demand a certain normal activity of invested funds. If the money invested, and left in the business by the stockholders is turned over too slowly, it is less productive. If it be too sluggish in its movement, it may indicate what is commonly called **"dry rot."** On the other hand, if this ratio is too high, it may indicate that the company is over-extending its operations and getting into a position of doing too much business for its capital investment. Either of these conditions approaches the danger point of credit when approaching an extreme.

F—WORTH TO DEBT

Method of Derivation: To secure this ratio, divide the net worth by the total debt, both current and funded.

Result: This ratio gives as a result the proportion that exists between the investment by the stockholders and the capital loaned to the company.

Principle Involved: In the productive activity of any business, there are **two kinds of capital funds** used, under two controls. The first is the capital, surplus and undivided profits or **net worth of the business.** The second is the **debt of the concern,** which is measured and controlled by its credit standing, and by the will of its creditors.

The proportion that exists between the worth and the debts shows quite clearly the balance between the source and the ownership of the funds being used in the affairs of the business. As the proportions of debt increase over the funds invested by the stockholders, the company becomes more dependent for working capital upon the decisions of its creditors, and the more susceptible to the strains and pressure of crisis.

The lower the worth to debt ratio, the more extended becomes the reliance of the owners upon their moral risk strength. Therefore, any event that will shake the belief in the moral risk, the greater will be the jeopardy of such a company. Too great reliance upon the good will of creditors will be shown by too low a worth to debt ratio. An abnormally low ratio should prompt the conservative credit grantor to investigate his risk more closely, and should influence the business executive to consider the advisability of revamping his affairs so as to establish a better balance between the capital invested and capital secured through loans. The having of too heavy a debt, especially if current in its

Company A

Date, December 31st	1918	1919	1920	1921	1922
Cash	$ 3,132.30	$ 3,915.27	$ 4,306.50	$ 4,785.70	$ 4,470.93

Total	$113,093.65	$126,212.37	$133,556.33	$141,043.37	$128,596.39
Sales	144,855.00	180,090.00	199,665.00	203,580.00	187,920.00

Company B

Date, December 31st	1918	1919	1920	1921	1922
Cash	$ 1,566.00	$ 2,192.40	$ 2,505.60	$ 2,818.02	$ 3,052.92
Receivables	19,938.31	25,419.31	24,636.31	26,202.31	25,575.91
Merchandise	10,698.91	18,137.41	24,088.22	28,786.21	31,237.17
Current Assets	32,203.22	45,749.12	51,230.13	57,806.54	59,866.00
Fixed Assets	19,575.00	19,575.00	23,490.00	35,040.50	47,375.00
Total	$51,778.22	$ 65,324.12	$ 74,720.13	$ 92,847.04	$107,241.00
Notes and Accounts Payable	15,558.21	21,822.21	24,954.21	27,538.11	29,104.11
Tax Reserve		780.00	780.00	1,400.00	1,575.00
Current Debt	15,558.21	22,602.21	25,734.21	28,938.11	30,679.11
Funded Debts	9,670.00	12,000.00	15,660.00	23,500.00	27,400.00
Total Debt	25,228.21	34,602.21	41,394.21	52,438.11	58,079.11
Capital	23,500.00	23,500.00	23,500.00	27,500.00	35,000.00
Surplus	3,050.01	7,221.91	9,825.92	12,908.93	14,161.89
Net Worth	26,550.01	30,721.91	33,325.92	40,408.93	49,161.89
Total	$51,778.22	$ 65,324.12	$ 74,720.13	$ 92,847.04	$107,241.00
Sales	86,130.00	105,705.00	125,280.00	140,940.00	122,931.00

nature, is like having a temperamental partner who may at any time wish to be paid out.

G—SALES TO FIXED OR NON-CURRENT ASSETS

Method of Derivation: To produce this ratio, divide the net sales by the net total non-current assets.

Result: The resulting ratio will indicate the dollars of net sales for every dollar invested in plant or other non-liquid assets.

Principle Involved: The comparative earning capacity of plant investment depends, in a large measure, on the volume of goods it can produce and sell. This ratio can be used to good advantage in connection with the ratio of worth to non-current assets (B). If the worth to non-current assets be a falling ratio, or below normal, and the sales to fixed assets be also a falling ratio, or below normal, then we are faced with a condition in which plant is enlarging more rapidly than worth, in proportion, and its sales productivity is not keeping pace with its increase in size. It then becomes the duty of the credit grantor and the executive to urge increased production efficiency, and not expansion of plant. As stated in section B, this ratio can be used to check up on the conversion of liquid capital into fixed capital, because plant extension is vindicated economically only if efficiency and resulting productivity demand it. This falling ratio may appear for a time where a new management takes over an old plant that needs revamping. If the investigation because of such a fall in this ratio discloses this fact and if policy is sound no alarm need necessarily be felt.

It is, of course, understood in sales ratios that allowance must be made to correct for price level changes if they are present in marked degree or variation.

AN EXAMPLE OF ANALYSIS

While the preceding pages outline in theory the principles of ratio or relationship analysis, it is more likely that a clearer understanding of the method can be gained from an example in figures and an analysis of them. For this purpose the figures of Company A and Company B are presented so that their analysis may be followed. (See pages 1206 and 1207.)

After spreading a statement on the comparison sheet, present generally accepted practice proceeds to the development of the **Current Ratio** so that by a comparison of it, progress by this test may be observed. The following table records the current ratios for each of the companies set into direct comparison. There is a slight variation from common practice in the method of recording in that the relation is expressed in percentages rather than in the fraction form more commonly used. For example, the current ratio for Company A is expressed as 204 instead of 2.04 to 1. It means that there are $204 of current assets on the statement for each $100 of current liabilities. At times this has been somewhat confusing to the person using this method for the first time. The method has been used, in this sort of analysis, because it is much easier to effect further use of the proportion than would have been possible by the adherence to the fraction form. Any one preferring to follow the older method of expression can do so by pointing off two decimal places and adding the phrase "to 1" in any of the ratios. A "2 to 1" current ratio by the percentage expressions becomes a current ratio of 200%.

It will be noted at once that all ten of these ratios, five for each company, when expressed in the fraction form would be "2 to 1" statements. As far as their current ratios are concerned these statements are nearly equal in strength.

To some a graphic display indicates trends more clearly than figures and for

A and B Companies' Current Ratio Record

	Company A	Company B
1918	204	206
1919	202	202
1920	205	199
1921	206	199
1922	205	195
Average	204	199
Combined Average	202	202

those the current ratios have been reduced to chart form by using their common average as a base line of 100% or par and then establishing the relation of the separate yearly ratios to this base (Fig. I).

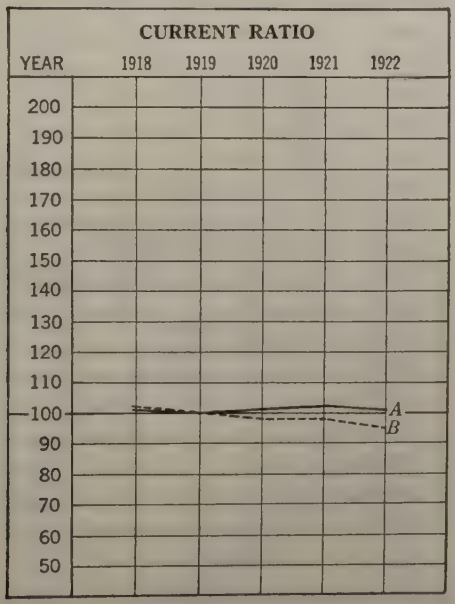

FIG. I

Graphic Display—A and B Companies

As was explained in the theoretical statement on ratio or relationship analysis, it is important to check the relationship of **net worth,** or owner's capital, to **the investment in non-current assets.** This has been done for the two companies under analysis and the resulting comparative table indicates the movement of this proportion for each company.

This shows a steady improvement to 1921 for the A Company with a slight drop-off in 1922, but still above the average for the period. Contrasted to this

Worth to Fixed Assets Ratio

	Company A	Company B
1918	122	135
1919	144	156
1920	142	141
1921	154	115
1922	150	104
Average	143	124
Combined Average	137	137

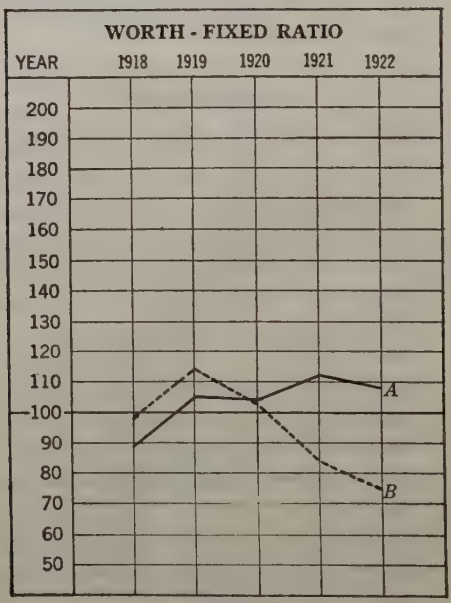

FIG. II

notice the drop in the relationship of the figures of Company B from 135 to 104 in 1922 and 20 points below the average position for that company during the five years. This shows clearly a falling proportion between the net worth and the fixed assets for the B Company. It now has only $104 of net worth for every $100 of fixed assets or $4 margin of its own money to be used in the current operation of the business for every $100 of fixed assets. Company A in the meantime has increased its proportion of net worth over fixed assets so it is now using 50% of its own capital in the current operations of the business.

The net worth of a concern is the cushion on which the creditor sits. It is the amount by which the assets can shrink before the creditors lose anything. We all know that the softer the cushion the more comfortable it is and the longer will

one be inclined to sit. However, when the cushion is stuffed with bricks and mortar we become dissatisfied with our seat. This is the case of the B Company. It is becoming a harder cushion all the time. Company A, on the contrary, has made its cushion softer. The tying up of worth in fixed assets must be carefully watched. The graph in Fig. II will show what happened to the worth-fixed ratios of these two companies—the more or less steady climb of A Company and the decline from 1919 of B Company.

The relation borne by the owned capital to the borrowed capital is a very important proportion on any property statement. This proportion, as expressed by the relation of **Net Worth to Total Debt**, has been developed for the two companies being analyzed, and is as follows:

Worth to Debt Ratio

	Company A	Company B
1918	127	105
1919	140	88
1920	175	80
1921	202	77
1922	249	84
Average	174	85
Combined Average	132	132

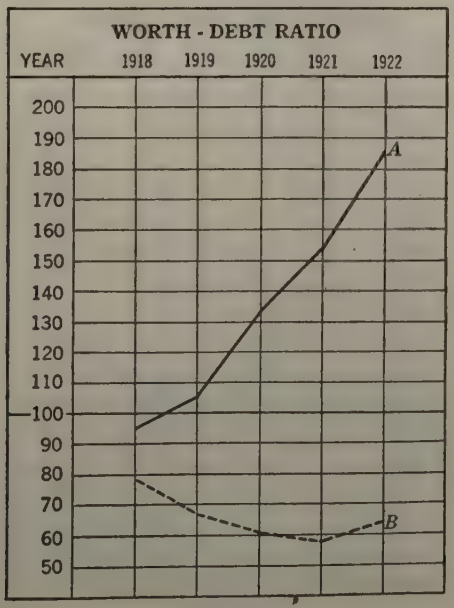

Fig. III

From this table it can be noted quite readily that Company A has very materially improved its control over the capital at use. In 1918 the worth of this company was 127% of its debts and by 1922 this has risen to 249%. At the start the net worth exceeded the debts by a trifle over one-quarter, while at the end of the period it was nearly two and one-half times as great. This change very clearly shows the increasing reliance on owned capital.

Company B has, however, shown a tendency to rely in a steadily increasing proportion on borrowed money to secure funds for financing its activities. This is an unhealthy sign in a marked degree when compared to the performance of Company A. The real condition has been obscured from being reflected in the current ratio because of the increased funded debts. The use of this ratio throws into sharp relief this tendency to borrow quite irrespective of the borrowing method, however.

The sharpness of the contrast in method is very clearly shown by the graph in Fig. III that has been prepared from the Worth to Debt Ratios of the two companies.

The merchandising ability and record of the two companies can be studied by the **Sales to Merchandise Ratio** record. The chart of this ratio is offered herewith together with its graph (Fig. IV) without further explanatory comment, because the trends seem so apparent as not to need explanation.

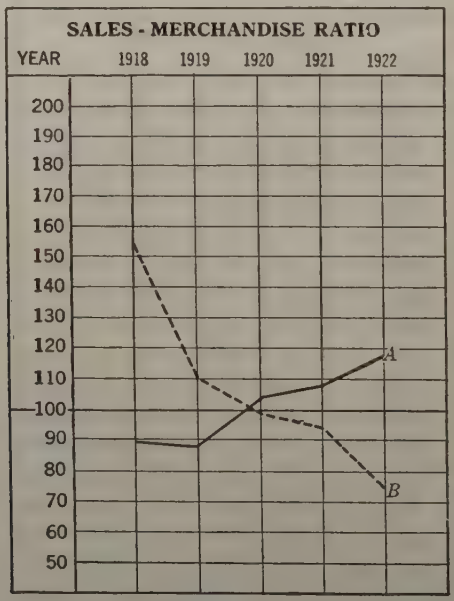

Fig. IV

Sales to Merchandise Ratio

	Company A	Company B
1918	464	805
1919	458	582
1920	542	520
1921	565	489
1922	616	393
Average	527	514
Combined Average	522	522

The collection methods and record are shown by the movements of the **Sales to Receivables Ratio** which are shown here in chart and graph form. (Fig. V.)

Sales to Receivables Ratio

	Company A	Company B
1918	531	432
1919	561	415
1920	605	508
1921	519	537
1922	575	480
Average	558	477
Combined Average	523	523

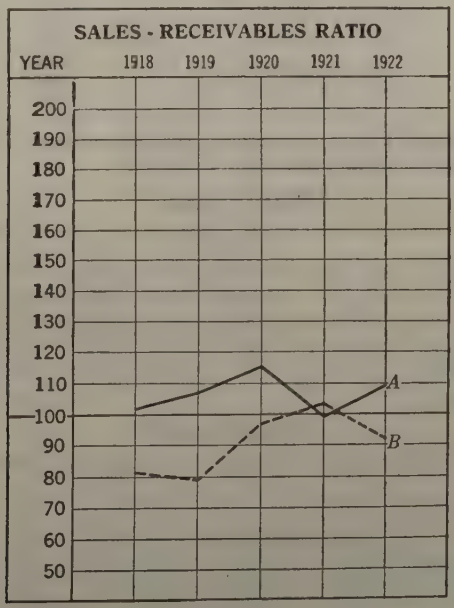

FIG. V

One objection to the ratio or relationship method of analysis is that there are eight sets of proportions to be read instead of the more generally used single proportion of the current ratio.

The Robert Morris Associates are investigating a method of combining such ratios as seem of importance in analyzing any name over a period of years into one index figure. As yet this is frankly in the experimental stage and while the tests so far seem to indicate the feasibility of accomplishing this end, there are details that will undoubtedly need adjustment and which will be subject to change as the experiment is carried further along. The method as so far developed has been applied to these two companies and is here presented, not as a completed principle, but as an experiment, in order to stimulate interest and arouse comment from which valuable opinion may be gained.

An Index for Companies A and B

As a first step five ratios have been selected as important in analyzing the relative position and strength of these companies. These are **not of equal value** and in order to establish a scale of relative values an arbitrary weighting has been chosen. The relation of the weights to each other will indicate the relative importance attached to the several ratios and have been so selected as to total one hundred. The ratios used and their relative importance is shown in the following table:

Weight Table

Current Ratio	25
Worth to Fixed	10
Worth to Debt	25
Sales to Receivables	20
Sales to Merchandise	20
Total	100

The actual ratios of the two companies used in this analysis are as listed below, those not being used in the index being eliminated.

Ratios Company A

	1918	1919	1920	1921	1922	Av.
Current Ratio	204	202	205	206	205	202
Worth-Fixed	122	144	142	154	150	137
Worth-Debt	127	140	175	202	249	132
Sales-Receivables	531	561	605	519	575	523
Sales-Merchandise	464	458	542	565	616	522

Ratios Company B

	1918	1919	1920	1921	1922	Av.
Current Ratio	206	202	199	199	195	202
Worth-Fixed	135	156	141	115	104	137
Worth-Debt	105	88	80	77	84	132
Sales-Receivables	432	415	508	537	480	523
Sales-Merchandise	805	582	520	489	393	522

The next step in the index development is to **compute the relation of every ratio each year to a base ratio** which in this study is the common average of the ratio for both companies. For example, the current ratio of 204 in 1918 for Company A is 101% of the average current ratio of 202%. That is to say, the

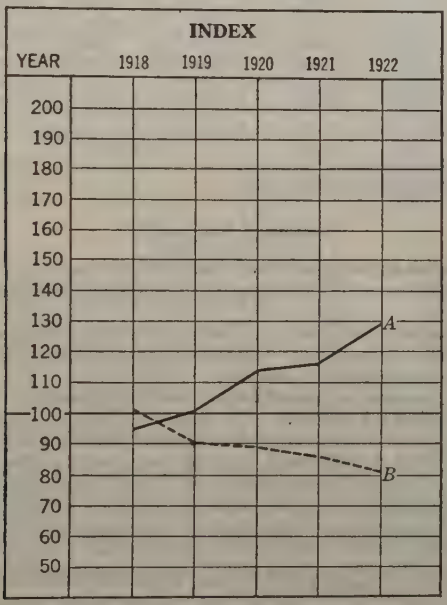

FIG. VI

current ratio of Company A is 1% stronger than the common average. In the preparation of the index this relative position of a ratio is multiplied by the weight assigned to that ratio. In the instance of the current ratio for Company A in 1918 this means taking 101% of 25, or establishing a value for the current ratio that year of 25.25 when measured against the common base.

This same method applied to the five ratios used to make this particular index results in the following table:

Index Company A

	Wt.	Rel.	Value	Rel.	Value	Rel.	Value	Rel.	Value	Rel.	Value
Current Ratio.....	25	101	25.25	100	25.00	101	25.25	102	25.50	101	25.25

Worth-Debt.....	25	96	24.00	106	26.50	133	33.25	153	38.25	188	47.00
Sales-Receivables..	20	101	20.20	107	21.40	115	23.00	99	19.80	110	22.00
Sales-Merchandise.	20	89	17.80	88	17.60	104	20.80	108	21.60	118	23.60
Total.....	100		96.15		101.00		112.70		116.35		128.75

Index Company B

	Wt.	Rel.	Value	Rel.	Value	Rel.	Value	Rel.	Value	Rel.	Value
Current Ratio.....	25	102	25.50	100	25.00	98	24.50	98	24.50	96	24.00
Worth-Fixed.....	10	98	9.80	114	11.40	103	10.30	84	8.40	76	7.60
Worth-Debt.....	25	79	19.75	67	16.75	61	15.25	58	14.50	64	16.00
Sales-Receivables..	20	82	16.40	79	15.80	97	19.40	103	20.60	92	18.40
Sales-Merchandise.	20	154	30.80	111	22.20	99	19.80	94	18.80	75	15.00
Total.....	100		102.25		91.15		89.25		86.80		81.00

The totals, or indices, have been reduced to chart form (shown in Fig. VI), in order to emphasize their movements.

Combined Statements

Comparing a series of statements with their own average position is important because it tells whether or not a company is advancing or falling back in credit strength.

It is **more important,** however, to discover **whether a company matches up in proportions** with its competitors, whether it is among the strong or the weak, whether it is above or below the average.

A further step consists of **consolidating many statements,** of contemporary date, **into one industry statement.** To make the figures readily usable this consolidated statement is then **reduced to what is called "A 100% Statement."** The process consists of dividing each item on the consolidated statement by the total footings so as to get the percentage each item bears to the total footings. This eliminates size and reduces the analysis to one of proportion. It is relatively easy, a matter of three or four minutes' computation, to reduce any single statement to a 100% basis. The relative proportions of its items can then be compared readily to the proportions of the trade consolidated statement, which is also expressed on the 100% basis.

In addition to establishing a typical trade statement, series of ratios are being selected each year in different lines of business. The average banker may have from five to ten statements in a single line of business that are comparable. The central office of The Robert Morris Associates accumulates as high as a hundred statements in one line and from a combined statement and from the use of the separate statements and their several ratios, selects what seems to be a reasonable percentage to expect for any one ratio.

An example of this is shown as developed in the wholesale grocery line.

Wholesale Grocers

Selected Ratios

Current	221	208
Merchandise-Receivables	138	139
Worth-Fixed	266	285
Worth-Debt	198	191
Sales-Receivables	793	832
Sales-Merchandise	562	581
Sales-Fixed	1043	1255
Sales-Worth	362	378

After accumulating the figures of some 108 names, the 100% statement was developed by dividing each item on the balance sheet by the total to find what percentage each item bore to the total. Thus, out of every $100 of total footings $4.94 was cash. The ratios are selected from an average of three figures as follows:

The first is the **actual arithmetic ratio** of the dollar statement.

The next figure is developed by **plotting the ratios** for each statement on a modal chart. This chart is a columnar affair with headings of equal frequencies for each individual ratio as shown on page 1218.

Thus a current ratio of 223 goes into a column headed 200-224, a sales-receivable ratio of 625 goes into a column on another chart headed 600-649. In this way what is known as a modal column is obtained. The mode itself is defined as the point around which the greatest number of figures concentrate. The average of this modal column is the second figure.

The third figure is the **median or middle item** when a series is placed in the order of their importance. Thus, in a series of 23 items, the twelfth is the median. These three, the arithmetic, the mode and the median, are averaged together to arrive at the selected ratio.

Formula for Selected Ratio

Average Modal Column	161
Median Figure	232
Ratio from Combined Statement	232
Total	625
Selected Ratio	208

The objection to the purely arithmetic figure is that the large statements have too much weight on the resulting ratio. The mode or median is not influenced by size but rather gives weight to concentration and centralization. The unusually good or unusually bad do not exert the influence on the selection that a purely arithmetic ratio would. The middle item or median has as many above as below and will not give undue importance to the larger companies.

These selected ratios and 100% statements are submitted to the members as backgrounds for measuring a credit risk. They cannot in any sense be considered yardsticks, but if a borrower's statement does not measure up to this background, it gives the credit executive an opening for asking questions. The explanation may be perfectly satisfactory and then again it may not be. If there is a wide discrepancy between the type figure and the customer's, such a comparison certainly gives an opportunity for asking the borrower the why and wherefore.

Wholesale Grocers—Current Ratios

	156										
	161										

There is an increasing number of requests for comparisons made with type figures which seems to indicate the value placed on them. Many banks use the ratios from year to year and find them exceedingly helpful.

To illustrate the use of these selected ratios, the table given below has been prepared comparing an individual company to the wholesale grocery business on a national basis.

The analyst glances first at the current ratio which seems quite satisfactory, and may be called a 2 for 1 ratio. Compared to the group it is very close to par, and not the least bit alarming. Notice, however, that the index number is only 87.30. The relationships of the ratios for the individual company have been compared to the group are found under the column marked "Relation." The weights assigned are arbitrary to a certain extent, in that they have been chosen according to our opinion of their importance, assigning 25% to Current and Worth-Debt as being the most important ratios and the Sales-Receivable

and Sales-Merchandise as next in importance. You may differ in your opinion of the importance of these various ratios and may re-arrange these weights, but they must equal 100. The relationship multiplied by the weight gives the value column which when added is the index number 87.30. This is 13 points below parity when compared to the industry and is subject to some question. Before pointing out the weaknesses, an explanation of the 185 in the relationship column may be in order.

This company has a very small investment in fixed assets which naturally makes the worth-fixed and sales-fixed ratios very high. In order to keep these extremely high ratios from influencing the index number to too great an extent the following formula is used.

Formula for adjusting relationship when the individual ratio exceeds the base ratio:

$$100 + 100 - \frac{\text{Base Ratio}}{\text{Individual Ratio}}$$

$$100 + 100 - \frac{285}{1847}$$

$$100 + 100 - 15 = 185$$

Using this trade statement as a base for comparison, the following is an example of how the index method may be applied:

Analysis of a Wholesale Grocer

As of December 31, 1923

	100% Statement Co. X	100% Statement Group
Cash	3.07	4.94
Receivables	41.32	29.14
Inventory	52.86	41.63
Listed Securities		.39
Miscellaneous		.70
Total Current	97.25	76.80
Total Fixed	2.75	23.20
Total	100.00	100.00
Payables	47.44	30.84
Taxes	.53	.72
Miscellaneous	1.22	1.52
Total Current	49.19	33.08
Funded		1.22
Total Debt	49.19	34.30
Reserves		1.61
Net Worth	50.81	64.09
Total	100.00	100.00
Sales	221.15	242.38

	Ratios Co. X	Ratios Group
Current	197	208
Merchandise-Receivables	127	139
Worth-Fixed	1847	285
Worth-Debt	103	191
Sales-Receivables	535	832
Sales-Merchandise	418	581
Sales-Fixed	8041	1255
Sales-Worth	435	378

	Wt.	Rel.	Value
Current	25	95	23.75
Merchandise-Receivables		91	
Worth-Fixed	5	185	9.25
Worth-Debt	25	53	13.25
Sales-Receivables	15	64	9.60
Sales-Merchandise	15	72	10.80
Sales-Fixed	5	185	9.25
Sales-Worth	10	114	11.40
	100	Index	87.30

This keeps the fluctuation above 100% equal to the fluctuation below 100. That is, the relationship of one number to another can fluctuate downward from 100 to 0, but can fluctuate upward from 100 to infinity. This formula then keeps the fluctuation between 100 and 200 for statements whose ratios are in excess of the base.

The company's outstanding weakness is its poor worth-debt ratio. The group shows a ratio of 191, almost twice as much of their own capital invested in the business as is furnished by the creditors. The individual relies to a 50-50 basis on his creditors, therefore, as a credit risk he is not so desirable, relying to a too great an extent on the goodwill of his creditors.

Another weakness is a poor sales-receivable ratio. The group shows 832 or a little better than 45 days, while the individual shows more than 60 days. This should be a lead to test the goodness of the receivables and the possibility of old accounts.

The sales-merchandise ratio is also below par, 72% of the group figure. A question concerning the freshness of its inventory would be in order here. If 108 companies show an average turnover of nearly six times, why doesn't this company? It may be due to purely local conditions and easily explained, but the background for the comparison is certainly an advantage.

There is little comment on the fixed ratios. The item is negligible, only 2.75 of the total footings and consequently given very little weight. It might have been better to have ignored them, but by giving the worth-fixed and sales-fixed ratios, each a weight of 5, the company appears even better than it probably is. Naturally if one takes 5 from a poor ratio and add it to a good one, he increases the index number.

Using 108 companies in the same line of business, we find that this individual company does not measure up to what seems reasonable to expect in this line of business. It is below standard in three very important ratios, the worth-debt, the sales-receivables, and sales-merchandise ratios. Such a condition is not

reflected by a casual glance at the current ratio and would probably not cause an alarm without barometrics as a background.

Bank Interest and Discount

INTEREST ON CALL LOANS.—The rates of interest on demand or call loans are not fixed when the loans are negotiated, as is done in the case of time loans. They fluctuate from day to day with the movements of the money market. If there is an agreement between lender and borrower that a loan will not be called until convenient for the borrower, the rate of interest will not vary greatly from that of a time loan. If there is no such agreement and the lender may call the loan whenever he wishes, the rate of interest will generally be slightly lower than that charged for a time loan. As the market rate fluctuates, the bank may simply notify the borrower that it desires to increase the rate, or the borrower may notify the bank that the market rate has dropped and that he wishes a corresponding lowering of his rate. Such action is termed **"marking up rates"** or **"marking down rates."**

INTEREST ON TIME LOANS.—Since the banker's assets are more liquid when his loans may be called at any moment, he usually allows slightly lower interest rates on call loans than on time loans. Generally, the later the date of maturity of a time loan the higher the rate is likely to be, since it becomes increasingly difficult for the banker to forecast what the condition of the money market will be at the time of the maturity of the loan.

FACTORS AFFECTING RATES OF INTEREST.—Rates of interest and discount vary with different banks and borrowers. Conditions of the money market, the credit standing of the individual borrower, and the bank's own resources, the condition of business in general, and geographic location, are the chief factors influencing rates of interest.

Condition of Money Market.—The condition of the money market is of prime importance. The amount of **money in circulation** and the **general level of prices** are indexes of the market. There are times when money is very plentiful and banks are eager and anxious to find borrowers. There are other times when money is almost impossible to obtain at any rate, as for example, during the financial crisis of 1907, when for a day or two, rates of interest on call loans in Wall Street reached the figure of 125% per annum. Extraordinarily high call money rates also prevailed during the inflation period immediately following the Great War.

Type of Borrower.—Rates may vary with individual borrowers. **New customers** will frequently be charged a higher rate than borrowers whose reputations have been long established. The banks consider the nature of the risks which they are assuming, ascertaining carefully the **uses to which borrowers are to put the funds.** They consider the type of the borrowers' businesses, the character of their management and their general reputation in the business world. **Small borrowers** must frequently pay higher rates of interest than larger borrowers because the banks incur more clerical expense proportionately in handling a number of small loans than in handling fewer large loans.

Bank Reserves.—Banks' reserves are generally **an index** to the rate they charge on loans. When the reserves are diminishing, the banks are less willing to accommodate borrowers. Borrowers, therefore, by watching carefully the state of bank reserves, may choose the most advantageous time for their loans. In the same way borrowers who wish to raise considerable sums may determine

whether their loans can be secured from one bank or if they will have to resort to several banks.

The Business Cycle.—Rates are generally **highest when prices are rising** and the business cycle is approaching the point of greatest prosperity. During **periods of depression** money becomes "cheap" and the banks are eager to find borrowers, offering loans at the lowest possible rates. There is also a yearly cycle, when the money market changes from season to season as money is in demand for the planting or harvesting of crops and their transportation to the market.

Geographic Location.—The Federal Reserve Board has sought to standardize discount rates throughout the country by means of the Federal Reserve System, but there are still wide fluctuations which depend largely upon location. **Rates in large cities** and business centers are usually lower than those in the outlying districts. In the **southern and far western states** rates are usually in the neighborhood of 1 to 2% higher than in the East. The lowest prevailing rates are generally to be found in great centers like New York or Chicago. There borrowers are offered a wider market in which to secure funds. Astute financial managers will take advantage of these varying rates and—all other factors being equal—secure for their concerns the benefit of minimum rates.

DISCOUNT AND INTEREST RATES IN LEADING CITIES.—The table of discount and interest rates, given on pages 1222 and 1223, is taken from the annual report of the Comptroller of the Currency.

Comparison of the range of rates for call loans, 60-day time loans, and two-name commercial paper loans in New York annually for 1915 to 1924, is shown in the statement on page 1224, taken from the annual report of the Comptroller of the Currency.

Selecting a Bank

The exercise of intelligent selection in making banking connections is frequently neglected. Sometimes the location of the business does not permit of much choice. Where, however, a selection can be made from among several banks, it would be well for financial executives to consider the **reputation, size, location, type** and **service** of the various banks and select the one which will best serve the needs of their businesses.

REPUTATION OF BANK—ANALYSIS OF ITS STATEMENT.—The financial executive should be able to **read a bank statement** and make a personal analysis of the strength of the bank. In analyzing the statement of a bank the first and foremost consideration is the **relative liquidity of the assets.** Is the bank in a position to meet without embarrassment its obligations, which consist mostly of deposits payable on demand? To answer this it is necessary to determine, in the first place, whether the bank is maintaining a **sufficient reserve,** as the term is used in banking, meaning cash or its equivalent.

Reserve.—The **legal reserve** of a national bank can only consist of deposits in the federal reserve bank. However, the actual reserve includes in addition cash in vault and deposits in banks in reserve or central reserve cities. Demand deposits on the other hand include all demand obligations—deposit accounts (both individual and bank) subject to check, demand certificates of deposits, outstanding cashiers' and certified checks. The amount of the actual reserve should be compared with this total of demand obligations.

The bank's **legal lending power** depends upon the ratio of its **legal reserve**—federal reserve bank deposit—to its net demand deposits which include all

deposit accounts and certificates of deposit payable within 30 days. **Net demand deposits** for this purpose are determined by deducting from the gross figure balances due from banks other than the federal reserve bank and foreign banks, "our checks," and checks on other banks, including clearing house exchanges. If the "Due from banks" item exceeds the "Due to banks," both are dropped from the calculation. In the case of a country bank the federal reserve bank deposit should be 7% of the net demand deposits; in the case of a reserve city bank, 10%; and in the case of a central reserve city bank, 13%. Otherwise a reserve deficit results, or a margin of reserve below the minimum required.

The bank must also carry a legal reserve of 3% against its time deposits which as defined by law consist of deposit accounts and certificates of deposit payable in thirty days or more. This requirement is the same for all three classes of national banks—country, reserve city, and central reserve city.

Loans and Discounts.—The bulk of the remaining assets of the bank should consist of loans and discounts, principally **self-liquidating commercial paper** running not much over six months, and so distributed as to maturity that some are constantly falling due. A good proportion of these commercial holdings should be paper eligible for rediscount at the federal reserve bank and thus serve as a **secondary reserve. Loans on real estate,** not being of the self-liquidation character are not the best type of bank loans, and the power of national banks to make such loans is sharply defined and restricted by law. Of course, the quality of a bank's loans cannot be judged from its statement.

Bonds.—Bond holdings should be relatively small. This rule is frequently violated by small country banks. Generally, no harm results in individual cases, but if all banks followed the practice it would result in a most perilous situation. Such banks as operate counter to this rule can do so merely because the rank and file of banks, particularly institutions in the larger cities which carry the accounts of country banks, practice more conservative methods in this respect. A national bank is prohibited by law from owning **corporate stocks** except stock in a federal reserve bank, and in a bank organized by a national bank for the purpose of financing foreign trade, unless acquired as collateral against a defaulted loan, in which case the stock must be disposed of as soon as market conditions permit.

Relation of Loans to Deposits.—The relation of loans and discounts to deposits is subject to much misunderstanding. It is generally thought that a bank is favorably situated if its deposits tend to exceed its loans and discounts. This does not necessarily follow. Such excess may result from the bank putting more of its funds into bonds or real estate and less into loans, so that its position becomes less liquid. Banks carrying large amounts of bonds invariably show a great excess of deposits over loans. During the war when the banks of the country were buying large amounts of Liberty bonds for their own account, the proportion of aggregate deposits to loans tended to increase, but no one with any knowledge of banking would contend that this signified an improvement in the banking situation. Only if the relative reduction in loans results in an increase of reserve, does such reduction mean a betterment of the bank's position.

Fixed Assets.—The remaining assets of a bank comprise such items as banking house, furniture, fixtures, etc. Being of a fixed nature they should constitute a very **small proportion of the total.** They should be compared with the bank's net worth—capital stock, surplus, and undivided profits—and should not amount to more than, say, 20% of that net worth. If the item

"Other real estate" appears in the statement, it should be scrutinized closely, as such holdings have been acquired as the result of default in payment of loans. A national bank may own only the building it occupies, and any other realty, acquired on defaulted loans, must be disposed of at the earliest opportunity. Some banks own buildings which form too large a part of their assets.

Note Circulation.—The note circulation of a national bank is a negligible item so far as the analysis of the bank's statement is concerned. Its amount is **relatively small** and it is protected by the pledge of United States Government bonds and by the 5% redemption fund, both deposited with the Federal Government in Washington, D. C.

Relation of Capital Items to Deposits.—Deposits should not exceed, normally at least, a certain proportion to the sum of capital stock, surplus, and undivided profits. Several years ago the Comptroller of the Currency recommended the passage of a law limiting deposits to 8 times the aggregate net worth. The stockholders' double liability should be borne in mind. It is safer on that account to deposit in, or loan to a bank whose net worth is represented chiefly by capital stock than to one which has a small capital stock but a large surplus.

Lending Power of a Bank.—A bank loan or discount in essence consists of an exchange of the bank's promise to pay legal tender money on demand for the borrower's promise to repay such money, usually at the end of a stated period. The exchange is advantageous to the borrower on account of the bank's enjoying a better credit standing with the general public, which accepts its demand obligations in ordinary transactions as the equivalent of legal tender money, that is, as so much cash. The bank's promise to pay may take the form of **engraved notes,** the so-called "bank notes," or far more generally in this country, the form of a so-called **deposit,** which is nothing more nor less than an account payable of the bank. This explains the phenomenon frequently witnessed that the aggregate deposits of the banks of the country rise and fall with their aggregate loans and discounts though not in absolute unison. It is evident that in making a loan a bank **lends its credit.** The fundamental difference between such a loan and a bank acceptance is that in the first case the bank lends **its demand credit,** and in the other case it lends **its time credit;** that is to say, in the first case it promises to pay on demand, while in the second case it promises to pay at a stipulated future date.

As the lending power of a bank must refer to the amount of these demand promises to pay it may issue, whether in the shape of engraved notes or deposits, it is obvious that that power depends upon the bank's credit standing which will depend in turn on the same factors as the credit standing of any business concern. Apart from the law regulating reserves, note issue, etc., a bank's, lending power is, therefore, determined by the following:

1. The integrity and capacity of its management, chiefly with reference to making sound loans of the proper duration.
2. The liquidity of its assets, which is measured chiefly by the ratio of its reserve to its demand liabilities.
3. The relation of its net worth to its deposits, notes, and other liabilities.

It is incorrect to state that the lending power of a bank is represented by the sum of its deposits, outstanding notes, and net worth items (capital stock, surplus, and undivided profits). The deposits and notes arise mostly out of the loans the bank is already carrying and therefore represent expended lending power. Furthermore, never gauge the strength or soundness of a bank by the volume of deposits or the total resources. Deposits are the bank's liabilities and if they increase as the result of loans, other things being equal, the bank's

position grows weaker. They are really the bank's accounts payable, and the strength of the bank should not be judged by their volume, any more than the soundness of an industrial concern is judged by its accounts payable. The same applies to total resources considered in the same connection, since they will grow as deposits grow. Of course, the bank becomes stronger if the deposit liabilities result from deposits of cash, but that is because of the cash and not the resulting deposit liability.

Nor does a bank lend its capital stock, surplus and undivided profits. These simply represent the stockholders' proprietary interest in the bank, or its net worth, and their aggregate amount is affected only by earnings, special profits, new stock subscriptions and special contributions—not by any loans made by the bank. They serve as a margin of safety for the protection of the bank's creditors, its note-holders and depositors.

Overdrafts.—The factors reviewed in the foregoing are the major considerations to be taken into account when determining the soundness of a bank from its balance sheet. Certain minor items among the assets and liabilities may also be studied with profit. One of such is the item of "overdrafts" among the assets. It in reality represents **involuntary loans** made by the bank, and needless to say, a large amount of "overdrafts" is an indication of rather loose management on the part of the bank.

Rediscounts and Bills Payable.—Rediscounts and bills payable due the federal reserve bank in emergencies or in seasons when the bank is subject to heavy demands from its customers for perfectly legitimate reasons, such as crop moving, are, of course, not a cause for any apprehension. However, if these liabilities remain heavy the year round, it is a sign that the bank is overextended. The same is true of bills payable representing borrowings from banks in the larger cities. The bank's **contingent liability** on rediscounts with the federal reserve bank should always be borne in mind. Also the fact that against its bills payable the bank is usually obliged to pledge some of its assets —Liberty bonds or commercial paper.

Acceptances.—The larger banks extend acceptance or time credits—that is, they accept bills of exchange for customers who in turn obligate themselves to reimburse the bank for the amount of the acceptances when they are due. With the consent of the Federal Reserve Board, a national bank may accept up to 100% of its unimpaired capital and surplus. At the peak of the demand for such accommodation, representing a seasonal fluctuation, 100% is not excessive. At other seasons, however, the amount might be considerably less with advantage. English banks are considerably more conservative in this regard than American banks, not allowing their acceptances to exceed 50 or 60% of their capital stock and surplus. Some of the large American institutions suffered not a little embarrassment during 1921 on account of the large volume of acceptances they had issued. The foregoing holds true of the liability assumed under letters of credit, which are simply the bank's promises to pay or to accept a bill of exchange at some future time.

Comparative Study.—It is difficult to judge the position of a bank from a single statement. A comparative study should be made over a number of years so as to determine the **trends in the bank's activities.** Taking a particular bank, its statement might also be compared with those of other banks in the same community and therefore doing more or less the same class of business. It might in fact be advantageous to average the various ratios for the several banks and thus establish standards that would afford some basis of comparisons in the case of a particular bank. However, each bank must

National Bank Loans to Single Borrowers

Character of Loans	Amounts Loanable
(A) Accommodation or straight loans, whether or not single name.	Maximum limit, 10% of bank's paid-up and unimpaired capital and surplus.
(B) "Bills of exchange drawn in good faith against actually existing values." The law expressly provides that this phrase shall also include: (a) Drafts and bills of exchange secured by shipping documents conveying or securing title to goods shipped. (b) Demand obligations, when secured by documents covering commodities in actual process of shipment. (c) Bankers' acceptances of the kinds described in Section 13 of the Federal Reserve Act.	No limit imposed by law.
(C) Commercial or business paper (of other makers) actually owned by the person, company, corporation or firm negotiating the same.	No limit imposed by law.
(D) Notes secured by shipping documents, warehouse receipts or other such documents, conveying or securing title covering readily marketable non-perishable staples, including live stock. No bank may make any loan under (D), however, (a) Unless the actual market value of the property securing the obligation is not at any time less than 115% of the face amount of the note, and (b) Unless the property is fully covered by insurance, and in no event shall the privilege afforded by (D) be exercised for any one customer for more than 6 months in any consecutive 12 months.	15% of bank's capital and surplus in addition to the amount allowed under (A); or if the full amount allowed under (A) is not loaned then the amount which may be loaned in the manner described under (D) is increased by the loanable amount not used under (A). In other words, the amount loaned under (A) must never be more than 10%, but the aggregate of (A) and (D) may equal, but not exceed, 25%.
(E) Notes secured by not less than a like face amount of bonds or notes of the United States issued since April 24, 1917, or by certificates of indebtedness of the United States.	10% of bank's capital and surplus, in addition to the amount allowed under (A), or if the full amount allowed under (A) is not loaned, then the amount which may be loaned in the manner described under (E) is increased by the loanable amount not used under (A). In other words, the amount loaned under (A) must never be more than 10%, but the aggregate of (A) and (E) may equal, but not exceed, 20%.
(F) Notes secured by U. S. Government obligations of the kinds described under (E) the face amount of which is at least equal to 105% of the amount of the customer's notes.	No limit, but this privilege, under regulations of the Comptroller of the Currency, expired December 31, 1920.

regulate the liquidity of its assets more or less in accordance with its own individual experience with respect to the withdrawal of deposits.

SIZE OF BANK.—In selecting a bank, the borrower's first consideration should be to determine that the bank **is large enough** to accommodate him to the full extent of his needs. On the other hand, a very small borrower in New York City, for instance, might receive better attention and service from a smaller bank in his vicinity. It should be borne in mind that size does not always mean strength. The **lending limit of the bank** should also be ascertained. If the bank is a state bank, the state banking laws apply. If the bank is a national bank, then the lending limits are determined by the federal statutes.

LENDING POWERS OF NATIONAL BANKS.—The amounts which a national bank may properly lend to any one person, company, corporation or firm (including in the liability of a company or firm, the liabilities of the several members thereof) are stated in terms of the percentage of the paid-up and unimpaired capital stock and surplus of the lending bank as shown on page 1229.

Illustrations of what a national bank may lend at any one time to any one customer, expressed in terms of the percentage of its capital and surplus follow:

	Illustration 1	Illustration 2	Illustration 3
(A) Accommodation or straight loans	10%	5%	5%
(D) Notes secured by warehouse receipts, etc.	15%	20%	15%
(E) Notes secured by a like face amount of Government obligations	10%	10%	15%
Total	35%	35%	35%
(B) Bills of exchange drawn against actually existing values	No limit imposed by law.		
(C) Commercial or business paper	No limit imposed by law.		
(F) Notes secured by at least 105% of U. S. Government obligations	No limit imposed by law.		

LOCATION OF THE BANK.—Generally it is advisable for the borrower to select a bank which is located fairly close to his place of business. There is considerable saving of time in the trips made by him or his employees between his office and his bank. The **hazards due to loss or robbery** are lessened.

SPECIALIZED BANKS.—There has lately been a tendency among banks to specialize in making **certain types of loans.** Some banks make a practice of giving special service to certain types of businesses or businesses engaged in special industries or trades. Others specialize in the handling of certain classes of collateral. There may be distinct advantages to be gained in doing business with a bank thoroughly acquainted with the borrower's type of business or with the kind of collateral which he offers as security for his loan.

MEMBER OF THE FEDERAL RESERVE BANKS.—The borrower should thoroughly acquaint himself with the particular advantages that might be gained from doing business with a bank which is a member of the Federal Reserve System. These banks are **under the careful supervision** of the Federal Reserve Board. Every effort is made to keep their assets thoroughly liquid by means of the **rediscounting function** of the regional Federal Reserve bank. The banks of the Federal Reserve System have **special facilities for transfer of funds** to distant points expeditiously and economically.

THE SERVICE FUNCTION.—Some banks offer attractive services in the way of safe-keeping securities, collecting coupons, and preparing income tax

returns, reports, etc. Most bankers will gladly furnish advice on matters concerning the financial management of business. The borrower often finds such services a valuable aid.

One of the most important services rendered by modern banks to businesses in general is offered by the **commercial and industrial service departments.** These departments are composed of accountants, engineers, economists and other experts, who make a study of business conditions in general and of businesses individually. They travel about the country investigating the affairs of clients of the banks and of prospective borrowers. The data which they compile is used to supply the bank with valuable credit information and to assist customers and clients of the bank in conducting their businesses. The bank is assisted in determining when loans may be safely granted. The customer, on the other hand, is given valuable information and statistical data covering his entire industry and referring to such important matters as cost of production, proportion of items making up cost, profit, labor supply, labor conditions in the plant, system of cost finding, prices, and management.

These departments are also called upon to assist clients who have fallen into financial difficulties and are unable to meet their obligations at maturity.

NATURE OF SERVICE RENDERED.—The development of industrial and commercial service is of a comparatively recent date. Some banks have developed these services to a considerable extent and have so organized them that their customers are supplied with useful information whenever they ask for it. In some instances the banks go no further than to collect useful information on trade and financial conditions for the purpose of distributing it to their clients for the asking. Some of the larger and more progressive banks issue **monthly bulletins** in which are set forth comprehensive surveys of financial, trade and industrial conditions.

The banks' industrial and commercial service departments are called upon to assist the individual borrower, who receives the benefit of all the experience these departments have had in dealing with other clients in similar positions.

A third type of commercial and industrial service is that rendered as a result of the **banks' investigations through their credit departments.** In making loans of considerable magnitude banks make a deeper analysis than could be made by a mere study of the balance sheet. Such investigations often enter into the most minute details of the business activities of their clients, such as the location of the factory with respect to their trade, their raw material, labor supply, labor conditions in the plant, relation of management to labor, cost-finding methods, relation to the trade, type of product, and a great many other phases of the problems entering into commercial, industrial and financial management of business.

As a result of the banker's investigations the most intimate details of the borrower's business come to his knowledge and are held in confidence by him. Nevertheless, from such close business contact, the banker is in a position to advise different clients more effectively by his intimate knowledge of the experience of other concerns under similar difficulties.

Trade Acceptances

USE OF TRADE ACCEPTANCE ILLUSTRATED.—Since the inauguration of the Federal Reserve System, the trade acceptance (Fig. 1) has returned to more general use. It has been defined as "a time draft or bill of exchange drawn by the seller of goods on the buyer for the purchase price, and accepted by the

DETACH BEFORE RETURNING ACCEPTANCE
A TRADE ACCEPTANCE
Is an acknowledgment of a debt by the buyer in favor of the seller, for merchandise that the seller had placed in the hands of the buyer. The buyer agrees, in writing across the face of this acceptance his name, the name and location of his own bank and the date, to pay the amount of this certain indebtedness at a certain time at his own bank.
This varies from the open book account method only in giving the debt a negotiable value.
According to a FEDERAL RESERVE BANK GOVERNOR'S OPINION, the signing of an Acceptance increases the financial standing of the giver, because it shows prompt paying methods.
Kindly fill in attached Acceptance above, on red lines across form and then forward to us.

APPROVED BY THE AMERICAN ACCEPTANCE COUNCIL

FIG. 1. Trade Acceptance

buyer, payable on a certain date at a designated place." The seller of goods draws a 30, 60, or 90-day draft on the buyer for each transaction or group of transactions, according to the terms of sale. The buyer writes across the face of the draft, "Accepted (date), payable at.....Bank," signs it and returns it to the seller. It may be held by the latter until maturity or taken to his bank to be discounted. By this method the seller gains the use of funds which would otherwise be tied up in open-book accounts. Also, the trade acceptance is negotiable evidence of the transaction, defining the rights and obligations of the parties and setting a definite day for payment, a great advantage to the seller. The buyer may arrange with the bank to make partial payments on account of the trade acceptance, thereby enjoying one of the chief conveniences of the open-account system. Trade acceptances discounted by a bank which is a member of the Federal Reserve System may be rediscounted with the Federal Reserve bank of the district, provided the date of maturity is not more than 90 days ahead.

TRADE ACCEPTANCE DISTINGUISHED FROM OTHER INSTRUMENTS.—

Commercial Drafts.—Trade acceptances are presented to buyers for acceptance when goods are sold, whereas ordinary commercial drafts are usually drawn upon slow paying customers whose accounts are past due. The former represent completed current business transactions and the latter past transactions.

Notes Receivable.—Notes receivable are one-name paper issued to close out past due accounts or issued in place of open accounts in those lines of business where notes are the basis of credit. Trade acceptances are essentially two-name paper drawn on the buyer by the seller, whereas, notes receivable are one-name paper issued by the buyer. This difference, however, is slight since notes receivable become two-name paper upon endorsement by the payee.

Bank Acceptances.—Bank acceptances are drafts or bills of exchange accepted by banks and are used for extending **bank credit** to business men while goods are in process of production or in transit in domestic or foreign commerce. Trade acceptances are accepted by merchants and indicate that goods have been sold and payment will be made at the maturity of the instruments.

HOW TO USE TRADE ACCEPTANCE.—The trade acceptance may accompany the invoice, may be mailed afterwards, or, in cases of active accounts, may accompany the monthly statement and cover the total amount of invoices rendered during the month. The buyer who receives the trade acceptance may either decide to discount the bill and ignore the trade acceptance, or if he desires to make payment at maturity, he may "accept" the trade acceptance.

Upon receiving properly "accepted" trade acceptances, the seller may use them for borrowing purposes either by presenting them to his own bank for discount or by selling them in the open commercial paper market. Otherwise he will hold such acceptances and in due time before maturity, depending upon the location, he will forward them for collection through his bank to the banks designated in the acceptances. According to law, the place of payment of a trade acceptance is at the office of the acceptor, unless a definite place be designated on its face, such as the acceptor's bank—this being the usual method.

To be **eligible for purchase by or discount at a Federal Reserve bank,** a trade acceptance should bear *prima facie* evidence that it is drawn by the seller on the purchaser of goods sold and must have a maturity, at time of purchase or discount, of not more than 90 days, exclusive of days of grace, excepting that if drawn for agricultural purposes or against sale of live stock, it may have a maturity at time of discount of not more than 6 months, exclusive of days of grace.

TRADE ACCEPTANCES AND TURNOVER.—E. W. Shepard, General Credit Manager, Western Electric Co., New York, says: "One of our primary reasons for the adoption of trade acceptances was because we knew that trade acceptances, especially when discounted would increase our turnover and therefore improve our net return.

"After nearly 5 years' use of trade acceptances we are convinced that they are a factor in speeding up turnover. During that period we have improved our turnover approximately 25%; we know that about 10% of the increase is directly due to the use of trade acceptances, but there has also been an indirect benefit in the effect of speeding up collections.

"Terms in the electrical industry are too short for us to increase the volume of acceptances to a great extent. Terms are usually 30 days' net with allowances of cash discounts for payment in 10 days. But in any line of business where the terms are 60 days or longer, and especially in those industries where future datings are given, the trade acceptance should have a great future.

"Too many manufacturers and jobbers are performing banking functions and have done so for a long time. Changing from the much abused open account system to selling on trade acceptance terms, and then discounting the acceptances simply means transferring the banking function to the banks where it rightfully belongs, and gives the banks better security in the shape of two-name paper.

"The purchaser who buys on an acceptance basis is also placed in a more enviable position. He is able to buy from the concern equipped to give him the best products, prices and service. He has not mortgaged his future by always feeling obligated to one major supplier for performing both a merchandising and banking service."

ADVANTAGES OF USE OF TRADE ACCEPTANCES.—Arguments advanced in favor of the use of trade acceptances may be summarized as follows:

To the Seller.—1. Trade acceptances **establish the correctness of the amount of the indebtedness** of the purchaser.

2. Trade transactions can be financed more economically when open book accounts are replaced by trade acceptances which can be discounted to obtain money to carry on more business. Trade acceptances bring full value less discount, whereas loans on open book accounts seldom bring more than 70 to 75% of the face value of the accounts.

3. The **costly cash discount** and the attendant friction caused by the attempts of some buyers to take discounts after the cash discount period has elapsed is **done away with** by the use of trade acceptances.

4. **Bad debts are reduced** because acceptors of trade acceptances, payable through local banks, hesitate to injure their credit by dishonoring them. Open accounts are more likely to remain unpaid at maturity and develop into bad debts.

5. With the use of trade acceptances there is less likelihood that customers will abuse the privilege of returning goods or make excessive claims, for damages, than with the use of the open account system.

To the Buyer.—1. **Buyer's credit standing** is raised by the use of trade acceptances. By meeting their trade acceptances at maturity they establish their credit standing with their bankers as well as with their trade creditors.

2. The use of trade acceptances tends to develop **greater efficiency** in buyers. They thereby can arrange their purchases better to coordinate with their sales. They will make greater efforts to collect on their sales in order to meet their own trade acceptances.

To the Banker.—1. Trade acceptances are a **desirable** form of commercial paper **for discount purposes.** They are two-name paper and hence afford more security for repayment at maturity than single-name paper.

2. Trade acceptances **represent current transactions** which are self-liquidating, one of the requisites of ideal commercial paper.

3. The **rediscount feature** of trade acceptances cannot be overlooked in periods of commercial activity. The Federal Reserve banks will rediscount such paper for local banks when the banks have exhausted their own funds for lending purposes.

4. There is **no limit upon the amount** of trade acceptances which a national bank may discount for any one customer.

ARGUMENTS AGAINST TRADE ACCEPTANCES.—The arguments presented by those opposed to trade acceptances may be summarized as follows:

1. Trade acceptances cannot be used advantageously where the prevailing terms of sale are for cash.

2. In those lines of trade where long terms of credit are customary it is not desirable at times to use trade acceptances. Under the regulations of the Federal Reserve Board trade acceptances for rediscount purposes cannot run longer than 90 days.

3. In many instances the trade acceptance may **tend to make the terms of payment longer.** Customers who would otherwise pay promptly to obtain the cash discount will be placed on a time basis by the use of trade acceptances.

4. The **open account method** has the advantage of being **elastic in making adjustments** for goods damaged in transit or returned on account of differences in kind or quality from that ordered. The use of trade acceptances does not lend itself to such adjustments.

5. The discount for early cash payment under the open book discount system is looked upon by purchasers as more desirable than time payments through the use of trade acceptances.

6. Trade acceptances in themselves do not avoid bad debts but are merely a means of improving trade relations in that they serve to arrange particular terms of payment. Bad debts are the result of lax methods of credit extensions, and poor management, which cannot be corrected by the use of trade acceptances.

7. Banks in discounting trade acceptances take into consideration, first, the financial condition of the borrower and then that of the acceptor. The banks **look to the drawer rather than the acceptor** for security. In view of this, little if any more credit can be obtained by the use of trade acceptances than can be obtained by the borrower on his own note.

8. Trade acceptances have been **subjected to certain abuses** which have given them an undesirable reputation. Among these abuses are renewals at maturity and accommodation acceptance arrangements. These practices do not represent commercial transactions or the best credit risks, the promotion of which is the primary purpose of trade acceptances.

9. Trade acceptances are not acceptable for use in those lines of trade in which **liens are retained on goods,** or in which there are **conditional sales** and title does not pass. The taking of trade acceptances may be interpreted as a waiver of the lien or the passing of title to the goods to the acceptor. Consequently, trade acceptances are **not used to finance consignment, instalment, or other conditional sales.**

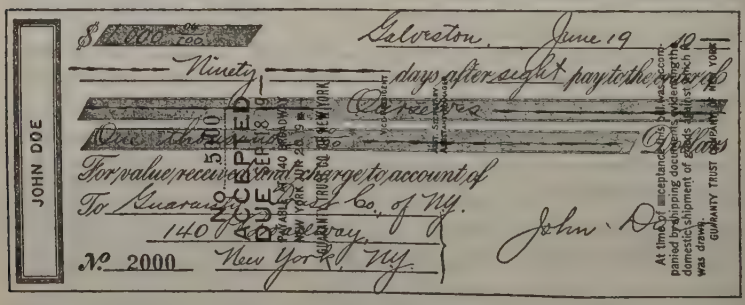
10. Dangerous **pyramiding of credit** is one of the possibilities of extended discounting of trade acceptances for the same merchandise. Where, however, the trade acceptances are held by the drawers and not discounted, this con-

dition would not be brought about. Where the same goods are subject to different processes in successive stages of production by different manufacturers, and each draws a trade acceptance for the maximum of time and amount which in turn is discounted, the same merchandise will serve as the basis of a series of credit transactions. The merchandise may have passed through the hands of several dealers before the trade acceptances they have issued become due. If this is carried on extensively, there will result a **credit inflation** which for business in general is economically unsound.

PRESENT STATUS OF TRADE ACCEPTANCES.—The trade acceptance does not seem to have attained the popularity or general use hoped for by its advocates. For several years after the inauguration of the Federal Reserve System the use of trade acceptances had a rapid development, but it now seems to be declining somewhat and the open account method of financing sales is returning to its former popularity. The **elasticity of the open account system** and the appeal to self-interest in taking cash discounts for early payment of bills, seem to be generally more acceptable to merchants than the advantages of the trade acceptance. Taking all the factors into consideration it appears that the open account system of carrying on business will remain the most popular for some time to come.

Bank Acceptances

DEFINITION.—The term "bank acceptance" (Fig. 2) has been **defined by the Federal Reserve Board** as "a draft or bill of exchange, whether payable in



JOHN DOE
Galveston, June 19 10
Ninety days after sight pay to the order of
Dollars
For value received and charge to account of
To Guaranty Trust Co. of N.Y.
140 Broadway
No. 2000 New York, N.Y.
John Doe
ACCEPTED
GUARANTY TRUST CO. NEW YORK
At the time of acceptance this bill was accompanied by shipping documents evidencing a domestic shipment of goods against which it was drawn.
GUARANTY TRUST COMPANY OF NEW YORK

FIG. 2. Bank Acceptance

the United States or abroad, and whether payable in dollars or some other money, of which the acceptor is a bank or trust company, or a firm, person, company or corporation, engaged generally in the business of granting banker's acceptance credit." It is simply a bill of exchange or draft, payable by the bank at a specified future date. The bank, on which the bill is drawn, has acknowledged in writing on the face of the bill that it will pay the amount at maturity.

USE ILLUSTRATED.—Bankers' acceptances are **used primarily in foreign trade.** Thus, in the use of the acceptance shown in Fig. 2, John Doe may have been shipping cotton to a foreign country. He instructs the foreign importer to make an arrangement through his own bank with the Guaranty Trust Co.

f New York whereby he (John Doe) may draw an acceptance on that institution. The Guaranty Trust Co. really substitutes its own credit for that of the foreign importer. This it is willing to do because the **foreign bank sponsors the transaction,** and also because it receives a **commission** of from ⅛ to ½ of 1% for its services. Having accepted the bill, the Guaranty Trust Co. becomes primarily liable, and must stand ready to give John Doe (or the holder in case he has sold it), $1000, 90 days after acceptance, as this is a 90-day sight bill. The Guaranty Trust Co. looks to the foreign bank to place it in possession of sufficient funds before the maturity of the bill, and the foreign bank looks to the importer for these funds. Thus, the New York bank, the drawee, really pays out none of its own money but simply **lends its good name.** The American exporter, the drawer, may after acceptance sell the bill to some other bank, as to the Federal Reserve bank.

The advantages resulting from the use of bankers' acceptances in foreign trade are that the exporter draws against a bank of recognized credit standing, that he may after acceptance discount the bill and thus receive his funds. And through their use the importer receives the goods he desires which John Doe might not have shipped had he been forced to draw directly on the importer. The importer disposes of the goods and turns over enough of the proceeds to his own bank so that it may remit $1,000 to the New York accepting bank to meet the maturing bill. This particular bill was drawn in dollars as are an increasing number by reason of the violent fluctuations in foreign currencies which have taken place since the war and also by reason of the ease with which dollar acceptances are disposed of in the New York money market.

USE IN DOMESTIC TRANSACTIONS.—Not all bank acceptances originate from foreign trade transactions. Some are drawn against **warehoused commodities** and some against the **domestic shipment of goods.** Their use in the domestic trade of the United States is bound to be limited due to the relative ease of getting accurate credit information regarding buyers and to the fact that other methods of financing trade such as the open-book account are in common use.

The bank acceptance should not be confused with the **trade acceptance.** The trade acceptance is the result of a transaction between a purchaser and a seller by which the purchaser acknowledges his obligation to pay for goods which have already been sold to him. A bank acceptance, however, results from a credit granted by a bank or acceptance company, for the purpose of financing an operation in the exporting, importing or producing of goods. In a trade acceptance the buyer accepts the draft, whereas in a bank acceptance the bank accepts it.

MONEY LOAN AND ACCEPTANCE CREDIT.—The American Acceptance Council draws the following distinction between a money loan and a banker's acceptance credit:

Money borrowed is available only to the extent of a bank's loanable funds, but acceptance credits may be extended even where the bank has no funds to loan. The open market will provide the funds drawn from other banks and other sections, and from other countries where money is seeking an opportunity for investment.

Money borrowed is **frequently immobilized—**

1. By investment in plant or other capital investment;
2. By employment in carrying non-liquid assets, such as unsold and unmarketable goods, and manufactures made up in anticipation of seasonal demand, old or overdue accounts; and

3. By employment to replace proprietors' working capital sunk in ill-conceived business, but for which hope for recovery persists.

Money borrowed, either with or without security, is often considered and used as invested capital, the withdrawal of which would more or less seriously embarrass the borrower. **A bank's loans** to customers, except for seasonal requirements or specific purposes, are, therefore, **as a class not always highly liquid.**

A **banker's acceptance credit** taken under provisions of the Federal Reserve Act must be of self-liquidating character; if a secured credit, it may in case of default be liquidated from realization of collateral enjoying a wide market, or, if unsecured, from completion of underlying transactions which, barring failure or fraud, will automatically yield in the banker's hands the funds for retirement. Such a credit, based on current commercial transactions, within limitations designed to minimize credit risks, may, therefore, be granted more freely, and with greater expectation of retirement at maturity than money might be loaned in ordinary course.

In loaning credit the bank must always consider the underlying transaction. Cautious regard for the acceptor's own reputation will require this. His obligation to accept for none but well-considered transactions of proper character is an obligation towards the whole money market, which scrutinizes with expert eye his acceptances sold in the market as evidences of his conduct of business. It is not necessarily so with regard to loans of money—there the lender need satisfy none but himself, unless he seek rediscount. Within legal limits and free from the scrutiny of the discount market he may lend on general belief and without specific knowledge of the purpose for which his assistance is sought.

This may be seen by a comparison of **the relative requirements for eligibility at a Federal Reserve bank** of commercial paper, including promissory notes given for borrowed money, and of bankers' acceptances. As to the note, the use of its proceeds is the determining factor. That use must be commercial, i.e., in one or more of the steps in the process of producing, carrying or distributing goods. The evidence of such use, however, may be, and in practice is, the **financial statement of the borrower,** which must disclose a reasonable excess of quick assets over current liabilities. Such a condition, however, indicates no more than that, at the time the trial balance for the statement was taken, the amount of money borrowed, other than mortgage money or other long time obligations, was not invested in plant, equipment, or other capital investment. It may be assumed that the statement was prepared at not the most unfavorable period as it is given for the purpose of securing credit. Under existing conditions such a statement is perhaps the most definite and precise information available to the lender of unsecured money, although, of course, good reputation and confidence based on personal acquaintance and knowledge of the character, habits and methods of the borrower form other and most important bases for extension of accommodation.

But how different and how much more definite must be the banker's knowledge of the nature and details of the business which he assists by extending his acceptance credit. There are the **documents,** which in many cases he receives, covering actual goods in transit bought or sold; in other cases the **contracts to export** must be disclosed, and the banker must be satisfied with regard to the value of the goods and the ability of the buyer to pay for them, and in some cases security by pledge of goods or staples is necessary. In granting acceptance credit, the banker, if he be prudent and has conscientious regard for the law, must have a more complete knowledge of the business to be financed than he

linarily would have in the case of money borrowed from him, which, once rrowed, may be put to any use at the borrower's pleasure.

It is the essence of commercial banking that money borrowed should be ned on the general faith and confidence of the lender in the borrower, volving, nevertheless, a legitimate and unavoidable credit risk. It must not assumed that there is an entire absence of such credit risk or even a smaller k in granting acceptance credit. Indeed, the hazards in extending acceptance edits are very real.

BANKERS' RISKS IN EXTENDING ACCEPTANCE CREDIT.—The nerican Acceptance Council describes these risks as follows:

Some risks are similar to those in lending money, others are of a different aracter. The accepting banker has to take the hazard of relying on the **rength and good faith of the taker of credit and of the buyer or consignee of e goods.** In the first case he must depend upon the borrower's ability and sire to protect the banker, in case the underlying transaction fails to produce funds necessary to meet the maturing acceptance. The accepting banker this case is in a position very similar to that of a commercial banker relying his customer's willingness and ability to repay borrowed money under verse circumstances. The acceptor's risk should be appraised in the same y, with this distinction, however, that even greater care should be exercised him, first, because of his obligation to the discounters of his acceptance edit, and second, because the amounts involved are apt to be larger.

The risk involved in having to rely upon the strength, ability and good faith the buyer or consignee of the goods sold by the taker of credit, is similar and y be more difficult to appraise, particularly if buyer or consignee is abroad. me may be required to conduct inquiries. If there is doubt, suitable guar- tees may be suggested or required which may result in the buyer providing edit instead of the seller extending it.

It may be wise to decline to finance exports on seller's credit in cases where is not abundantly able to stand a loss, if loss should occur. In this regard, other class of risks must be considered, such as the **nature of the goods and ir value.** Are they perishable or subject to material depreciation in quality transportation? Is their market wide or restricted? Is their market value ble or liable to sudden **decline**? In case of delayed shipment or delivery the other end, will they still hold their value? What facility has the banker disposing of the goods in a foreign port if not accepted by the buyer or signee? What **expenses** would this involve, and what loss might result? penses would include customs duties, transportation, storage, legal fees, nmissions, etc. Loss might include these and also depreciation in quality ough delay, loss on adjustment of insurance, etc., loss in value from a failing rket, loss in exchange and interest.

The accepting banker must have **wide and special knowledge of goods and mmodities,** their values and markets: also of the special dangers and risks ident to their transportation, storage and sale. He must, if financing export de on credit furnished by the seller, have special knowledge of foreign dits, foreign laws and business customs, or employ agents who have this owledge. The American foreign trade banks, in which he possibly has a prietary interest, can serve him in these regards in lieu of, or in addition to, er relations or correspondents, and by their specialized knowledge and ilities can greatly assist those acceptors who have not developed foreign partments or established satisfactory connections abroad.

Many of the same risks in varying degrees surround acceptance credits in **mestic shipments,** but trouble in these may frequently be more quickly

adjusted. In credits secured by warehoused staples, the applicable risks among those mentioned are very apparent, and there is another which should always be guarded against—the danger in lending on commodities held for speculation. Aside from the almost always ominous speculative hazard, bills drawn against speculative holdings are not eligible at Federal Reserve banks. As a precaution in these credits, as indeed in many others, an ample margin of collateral security in the commodity itself should be required, and the banker should inform himself as to the nature and extent of any prior liens on goods and the volume of similar credits taken from others. Credits against unsold goods ordinarily should be restricted to the period of time required to move the goods into channels of distribution through sale.

BANK'S LIABILITY ON ITS ACCEPTANCE.—A bank acceptance credit is very much **like a promissory note of a bank.** According to an opinion of counsel of the Federal Reserve Board the **contractual liability of an accepting bank** is substantially similar to that of a maker of a note. Although the form of a bank acceptance differs from a note, the legal effect is the same. Consequently, the holder of a bank acceptance has the same legal rights against the bank as a holder of a promissory note has against the maker. The bank is, in other words, primarily liable on its acceptance but it holds as security the merchandise covered by the shipping documents and the guarantee of the purchaser of the merchandise.

LIMITATIONS IMPOSED BY LAW.—In order to prevent abuses in the use of bank acceptances the banks are carefully regulated by law as to the amounts for which they may accept. National banks are permitted to accept up to an amount equal to **50% of their capital and surplus and, with the permission of the Federal Reserve Board, up to 100%**; but the aggregate amount of acceptances growing out of domestic transactions cannot exceed 50%. In addition to this, banks are permitted to accept up to 50% for the purpose of furnishing **dollar exchange,** which is separate and distinct from, and not included in, the limits placed upon the acceptances of drafts and bills of exchange above described.

The sixth paragraph of Section 13 of the Federal Reserve Act, as amended limits the amount which any member bank shall **accept for any one person** company, firm, or corporation, whether in a foreign or domestic transaction to an amount not exceeding at any one time, in the aggregate, **10% of its paid up and unimpaired capital stock and surplus.** This limitation does not apply, however, in cases where the accepting bank remains secured either by attached shipping document or by other security growing out of the same transaction as the acceptance.

Other provisions under which banks may accept are as follows:

The bill must—

1. Have its origin in a transaction involving the **importation or exportation of goods,** or
2. Arise from a transaction involving domestic shipment of goods and having **shipping documents attached** at the time of acceptance, securing or conveying title to the goods, or
3. Be secured at the time of acceptance by **warehouse receipts** or such other documents conveying or securing title to readily marketable staples.

ADVANTAGES OF BANK ACCEPTANCES.—**To merchants** the advantages are as follows:

Through bank acceptances the buying field and credit of merchants are in-

eased, enabling them to make purchases advantageously, even in markets here they are unknown. In commercial transactions bank acceptances are ooked upon as commercial paper of the highest character because the primary sponsibility on such paper rests with the accepting bank. This eliminates ne trouble of investigating the credit of the drawers and indorsers.

American exporters have formerly had difficulty in competing with merhants abroad in according foreign buyers acceptable terms of credit. By the se of bank acceptances the credit required for payment of the goods may be stablished by drawing at 60 and 90 days' sight on a New York accepting bank, he acceptance being discounted at the current or at a fixed rate. The exporter hus can be reimbursed at once for the merchandise he sold and can immeiately reinvest his capital in new business instead of having it tied up in credits.

By means of bank acceptances a **bank having surplus funds** may invest them first-class acceptances until the funds are required for other purposes. The ank can either hold such acceptances to maturity or sell them in the open arket, if necessary. The bank's facilities for financing conveniently the transctions of their customers are increased by the use of bank acceptances.

On account of their ready marketability and high security, bank acceptances f well-known banking institutions are sought for more and more as convenient nd profitable **short-term investments** for businesses, institutions, and inestors. One of the features of the whole acceptance movement has been the eadily broadening market for bankers' acceptances. Every principal city has s acceptance dealer or dealers and many of the largest banks have established cceptance departments where complete service in the creating and the buying nd selling of acceptances may be secured. There has been a steady increase the demand for bankers' acceptances for investment purposes, among country anks, savings institutions, corporations, fiduciary institutions, insurance comanies, trustees and individuals in possession of funds. As acceptances have een more widely distributed in these channels the load has been taken from the 'ederal Reserve banks, which were of necessity in previous years, the reservoirs nto which were turned the bills for which there was a narrow market elsewhere.

RELATION OF FEDERAL RESERVE BANKS TO ACCEPTANCE MARKET.—One of the reasons prompting the establishment of the Federal Reserve anks was that they might aid in the creation of a discount market in New York nd in the other financial centers of the country. A discount market is the ame given to that section of the money market which deals in bankers' acceptnces. The market is not centered in one room as is the New York Stock xchange but rather is a term used to embrace all transactions in bankers' ills between banks, financial houses, exporters and importers. The reserve anks have been the **mainstay of the market** as they stand ready at any time absorb those acceptances which cannot find a ready market elsewhere. In ct, at times their purchases have been so large that they really were the arket and the controlling influence on the rates prevailing on bankers' bills. 1924 the twelve reserve banks purchased $2,200,000,000 of acceptances of hich $1,600,000,000 arose from foreign trade. It is estimated that their tal purchases equaled 50% of the total volume of outstanding acceptances. These purchases of acceptances in the open market by the Federal Reserve anks have the same effect on the general credit situation of the country as discounting by member banks. They result in **swelling member banks' serve deposits** with the reserve banks, thus augmenting the member banks' nding power, and they are, therefore, to be watched as closely as the amount rediscounting. The purchases in any volume are frequently made when the edit position is easy and rediscounting by member banks is light, since such

purchases are then the only channel open to the reserve banks for keeping their funds employed in sufficient volume to meet current expenses and earn sufficient profit on the member banks' investment in the capital stock of the reserve banks. This is one of the weak features in the actual operation of the Federal Reserve System, since at the very time when money is a drag in the market, the Federal Reserve banks are compelled to accentuate the condition by forcing more funds into the market, which furnish member banks with a basis for further lending.

Commercial Paper Houses

MEANING OF COMMERCIAL PAPER.—The sale of commercial paper through commercial paper houses, or in the **open market,** is resorted to by large concerns with a high credit rating in securing short-terms loans. Popularly, **"commercial paper"** includes all types of short-term negotiable instruments which call for the payment of money and which may be used for borrowing purposes. This includes promissory notes, drafts, bills of exchange, acceptances, etc. Financially, "commercial paper" generally means only those unsecured promissory notes which are issued by business borrowers and sold through commercial paper houses to banks and large investors.

FUNCTIONS OF COMMERCIAL PAPER HOUSES.—Commercial paper houses act as **middlemen** between borrowers and lenders. The operation of paper houses differs from that of the older note brokers, who merely brought borrowers and lenders together and assumed none of the risks of the transaction. Paper houses frequently **buy up an entire issue of borrowers' notes,** paying their face value, less the market rate of discount and also their commission, which is generally a flat rate of ¼%, irrespective of the maturity of the paper. Any portion of the issue which they fail to sell must be carried until maturity. They profit or lose by any fluctuations in the discount rate.

OBTAINING FUNDS THROUGH COMMERCIAL PAPER HOUSES.—Borrowers wishing to issue notes through paper houses should be prepared to furnish the information required by these houses in their investigations of the borrowers' financial standing and should make their notes in the denominations and forms required by the brokers. Commercial paper houses generally expect borrowers to fill out and sign forms conveying the following information:

1. Nature of business.
2. We have no outside contingent liabilities such as endorsement or guarantees, except .....
3. We have no mortgage debts, nor is there any lien on current assets.
4. Our maximum liability during the 12 months preceding our last audit was $ .....
5. No money used from the sale of our commercial paper is used for any of the following purposes:
   (a) For permanent or fixed investments of any kind, except such as are properly to be regarded as costs of operation.
   (b) For investments of a merely speculative character, whether made in goods or otherwise.
   (c) For carrying stocks, bonds, or other investment securities.
6. None of our personal assets is hypothecated, nor have we any contingent liability arising from rediscount of bills receivable or from accommodation endorsements.

INVESTIGATION MADE BY COMMERCIAL PAPER HOUSES.—Since e commercial paper houses do not always stand in the close relationship ith borrowers that banks do, they usually make a very thorough investigation clients' financial condition. They demand that **balance sheets and profit nd loss statements be certified by public accountants.** They examine the cords of the past earnings of companies over periods of several years to see iat they have made adequate earnings for several years on their invested apital.

In financial statements commercial paper brokers look for indications of quidity of the current assets as an assurance of the payment of the notes at aturity. They also satisfy themselves that the transactions, which are to e financed by the loans, arise from purely business operations the proceeds of hich will provide the funds for repayment at maturity. The self-liquidating iaracter of the paper is thus assured. A **borrower's credit standing** is thoroughly xamined, especially if his name is not a familiar one on the market. The ommercial paper houses make investigations at the usual sources such as redit-reporting agencies, banks with which the borrower does business, other anks which might be less disposed to conceal confidential information, and oncerns from which the borrower has received credit. In this way the com- ercial paper houses are informed of the client's general credit capacity, as ell as his integrity, character and managerial reputation.

INFORMATION FURNISHED BY CREDIT REPORTING AGENCY.—he well known credit reporting agencies, such as Bradstreet's and R. G. Dun Co., are generally the media through which the commercial paper houses btain part of the necessary credit information. The reports of these agencies over the following:

1. Name of company
2. Nature of business
3. Location
4. Branches and locations
5. Officers
6. Financial statement
7. Trade opinions
8. Antecedent history
9. Fire record
10. General remarks (state of business, standing of officers, etc.)

For accuracy the information secured by credit agencies cannot compare ith the reports furnished by public accountants. But there are items of terest such as those relating to fires, public reputation, etc., which are more lly covered by the reports of the mercantile agencies.

DENOMINATION AND FORM OF NOTES.—Commercial paper to be ld to brokers is usually issued in denominations ranging from $5,000 to 0,000. In order **to accommodate the smaller banks** some notes may be sued for as little as $2,500. Each note is signed by the borrower, made payable himself or order, and endorsed in blank. A definite payee cannot be named ecause the buyer of a note is generally unknown to the maker. Notes may be dorsed to give them added strength, but such notes are not popular, as this ocedure is an indication of weakness in the borrower.

Figs. 3 and 4 are typical forms of notes usually required of an individual or rtnership. Fig. 5 (a and b) is a typical form of note for a corporation.

ENDORSEMENT OF COMMERCIAL PAPER HOUSES.—Commercial per houses **do not ordinarily endorse or guarantee** the paper that they sell. xceptions are sometimes made in the case of the larger and more influential nks which will not buy unendorsed paper. As a protection for their own putations, paper houses sometimes assume losses in the event of borrowers' fault, even though such paper has not been endorsed by the paper houses.

MATURITY OF PAPER.—The time of notes may vary from **1 month to 1 year.** The **most common length** of time is about 4 months. Borrowers will generally try to avoid short-term loans and frequent borrowings, for they must pay the ¼% commission to the paper houses on each separate issue. The most important factors influencing the length of loans, however, are the

rowers' immediate needs and the financial condition of the banks and estors who purchase the notes from paper houses.

NOTES BOUGHT ON CONSIGNMENT OR ON MARGIN.—Paper houses not in all cases buy the maximum requirements of the borrowers and thus id assuming the risks of changes in the discount rate. They may some- es **buy on consignment or on margin.** Under the former arrangement the per houses sell only a portion of the notes at a time, waiting until the borrow- authorize them to sell. When they buy on margin, they pay to the borrowers y a part of the face value of the notes received, holding the balance until ds are actually received from the sales.

DISTRIBUTION OF NOTES.—The notes are distributed throughout the ntry by means of **branch offices, correspondents and salesmen** of the mmercial paper houses. Careful watch is kept upon banks and other large esting concerns which may have money to invest temporarily. They are ormed by the salesmen of the nature of the notes which the paper houses offering for sale as well as the more important facts concerning the borrowers' ancial conditions, especially their balance sheet details.

An investing bank does not buy paper without making some investigation ts own regarding the borrower. An option of 10 days usually is granted by per houses in selling notes. A bank which has found the borrower's credit atisfactory may return the paper within that time and receive back the chase price with interest. The bank makes inquiries in the usual way, ding out requests for information to other banks, and employing agencies ch specialize in investigating bank loans. Only the largest and strongest cerns can dispose of their paper on the open market. This accounts for the that though the amount of paper sold annually is large, the number of cerns borrowing in this manner is comparatively small.

TYPE AND SIZE OF LOANS.—The open market is essentially a means of **uring working capital** and cannot be used with safety in raising funds for d capital purposes. There is no close relationship between borrowers and banks which buy their paper. The banks are not obligated to renew notes naturity as the borrowers' own banks might be in the case of ordinary loans.

Therefore, the open market should never be used as a steady source of funds, but only as a means of financing peak operations.

A business which wishes to sell its paper on the open market should have a capital of at least $200,000 and working capital large enough to warrant an issue of paper of at least $25,000. A smaller issue would hardly pay the commercial paper house for the costs of investigation and sale.

OTHER REASONS FOR UTILIZING THE OPEN MARKET.—These reasons may be summarized as follows:

1. Local banks are sometimes not large enough to take care of the needs of all of their customers, especially those of considerable size.
2. Interest rates on commercial paper may be more favorable than on ordinary bank loans.
3. Many concerns look upon open-market borrowing as a way of advertising themselves, bringing their names before a very wide market and so opening new fields of business and credit.
4. The open market often affords a means of borrowing to settle bank loans, thus enabling borrowers to maintain credit at their banks.
5. None of the proceeds of sales of commercial paper need be tied up as in the case of bank loans, of which a certain percentage must be kept on deposit.

ADVANTAGES OF COMMERCIAL PAPER TO BANKERS AND INVESTORS.—Bankers, investors and commercial concerns having surplus funds available for temporary investment may find that they can obtain a higher rate of interest on such investments than they can obtain from balances on deposit with banks. In addition to affording a means of investing idle funds, commercial paper is flexible in that funds can be kept safe and liquid. The reasons for this are as follows:

1. **Maturities** can be arranged to suit the needs or convenience of the investor.
2. The **risk** can be **diversified** as to geographical location as well as to types of businesses.
3. The investors or bankers are under **no obligation to renew the loans.**
4. Commercial paper **can be rediscounted** through the Federal Reserve banks to provide liquid assets in times of monetary stringency.

DISADVANTAGES OF OPEN-MARKET BORROWING.—There are certain dangers in open-market borrowing, some of which may be avoided. One of the greatest dangers is that borrowers may **neglect to maintain their bank credit lines.** Few concerns are strong enough to rely solely upon the open market to the complete exclusion of banks. Since commercial paper houses are usually "fair weather friends," it is difficult to obtain sufficient funds from them in times of financial stringency. At such times proper banking connections are particularly valuable. Loss of contact with banks deprives borrowers of the advice and intimate counsel which such institutions can impart. Banks can be of great service to their clients by imparting information on economic and financial conditions.

LIMITATIONS OF OPEN-MARKET BORROWING.—With all the advantages of open-market borrowing there are certain limitations to be considered by financial executives. These limitations may be summarized as follows:

1. Open-market borrowings are **not available for new businesses** or those whose credit position is not established.
2. **Small businesses** or those which cannot justify commercial paper issues

25,000 or over, are usually precluded from open-market borrowing, as the of their loans does not justify the commercial note brokers in incurring expenses of investigations.

. Open-market borrowings are **not adaptable to certain types of business,** ticularly those with a slow turnover of merchandise, and those which deal uxuries or articles sold on the instalment plan.

. The **cost of open-market borrowing** may, under certain conditions, be ıter than that of borrowing from local banks, especially if the notes are rt time paper on which the flat rate of ¼% commission must be paid on h issue. As a rule, however, the shorter the time, the lower the interest . This may in part offset the additional commission.

. Banks purchasing commercial paper, as a rule, have **no personal contact** h **the borrower** and generally demand payment at maturity regardless of ther or not the business of the borrower is inconvenienced.

. **In times of business stringency** the borrower would be compelled to pay ıer rates than those which could be obtained from a bank with which he had personal relations for a number of years.

. **In periods of business reactions,** such as prevailed in 1920 and 1921, e lines of credit with banks are more desirable than apparently available n-market credit.

WHEN TO USE OPEN-MARKET BORROWING.—Open-market borrow- are at times an economical means of raising money for temporary purposes. ıe of these purposes may be:

. To **settle lines of credit** with the local banks. After the re-establishment he lines of credit the commercial paper may be retired through bank loans.

. To **meet seasonal variations** in some businesses which require additional porary capital to finance sales or production for several months of the year. commercial paper may be retired when the peak of the financial needs assed.

OME PROMINENT COMMERCIAL PAPER HOUSES.—There are a ıber of commercial paper houses in the United States, some of which are follows:

Bayne, Hine & Co.	W. O. Gay & Co.
A. G. Becker & Co.	Goldman, Sachs & Co.
Blake Brothers & Co.	Hathaway, Smith, Folds & Co.
Bond and Goodwin, Inc.	Lane, Piper & Jaffray
G. H. Burr & Co.	Merrill, Lynch & Co.
Curtis & Sanger	E. Naumburg & Co.

DISCOUNT COMPANIES.—Another means of obtaining funds in the open ket is through discount houses. These institutions are engaged largely in purchase and sale of trade and bankers' acceptances, although they also in other commercial paper. The discount companies are a comparatively nt development in America.

he *Wall Street Journal* describes the functions of the Discount Corporation ew York, one of the largest discount companies in America, as follows:

Discount Corporation of New York discounts approved bankers' accept- es and trade acceptances with bank endorsements. It buys and sells t-term government obligations. It receives funds repayable on demand t fixed maturity against the security of bankers' acceptances or government gations. It acts as sort of 'back log' in the bill market, tending to absorb ver-supply, or to feed out bills to the market when it displays a readiness ake them. In this way it exercises a very stabilizing effect upon the market,

and performs a service similar to that of the great discount houses of London.

"Although there are several banking institutions and firms, both here and elsewhere, which undertake to deal in substantially the same class of paper as the Discount Corporation, a requisite to a successful discount bank is the availability of a world money center, where are represented many foreign banks and agents to afford a good supply of bankers' bills.

"At present, New York City might be said to be trying to establish itself as such a world money center, with considerable success it is true, but not such as to encourage the establishment of other like concerns here."

Some of the larger discount companies which deal principally in acceptances and maintain offices, or have agents, in the principal large cities of the United States, are the following:

Discount Corporation of New York
First National Corporation
Salomon Brothers & Hutzler
Scholle Brothers
Shawmut Company

Finance Companies

CLASSIFICATION AS TO FUNCTIONS.—The Division of Analysis and Research of the Federal Reserve Board classifies finance companies thus:

1. Buying or discounting commercial receivables which include accounts, notes and acceptances.
2. Advancing funds to dealers to finance the purchase of automobiles from manufacturers or wholesalers.
3. Advancing funds to enable retail dealers to finance the sale of automobiles on the instalment plan.
4. Advancing funds to retail dealers to finance instalment sales of agricultural implements, books, electrical appliances, furniture, musical instruments, etc.
5. Advancing funds against merchandise.

CASH RECEIVED FROM SALE OF ACCOUNTS RECEIVABLE.—Finance companies, in purchasing accounts receivable, usually advance from **70 to 80% of the face** amount of the accounts, but in some instances they advance from 65 to 85%, depending on the nature of the accounts, the character of the business and the policy of the finance company. The balance of 15 to 35% as the case may be, is required by the finance companies as a margin of safety to protect them against loss until the accounts are collected. After the principal, interest and other charges are repaid, any balances or uncollected accounts are returned to the sellers.

A large concern organized for the purpose of financing manufacturers, wholesalers and jobbers, on the **non-notification plan** through the medium of their open accounts and notes receivable, outlines its plan as follows:

1. An agreement is signed for the use of the service.
2. The correctness of the accounts receivable, on which realization is desired, is supported by copies of the invoices with the original bills of lading, shipping receipts or delivery tickets.
3. Payment of about 80% of the net face of the accounts is made. The balance is paid to the assignor immediately upon receipt by the finance company of the customer's original check.
4. The assignor collects all accounts sold, endorses the customers' checks with a rubber stamp reading: "Pay to the order of any Bank or Banker," and sends them to the finance company.

FINANCE COMPANY'S DEMANDS IN ITS CONTRACT.—The various nance companies make different demands on their customers in the contracts rawn up with them to take over their accounts. Most of them, however, nbody the following:

1. The finance company must be allowed to make a careful **investigation of he credit standing of the borrower,** using the same methods as are employed y banks and commercial paper houses.

2. The assignor must supply a **signed financial statement,** giving a detailed nalysis of the assets and liabilities of the business. He must affirm that this tatement is correct and that he will notify the credit company of any material hange in the condition of the business, under penalty of his obligation to the redit company immediately becoming due and chargeable against any reserves r balances held by the credit company.

3. The assignor must pay the **costs of a fidelity bond** to cover losses arising rom assignment of false accounts or from the failure of the assignor to remit ayments on such accounts.

4. The assignor must further **guarantee:**

(a) That the debtors are solvent and that if the debtors become insolvent the assignor will pay the accounts.
(b) That all payments to the credit company will be made in full in cash.
(c) That the accounts are due for bona fide sales and deliveries, not for shipments on consignment.
(d) That there are no counterclaims on any account.
(e) That no account sold has already been sold to some other finance company.
(f) That all payments on accounts will be sent to the finance company the day they are received.
(g) That no accounts will be sold elsewhere without 10 days' notice to the finance company.

5. That the assignor will allow the auditors of the finance company to inspect is accounts and records at any time.

6. That the salaries and traveling expenses of the finance company's auditors ill be paid by the assignor.

7. That the assignor will give the finance company power of attorney to ransact any business relating to the assigned accounts.

A typical **finance company contract** is as follows:

THE.....CORPORATION

CONTRACT

This Agreement entered into between ..... designated as: rst party, and THE ..... CORPORATION, a ..... corporation, its successors or assigns, designated as second party.

Witnesseth, That Whereas first party is desirous of selling to second party, Accounts eceivable, Notes, Leases, Mortgages, Contracts and Choses in Action, hereinafter designated as "Accounts," evidencing sales and deliveries of personal property usually dealt by first party. Now Therefore, in consideration of the premises, the statements made the second party regarding the financial condition of the first party, and the mutual venants hereinafter mentioned, the parties hereby agree as follows:

FIRST. Second party will from time to time, during the continuance of this agreement d within the limits agreed upon, buy such Accounts, belonging to first party as may be ceptable to second party, and will pay therefor.

One hundred per cent (100%) of the net face value thereof, less a charge equal to the

legal rate of interest on the money outstanding thereon, on which –77– per cent of the net face value thereof shall be paid in cash upon acceptance thereof by second party, and the remaining –23– per cent less any deductions and plus any overpayments by the debtors and less total charges, as shown in lines 51 to 60 hereof [numbering of lines omitted here], to be paid to the first party immediately upon payment of any such Accounts to second party; provided, that no payments of any such remainder need be made so long as any Accounts purchased hereunder are affected by any breach or violation of warranty hereunder, but such remainder and any moneys, Accounts or property of first party which may come into possession of second party may be held and applied to the payment of any such Accounts.

SECOND. In order to obtain from second party the right and privilege which are hereby given, to make collection at its office and expense of all Accounts sold to second party and thereby avoid objections by, and any possible loss of trade from any of its customers, through second party collecting the Accounts direct from the Debtors, first party will pay second party for the salaries and all expenses of travel of auditors of second party, who shall have the right to call every thirty days or oftener and inspect, audit, check and make extracts from the books, Accounts, records, orders, original correspondence and other papers of first party relating to Accounts sold hereunder as provided in any fidelity bond which may be obtained by second party; said right and privilege may be terminated by second party at any time, and shall terminate immediately upon the suspension of business, request for general extension, bankruptcy petition, or any act amounting to a business failure, by or against first party. First party warrants that it will transmit or deliver to second party at its office in ..... on the day of receipt thereof, all original checks, drafts, notes and other evidences of payment received, in payment of, or on account of, any Accounts purchased hereunder.

THIRD. Second party will: (a) place its collection department at the disposal of first party, and upon request endeavor to collect direct from the debtors any Accounts purchased hereunder. (b) Have its auditor give first party his report of each examination as above, with full instructions as to the best method of keeping the books, records and Accounts of first party. (c) Place its credit department at the disposal of first party and pay for all accounting, postage and credit investigation of Accounts purchased or offered for purchase hereunder and upon request give credit and financial advice. (d) Have its employees at the request of first party instruct first party how to increase sales, organize the business of first party in an efficient manner, and increase the profits of first party. (e) Permit first party to submit any of its sales contracts with its customers to the General Counsel of second party for advice and opinion as to the form and legality thereof. (f) Accept at par subject to payment all remittances received through first party, and pay the cost of all exchanges on same. (g) Obtain and have on hand at all times sufficient funds to make prompt remittance to first party for all acceptable Accounts within the limits agreed upon. (h) Supply all forms proper for assignment of Accounts hereunder and assist in the prompt collection thereof.

FOURTH. The total compensation to be paid by first party for all services and other considerations specified in lines 12 to 16 hereof, added to the charge as mentioned in lines 12 and 13 hereof, it is hereby agreed shall be:

FIFTH. In consideration of the prompt purchase and remittance by second party for Accounts acceptable to second party, without waiting to make a complete credit investigation thereof, first party hereby warrants that: (a) First party and each debtor named in an Account is solvent and will remain so until maturity thereof; (b) There will be no suspension of business, request for general extension, bankruptcy petition, nor any act amounting to a business failure by or against first party or any debtor; (c) Every Account purchased hereunder and any settlement received thereon will be paid in full at maturity in cash or ..... par funds; (d) Prompt payment will be made to second party of the net invoice value of any goods returned, rejected, re-sold, re-routed in transit, or of any allowance or credit upon any Account sold to second party; (e) Each Account offered for sale to second party, shall represent a bona fide sale and delivery of property usually dealt in by first party, and shall be for a certain undisputed, liquidated claim or demand, which is due or to become due on the dates set forth; (f) First party will not sell or assign any of its own Accounts elsewhere without first giving ten days' written notice to second party of such intention.

SIXTH. Contemporaneously with the purchase of Accounts hereunder, first party will, proper instrument in writing, assign and set over to second party such Accounts pur- ased by it as aforesaid, to the end that second party may be and become subrogated all of the rights, securities or guaranties possessed by the first party in respect thereto, luding the right of stoppage in transit; should the latter right be exercised, or should the btor named in any account fail or refuse to accept, receive or retain, or return the prop- y evidenced by such Account, or should said property be re-routed or re-consigned, then e title to said property or property exchanged therefor, with the right to sell or otherwise spose thereof, and the title to any new Account created through the re-sale thereof, all be and remain in said second party. Immediately upon consummation of the pur- ase of Accounts hereunder, the first party will make upon its books suitable and proper tries disclosing the absolute sale of said Accounts to second party. First party further ll execute and deliver to second party any instrument necessary, proper or convenient carry into effect the terms, provisions and conditions of this agreement, or to facilitate e collection of Accounts purchased hereunder.

SEVENTH. If any warranty, expressed or implied, made herein or resulting from the ovisions hereof with respect to any Account or made in or resulting from the provisions the assignment of any Account to second party or from the subject matter hereof, shall broken or violated, either through the act of first party or others, the damages which cond party shall be entitled to recover from first party, as a result thereof, shall include attorney's fees, Court costs and all other expenses which may be expended or incurred second party to obtain or to enforce payment of Account purchased hereunder, either against the debtor, first party, or any of its guarantors, or in the prosecution or defense any action or concerning any matter growing out of or connected with the subject matter this contract, and Accounts purchased thereunder. Granting extensions to, or adjust- ents of claims of debtors named in Accounts purchased hereunder, compromises, compo- ions or settlements of such Accounts, either with the debtor or others, or of the sale, signment or transfer of Accounts thereunder by second party, shall not affect the lia- lity of first party under any of its warranties as herein provided.

EIGHTH. First party does hereby make, constitute and appoint .... or ....., or any person whom either he or second rty may designate, its true and lawful attorney, with power to receive, open and dispose all mail addressed to first party; to endorse the name of first party upon any notes, checks, afts, money orders or other evidence of payment or collateral that may come into the ssession of second party of or upon Accounts purchased by it hereunder; to endorse the me of the first party on any invoice, freight or express bill or bill of lading relating to y said Account; to sign the name of first party to drafts against debtors, to assignments d verifications of Accounts and notices thereof to debtors; and to do all other things cessary or proper to carry out the intent of this agreement.

NINTH. Neither of the parties hereto shall be bound by anything not expressed in iting by and between the parties; this agreement and all of its provisions shall inure and become binding upon the parties, their heirs, executors, administrators, successors d assigns only after acceptance by two duly authorized officers of second party; the ovisions of this agreement shall be construed and interpreted in accordance with the ws and decisions of the State of ..... first party hereby waives all notice any matter to which it might otherwise be entitled, also waives presentment, demand y protest of any note, draft or other evidence of payment; either party hereto shall have e right at any time, upon written notice, to cancel this agreement as to future transactions.

IN WITNESS WHEREOF, first party has caused these presents to be executed this]..... y of ..... 19..

TEST OR TNESS ..... Signed.....(Seal).... President, Partner or Owner

Accepted by THE ..... CORPORATION, this ..... day of ....19..

.....(Seal).... By.....(Seal).. Treasurer or Ass't. Treasurer President

THE FOLLOWING GUARANTY AND WAIVER IS TO BE SIGNED BY INDIVIDUALS:

In consideration of the acceptance by "second party," of the aforementioned agreement between the "first party" and "second party," of other valuable considerations, and of the sum of One Dollar in hand paid to each of the undersigned, the receipt of which is hereby acknowledged, the undersigned and each of them do hereby jointly and severally guarantee to second party, its successors or assigns, the full and prompt payment, performance and discharge by first party of said agreement, and of each and every of the agreements, terms, provisions, and conditions set forth in said agreement, and of any rider or riders to be thereto attached, and of any other instrument or instruments given or executed in pursuance thereof, provided to be done, paid or discharged by the first party, and the due execution thereof. The undersigned and each of them do hereby agree that the liability hereunder shall be direct and not conditional upon the pursuit by the second party, its successors or assigns of whatsoever remedies it or they may have against said first party, and shall continue until second party receives written notice revoking said liability on future accounts or transactions, and they and each of them do hereby waive, release, assign and transfer to second party, so far as the obligation herein is concerned, all rights in and to homesteads and exemptions to which they or any of them may be entitled under the laws of any State or States.

This guaranty and waiver shall be construed and interpreted according to the laws and decisions of the State of ..... The undersigned hereby jointly and severally waive all notice of default by first party, and waive notice of acceptance of the guaranty by second party, and waive all other notices to which they might be otherwise entitled.

In Witness Whereof, we have hereunto set our hands and seals this ..... day of ..... 19..

FIG. 7. Form of Certificate Accompanying Assigned Accounts

TO THE.....CORPORATION

Dear Sirs:—For the purpose of inducing The ..... Corporation to enter into a contract to purchase Accounts Receivable, Notes, Contracts, and Choses in Action hereinafter designated as "Accounts." And Thereafter, and from time to time, to purchase Accounts, the undersigned hereby makes and delivers to The ..... Corporation the following statement of its assets and liabilities, which statement shall be considered as continuing and authorizing The ..... Corporation to act upon it and use it as the basis for making such contract to purchase Accounts and thereafter, and from time to time, as the basis for the purchase of said Accounts as and when said statement shall continue as being substantially correct and to be used and acted upon as aforesaid until the undersigned shall notify The ..... Corporation of any material change in the financial condition of the undersigned.

In consideration of the making of the aforementioned contract and of the purchase of said Accounts, the undersigned agrees that if the undersigned at any time should fail, become insolvent or commit an act of bankruptcy, or if any of the representations made below are untrue, or if the undersigned fail to notify The ..... Corporation of any material change as before agreed; then and in any such case, all obligations of the undersigned held by or for The ..... Corporation shall immediately become due and payable without demand or notice and the same may be charged against any balance the undersigned may have with The .....Corporation, the undersigned hereby giving The ..... Corporation a continuing lien upon such balance of account from time to time existing to secure all obligations of the undersigned held by or for The..... Corporation.

Fig. 8. Type of Financial Statement Required by Finance Companies

rarily and continue in control of their businesses rather than to pay a large portion of their profits permanently to new partners or stockholders.

"Many firms are more experienced in the practical manufacturing and selling part of their businesses than in finance, and **dislike to borrow much money from banks,** with which they would have to carry substantial balances.

"Many others, especially manufacturers, have most of their invested capital tied up in real estate, plant, machinery, etc., usually blue-penciled by the banker. Their **current liabilities are out of proportion** to current assets, although they may sell to the very highest rated trade.

"Many firms are located in towns having **limited local banking facilities,** and have not established, or for many reasons may be unable to establish, sufficient bank credit connections in the larger cities.

"Many others **need extra money** to carry them through the peak of their seasons, to buy for spot cash, to discount or to pay their bills promptly, or to increase the volume of their trade with but little increase of overhead. The saving in discounts alone will probably offset the cost.

"Many firms which must sell on from six to twelve months' time, payable in instalments, thereby quickly tying up their operating capital, must find a continuous outlet for such paper."

NOTIFICATION AND NON-NOTIFICATION PLANS.—In connection with the sale of accounts there are two methods of dealing with the customer, notification and non-notification. Under the former the debtor is informed of the assignment of his account to the credit house. Many businesses object to this method on the ground that a customer is inclined to regard the practice as an indication of the seller's financial weakness. The non-notification plan is offered as a remedy. No notice is given the debtor of the assignment of his account. He continues to remit to the seller, who acts in the capacity of agent of the finance company and turns over to it all collections. Under the non-notification plan the finance company must be very careful as to the integrity and character as well as the financial responsibility of the assignor. Frequently the finance company demands a fidelity bond at the expense of the assignor when purchasing accounts under this plan.

COST OF OBTAINING CAPITAL THROUGH SELLING ACCOUNTS RECEIVABLE.—In general, it may be said that the cost of securing capital by selling open accounts to a finance company is **considerably greater** than borrowing from banks or in the open market. But if bank credit is not open to the borrower, the finance company remains as a legitimate means of procuring working capital.

The charges of the finance companies vary as to amount and method of assessment. Generally they charge from 1/30 to 1/25 of 1% a day on the full amount of the account plus $5 per $1,000 on the first $100,000 of accounts purchased during any twelve months' period. Thus, if the company buys accounts amounting to $100,000 on the basis of 75% of their face value, it advances to the seller $75,000, and if these accounts run for 30 days, at a charge of 1/30 of 1% a day, the costs are as follows:

Interest (1/30 of 1% a day = 1% in 30 days on $100,000)	$1,000
Service charge of $5 per $1,000	500
	$1,500

$1,500 ÷ $75,000 = 2% a month or 24% a year.

Another method, which, however, is substantially the same as the above is followed by some finance companies. The seller, in submitting his schedule

of accounts receivable, is charged an initial fee of ½% on the face value of the accounts. This charge is made every time he submits a schedule and is generally called a service charge. The account is also charged 1% a month for the term of the credit. The finance company advances 75% of the amount of the accounts. If the accounts run for a month, the cost is 1½%, or 18% a year, on the amount purchased. As the advance was only on 75% of the face amount of the account and the charges were on 100% the rate of interest is 24% a year. There are several different bases used to compute the charges but the average rate amounts to about 18 to 24% a year.

COST OF ASSIGNED ACCOUNTS COMPARED WITH DISCOUNTS.—Representatives of finance companies point out that the cost of financing by assigning accounts is less than by allowing cash discounts. They compare costs as follows:

Where the terms are 2/10 or 30 days net on an account of $1,000, the discount equals $20.00 for 20 days.

When the account is assigned the costs are:

Service charge	$ 5.00
Interest 1/30 of 1% per day on $1,000	10.00
	$15.00

Assignor receives an advance of 75% of $1,000 or $750 when goods are sold and the balance less costs when paid by the customer.

The comparison of the cost of financing by assigning accounts receivable with the cost of allowing cash discounts is not altogether fair for the following reasons:

1. When the discounts are taken the seller is sure of his money.
2. If discounts are not taken and the accounts are sold, the merchant not only pays for the advance he receives, but he must repay the advance if the debtor fails or for any reason does not pay.

FINANCING INSTALMENT SALES.—Manufacturers or dealers who sell household furniture on the instalment plan generally receive a percentage of the purchase price (usually about 10%) down and an agreement for the payment of the balance in periodic instalments. This agreement, or contract, may be sold to a discount company which generally advances about 80% of the unpaid balance to the dealer, 10% being retained as a commission and 10% as a reserve. The reserve is returned to the dealer when the instalments are all paid. The dealer must guarantee the contracts. The cost of capital secured in this manner is about 20% a year. This would mean that the dealer would be paying a very heavy price for his capital were it not for the fact that he generally adds this charge to the selling price of his article, in which case the interest on the commission and reserve is the only cost of a quick realization of his profits. In some cases the credit companies allow interest on the reserve, but generally they do not.

FINANCING AUTOMOBILE SALES.—The financing of automobile sales is carried on under two plans:

1. **The wholesale plan** calls for payment by the dealer to the manufacturer of a portion, generally about 15%, of the wholesale price of the cars and the acceptance of a time draft drawn on him by the manufacturer for the balance. The credit company will purchase this time draft for about 90% of its face value, the balance less a commission being returned to the manufacturer when the draft is paid. In setting the price of the cars to the dealer, the manufacturer

includes the commission of the discount company. The **security given the discount company** is a lien on the cars, effected by means of a trust receipt from the dealer. The latter must store the car and remit the proceeds of its sale to the discount company which holds the time draft.

2. **The retail plan** is an agreement between the dealer and the discount company. The dealer sells the car to the customer who pays a percentage of the price down and tenders the dealer a series of instalment notes for the balance. The discount company buys these notes from the dealer, paying from 80 to 100% of their face, less its charges. As security, the discount company receives a chattel mortgage, lease, or conditional sale agreement on the cars, the particular legal form depending upon whether or not the law of the state where the sale is made allows the discount company to retain full title to the car. The dealer usually has to endorse the notes and warrant the truth of the customer's statement of his financial condition. The cost of this method of securing capital varies from 15 to 30% a year, according to the value of the car, the use to which it is put, the time the notes are to run and similar conditions. The dealer usually includes this amount in the price of the car.

ADVANTAGES OF USING FINANCE COMPANIES.—The advantages of using the facilities offered by finance companies may be summarized as follows:

1. A concern without adequate credit facilities at its bank or in the open market may obtain **additional working capital** through finance companies.

2. An active and profitable concern which has more business than it can handle on its own capital, and which has no other more economical sources of credit available, must turn to the finance companies for additional working capital. The costs may be high, nevertheless the profits of the increased business may be large enough to warrant the payment of such charges.

3. **Bankers will not finance instalment sales** on account of the risk and the varied details involved. As banks are not equipped to handle such business, instalment dealers are compelled to use finance companies.

4. Bankers generally confine their operations to short term loans. If borrowers must extend **long terms of credits** to their customers the banks sometimes hesitate to extend credit, whereas the finance companies often extend loans to such borrowers.

DISADVANTAGES OF USING FINANCE COMPANIES.—The disadvantages of using finance companies may be summarized as follows:

1. **The cost** is very high. In addition to the interest charges there are service and supplemental charges, among which are the salaries and expenses of the finance companies' auditors during their periodical inspections.

2. Bank and commercial credit may be injured. Banks and creditors often look upon this method of financing by a merchant as a sign of weakness and as a **reflection upon the credit of the business.**

3. Financing through finance companies often has a tendency to tempt the owner of a business to deceive his creditors. Concerns which hypothecate accounts do not as a rule care to have it known that they are compelled to resort to such financing and generally make every effort to conceal the fact from creditors. Receiving advances on accounts as soon as the bills are sent out also has a tendency to make the seller careless as to his credit risk, and he often loses sight of the fact that unpaid or uncollectible accounts must be made good to the finance company.

THE PLACE OF FINANCE COMPANIES.—The various types of legitimate finance companies have a place in the financial structure of the community. Their use is proper and appropriate under certain conditions. The service they

render is at times indispensable although expensive. The ordinary banking facilities and open-market borrowings are not available for certain forms of financing which have become necessary through the development of the installment payment feature in many lines of trade. Likewise new businesses and those which cannot obtain sufficient bank loans to furnish them with adequate working capital must have some other recourse for loans. Out of this situation the finance companies have developed. But there should be no concealment from customers nor from creditors on the part of borrowers. The difficulties of concealment frequently lead to fraud by borrowers. This fact has given rise to severe criticism of finance companies.

Federal Reserve System

DEVELOPMENT OF SYSTEM.—Until the Civil War with the exception of the First and Second United States Banks, banking was conducted under the laws and practices of the several states. In order to provide a uniform and safe banknote currency and to afford fiscal agencies for the government, the **National Banking Act** was passed in 1863. Defects soon appeared, but these were mostly of a technical nature and were remedied by a revision of the act in 1864 and by subsequent amendments. The national banking system was such an improvement over the systems of banking which had existed in many of the southern and western states that changes of a thoroughgoing nature were not considered necessary.

The panic of 1893, the first serious one since the United States had resumed specie payments in 1879, revealed some of the weaknesses of the national banking system and the panic of 1907 aroused the country to the need of a decided change in our banking methods. In 1908 Congress passed the **Aldrich-Vreeland Act,** a confessedly temporary measure, but which provided for an emergency currency to be issued during panics and which also brought about the appointment of the National Monetary Commission to make a thorough study of the banking problem. After much investigation, discussion and criticism the movement for banking reform developed rapidly and in December, 1913, the **Federal Reserve Act** was enacted.

FEDERAL RESERVE DISTRICTS.—In furtherance of the provisions of the act the United States was divided into twelve reserve districts (Fig. 9), which was done on a commercial and industrial rather than a geographical basis. Each district has its own Federal Reserve bank with such branches as may be needed to furnish adequate banking facilities for the member banks. Other particulars of the Federal Reserve districts, such as their size, the location of the reserve banks, and branches, their paid-in capital and surplus, is indicated by the tabulation on page 1263.

CAPITAL OF FEDERAL RESERVE BANKS.—The capital stock of the Federal Reserve banks is owned entirely by the member banks of the district. Each member bank subscribes a sum equal to 6% **of its paid-up capital and surplus,** and when a bank already a member increases its capitalization or surplus it must at the same time increase its subscription. Half this subscription is payable in one immediate payment and the rest at the call of the Federal Reserve Board. When a bank reduces its capital and surplus or withdraws from the system, it is refunded a portion or the whole of its investment. On the paid-in stock, the member banks receive **dividends** at the rate of 6% per annum which are cumulative. **Excess net earnings** of the reserve banks are carried to surplus until this equals 100% of the subscribed capital, after which

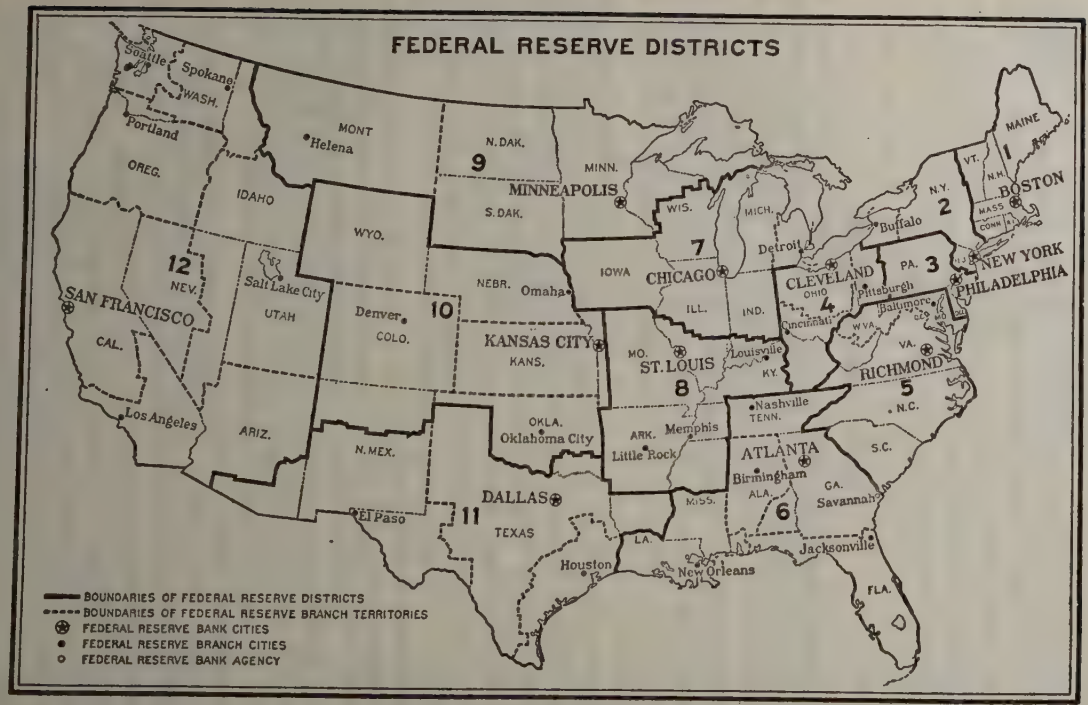

FIG. 9. Federal Reserve Districts

Size of Federal Reserve Districts

Dist.	Location of Reserve Banks	Branches	No. of Member Banks	Territory in Square Miles	Capital of Federal Reserve Banks	Surplus of Federal Reserve Banks
					(000 omitted)	(000 omitted)
1	Boston	None	424	66,465	$ 7,532	$12,351
2	New York	Buffalo	835	49,170	24,677	51,308
3	Philadelphia	None	722	39,865	8,340	13,069
4	Cleveland	Pittsburgh, Cincinnati	877	183,995	10,162	13,712
5	Richmond	Baltimore	627	173,818	4,876	8,067
6	Atlanta	New Orleans, Jacksonville, Birmingham, Nashville	525	233,860	3,841	7,050
7	Chicago	Detroit	1,427	176,940	13,490	23,917
8	St. Louis	Louisville, Memphis, Little Rock	624	146,474	4,266	5,884
9	Minneapolis	Helena	940	437,930	3,294	5,178
10	Kansas City	Omaha, Denver, Oklahoma City	1,122	509,649	4,314	8,395
11	Dallas	El Paso, Houston	849	404,826	3,821	4,152
12	San Francisco	Seattle, Portland, Spokane, Salt Lake City, Los Angeles	802	693,658	6,395	11,662
	TOTAL		9,774	3,116,650	$95,008	$164,745

90% goes to the United States government and 10% to surplus. Up to January 1, 1925, the reserve banks had turned over $139,000,000 to the government.

MEMBERSHIP IN FEDERAL RESERVE SYSTEM.—**National banks** must join the Federal Reserve System or surrender their charters. Incorporated state banks and trust companies may become members if they so desire. On April 6, 1925, there were 9,531 member banks of which 8,010 were national and 1,521 were state banks. The total resources of all member banks amounts to $40,000,000,000. The law provides that **state institutions** may become member banks and not lose their rights under the state charters. They must meet the same unimpaired paid-up capital requirements of national banks, excepting that they may become members if their capital amounts to only 60% of the capital requirements of national banks provided that the deficiency is made up within five years. National banks in cities of 3,000 people or less must have a capital of $25,000; in cities of from 3,001 to 6,000, a capital of $50,000; in cities of from 6,001 to 50,000 a capital of $100,000; in cities with more than 50,000 people a capital of $200,000. State banks must subscribe to the capital stock of the district banks, maintain the reserves required by the act, make the same reports, and be subject to similar examinations.

Upon becoming members of the Federal Reserve System state banks must conform to the laws imposed upon national banks prohibiting them from **lending on or purchasing their own stock,** and to those laws relating to the **withdrawal or impairment of their capital** and the **payment of unearned dividends.** Their officers and employees become subject to the national bank statutes covering penal offenses. They are required to present to the Federal Reserve banks reports of their condition and of dividends paid. They are subject to **examinations** by examiners selected or approved by the board of the reserve bank although the reserve bank may accept the examinations made by the state authorities.

ADVANTAGES OF MEMBERSHIP.—Some of the reasons prompting a state institution to join the system are:

1. It may retain its state charter and state statutory powers, and in addition enjoy the advantages of the Reserve System.
2. It benefits by the **par collection system,** in the easy transfer of funds by draft or telegraph and the shipment of funds without cost.
3. It may borrow from the reserve bank or **rediscount** at low rates and with more certainty of accommodation than from its correspondents, particularly in times of stress.
4. It may carry with safety substantially **lower reserves,** and invest excess in earning assets.
5. Membership tends to satisfy the moral obligation to contribute to the strength and unity of the banking system, particularly in time of war.
6. It acquires the right of receiving **postal savings and other federal governmental deposits.**
7. It gains the **prestige** of examinations made under the supervision of the federal government.
8. It gains the **advertising value of membership** in the system.
9. It may obtain **better prices for its own acceptances** from the reserve banks.
10. It has the benefit of **special services** which the Federal Reserve banks may develop for their member banks such as purchasing and caring for commercial paper, clearing out-of-town checks, etc.

DISADVANTAGES OF MEMBERSHIP.—The principal disadvantages of membership to state banks are:

1. The **loss of interest on the Reserve balances** carried with the Federal Reserve banks.

2. The **loss of collection and exchange profits.** Non-member banks are able in some cases to make collections and exchange charges which as member banks they cannot.

3. Expense of the **additional examinations** and reports required.

4. **Limitations on individual loans.** Under the Federal Reserve System national banks are limited in their loans to any one concern to 10% of the bank's capital and surplus, while some states allow their banks to make such loans to 25% of their capital and surplus.

State banks in the Reserve System may with limitations retain their charter and statutory rights. Their individual loans over 10% of their capital and surplus are not eligible for rediscount.

FEDERAL RESERVE BOARD.—The Federal Reserve Board, with its offices in Washington, co-ordinates and controls the whole Reserve System. This Board consists of **eight members.** The Secretary of the Treasury and the Comptroller of the Currency are members ex-officio. The six others are appointed by the President by and with the advice and consent of the Senate for terms of 10 years each. Not more than one member of the board can come from a single reserve district. No member of the board may be an officer, director, or stockholder of any bank. The President is empowered to name one of the six appointed members as **"governor"** who is the chief operating officer and in the absence of the Secretary of the Treasury acts as chairman at meetings of the Board.

The Board is responsible for the success of the System and is clothed with such important **powers as:**

1. To examine the Federal Reserve banks and member banks, and to require weekly statements from the reserve banks.
2. To permit or, on the affirmative vote of at least five members of the Board, to require, Federal Reserve banks to **rediscount the discounted paper of other Federal Reserve banks** at rates fixed by the board. Inter-district borrowings were carried on to a very large extent from 1919 to 1921, when the reserve ratios of some of the reserve banks was very low.
3. To **suspend reserve requirements** for limited times under certain conditions.
4. To supervise and regulate, through the Comptroller of the Currency, the **issue and retirement of Federal Reserve notes.**
5. To add to the number of cities classified as reserve and central reserve cities, or to reclassify them, or to terminate their designation as such. Thus St. Louis in 1922 was reclassified as a reserve city. Prior to that time it had been a central reserve city.
6. To suspend or remove any officer or director of any Federal Reserve bank.
7. To require the writing off of doubtful or worthless assets upon the books and balance sheets of Federal Reserve banks.
8. To suspend, for violations of law, the operations of any Federal Reserve bank, to take possession of it, administer it during suspension, and when deemed advisable, to liquidate or reorganize it.
9. To require bonds of Federal Reserve agents; to make regulations for the safeguarding of all collateral bonds, Federal Reserve notes, money, etc.; to prepare rules and regulations for the conduct of all

business required under the law; and to employ such attorneys, experts, etc., as may be deemed necessary to the conduct of the Board.

10. To permit or compel Federal Reserve banks to **establish branches** within their districts, and to permit them to establish branches, agencies or correspondents abroad or in our insular possessions, and to authorize member banks to establish branches abroad.
11. To require Federal Reserve banks to buy from national banks at par the 2% United States bonds bearing the circulation privilege offered by them for sale.
12. To readjust Federal Reserve districts.
13. To assess the expenses of the Board upon the Federal Reserve banks.
14. To define the character of **paper eligible for discount** for member banks, and prescribe rules and regulations as to rediscounting and open-market operations.
15. To review and determine the **rates of discount** fixed by the Federal Reserve banks.
16. To act as a **clearing house for the Federal Reserve banks** and to require the reserve banks to act as clearing houses for member banks.

The **administrative duties** of the Board consist of the approving of discount rates, granting power to member banks to accept bills drawn upon them up to 100% of their capital and surplus, the preparation of reports, determination of salaries, passing on increases and decreases of capital stock of the reserve banks, and so forth.

COMPTROLLER OF THE CURRENCY.—The **powers and duties** of the Comptroller's office as they have developed under the national bank laws and as they exist under the Reserve Act are, in part, as follows:

1. To determine whether an organizing national bank has or has not satisfied the conditions prerequisite to issuing a certificate authorizing it to commence business; to issue such certificates or withhold them for good cause; to determine the maximum and minimum capitalization of a national bank; to issue permits to increase or decrease the capital stock of such banks; to allow it to merge with other banks; to extend charters; to approve the name or change of name of a bank; to require and file oaths of directors; and the like.
2. To take possession of defaulting national banks, appoint receivers, liquidate the banks, cancel their notes, and pay depositors.
3. To care for the issue, redemption, security, withdrawal, and cancellation of national bank notes. This includes the engraving of plates and the making of dies and the custody of same; the printing of new notes and the custody of new and old notes; furnishing notes to banks; issuing new notes for those worn or mutilated; calculating and watching the 5% redemption fund; requiring deposits of bonds and increases of such deposits if values fall; examining bonds, notes, dies, etc.; transferring these bonds for owners; redeeming notes, etc.
4. To appoint examiners and conduct examinations of all national banks and of all banks in the District of Columbia.
5. To report to Congress annually the condition of the national banks, and of state banks, banking companies and savings banks.

FEDERAL ADVISORY COUNCIL.—The Federal Advisory Council was established by the Reserve Act as a means of voicing the **banking opinion of the country** and of rendering advice to the Federal Reserve Board. It is composed of a member from each reserve district selected by the board of directors of the

serve bank of the district. The meetings of the Council are held at Washington at least four times each year and oftener if called by the Federal Reserve oard. The Council may call such additional meetings in Washington or elsewhere as it deems necessary, may elect its own officers and adopt its own methods of procedure. As its name indicates, it acts in an advisory or consultative apacity.

MANAGEMENT OF FEDERAL RESERVE BANKS.—Each Federal Reserve bank is managed by a **board of directors** consisting of nine members. The membership of the board is divided into three equal groups known as class A, class B, and class C directors. **Class A directors** are chosen by and are representatives of the stockholding member banks. **Class B directors** are persons actively engaged in some commercial, agricultural and industrial pursuit in the Federal Reserve district of the bank. They are chosen by member banks.

Class C directors are selected by the Federal Reserve Board and are in effect the representatives of the government. One of these is designated by the Federal Reserve Board as the **Federal Reserve agent,** who is chairman of the local board of directors and in charge of the auditing, note issues, member bank relations, bank examination and statistics department. The board of directors elects the **governor of a Federal Reserve bank,** who is in charge of the operating departments. He is not a member of the board.

FUNCTIONS OF FEDERAL RESERVE BANKS.—The functions of the Federal Reserve banks may be summarized as follows:

1. They hold the **reserves** which member banks are required to maintain against their own deposits.
2. They **advance funds** to member banks upon the security of government bonds and **rediscount such paper** as they may possess which is eligible.
3. They provide an **elastic bank-note currency** for the country which fluctuates with business and trade needs.
4. They provide facilities for the **transfer of funds** and for the **clearance of checks** for members.
5. They act as **government depositaries** and fiscal agents.
6. They assist in the **financing of foreign trade** and may establish **foreign branches.**
7. They issue bulletins on banking and business conditions.

A Federal Reserve bank renders practically the same service for banks as they render for their customers. It receives money on deposit from and loans to its members. Every member bank is obliged by law to keep on deposit with its Federal Reserve bank funds to a certain proportion of the deposits it has received from its customers. This is called a "reserve," and as the Federal Reserve banks keep the reserves of their members, they are called "Reserve" banks. At times member banks borrow from their Federal Reserve banks just as individuals borrow from their own bank.

A RESERVOIR OF CREDIT.—The Federal Reserve banks may be thought of as a system of twelve reservoirs, each of which serves the needs of the member banks in its own district. In each of these reservoirs credit is stored up and supplied to the member banks, as the need arises, and through them to their customers. Member banks may borrow to meet the **seasonal needs** of their customers, such as arise at the crop-sowing period, or may borrow in order to assist their customers in **periods of panic or depression.** The member banks deposit in the Federal Reserve banks most of the gold they formerly kept in their own vaults and some of the money they used to keep on deposit with other

banks. It is the gold which Federal Reserve banks acquire in this and other ways that gives them the ability to make loans and issue bank notes.

FEDERAL RESERVE BANK AND MEMBER BANK RESERVES.—Each Federal Reserve bank must maintain a reserve in gold or lawful money of not less than **35% against its deposits,** and a reserve of gold (including gold certificates) of not less than **40% against its Federal Reserve notes** in actual circulation. Prior to the enactment of the Federal Reserve Act the reserves of national banks had been carried either in their own vaults or as deposit accounts with reserve city and central reserve city banks. The object of the Act was to concentrate these reserves in order to make them more effective and to employ them for more strictly commercial purposes. Under the Act every member **country bank** keeps a reserve balance with its federal reserve bank of 7% against its demand deposits; a **bank in a reserve city,** a reserve of 10%; and a bank in a central reserve city, a reserve of 13%. On **time deposits** all classes of banks maintain a reserve of 3%. Under these percentages the amount of reserve which must be held is less than originally prevailed. But as the reserves are concentrated and as funds may be quickly borrowed from the reserve banks, it is not necessary for member banks to keep on hand large amounts for emergency. Many states now permit state member banks to keep reserves in accordance with the provisions of the Federal Reserve Act.

REDISCOUNT FUNCTION OF RESERVE BANKS.—Certain of the promissory notes and acceptances held in the portfolio of banks may be rediscounted with the Federal Reserve banks. This gives to such commercial paper the qualities of a **secondary reserve.** Member banks resdicount when they are in need of funds to meet their customers' demands for additional credit or to meet withdrawals of deposits.

A Federal Reserve bank may discount for any of its member banks any notes, draft, or bill of exchange provided:

1. It has a maturity at the time of discount of not more than 90 days, exclusive of days of grace; but if drawn or issued for agricultural purposes or based on livestock, it may have a maturity of not more than 9 months. Nine months' agricultural paper may be rediscounted for a Federal Intermediate Credit bank provided it does not bear the endorsement of a non-member state bank or trust company which is eligible for membership.

2. It is a bill of exchange payable at sight or on demand drawn to finance the shipment of readily marketable agricultural products.

3. It arose out of actual commercial transactions; that is, it must be a note, draft, or bill of exchange, which has been issued or drawn for agricultural, industrial, or commercial purposes or the proceeds of which have been used or are to be used for such purposes.

4. It was not issued for carrying or trading in stocks, bonds, or other investment securities, except bonds and notes of the government of the United States.

5. The aggregate of notes, drafts, and bills bearing the signature or endorsement of any one borrower rediscounted for any one member bank shall at no time exceed 10% of the unimpaired capital and surplus of such bank; but this restriction shall not apply to the discount of bills of exchange, drawn in good faith against actually existing values.

6. It is endorsed by a member bank.

7. A Federal Reserve bank may also discount for a member bank bankers' acceptances indorsed by at least one member bank and running for not more than 90 days, providing they grow out of transactions concerned with the importation and exportation of goods, or providing they grow out of the domestic

pment of goods, and shipping documents are attached. Of like purpose is power to purchase bills drawn by foreign bankers on member banks for the rpose of furnishing dollar exchange.

The object of these provisions is to limit the privilege to operations connected th the process of immediate production, manufacture, and marketing of ods. The Federal Reserve Board carefully defines the various kinds of com-rcial paper as, (1) promissory notes, (2) bills of exchange and trade accept-ces, or (3) 9 months' agricultural paper; and for these different classes of per determine the rates of discount it will charge.

Not only may a reserve bank rediscount the commercial paper presented its member banks, but it may **loan directly** to those banks. Such loans ust have maturities not exceeding 15 days though they may be renewed. he note of the borrowing bank must be secured by commercial paper eligible r rediscount, or by government securities.

CONTROL OF REDISCOUNTS.—The reserve banks endeavor to control e borrowings of member banks so that they will apply for funds only to meet gitimate demands for credit. The Federal Reserve banks act independently, it under the approval of the Federal Reserve Board, in establishing rates the different classes of paper which they discount for member banks. These tes usually rule higher than rates on bankers' acceptances and Treasury rtificates of indebtedness but lower than rates on commercial paper and on ll of credit loans. The rediscount rate in August 1925, at the Federal Reserve nk of New York was 3½% while the rate on prime 4–6 months' commercial per, as well as the call loan renewal rate, ruled at 4%.

INTER-DISTRICT BORROWING.—A reserve bank which has extended edit up to the limit allowed by its reserves may replenish its reserves by **discounting with other reserve banks.** In this way the resources of all serve banks are made available to all member banks throughout the country. his feature tends to equalize credit conditions throughout the country. Credit t needed in one section is promptly made available wherever needed.

OPEN-MARKET OPERATIONS.—In addition to their dealings with member nks, the Federal Reserve banks may engage in certain open-market operations ith member or non-member banks, corporations, firms and individuals. The ederal Reserve banks may buy and sell—

1. At home and abroad cable transfers, bankers' and trade acceptances of the kinds and maturities made eligible for rediscount with or without the endorsement of a member bank.
2. Through foreign correspondents, bills of exchange which arise from actual commercial operations, which mature within 90 days, whether these be drawn in dollars or some foreign currency.
3. United States obligations and municipal warrants.
4. When the public interest so requires, acceptances of the Federal Intermediate Credit banks and of the National Agricultural Credit corporations.
5. May deal in gold coin and bullion.

Through its open-market powers the reserve banks may invest their resources nen rediscounting is slight in order to meet their operating expenses; may sist in the financing of the foreign trade of the United States and in the building of a discount market in New York City; may aid foreign nations to establish e gold standard as was done in the case of England; may check inflation and eculation by mopping up surplus funds in the market. The open-market ovisions are very necessary and important in enabling the reserve banks to

influence credit conditions. As the following table shows, open-market purchases were more important than rediscounts in 1916, and have increased in relative importance in recent years. During and immediately following the war, rediscounts by member banks exceeded open-market purchases.

The Discount and Open-Market Operations of the Federal Reserve Banks

(In Millions of Dollars)

Year	Bills Discounted for Member Banks	Open-Market Operations		
		Acceptances Purchased	United States Securities Purchased	Municipal Warrants Purchased
1914	$ 21	.....	$ 0.2	$ 0.7
1915	161	$ 65	16	66
1916	208	386	57	91
1917	8,969	1,078	89	17
1918	39,753	1,810	5,850	2
1919	79,174	2,825	4,738	.....
1920	85,321	3,218	7,988	.....
1921	57,759	1,534	3,847	1
1922	22,083	1,955	4,506	0.2
1923	38,380	2,547	3,501	0.5
1924	15,419	2,172	2,257	15

ISSUE OF FEDERAL RESERVE NOTES.—The Act provides for the issue of Federal Reserve notes by the Federal Reserve Board through the Federal Reserve Agent to the Federal Reserve banks in exchange for an equal amount of collateral in the form of notes, drafts, bills of exchange, acceptances, bankers' acceptances, gold and gold certificates. If the volume of loans made by member banks is large and the latter seek rediscounts at the reserve banks and wish the proceeds in the form of money, a large volume of notes will be issued. If commerce and industry decline, necessitating a less demand for rediscounts, the volume of notes will shrink. When a business transaction is closed and the debtor of the member bank settles this obligation, the commercial paper underlying the Federal Reserve notes is liquidated and the reserve notes are withdrawn from circulation.

The **expansion and contraction of the** Federal Reserve note circulation to meet the trade and business needs of the country has introduced the quality of elasticity into the currency system of the United States.

CHECK COLLECTIONS AND TRANSFER OF FUNDS.—Check collection in the United States had long been unorganized and was each year imposing on business an increasing burden of expense and inconvenience. The twelve Federal Reserve banks and their branches, with a central jointly owned gold fund in Washington for the settlement of accounts between districts, forms today an effective organization for the transfer of funds about the country and the rapid, direct and economical routing and collection of checks. The **transfer of funds by telegraphic advice and book settlement** has replaced the expensive and dangerous shipments and reshipments of currency and coin by express. The Federal Reserve check collection system cut in half the average time required to collect checks, and greatly reduced the cost. Under the old system of collecting out-of-town checks the correspondent banks in reserve and central reserve cities were utilized for the purpose, the service being performed by these banks

partial compensation for the use of the reserve and other funds deposited th them by country banks.

Under a ruling of the Federal Reserve Board every Federal Reserve bank is uired to exercise the functions of a **clearing house for its members** and for tain qualified non-member banks, known as "clearing member banks." nder this system each Federal Reserve bank is to receive at par (without llection charges) checks drawn on all member and clearing member banks, d on all other non-member banks which agree to remit at par through the deral Reserve bank of their district.

For instance, a member bank in New York City which receives a check awn on a bank in Albany, N. Y., accepts the check from its customer at par d sends it to the Federal Reserve Bank of New York, which in turn sends it rectly to the member bank in Albany for collection. Since all banks within a ven district have deposit accounts with the Federal Reserve banks, the counting may be taken care of merely by debiting and crediting the accounts member banks at the Federal Reserve bank. The proceeds of the check, owever, are not made available for withdrawal by the New York bank or unted as a part of its reserve until sufficient time has elapsed to permit it to actually collected and the funds returned to the Federal Reserve bank. The mount of time that must elapse before it can be counted as reserve varies with e distance of the bank upon which the check is drawn from the Federal eserve bank which is collecting it.

Every Federal Reserve bank receives also at par checks drawn upon any bank ithin its district whose checks can be collected at par, when presented by serve banks outside the district. That is to say, if a check drawn on a hicago bank is cashed by a member bank in San Francisco it will be sent to e Federal Reserve Bank of San Francisco, and in turn to the Federal Reserve ank of Chicago, where it will be received at par and be collected from the ank upon which it is drawn. Inter-district clearings are effected through the old settlement fund which is under the supervision of the Federal Reserve oard in Washington.

GOLD SETTLEMENT FUND.—The Federal Reserve Act requires each ederal Reserve bank to forward to the Treasury at Washington, for credit to e account of the gold settlement fund, under the administration of the Federal eserve Board, $1,000,000 in gold or gold certificates, plus an additional amount qual to its indebtedness at the moment to the other Federal Reserve banks. t 10:00 A. M., eastern standard time, each bank sends a telegram to the Federal eserve Board stating the amount it has credited to other Federal Reserve anks during the preceding day. Just as the Federal Reserve Bank of Chicago ow effects the settlement of the daily balances of Chicago clearing house banks y increasing or decreasing the deposit accounts of each bank, as determined y the record of the daily clearings, so the Federal Reserve Board adds to or ubtracts from the account of each Federal Reserve bank in the gold settlement und. In case the balance of any Federal Reserve bank falls below $1,000,000, must be immediately replenished by the sending of additional gold to the reasury. The balance thus maintained by each Federal Reserve bank is unted as a **part of its legal reserve against deposits.** The establishment of is gold settlement fund has rendered almost negligible the volume of money at needs to be shipped from one section of the country to another.

RELATION OF FEDERAL RESERVE BANKS TO THE GOVERNMENT.—ederal Reserve banks are **not directly managed or controlled by the govern-ent,** but the **relationship** of the government to the new system is **close and**

intimate. The Federal Reserve Board is appointed by the President, by and with the advice and consent of the Senate; the Federal Reserve Board has a voice in selecting one-third of the board of directors for each of the twelve district banks; the federal reserve notes are direct obligations of the United States; a certain portion of the excess profits of the bank must be paid to the government as a franchise tax, and the reserve banks must perform for the government certain fiscal agency operations. On the other hand, the several regional banks are not under the direct control of the government, for each board of directors can, subject to the supervisory powers of the Federal Reserve Board, manage its own affairs. The chairman of the board of directors of each reserve bank is, however, appointed by the Federal Reserve Board. As fiscal agents of the federal government, the Federal Reserve banks take charge of the placing of government loans and may hold government deposits.

REPORTS ON BUSINESS CONDITIONS.—The Federal Reserve Board issues monthly the **Federal Reserve Bulletin** which deals with the developments in business finance and commerce, and gives reliable statistics indicating the current trend of business. In a similar manner each reserve bank keeps in close touch with business conditions and publishes monthly bulletins for free distribution.

SERVICES RENDERED THE BUSINESS COMMUNITY.—While the Federal Reserve banks are thought of usually as bankers' banks and as fiscal agents for the government, they do directly and indirectly render many invaluable services to business men. They stand ready to purchase bankers' acceptances from exporters and importers and others engaged in foreign and domestic trade. Through their efforts nearly 90% of the banks of the country remit at par, thereby lifting the toll which was formerly imposed on domestic trade. Extreme seasonal changes in interest rates and money panics have been eliminated. The money market has been stabilized. A beginning has been made toward the elimination of the ups and downs in business, toward the mitigation of the amplitude in the business cycle. Perhaps of more importance than all these is that their presence has introduced a **feeling of confidence in banking and business circles.** The feeling of uncertainty, so prevalent prior to the passage of the Reserve Act, has gone.

THE FEDERAL RESERVE STATEMENT.—On Friday of each week there are issued by the Federal Reserve Board separate statements as of the proceeding Wednesday for each of the twelve reserve banks and a combined statement for the entire system. The assets and liabilities are set forth in such detail as to enable those who are interested to follow very closely the operations of the Reserve System. The statement of June 17, 1925, together with an explanation of the various items is given in the following tabulation:

Resources or Assets

1. Gold with Federal Reserve Agents..... $1,500,333,000
   This is the gold lodged by the reserve banks as **partial collateral** against the reserve notes received from the reserve agent. The reserve agent is appointed by the Federal Reserve Board to act as the chairman of the board of directors of a reserve bank. He represents the United States government and inasmuch as reserve notes are obligations of the government, he is entrusted with the duty of holding the collateral against which they are issued.

2. Gold Redemption Fund with United States Treasury..... $ 38,062,000
The Reserve Act requires that an amount in gold equal to at least 5% of the reserve notes which are not entirely covered by gold, be maintained by the reserve banks with the United States Treasury to redeem such of the notes as are presented at Washington for redemption. Since one reserve bank may not issue the notes of another reserve bank which have fallen into its possession, excepting upon the payment of a 10% tax, such notes are immediately sent for redemption, either directly to the issuing reserve bank or to the Treasury Department, in which case they are redeemed out of this 5% fund. This fund may count as part of the gold reserve against reserve notes.

3. Gold Held Exclusively against Federal Reserve Notes..... $1,538,395,000
This is a total of items 1 and 2. It will be noted that this amount is only approximately $100,000,000 less than the amount of reserve notes in actual circulation. The reserve notes are virtually gold certificates.

4. Gold Settlement Fund with Federal Reserve Board..... $ 678,157,000
This is the fund held by the Reserve Board in trust for the reserve banks through which **clearings and transfers** are effected between the twelve banks. It may be counted as part of the 35% gold and lawful money reserve which must be held against the deposit liabilities of the reserve banks.

5. Gold and Gold Certificates held by the Reserve Banks.... $ 604,515,000
This is in the vaults of the reserve banks and is used to meet **withdrawals of cash,** etc. This as well as the next item may be counted as part of the 35% gold and lawful money reserve held against deposits.

6. Reserves Other than Gold..... $ 146,659,000
This includes lawful or legal tender money such as greenbacks, Treasury notes of 1890, and standard silver dollars.

7. Total Reserves..... $2,967,726,000
Items 1, 2, 4, 5 and 6.

8. Non-revenue Cash..... $ 54,613,000
This includes the money in the vaults of the reserve banks which does not possess the legal tender power, such as national bank notes and the notes of the other reserve banks awaiting redemption.

9. Bills Discounted:
Secured by United States Government Obligations..... $ 248,122,000
These for the most part represent the **15-day promissory notes** of member banks secured by government obligations.
Other Bills Discounted..... $ 193,842,000
These represent the **eligible paper** in the portfolio of member banks which they have rediscounted with the reserve banks. There is a strong seasonal movement

in this item, increasing as it does when member banks feel a pressure for funds during the crop moving period and the holiday trade.

10. Bills Bought in Open Market..... $ 246,083,000
These are the bankers' and trade acceptances (mostly bankers') which the reserve banks purchase in the open market. This item usually increases in the fall as the exports of raw materials move from the United States to Europe.

11. United States Securities Purchased..... $ 306,399,000
These are the United States bonds, Treasury notes and certificates of indebtedness purchased by the reserve banks. In purchasing these the twelve reserve banks **act as a unit** so that the credit policies adopted by one will not nullify those adopted by another. Purchases and sales are made with a view of stabilizing the money market and of checking inflation and speculation.

12. Foreign Loans on Gold..... $ 10,500,000
These are loans made to foreign banks entirely secured by earmarked gold held in the vaults of a central bank which happens to be one of the foreign correspondents of the reserve banks.

13. Other Earning Assets..... $ 2,250,000

14. Total Earning Assets..... $1,007,196,000
For the past several years this item has fluctuated about $1,000,000,000. A continuous investment at 4% of slightly more than $1,000,000,000 will enable the reserve banks to meet their expenses. Though they could easily do so, they should not invest a larger amount than this for such a policy would tend only to lower interest rates artificially and promote inflation. The reserve banks are **not profit-making institutions.** Their function is to act as a stabilizer of economic conditions.

15. Uncollected Items..... $ 811,856,000
These are the checks which are being collected through the reserve banks. This item is largely offset by "Deferred availability items" among the liabilities.

16. Bank Premises..... $ 60,162,000
Of this amount more than 50% is accounted for by the premises of the New York, Cleveland and Chicago Reserve Banks.

17. Other Resources..... $ 21,136,000

18. Total Resources..... $4,922,689,000

Liabilities

19. Capital Paid In..... $ 115,543,000
The capital stock is entirely owned by the member banks. This amount is 3% of the total capital and surplus of all member banks.

20. Surplus.....$ 217,837,000
The Federal Reserve banks are allowed to accumulate a surplus equal to 100% of their subscribed capital after which 90% of net earnings are turned over to the government and 10% is carried to surplus.

21. Federal Reserve Notes in Actual Circulation.....$1,643,047,000
At the present time the Federal Reserve notes form about **35% of the total amount of money in circulation** in the United States.

22. Deposits:
Member bank reserve account.....$2,212,772,000
These are the funds which member banks are required to keep on hand with the reserve banks as **reserve against their own deposit liability.**
Government.....$ 5,364,000
Deposits of the United States government.
Other.....$ 26,466,000
These represent deposits made by foreign central banks, by non-member clearing banks, etc.

23. Total Deposits.....$2,244,602,000

24. Deferred Availability Items.....$ 687,156,000
These are the checks in the process of collection through the reserve banks which will be credited as soon as collected to the deposit account of member and non-member clearing banks.

25. Other Liabilities.....$ 14,504,000

26. Total Liabilities.....$4,922,689,000

Reserve Ratio.—On this particular date the ratio of the total gold, gold certificates and legal tender money held by the reserve banks amounted to 76.3% of the total deposit and note liability combined. This ratio should be maintained at a fairly high figure, as the United States is acting today in a certain sense as the trustee of a large part of the world's monetary stock of gold which will be withdrawn and redistributed as Europe solves her economic and currency problems.

Important Items in the Statement.—The items which should be closely followed in this statement are **bills discounted, bills bought in open market, and U.S. government securities.** The first is an evidence of the member banks' need for funds. The second is an indication of the extent to which the discount market is forced to rely on the reserve banks. The third, which often moves inversely to the other two, reflects directly the credit policies of the reserve banks. Government securities are purchased and sold in order that prices and interest rates may be fairly stabilized and inflation and speculation checked.

SIGNIFICANCE OF THE RESERVE RATIOS.—As explained elsewhere, banks that are members of the Federal Reserve System must maintain their entire reserve with their respective reserve bank. **Money in their own vaults** does not constitute reserve funds. It must be on deposit with a reserve bank. As a rule member banks do not maintain deposits with the reserve bank in excess of those required by law. The excess is withdrawn and loaned on the call loan market or invested in bonds and commercial paper. On May 15, 1925, the 8,010 national banks had deposits with the reserve banks amounting to

$1,275,496,000, which was only $14,749,000 in excess of the amount required by law. Not only was it true on that particular date, but it is generally true, that banks in the United States pare down their reserves to the legal minimum. The minimum reserves as fixed by law became the actual reserves. Since this practice is the customary one, the reserve ratios of member banks have little significance.

There was a time when the reserves, especially the surplus reserves, of the New York Clearing House banks were followed closely as a barometer of credit and banking conditions. The surplus reserves constituted really the only available supply of unused credit in the United States. Now that the New York banks may easily and even profitably make up deficiencies in reserves by rediscounting with or borrowing from the Federal Reserve Bank, the reserves of the Clearing House banks are of little importance. At the present time the **reserve ratios really significant** are those of the Federal Reserve banks. The ratio of their gold reserves to their note and deposit liabilities is an indication of the amount of additional credit available for trade and production. As this ratio declines, the probability is strong that the bank rate will be raised; and as the ratio increases, that the bank rate will be lowered. The reserve ratios fluctuate with the demand for credit and forecast changes in the reserve bank rates. At the immediate moment the reserve ratio of the Federal Reserve banks is so very high (76.3%) that a considerable decline could take place without necessarily causing the bank rate to rise. Though it is significant, it does not possess the same importance as it did in 1920 when it was hovering just above the legal minimum.

SECTION 24

PROFIT-SHARING PLANS

DEFINITIONS.—The Encyclopedia Brittannica (eleventh edition) defines profit-sharing as follows:

"**Profit-sharing** (i.e., between employer and employee) is a method of remunerating labor under which the employees receive in addition to ordinary wages a share of the profit which the business realizes. The term is not infrequently used loosely to include many forms of addition to ordinary wages, such as bonus on output or quality, gain sharing and product bearing. Yet strictly, where an employee or group works for a share of the products, or is paid so much in addition to ordinary wages in proportion as the product exceeds a certain standard, in neither of these cases have we profit-sharing, for the net result of the business may be a large profit or a small one or a loss, and the employee is unaffected. In the same way if a workman is employed on the basis that if in doing a particular job he saves something out of a stipulated time or labor, or a stipulated amount of material, he shall receive in addition to ordinary wages a proportion of the value so saved, that is technically gain-sharing, not profit-sharing. Even where the bonus depends strictly on profit, it is not reckoned as profit-sharing if it is confined to the leading employees."

The British Board of Trade, in its report on "Profit-Sharing and Labor Copartnerships in the United Kingdom" (1912), defines "true profit-sharing" as follows:

"**Profit-sharing** is understood to involve an agreement between an employer and his work-people, under which the latter receive, in addition to their wages, a share, fixed beforehand, in the profits of the undertaking."

True profit-sharing plans, then, are agreements under which employers undertake to share their profits with some or all employees on a predetermined and definitely known basis, so that employees receive, in addition to their wages or salaries, compensation which varies with the profits of the business. Many so-called profit-sharing plans provide for compensation bearing no direct relation to the profits of the business, and so do not meet the full requirements of the above definitions. Such plans, for example, may provide for stock subscriptions at or below the market price, cash distributions on the basis of wages, production, length of service, or some other basis, or distributions in the form of gratuities. They have also been included in this section.

DEVELOPMENT OF THE PROFIT-SHARING IDEA.—Profit-sharing plans in the United States are of comparatively recent origin, although they have been in existence for many years in Europe. During the 19th century, there developed in this country a spirit of unrest among employees of many industrial concerns, the outcome of economic and social conditions. The growth of labor unions and the agitation caused by them brought to employers the necessity of attempting to meet the situation. Much thought was given to

welfare plans, personnel management and various forms of profit-sharing, and many plans were tried. Of the large number of so-called profit-sharing plans installed, many have failed and have been discontinued. Others have succeeded, and new ones have been installed. And while the experiments of employers have not brought uniform results, there is undoubtedly a growing interest in the subject.

ATTITUDE OF EMPLOYERS.—Among employers there is a **wide difference of opinion** as to the merits of profit-sharing. The National Civic Federation in 1919 made a study of the subject and reported the following reasons for and against the profit-sharing principle:

Favorable:

1. It promotes more continuous service.
2. It has made a 9% reduction in the cost of production.
3. It secures more regular attendance.
4. It builds up confidence.
5. It eliminates the rolling stones and encourages home building.
6. It is successful—never had a strike.
7. It enables the company to keep employees during the rush season.
8. It creates a better spirit among the workmen.
9. It keeps expenses down; salesmen work harder.
10. It tends to promote efficiency and stimulate endeavor.
11. It promotes regularity of employment.
12. It increases effectiveness and profits of the business.
13. It effects a noticeable increase in interest and loyalty on the part of those retaining their stock.
14. It produces a greater spirit of cooperation between employer and employee.
15. It is a great benefit in securing the cooperation of those in responsible positions.

Unfavorable:

1. Employees fail to grasp the significance of profit-sharing.
2. There is dissatisfaction on the part of employees when profits are small.
3. Employees count on bonus payments and make use of them in advance.
4. Employees prefer to have their wages increased instead of receiving a bonus.
5. Stock distributed to employees is often sold to outsiders.

ATTITUDE OF LABOR UNIONS.—Labor unions in general appear to be **opposed** to any form of profit-sharing. They contend that workers should receive fair wages and be allowed to look after their own interests; that money received under any plan represents only what should have been paid in wages; that gifts merely place workers under obligations and take away their opportunity for seeking increased wages to which they may be entitled; and that stock subscription plans are no better since dividends received on stock owned represent no additional compensation, but would be the same even if the stockholders were not employees.

The National Civic Federation, in its report on "Profit Sharing by American Employers," presents the attitude of trade unions toward profit-sharing as follows:

"So far as organized labor is concerned, it is generally opposed to all profit-sharing schemes. Theoretically, one would suppose that there could be no pos-

sible objection to the periodical cash distribution of a percentage of profits, and yet general criticisms on the part of the employees are:

That market wages are not paid where such cash distributions are made
That they prefer to have a fixed wage scale upon which they can count; and
That when such percentages of profits are received they are regarded as gifts, which place the workers under obligation to the employer and in a position in which they cannot ask for increase in wages or salaries to which they may be justly entitled.

"In relation to stock selling plans, some of the criticisms are:

That foremen will keep down the wages of the rank and file in order that the dividends on stock owned by the foremen may be higher;
That the aim of the company in selling stock is sometimes circumvented as in the case of the Northern Pacific Co., which experienced disappointment because the stock was sold to the employees at a low price and when it rose the employees promptly sold it instead of remaining participators and
That, although stock may be sold on the instalment plan, comparatively few in the rank and file can afford to take advantage of such opportunities;
Then there is the question of possible loss by a company in any given year and employees who are owners of stock are likely to become interested in watching the market and to cultivate the gambling instinct."

OBJECTS OF PROFIT-SHARING PLANS.—The chief objects of profit sharing plans may be summarized as follows:

1. Increased efficiency
2. Stability of labor
3. Cooperation
4. Continuous operation of business
5. Industrial peace

Increased Efficiency.—For the average employer who looks upon profit sharing as an incentive toward efficiency, the **most direct results** will perhaps be obtained among the managerial groups of employees or among employees whose individual efforts or results cannot be easily measured.

Stability of Labor.—Industrial executives realize the excessive cost of a large and rapid labor turnover. A shifting labor force is costly even among the lower grades which can be filled easily, but where specialized ability is required frequent changes in personnel are even more costly to an organization. Profit sharing plans are often used as a **means of reducing labor turnover** when other conditions, such as wages, salaries, working conditions and labor policies, are satisfactory.

The United States Bureau of Labor Statistics, in its report on "Profit Sharing in the United States" (Bulletin No. 208, page 170), states: "All the informants without exception were also of the opinion that the establishment of the plan had a tendency to reduce the percentage turnover of their working organization."

Cooperation.—Where cooperation is desired between employees and executives of different departments or branches, and particularly among inside salesmen and members of executive or managerial staffs, a sharing of the profits of the business as a whole should prove more effective than individual rewards in the way of bonuses or distributions of departmental premiums or profits.

Continuous Operation of Business.—Profit-sharing plans may be used as a means of continuing an established business when the owners wish to retire from active management without the withdrawal of their investment. The success of such an arrangement depends upon the type of profit-sharing plan adopted and also the managers selected. The profit and management sharing plans used by the Dennison Manufacturing Co., and the Maison Le Claire, are outstanding examples of such a continuance of an established business.

Industrial Peace.—Dr. Charles W. Eliot, President Emeritus of Harvard University, gives his concept of profit-sharing as "The Road Toward Industrial Peace":

"The arguments for and against profit-sharing take a wide range; and so do the experiments which are actually under way. Many of the experiments are so ill devised that they inevitably fail; and, on the other hand, some of those that succeed prove such valuable assets that their devisers conceal the nature and results of their experiments, lest their competitors imitate them. There is obviously no such thing as one best and uniformly applicable scheme of profit-sharing. Every individual factory should have its own scheme adapted to its own nature, history and surroundings; and so should every separate plant of a corporation or firm which maintains many scattered plants.

"Then, there are many industries to which profit-sharing cannot be applied at all, just as there are many to which the eight-hour day cannot be successfully applied, unless it be treated as merely an acceptable plan for raising wages. . . .

"Prudent advocates of profit-sharing never represent the method as applicable in all industries, or as the single cure-all for the industrial strife. They maintain that profit-sharing must always be associated with cooperative management, that is, with the effective sharing by the working people in the management and discipline of the works or shops, and also with complete accessibility of the accounts of the establishment for the elected representatives of the workers, whether members of the company's board of directors or merely auditors satisfactory to the employees. In other words, profit-sharing should be only one element in a scheme having three parts. The object to be attained in any hopeful reorganization of the machinery industries is a generous sharing of control and responsibility, and therefore of profits, when there are any, after wages and interest on borrowed money have been paid. Nothing short of that will give satisfaction to both parties in the present industrial strife, and nothing else ought to. To take together a long step on the road toward lasting peace employers and employees must be really partners, with like motives for diligence, the prevention of wastes, and the adoption of improvements. . . ."

FUNDAMENTAL PRINCIPLES FOR EFFECTIVE PROFIT-SHARING PLANS.—Although profit-sharing plans must be modified and adapted to meet the needs of each particular problem, there are certain principles which are fundamental in any plan.

Standard Wages.—An effective profit-sharing plan presupposes the payment of the prevailing rate of wages to the participants. The full market rate of wages must be guaranteed for ordinary service. In order to obtain further results in the way of special effort, cooperation, efficiency, attendance or continuity of service, it is necessary to offer some **incentive greater than ordinary wages.** That incentive may be supplied by some form of participation in profits, and the employer cannot expect to obtain important results through such profit-sharing unless the profits divided with employees represent something over and above the wages generally paid in the industry.

Definiteness of Plan.—A profit-sharing plan should be definitely set forth, preferably in the **form of an agreement,** so that its conditions and terms may be known and clearly understood. Any plan which is indefinite or dependent upon the periodical decision of the employer as to the profits to be distributed, will not have the confidence of employees.

Adequacy of Profits Distributed.—It is essential to the effectiveness of a profit-sharing plan that the profits distributed provide an appreciable addition to wages under normal successful conditions. Although there is no percentage which would be universally applicable in the distribution of profits, experience appears to indicate that in order to hold the sustained interest and effort of employees, it is necessary that the share of profits distributed approximate a **minimum of 5% or 6% of the wages paid.**

Adaptability of Plan.—Since forms of profit-sharing are so limitless and so diverse in character, it is necessary that each plan be specifically designed to meet the purpose or purposes for which it is intended. A plan devised to promote efficiency will differ from one designed to increase length of service, and a plan designed to hold employees until the demands of a seasonal business are satisfied, will bear only slight resemblance to the latter. **Time of payment,** for example, will depend upon the purposes of the plan. To hold employees throughout a busy season, payments should come after the close of that season. To provide stability of labor, payments would be deferred, with the provision that the employee leaving before the date of payment sacrifice his share of the profits. Some plans provide for a qualifying period of from 6 months to 5 years (the ordinary period being 1 year) before employees become eligible for profit-sharing.

The **Sears, Roebuck plan** is pointed toward such a stabilization of labor. An employee is eligible to participate in profit-sharing after 1 year of service, but does not receive any benefits in the way of payments until 9 years thereafter. He may deposit each year, after the qualifying period of 1 year, 5% of his annual salary, not to exceed $150. The company contributes one-third of its net profits after deductions for dividends, this amount being credited to employees in proportion to their deposits during the previous year. At the end of 10 years an employee may withdraw the total amount standing to his credit, consisting of his savings, the share of profits contributed by the company, and accumulated interest. If the employee leaves before the expiration of the 10-year period, he may withdraw only his savings plus interest at 5%, compounded semi-annually. In the case of death of an employee, his estate receives the full amount contained in his account, and a woman employee who leaves after 5 years of service to be married, likewise receives full payment. The fund is managed by a board of five trustees, two being employees and three being officers or directors of the company. (See page 1298.)

Information Accessible to Employees.—It is essential that under any plan providing for profit distribution dependent upon earnings complete information be accessible to employees concerning those earnings. It is not perhaps necessary that the books be open to the scrutiny of individual participants in the plan, but a **complete and reliable report** should be available which will assure them that they are receiving the profit distributions to which they are entitled under the terms of the plan in operation.

EFFECTIVENESS OF PROFIT-SHARING PLANS—GENERAL ADVANTAGES AND DISADVANTAGES.—Prof. Ralph E. Heilman, Dean of the School of Commerce, Northwestern University, in an address before the Chicago

Chapter of the National Association of Cost Accountants, speaks of profit-sharing as follows:

"Viewing profit-sharing purely as an efficiency device, its effectiveness is in direct ratio to the rank of the participants, and it is in inverse ratio to the size or the number of the participating group. Let us analyze that statement just a moment. We say that the effectiveness of profit-sharing as an incentive, as a motive, as a stimulus for men, is in direct ratio to the responsibility, to the character of the job the man occupies. The higher the job, and the greater the responsibility, the more effective profit-sharing will be.

"In the first place, it is perfectly evident that in the case of men who are occupying positions of this character, their opportunity to exercise an important influence is very much greater than is that of the man who holds a job in the rank and file. The purchasing agent, by one shrewd purchase in the front office, in half an hour can exercise a more important influence on the year's total production than can a mechanic out in the shop in a year, regardless of how faithful and efficient he may be in the performance of his duties. In other words, the men who occupy the more important positions exercise a more important influence upon profit, and, therefore, it follows, that if you can get any additional incentive for them, it will be more profitable to do so. In the second place, those who occupy the more important responsibilities can see the relationship between their effort and profit very much more easily than the obscure employee down in the rank and file.

"Then, again, for those who occupy these more important positions, profit-sharing is likely to prove much more successful, because they are much more familiar with business vicissitudes, fluctuations and uncertainties than are the employees down in the rank and file. That is a tremendously important consideration, because if you have a profit-sharing scheme which includes all the rank and file, your plan may go along beautifully so long as you are earning good profits, but just as soon as the company strikes a lean year and the profits available for distribution are small or non-existent, antagonism and suspicion are aroused.

"But more important than any of these considerations is the fact that in the case of men occupying the upper positions of more importance, it is more difficult, generally speaking, to find any yard-stick by which you can measure their individual results. How will you find a system for these men occupying the more important positions by which you can definitely distinguish the contribution which that individual has made to the success of the business, or pay him a bonus accordingly? It can be done in some cases. The sales manager may be paid a bonus upon sales, but what yard-stick would you find, for example, for the controller, the auditor, the chief cost accountant, the employment manager, the man in charge of public relations, the publicity man, the advertising department? It simply cannot be done, and in the absence of any such individual yard-stick, and as a supplement to strengthen and reinforce the flat salary arrangement, profit-sharing frequently proves highly effective in motivating and energizing this group upon whose effort so largely depends the success of the business. It is for these reasons that I say profit-sharing is in direct ratio to the rank of the participants.

"I should not be misunderstood as saying that profit-sharing will never work with a large group of employees. It may. It is in operation in some such establishments, but I do maintain that if it is to be applied to the rank and file of wage-earners, it will work very much better in a comparatively small business establishment than it will in a large establishment where thousands of such employees of the rank and file are permitted to participate. Why? What is the

ratio of the effectiveness of profit-sharing as a method for compensation on the size of the participating group? It is this: The greater the number, the larger the number of employees who are to participate in the scheme or plan, the less is the opportunity for the management to educate the employees with regard to the essentials of profit-sharing. If you are going to have a plan of profit-sharing for the rank and file of labor, it will not prove self-operating. Nothing does. That means you must have a constant and continuous campaign for education among all these employees who participate in order to point out to them all the time just how they can affect profits, just what they can do by increased care or economy of exertion to help increase the company's profit for the year. The larger the number of your employees the more difficult that is to do. The more it has to be delegated by the management to certain other employees and subordinates, the less is the direct, immediate, personal contact between the management of the business and the employees of the rank and file, and, therefore the less effective, ordinarily, are the efforts to enthuse the group with regard to profit-sharing.

"This also is true: The larger the number of the rank and file of employees who are participating (other things being equal), the less is the influence which any one of them actually does exert upon profits. If you have a thousand or ten thousand employees, the influence that any one employee in one department can exercise upon the year's profits is relatively negligible. The larger the business, even if he does exert himself, the greater is the possibility that any increased care or saving, economy or efficiency on his part will be offset by the loafing on the job of someone else in some other department in the business whom he has never seen or whom he does not know. You cannot get the same degree of personal enthusiasm out of a group of ten thousand wage-earning employees with regard to a profit-sharing scheme that you can where there are a hundred or two hundred.

"Profit-sharing is in direct ratio to the rank; inverse ratio to the size. I think that this conclusion, theoretical though it may seem to be, is actually borne out and verified by the history of profit-sharing experience, because so far as our investigation carried us, we found, on analysis of the actual experience of American firms and corporations dealing with profit-sharing plans, that in practically all of those companies which had introduced profit-sharing, had experimented with it and later had abandoned it, the schemes were of the type which included the wage earners alone, the rank and file alone, or which included a very large number of the rank and file. We also found that out of those firms which had experimented with profit-sharing among the managerial and executive group, practically none had abandoned it.

"We also found that where profit-sharing had been employed for the rank and file of the employees and where it has had a successful operation over a goodly number of years—and there are some such plants—practically all those plants are relatively small. Some of the best known profit-sharing experiments, where profit-sharing has been in operation for many years among the rank and file, occur in small plants.

"Viewed purely as a method of industrial compensation, profit-sharing has its place in the industrial scheme of things. It is not a universal place; it is not to be recommended under any and all circumstances. It simply takes its place side by side with a good many other systems of industrial compensation, each one of which is to be used under those circumstances which are most designed to secure its success."

The conclusion that profit-sharing has a **real place in industry** under our present economic system would appear to be justified. The realization that it is not a general panacea, a substitute for good management or the wage system, is well presented in the following paragraphs from "Profit-Sharing—Its Principles and Practice," by Burritt, Dennision, Heilman and Kendall:

"While we are confident that proper profit-sharing will accomplish some very important results, there are certain things which profit-sharing does not do. Profit-sharing is not a substitute for good management, nor should it be introduced with the expectation that it alone will transform an unsuccessful and poorly managed business into a highly successful and prosperous one.

"Profit-sharing does not propose to do away with the existing economic order, under which some men must be employers and others employees. Indeed, it rests upon the assumption of the continued existence of that economic system and merely proposes that under certain circumstances the flat wage or salary shall be supplemented by an additional payment representing a share in the profits. Just as the commission system provides that the salesman shall receive payments based upon sales, in addition to salary; just as scientific management provides that the workmen shall receive a bonus payment based upon output, in addition to stipulated wages; so profit-sharing is an arrangement which provides that the participant shall receive a payment based upon profits, in addition to his guaranteed wages or salary. Profit-sharing is not a substitute for the wage system, but it should be recognized as having its rightful place within that system."

BASES OF PARTICIPATION.—Some of the ordinary bases of participation in profit-sharing plans are as follows:

1. Wages
2. Rank
3. Efficiency
4. Length of service
5. Equality

Wages.—The most usual basis of participation in profit-sharing is that of wages. When **employees are not classified,** individual wages are the measure; when there is **group classification** of employees, participation within groups in proportion to the wages of the groups is common.

Rank.—Since the rank of employees may have a very definite bearing on their ability to influence profits, it is often a useful gauge for their participation in profits. Employees to participate may or may not be limited to certain groups.

Efficiency.—Efficiency, as determined by the management, may be the basis for participation in profit-sharing. This method is subject to frequent criticism by employees because it is open to abuse by favoritism on the part of the management.

Length of Service.—Participation in profit-sharing on the basis of length of service is common, being chiefly directed toward the stabilization of labor.

Equality.—Some profit-sharing plans have distributed profits equally among employees, without regard to wages, rank, efficiency, length of service, or any other factor. Where profit-sharing is for the purpose of rewarding individual effort and accomplishment, it is obvious that the objective cannot even be approached through a uniform distribution of profits. Such a distribution may serve as an incentive to the organization, but only in a general way.

BASES OF PROFIT DISTRIBUTION.—

Before Interest or Dividends on Capital.—Some profit-sharing plans now in use provide for a distribution of earnings before deductions for interest or dividends on capital. In this manner employees are assured of a distribution if the company makes even a small profit, though during a period of inadequate profits proprietors may not receive a fair return on their investment. The ordinary share of profits assigned to employees under this method **varies between 5 and 35%**, and in a majority of cases is not over 10%. **One typical plan** installed at a textile mill with several hundred employees provided for an equal distribution of profits between employees and stockholders. Of the stockholders' share, part was paid in dividends and part was devoted to surplus. The employees' share was divided into three parts, one for officials, one for heads of departments and minor officials, and the third to other employees. The first two parts were distributed in cash; the third was devoted to a partial distribution of cash, the balance being set aside in special funds. One of these funds was originally used for the building and maintenance of a clubhouse. Later all funds were merged into a general welfare fund available for the clubhouse, old age pensions, group life insurance, accident insurance, sick benefits, poor and distress relief, free dispensary and medical attendance, educational classes, and other activities. Although the equal distribution of profits provided for appears to be very liberal, the following statement of the company reflects its satisfaction with the plan:

"The profit-sharing feature has unquestionably been a live factor in the development of the business. The stockholders' earnings have steadily increased, and the earnings of the officials from the highest to the lowest, as well as those of department heads and employees generally, have been quite generous, meeting all demands and expectations. We have no recollection of an official or experienced head of a department leaving our employ to engage in a competitive business or to join a competitor. We endeavor to offer opportunities to ambitious, capable men equal to those found in private enterprises or offered by competitors."[1]

After Interest or Dividends on Capital.—Provision for interest or dividends on capital before the determination of distributable profits may be allowed to ensure a minimum fixed investment return from available earnings. If earnings are low, employees may receive no distribution, but in spite of this the provision would appear to be equitable. One plan of this type is in operation by a company manufacturing builders' hardware (Warner Hardware Co.) and maintaining about 1,000 employees. An 8% return is first allowed stockholders on the **capital and surplus** invested in the business, the remaining profits being apportioned 50% to stockholders and 50% to employees. Commissions on sales have been discontinued. A marked increase in efficiency among the employees who understand the plan is reported.

A **clear definition of profits** is essential in any such plan. The capital upon which a fixed investment return is to be computed must be defined, for it may include capital stock only or capital stock and surplus. Surplus may be taken to be earned surplus alone, or may include paid-in surplus or surplus arising from revaluations or appraisals. The treatment of capital gains and losses or unusual charges against operations for the purpose of creating reserves, should be specified. Such attention to detailed definitions is necessary in order to avoid misunderstandings arising through confusions of terms.

[1] National Civic Federation—"Profit Sharing by American Employers" (Wayne Knitting Mills).

Types of Profit-Sharing Plans

As stated previously this section presents a brief summary of the features of various plans used as incentives for employees, and does not confine itself to those plans alone which would meet a rigid definition of profit-sharing. Some plans offer a direct reward based upon individual efforts; others offer some form of distribution dependent primarily upon profits, either of units, departments or branches, or of the business as a whole; still others resemble welfare plans.

BONUS PLANS.—Among profit-sharing or similar plans, the **cash bonus plan** is the most general. Details of payment vary widely, but disbursements are usually regular and to employees represent a comparatively large sum to receive at one time. Although employers do not often attempt to control the expenditure of such a bonus by employees, it has been noted that where **savings bank facilities** have been made convenient, the workers have deposited therein substantial portions of their bonus.

Uniform Wage Bonus.—A bonus based directly upon wages may be paid to employees in addition to the prevailing rate of wages. It should help to ensure and stabilize the labor supply, though some employers feel that this object can be more readily accomplished by the payment of a higher rate of wages.

Graded Bonus.—A bonus, graded with length of service, is likely to promote **continuous service.** One company makes the following bonus gradation:

Term of Employment	Percentage of Salary of Preceding Year
2 years	2 %
3 "	2½
4 "	3
5 "	3½
6 "	4
7 "	4½
8 "	5
9 "	5½
10 " or more	6

Another company grades its bonus as follows:

Term of Employment	Percentage of Salary of Preceding Year
1½ to 2½ years	5 %
2½ to 5 "	10
5 to 10 "	12½
10 years or more	15

Still another graded bonus progresses as follows:

Term of Employment	Percentage of Wage of Preceding Year
1 to 2 years	2%
2 to 3 "	4
3 to 4 "	6
4 to 5 "	8
5 to 6 "	10
6 to 7 "	12
7 to 8 "	14
8 to 9 "	16
9 to 10 "	18
10 years and over	20

Gang Bonus.—Where the results of individual effort cannot be measured but the total amount of work accomplished by a group or gang can be ascertained, a gang bonus system under adequate managerial supervision may be inaugurated. The use of such a system is attended with many difficulties and it rests with the individual case whether direct profit-sharing would be simpler of operation.

Bonus on Production of Sales.—Bonus payments are sometimes based upon production of operating department employees, and may stimulate quantity output or high quality of work. Bonuses based upon sales afford an effective driving force for the sales organization, and are in general well regarded by employers.

Bonus on Savings over Predetermined Standards.—Employees may be paid a bonus on the savings between a predetermined standard or estimate of cost, and actual cost. This is a difficult system to install and operate, for the standard must be carefully and fairly set. If the bonus proves large, the employer may feel that his standard is too high and that he is paying a high price for the additional production which is not a fact; if the bonus proves small the employee may feel that he is being exploited. Frequent changes are not looked upon favorably by employees, particularly if the standard cost is revised downward. Although this system is complicated and difficult to handle, where operated with the utmost care it has proved conducive to the efficient execution of assigned tasks.

Bonus to Executives on Basis of Production.—In some industries where the employees are paid high wages, no further direct incentives are offered, but the executives may receive a bonus. Such bonuses are frequently paid on production in excess of the normal or standard, as determined from the average production of previous years.

Discretionary Payments.—Cash payments to employees are sometimes made by the management at its discretion. One company has for several years declared an annual bonus for all employees varying from 10 to 23% of their yearly wages, and finds the plan satisfactory. Another company has distributed amounts to managers at its will and has paid other employees a bonus based upon wages of 5% for service of less than 1 year and 10% after service of 1 year or more.

WAGE DIVIDEND PLANS.—Under wage dividend plans employees receive a dividend on their annual wages which bears a **definite relation to the dividend paid on capital stock** of the company. In many instances the rate is the same as on the capital stock; in others it may be smaller. Some companies set variable rates, depending upon the employee's length of service. The Edison Electric Illuminating Co. of Brooklyn, for example, pays to employees who have been with the company for 2 years a wage dividend at one-half the rate of dividend payments on its stock. The rate advances at regular intervals until, for employees of 5 years' standing, it is equal to that paid on the capital stock.

In another company with about 3,000 employees and an annual wage roll of around $2,000,000, those employees who render satisfactory and continuous service for 12 months receive a dividend on their year's wages of 8%, the same rate as that paid to stockholders. Any dividends which are forfeited by employees who leave voluntarily, or are discharged, or are excluded from participation on account of unsatisfactory service, are credited to a benefit fund out of which the directors of the company may grant assistance to aged or disabled

employees. The plan provides for participation by all employees, and after 5 years of operation, is regarded by the company as an unqualified success.

To employees the **chief defect** of wage dividend plans is the fact that the dividend is entirely subject to the discretion of the management. Even if earnings are large and employees share at the same rate as stockholders, the directors may withhold from distribution a large part of profits, and the portion accruing to employees may be small.

STOCK OWNERSHIP PLANS—DISTRIBUTION OF STOCK AS SHARE OF PROFITS.—Profit-sharing may take the form of a distribution to employees of capital stock of the company. Certificates may be **currently distributed outright,** though this method has the disadvantage of compelling the issue of a large number of fractional shares, stock may be **paid for partly by the employee and partly from his share of bonus or profit distributions,** or **profits may be credited to employees** for application against the purchase price of stock, the stock to be delivered when those accumulated profits equal the purchase price decided upon.

A stock ownership plan of the latter type has been in operation for many years in one manufacturing company, the employees now owning about one-third of the entire capital stock. After the payment of 6% dividends to stockholders, the remaining profits are divided equally between stockholders and employees, all of whom participate, from the president down. The employees' share is divided proportionately according to annual wages or salaries among those who have been with the company for 6 months or more, and credited to their stock subscription accounts. When accumulated credits are sufficiently large, fully paid stock is issued to employees. The stock, however, is issued in any case only after 3 years, and is non-transferable while the employee remains with the company, although in unusual cases where individual circumstances warranted, the company has purchased it from employees who were in need of cash. Any employee who leaves the company before the expiration of the 3-year participation period forfeits his accumulated profits. The above plan has proved satisfactory to the company and its 1,000 employees; there has been no labor trouble and it appears that the effectiveness and earning power of the company has increased.

A somewhat similar plan was in use for several years in a **public utility corporation** with about 550 employees. All employees except officers who had been with the company for a year were eligible, and were credited each quarter at the annual rate of 8% on the wages earned by them during the preceding three months. The annual rate of dividends paid to stockholders was also 8%. When the accumulated credits of an employee were equal to the market value of one or more shares of the company's stock, a stock certificate was delivered to him, with no restrictions as to its use. If the employee desired to withdraw cash instead of stock, he received only one-half of the amount credited to him. In the case of employees discharged for drunkenness, insubordination, crime or destruction of property, credits were forfeited. If discharged for other reasons, employees received full credits, as did women who left to marry. Other employees leaving of their own accord received one-half of their total credits. The company reserved the right to refuse participation in the plan to any employee who lacked interest in the company's welfare, and to cancel upon one week's notice any agreement in force. The plan was discontinued after several years, because it was decided that the higher wages and shorter hours then existing offered sufficient remuneration and inducement to the employees.

DISTRIBUTION OF CASH AND STOCK AS SHARE OF PROFITS.—Sometimes a distribution to employees of part cash and part stock is made, **the proportions varying** with different groups of employees. In general, the smaller the wages the greater is the proportion of cash paid under such a plan. Sometimes the company retains the right to determine how payments shall be made, whether in stock or in cash, and in what proportions. This method enables it to govern its distribution by the requirements of its cash position, though employees usually prefer to know definitely what distribution they may expect. Employees are allowed at times the option of taking their share of the distribution in stock or in cash on some predetermined basis. The New Haven Gas Light Co. permits its employees to take either stock for the full amount or cash for one-half the amount credited to them. Such a plan may prove disturbing to the company in working out its financial plans, since it cannot know in advance how great a proportion of its cash resources will be required for distribution either in ordinary times or in periods of financial stress.

SALE OF STOCK TO EMPLOYEES ON INSTALMENT PAYMENTS.—Perhaps the **most common form** of stock ownership by employees arises through the sale to them of stock which may be paid for in instalments. Often the price to them is below the market value of the stock. One clothing manufacturing company with about 200 employees allowed them to subscribe at $80 a share to capital stock of $100 par value, paying dividends at the rate of 7% annually. Ten per cent of the purchase price was required to be paid annually, either at one time or in weekly payments at the option of the employee. Under a somewhat different plan, a Chicago bank offered to its employees who were members of the bank pension fund the privilege of purchasing shares of its capital stock at $10 less than the market price. The employees were allowed to borrow the necessary funds from the bank and repay them in instalments of $5 a month for each share, interest being charged on unpaid balances at the rate of 4% per annum.

TYPES OF STOCK DISTRIBUTED.—**Preferred stock** is not often distributed to employees under profit-sharing plans, for its dividend is stable and does not reflect ordinary fluctuations in earnings. **Common stock** is frequently distributed, though its speculative character may make it unsuitable for employees. The most desirable type of stock for issue under a profit-sharing plan is a **special issue** adapted to the requirements of the plan. Such stock may be non-transferable, it may be in small denominations for convenient distribution of fully paid shares, or it may carry special privileges, such as representation on the board of directors. The amount of the issue would readily show the capitalization of the company arising from its profit sharing plan.

RESTRICTIONS ON STOCK HOLDINGS OF EMPLOYEES.—Some form of restriction is usually placed on stock held by employees. Generally the amount is limited according to the wages, salary or length of service of the participants. The Procter & Gamble Co., Cincinnati, limits the stock holdings of an employee, under its plan, to the amount of his annual salary, with 25% additional for each 5 years of continuous service. It is desirable that employees hold their stock as long as they remain with the company, and it is usually necessary to make provision for this in the stock ownership plan. Some plans provide for stock that is non-transferable while the employee remains; others deprive employees who dispose of their stock of their rights to participate in the future profits of the company; others pay a special bonus to employees who retain their stock.

A plan, placed in operation by a company with several thousand employees is outlined below. The executives, including factory and store managers, were allowed to purchase common stock in amounts proportionate to their salaries, and to pay for it in equal monthly instalments extending over 20 years. Interest at 5% was charged on the unpaid balance, and all dividends declared were credited to the account of the subscriber. An additional amount was credited or paid in cash if subscriptions were fully paid, of $1 per share for each $30,000 of net profit of the company remaining after dividends, sinking fund, depreciation, income taxes and similar requirements had been met. It is interesting to note that the employees' subscriptions were nearly all paid up in 3 years, instead of the 20-year period allowed under the plan.

ADVANTAGES AND DISADVANTAGES OF STOCK OWNERSHIP BY EMPLOYEES.—Ownership of stock in a company by its employees is desirable since it **stimulates the immediate efficiency** of the organization and makes for its permanence. The employee who sees in his stock tangible reflection of the profits or losses of the business cannot be disinterested. The danger of his developing a **speculative interest** in the purchase and sale of the company's stock can be guarded against by the issue of non-transferable stock, or by other restrictive measures outlined in preceding paragraphs. The **chief disadvantage** to the company of stock ownership by employees is the possibility of capital expansion which may perhaps become unwieldy. But this should not be difficult to adjust under a sound financial management.

OTHER MISCELLANEOUS PLANS—BENEFIT FUNDS.—Promotion of the welfare of employees is sometimes undertaken through the establishment of benefit funds. These funds are available for payment of benefits in case of accident, sickness or unemployment, and to provide insurance or old age pensions. They tend to encourage length of service among employees, when wages and working conditions are satisfactory according to the standards set by similar businesses. Since participation in their benefits appears remote to most employees, they **do not offer an incentive** to increased efficiency.

RELIEF FOR FAMILIES OF EMPLOYEES.—Plans providing relief for families of deceased employees are generally part of a comprehensive welfare system. Such relief plans often provide **insurance** for employees who are with the company over a specified number of years, and who die while in its service. The widow receives, during widowhood, a monthly payment bearing a definite percentage ratio to the salary of the employee, with additional compensation for each dependent child. One relief plan installed in a manufacturing company having about 2,000 employees arranged that in case of the death of an employee who had been with the company for more than 2 years, the widow should receive each month 30% of the employee's monthly wage, with an additional 10% for each child under 16 years of age, the total amount being limited to 60% of the employee's monthly wage or salary, or in any case $60. Payments continued during the life of the widow, except in cases of remarriage, when they ceased two years thereafter.

EMPLOYEES' PROFIT-SHARING SAVINGS FUND.—Profits may be shared through the establishment of a savings fund for employees. One company contributes annually 5% of its net profits to an employees' profit-sharing and savings fund, in which all employees who have been with the company for 3 years or more are eligible to participate on the basis of their contributions; the contributions are limited to 5% of each employee's annual salary. Another company has established a savings and profit-sharing plan in which several thousand of its employees participate. All employees, after 3 years of

service, are eligible, and each may deposit annually not more than 5% of his wages, the limit for any one year being $150. The company contributes 5% of its profits. The fund is handled and invested under the direction of a board of five trustees selected by the directors of the company, three being officers or directors and two being employees.

It sometimes happens that **combination plans** are devised, such as one adopted by a large automobile manufacturing company. The plan provides that 10% of net profits after the allowance of 6% on capital invested be distributed annually among deserving employees on account of specially valuable services. There is, in addition, a savings and investment fund in which about 18,000 employees, 32% of the total, participate. Each employee is permitted to deposit periodically $5, or multiples thereof, up to 10% of his annual wage, but not exceeding $300 a year. The company administers the fund, contributes an amount equal to the employee's savings, and pays interest at 6% per annum, compounded semi-annually, on the total. A new class starts each year, to terminate in 5 years. As each class matures the beneficiary may elect to take cash, withdraw securities in which the funds have been invested, or leave the money to continue at interest.

LIFE INSURANCE.—A life insurance plan provides that certain employees who have been with a company over a definite period of time, receive a life insurance policy, the **annual premium** on which is **paid by the company.** Details of such plans vary. One company presents to each employee of three months' standing a policy for $1,000. Another company pays bonuses to department heads and assistants, and pays the premiums on insurance policies for all other employees, the amount of insurance depending on length of service. After 1 year the amount is $250, after 3 years $500, and after 5 years $1,000.

ATTENDANCE REWARDS.—Attendance rewards are sometimes given for regularity in attendance, the sole purpose of such a plan being to ensure full time attendance of employees for a given period, generally **over the peak of production.** Payments are usually based on regular wages. One company pays a bonus of 4% for regularity of attendance during a pay term, and an additional 12% for regularity during a period of 6 months. Another company, engaged in the manufacture of candy, during the last several months of each year offers bonus payments for full attendance amounting to 5% for one week, an additional 5% for 4 weeks, and a third 5% for a period of several months. Still another company offers to employees who are not absent during a period of 3 months a bonus of 10% of the wages earned during the period.

LOANS AT LOW RATES.—Cash loans at low rates to employees are frequent particularly in small companies where employers are in close touch with the workers. Credit unions or somewhat similar organizations are often used to furnish the nesessary media through which loans may be placed. Such loans may be for the purchase of homes, to cover the expense of illness, or for various other purposes, and are usually to be **repaid in scheduled instalments.** In helping to prevent employees from falling into the hands of loan sharks, they perform a very useful service, and while greatly removed from profit-sharing, they nevertheless have proved effective in maintaining the goodwill of employees and insuring continuity of service.

DISCOUNTS ON PURCHASES.—It is quite usual for employees to be allowed a special discount on purchases made through the company. The discount may be limited to the ordinary product or merchandise of the company, or as in many cases it may extend to clothing, foodstuffs and other commodities

carried in a general company store for the benefit of employees and sold to them at cost.

GIFTS AND PRIZES.—Some companies present their employees with turkeys at Thanksgiving or Christmas; others give at Christmas a gold piece or a week's wages. These distributions are, of course, in the nature of **gratuities**, and are recognized as such by employees. A percentage of profits is sometimes set aside for distribution among employees in the form of **prizes** as a reward for promptness, attendance, efficiency, courtesy or some other desirable quality. Distributions are made directly, or through an employees' mutual benefit society.

FREE TRANSPORTATION AND LUNCHES.—Many companies furnish to employees **free transportation** to and from the plant or office, either in special busses or by making allowances for railroad commutation tickets, trolley fares or other transportation expense. Employers, particularly banks and trust companies, sometimes **furnish lunch** to employees, either gratuitously or at a nominal cost. The lunch period is generally curtailed and prompt attendance of employees is required. Concessions, such as free lunches or transportation, are usually considered by employees as incidental to their employment and part of their wages.

PENSION SYSTEMS.—Pension systems are often installed to provide for the retirement of employees with a yearly pension after long service. The provisions of such systems vary widely. Retirement generally becomes effective after 25 years of continuous service, and the annual pension may be approximately 50% of the employees' salary during the last year of service.

Examples of Profit-Sharing Plans

Several representative profit-sharing plans now in successful operation are presented in the following pages.

DENNISON MANUFACTURING CO.—The Dennison Manufacturing Co. plan in the form of an "Industrial Partnership" is of exceptional interest and merits careful study. Excerpts from the literature of the company together with the plan are given below.

"Technically, the Dennison Manufacturing Co. has all the attributes of a corporation.

"Actually, the Dennison Manufacturing Co. is not a normal financial corporation but more truly an industrial partnership. In so far as its corporate fund is the property of investors, it is represented by preferred stock which gives to its owners a fixed return in the nature of interest and compensation for risk. This stock, however, carries with it no right to share either in the net profits or in the control of the corporation. The investors are in the position of lenders and are not a part of the body corporate.

"The control of the Dennison Manufacturing Co. is vested in its employees—chiefly in its managerial employees who hold the voting stock of the company. Employees whose positions are not of a managerial nature also have a voice in the government of the company through participation in the Works Committee.

"All employees share in the company's profits roughly according to their participation in management. Each year, after dividends on all outstanding stock have been paid, the net profits are re-invested in the business, and against this increase of capital new shares of Industrial Partnership stock are issued. Two-thirds of this stock is voting stock and is distributed to the Managerial Industrial Partners in proportion to their relative salaries. One-third is non-voting

stock and is issued to the Employee Industrial Partners in proportion to their length of service. In each case a minimum term of service is required in order that the employee may become thoroughly identified with the company before sharing in its management or profits.

"Thus the company is very similar in organization to a "limited partnership" of nearly two thousand members. For although the corporate entity is strictly an invested fund, the body corporate is not a group of investors but the active workers of the company. . . .

"The company was entirely reorganized in 1911. All the common stock previously held by the investors was changed over to non-voting first preferred stock with a fixed annual return of 8%. All remaining profits are annually re-invested in the business, and stock certificates covering this investment are issued to managerial employees. This stock, which is called Managerial Industrial Partnership Stock, gives to its owner the privilege of voting for the Directors of the company and the right to an annual cash dividend. The exact amount of this cash dividend is determined each year by the Directors on the basis of business conditions.

"The Managerial Industrial Partnership Stock is distributed each year to the managerial employees in proportion to their salaries. Managerial employees are sales managers, senior salesmen, department heads, principal foremen, chief clerks, and others whose work requires similar managing ability or whose work shows a high degree of imagination, tact, or business judgment. This stock is not transferable, but when a Managerial Industrial Partner dies or leaves the company, his Partnership Stock is cancelled and 7% second preferred stock of equal par value is given in place of it.

"By this change the investors who were not actively engaged in the business received a fixed dividend and had no power to vote, while the remaining profits and control of the company were given to the people who were in a position most to influence those profits, and at the same time whose positions in the company enabled them to understand the broader problems with which the company had to deal.

"After the reorganization it became evident that the company would be better managed if those employees who were not in managerial positions were also given a proper opportunity to strengthen its policies by their suggestions on matters relating to their own work. On this account, the management put before the employees in 1919, the desire of the company to have them work out some plan for their participation in management. The employees worked out a plan, which was so thorough and well-balanced that the management immediately approved it.

"The plan provided that the employees of each large department or group of small departments, should elect representatives to a General Works Committee. This committee meets semi-monthly to consider problems relating to the welfare of the factory and to make recommendations to the management. When the Works Committee has reached its conclusion on any point, its decision is referred to one of the several small conference committees consisting of an equal number of members from the management and the employees. Matters that start from the management, may either be similarly referred first to one of these conference committees or may go directly to the Works Committee. The conference committee carefully goes over the proposition and makes any changes that seem advisable from the joint point of view of the management and the employees, and their recommendations are passed on to the management and the Works Committee for final approval.

"Through the Works Committee the employees took an active and vital part in the management of the business. After the employees had assumed this direct share in management, they felt that they could earn the right to share to some extent with the Managerial Industrial Partners in the profits of the business. The management felt also that the stimulus to extra effort which comes from the sharing of profits by all employees might be of benefit to the company as well as a means of increasing the earnings of the employees and that the sense of sharing directly in the fruits of successful management would also be a wise safeguard of the participation of the employees in management, exactly as it was a wise safeguard of the powers of control exercised by the managerial employees.

"The Works Committee on this basis worked out a plan which they asked the management to accept on trial with the understanding that it would be made permanent if experience shows that the employees earn that share in the profits which the plan provides they shall receive. This plan provides an annual distribution, among the employees who do not participate in profits as Managerial Industrial Partners, of one-third of those profits of the company available for distribution after preferred stock dividends have been paid. The employees who receive this distribution are called Employee Industrial Partners and must have been two years in the employ of the company at the beginning of the year in which the profits to be distributed were earned. Exactly as with Managerial Industrial Partners, these profits are reinvested in the business. Employee Industrial Partnership Stock is then issued equal in par value to money thus invested. The relative amount of stock which each Employee Industrial Partner receives depends upon his length of service. The stock is like Managerial Industrial Partnership Stock in that it is non-transferable, and is cancelled and changed into second preferred stock when the employee leaves the company or dies. It is paid the same dividend as the Managerial Stock. Employee Stock, however, does not carry the right to vote because the employees already share in the internal management of the company through the Works Committee, and because their work does not give them experience which would enable them to exercise sound judgment on matters relating to outside financial and commercial policies.
